Third-class mail

Certain rate adjustments are also being recommended for third-class mail which consists largely of advertising matter.

It was never the sense of the Congress, as far as we can ascertain, that commercial advertising matter should be carried in the mails at the expense of the general taxpayer. In 1926, when the annual cost ascertainment program was inaugurated, third-class mail was paying 98 percent of its fully allocated cost.

Despite this excellent beginning—and here I should like to direct your attention to chart 13—successive pay and other cost increase have caused an excess of expenditures over revenues in third-class mail of $1.3 billion in the postwar years.

The effect of the twin evils of rising costs and lagging rates was to reduce expense coverage in this class of mail to 61 percent in the last fiscal year and to 57 percent in this fiscal year. The proposals under consideration will increase the expense coverage to 73 percent.

This class of mail does not receive the privileges and preferment of service which letter mail receives. These are pertinent differentials which are reflected in our rate recommendations.

In proposing third-class rate adjustments we have been mindful of the importance of advertising in the American economy. We recognize that advertising plays a key role in the distribution of goods and services which are produced in our factories and mills. But this should not preclude a fair and reasonable rate for the services extended by the Post Office Department in delivering the advertisements.

Since 1946 national expenditures for advertising have more than doubled, reaching an alltime high in 1955. Direct mail advertising shared in these phenomenal gains, increasing by almost 250 percent during this period.

This increase in direct mail advertising is reflected in the volume of third-class mail. In 1946 we handled about 6 billion pieces. In the present fiscal year volume is expected to be about 15 billion pieces.

There is no valid reason why the taxpayer should continue to subsidize the distribution of advertisements.

VI. THE SECOND STEP: A COMMISSION ON POSTAL RATES

I should like to read a brief passage from the President's special message on the Post Office dated January 11, 1955:

"If the Post Office is to successfully meet the challenge of the future its prices must be sufficiently flexible to reflect changes in costs and the developing needs of a dynamic economy. It is my belief that an independent commission entrusted with the authority to establish and maintain fair and equitable postal rates can best provide this needed flexibility."

Consideration of the rate problems which have beset this committee in the past shows the tremendous magnitude and detail of the task encompassed in adjustment of postal rates. The vigorous American economy is a breeding place of change. That there will be a need for rate adjustments in the future is a certainty.

The rate structure has grown complex and cumbersome. The complexity of ratemaking is due, in large measure, to the fact that the consumer of goods and services does not pay for cost but for value received. Only through appraisal of ability to pay, value of service, the cost and nature of alternative services available, and a host of other tangible and intangible factors can a fair and equitable rate pattern be established. The experience of all regulatory agencies indicates that such an appraisal can best be made by highly skilled specialists who, through constant application, develop a reservoir of experience in establishing specific rates.

Another and equally important consideration is the urgent need for rate-making procedures which will allow greater flexibility in adjusting rates to meet changing conditions as they occur. Ratemaking by legislation has resulted in a tendency for rate adjustments to lag far behind the need for revenues. Moreover it has damaging effects on the financial condition of the postal service and—in terms of deficit financing—operates to the detriment of the taxpayer.

These facts lead to the unavoidable conclusion that a permanent commission, empowered to develop and maintain equitable and reasonable postal rates under policy guidance of the Congress is the only practical solution.

The proposals under consideration would place the pricing of postal services on a sound economic basis and relieve the Congress of the burdensome, time-consuming, and technical task of ratemaking.

The establishment of a ratemaking commission does not mean that the Congress will relinquish control over the postal rate structure. The Congress will continue to dictate the policy framework within which the Commission shall operate. The Congress will also prescribe, and amend—when necessary, the rules of ratemaking which the Commission must follow. It will also remain the prerogative of the Congress to prescribe special low rates of postage for certain postal services to give expression to public welfare factors.

In short, it is intended that the Congress maintain control over postal rates through policy guidance while the Commission gives specific expression to such policies.

VII. A SELF-SUSTAINING POST OFFICE

The phenomenal economic growth of the Nation since the turn of the century has been reflected in an even greater growth in the volume of mail. While our population has doubled and our gross national product—measured in terms of constant dallers—has more than trebled, the volume of mail matter increased almost seven and one-half times.

In its report of October 27, 1954, the Joint Committee on the Economic Report predicted that by 1965 population would reach

190 million and total national output would increase to $535 billion. On the basis of these estimates, it is predicted that mail volume will climb to 74 billion in the next 10 years.

Ladies and gentlemen, if we do not put our financial house in order now, how shall we fare in 1965? If we assume that costs and revenues in the decade ahead continue in the same relationship as the last 10 years, the postal deficit in 1965 may be more than a billion dollars. Continued delay will not solve our fiscal problems but will further complicate and intensify them.

Opponents of our views will base their opposition, in part, on the contention that the post office is a public service institution. They will say: Why should Congress be concerned about the postal deficit? Why not support the post office with tax funds as is done with other Federal agencies?

The allegation that the Post Office Department is attempting to operate under a different set of fiscal rules than those guiding other departments of the Federal Government is not true.

All Federal agencies are encouraged by law to establish fees and charges for measurable services when performed for identifiable individuals or organizations. Public Law 137 (5 U. S. C. 140) of the 82nd Congress established the policy that such services be "self-sustaining to the full extent possible."

The fact that other agencies do not attempt to break even overall does not indicate that they or the Post Office are in conflict with expressed congressional intent. Generally speaking, only a relatively small portion of the functions of other Federal agencies are of measurable value as they apply to identifiable individuals or businesses. When other departments do perform such services they charge accordingly. The Post Office is unique only in that practically all of its services are of measurable value and are performed for identifiable patrons.

There are other forceful arguments in support of a break-even policy for the Post Office.

There is the American tradition of fair play. In the interest of common justice those individuals and organizations that receive the benefits of postal services should support those services.

The Post Office is dedicated to service in the public interest, but this is not a valid reason for operating the Post Office at a loss which must be made up by the taxpayer.

Privately and publicly owned gas, light, transportation, and water companies all provide essential public services. They are required by law to operate in the public interest. But these utilities, whether privately or publicly owned, charge a fair price for the services they perform. When then should the Post Office Department continue to operate at a deficit?

The Department recognizes that a small number of its services are performed for the benefit of the people at large. One such example is free mail for the blind. The cost of these welfare services is relatively low and should not hinder us in placing the Post Office on a self-supporting basis. All that is necessary is that public welfare services be identified and provision made by the Congress to reimburse the Department for their costs.

I think what we are trying to accomplish is clearly defined on chart 14.

We are asking that postal patrons pay only for the services they receive. In this category falls the four classes of mail and the special services, both domestic and international. On the other side of the fence are the services performed either for government agencies or in the interest of the public at large.

As you can see, the Congress has already taken action to remove from the postal deficit two major items of cost not related to patron services. The Department is now reimbursed for penalty and franked mail and the airline subsidy has been transferred from the Post Office to the Civil Aeronautics Board.

Two bills, which we support, have already been introduced in the Congress. If enacted, these bills will provide reimbursement of about $30 million to postal accounts for services performed by the Department either for Government agencies or in the interest of the general public.

The importance of identifying and providing reimbursement for so-called "public-welfare" services is further emphasized by the misapplication of this term by opponents of rate increases. In seeking to adapt the "public-welfare" concept to their own ends, they allege that no private business could operate so many units and offer such broad services as does the Post Office and still break even. They reason from this that smaller post offices and rural routes are operated in the public welfare and that the costs should be paid by the taxpayer. This is specious reasoning.

The Department dispenses a national communication service in which rural routes and smaller post offices peform a necessary function. Many of these do not take in sufficient revenues to cover costs. But how much revenue would be lost at the larger post offices if these smaller units and rural routes were not available to distribute the mails? The small post offices and rural routes were not established primarily to originate revenue, but are an integral part of our national distribution network. More than 10 million families are served by rural routes and small post offices.

Post office terminals, also an integral part of our distribution system, do not produce any revenues. Shall we ask the taxpayers to underwrite the cost of our terminals, too?

The rate proposals under discussion are fair and reasonable. Only by means of rate increases can we place the Post Office on a sound financial basis. However, as stated earlier, these proposals will not immediately make the Post Office a breakeven operation.

The deficit in the next fiscal year is estimated at $470 million. The bill before us will produce about $407 million in additional revenues, leaving a deficit of $63 million.

Most of the member nations of the Universal Postal Union operate close to a breakeven basis. Many actually make a profit from their postal operations. I do not endorse this idea. But I do maintain that the Post Office of this Nation should be operated on a self-sustaining basis.

VIII. THE NEED FOR MODERNIZATION

There is another problem of the Post Office which should be considered when talking about our financial situation. I am referring to the need of a modernization program.

Over the past 20 years, the Post Office has experienced an increase of almost 250 percent in mail volume while its Government-owned buildings have remained virtually unchanged. As a result, its physical plant has grown obsolescent and inadequate. Our expenditures on our postal buildings are not keeping up with their deterioration and our need for expansion.

In many cities we have completely outgrown these buildings. In some localities we are handling mail on the sidewalks regardless of weather conditions. In hundreds of post offices, postal workers are hampered by poor lighting, antiquated equipment, and insufficient space. Under such handicaps, morale and efficiency suffer, and only through exceptional efforts is the American public afforded adequate mail service.

A few post offices have already been renovated with the limited funds at our disposal. The resulting experience proves beyond doubt that an investment in modernizing postal facilities brings an immediate return in better mail service.

A comprehensive survey has now been completed of the Department's building and modernization needs. This is explained on chart 15. A 5-year program has been developed but not yet activated. The annual cost to accomplish this program would average about $133 million, but, for the first year, cost would be somewhat less than that.

In my report to the President dated January 30, 1956, I informed him that the rate proposals now under consideration would provide $56½ million above the estimates included in the 1957 budget. The enactment of these proposals would provide funds to begin the modernization program during the next fiscal year.

This program should pay dividends in improved operating efficiency and employee morale. By increasing postal rates, adopting sound fiscal policies and ratemaking procedures, and by modernizing postal facilities, the Congress will have insured the American people that heavy postal deficits are a matter of history.

IX. CONFUSION

I have appeared before you today because the task which we have undertaken cannot be completed without your help. The issues at stake involve more than fiscal responsibility. There is a moral issue as well. We cannot, in good conscience, continue to burden the taxpayer for services rendered to others. We should not—as responsible members of the Government—allow the problem to fester in the hope that it will be cured by future administration. We should, in my judgment, put an end to the practice of saddling generations yet unborn with the cost of today's postal services.

For our part, we intend to continue our efforts to increase our efficiency and to further reduce our costs. But a half billion-dollar deficit is not a problem which can be met in this way.

This has been recognized by the Committees on Appropriations of the House and the Senate. House Committee Report No. 1743, dated February 3, 1956, in referring to the cost of handling the mails, stated "it is obvious that the presently established rates are woefully inadequate to compensate for such necessary expenditures."

I should also like to quote a brief passage from Report No. 1624 of the Senate Committee on Appropriations dated March 6, 1956:

"Regardless of any additional economies which might be effected in the operation of the Department, there will still be a need for additional revenues and this committee urges the Committee on Post Office and Civil Service of the Senate and the Members of the Senate to give diligent attention to the problem of increasing postal revenues if the Department is to be placed on a sound fiscal basis while carrying out its service responsibilities to the people."

The proposals before us are neither political nor partisan in nature. Sound financial management is the common responsibility of all who hold public office regardless of political affiliation. I might add that every postal rate adjustment enacted in previous years has received support from both sides of the aisle.

I might add, too, that the rates which we have adjusted under our own authority have been well accepted by the public.

I am deeply appreciative of the courtesies which the members of this committee have extended to me today. I wish to thank each of you individually for this opportunity to appear before you.

They Admit It

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column written by Joseph and Stewart Alsop in which they discuss the relative status of American air-atomic power as opposed to the Soviet Union's. This column is based on testimony presented to the House and Senate Armed Services Committees by Secretary of the Air Force Quarles and Chief of the Air Staff General Twining:

[From the Washington Post and Times Herald]

THEY ADMIT IT

In recent testimony before executive sessions of both the congressional Armed Services Committees, the Secretary of the Air Force and the Chief of the Air Staff have now officially confirmed all the darkest unofficial reports about the relative status of American and Soviet air-atomic power.

The following items from this sworn testimony of Air Force Secretary Donald Quarles and Gen. Nathan Twining, will be enough to give the general picture.

Item: It has long been reported that this country was lagging far behind the Soviet Union in production of long-range jet bombers; but Quarles and Twining at last revealed how enormous the lag really is. It can be stated on undoubted authority that they gave our current output of B–52 bombers as only 4 per month, and in contrast stated that Soviet output of the comparable Bison bombers was almost certainly 3 times as large.

These current monthly output rates, of 4 B–52's against 12 Bisons, do not tell the whole story. Quarles and Twining further admitted that we would not reach our planned peak output of 17 B–52's per month for at least another year and a half. The Soviets are working toward a peak output of 25 Bisons per month, and they will reach their high peak considerably sooner than we shall reach our much lower peak.

Item: It has also been reported, for the first time in this space, that the Soviets were already fight-testing a ballistic missile of 1500-mile range. No comparable ballistic missile has as yet passed the drawing-board stage in this country. Once again on undoubted authority, it can now be stated that Secretary Quarles and General Twining admitted these facts, stating they had sure evidence that the Soviets were indeed testing a 1500-mile ballistic missile.

Item: It has also been reported that the Soviets' Farmer, dayfighter, and Flashlight, nightfighter, were advanced designs of high quality; that these Farmers and Flashlights were already being produced in substantial quantities; and that no comparable advanced American fighter aircraft had yet entered the stage of serious quantity production. Again on undoubted authority, it can be stated that Quarles and Twining admitted these facts, too.

Our really superior F–104 dayfighter is not in production at all. Our only good nightfighter, the F–102, is being produced in tiny trickles. Our rather unsatisfactory F–100 dayfighter, which may well not offer adequate opposition to the Soviet Bison, is officially in quantity production, but the quantities being produced are still trivial. Meanwhile, the Soviets' output of Farmers and Flashlights will shortly be counted in many scores per month.

Our stock of nuclear weapons remains far greater than the Soviet stock, and will no doubt always remain far greater. But their nuclear stockpile is now approaching decisive proportions. Meanwhile, they are presently well ahead of us in the best type of bombers that must deliver the bombs, in the fighters that must intercept the bombers, and in the medium range ballistic missiles which foreshadow the ultimate weapons, the missile of intercontinental range. That is the present picture, as officially outlined.

In these circumstances Air Secretary Quarles' testimony about the Air Force budget itself was truly remarkable. The Air Force general staff, he admitted, had originally proposed a minimum budget of $20 billion. He had himself cut the air staff requests to $18,500,000,000, which he seemed personally to have regarded as rockbottom. But Secretary of Defense Charles E. Wilson nonetheless ordered a further slash, to $16,500,000,000. And Quarles yielded to Wilson, although he said this final concession to the Treasury and Budget Bureau really did make the Air Force budget "very austere, indeed."

Quarles still further admitted that this "austere budget" was crowded with "one-shot savings" which could not be repeated next year. Because of this heavy borrowing from next year's Peter to pay election year's Paul, Quarles testified that the Air Force budget would have to be massively increased next year unless the strength of the Air Force was instead heavily reduced.

Meanwhile, there was no talk whatever, except from the shocked Senators and Representatives, about a great emergency effort to overcome the aid lead the Soviets have now achieved. Secretary Quarles took refuge in a cloud of technicalities. The unhappy General Twining contented himself with saying we still retained greater air-atomic power than the Soviet Union as of now, with melancholy emphasis on the "as of now."

But what about 2 years, or 3 years, or 4 years from now, when it will be too late to catch up, and the Soviet air lead really begins to produce decisive results?

Speech by Hon. Chester E. Merrow, of New Hampshire, Before the Conference of National Organizations, Washington, D. C., February 28, 1956

EXTENSION OF REMARKS
OF
HON. A. S. J. CARNAHAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. CARNAHAN. Mr. Speaker, under permission to extend my remarks in the RECORD, it is a pleasure to include herewith an address by my esteemed colleague the gentleman from New Hampshire, Congressman CHESTER R. MERROW.

From his experience as a member of the United States Delegation to the 10th General Assembly of the United Nations held in New York last fall, Mr. MERROW gives an excellent summation of his work as a United States delegate to the U. N. General Asembly:

THE UNITED NATIONS SYSTEM: COST AND EVALUATION

Mr. Chairman, distinguished guests, and members of the Conference of National Organizations, it is a pleasure to be here with you this afternoon, and I hope you will not consider it a poor return for your excellent hospitality if I employ this opportunity you have so generously afforded me to address my remarks primarily to the subject of how much money the United Nations and the agencies associated with it costs and what is accomplished by the expenditure of such funds.

SIGNIFICANCE OF THE 10TH GENERAL ASSEMBLY

A large part of what I wish to say this afternoon grows out of my experience as a member on the United States delegation to the 10th General Assembly held in New York from September 20 to December 20, 1955. I should like to take a moment at the very beginning to comment briefly on the significance of the 10th session which marked the beginning of the second decade of the United Nations.

Two major forces seemed to pervade and shape the discussions; the worldwide struggle between freedom and communism, and the resurgence of nationalism among the peoples of Asia, Africa, and the Middle East. Once again the United Nations proved itself to be a forum where we can meet the Soviet threat to the free world and expose that threat for what it is even when its drive to dominate the world is set forth in economic rather than in purely political terms.

On specific issues, the highlights of the accomplishments can be said to include the admission of 12 free nations, the overwhelming endorsement of President Eisenhower's "open sky" plan for inspection from the air and the exchange of military blueprints, the approval of further steps to develop the peaceful uses of atomic energy by providing a method for the establishment of an International Atomic Energy Agency, and the formation of a committee to fix the time, place, and procedures of a conference on charter review, such committee to report to the 12th General Assembly in 1957.

On the so-called colonial issues, the action that eventuated was, on the whole moderate, but owing to the passions aroused during discussions, the course at times came dangerously close to imposing on the Assembly a role which would prolong and further embitter the issues, rather than contribute to their solution.

ADMINISTRATIVE AND BUDGETARY COMMITTEE

My primary responsibility on the delegation was to serve as the United States spokesman on the Administrative and Budgetary Committee. Since I am a native of that part of the country noted for its thrift and practicality, you will readily understand that I embarked upon this assignment with interest and with an eye to seeing whether the taxpayer's money is being well spent in our contribution to the United Nations.

I came away from this experience greatly reassured. Because we constantly hear so much criticism of "cost" of the United Nations activities without very much being done to develop an appreciation or understanding of what we really do get for our money, I thought it might be worth while for me to discuss with you some of the conclusions I have reached in reference to our participation in the U. N. system.

UNITED NATIONS IN NO RESPECT A WORLD GOVERNMENT

To put the budget process in perspective, let me reassure anyone who may entertain any qualms about the United Nations invading our national sovereignty. The United Nations is not a world government. It cannot enact legislation, levy taxes, raise armies, or enforce laws. We certainly do not want it to have these powers. Its powers are strictly advisory depending on the voluntary cooperation of sovereign states. The General Assembly does, of course, make decisions about the structure and work of the Secretariat and it can assess member states for

annual dues. On the other hand, any member government that has really serious objections to the majority decision on such issues can always, as a last resort, withdraw.

BUDGET REVIEW AND CONTROL

I should now like to proceed to the question of the system for keeping United Nations expenditures under review and control. The regular annual budget of the organization is drawn up by the Secretary General. Given the financial background of the present Secretary General (you recall that he was one time Under Secretary of the Finance Ministry of Sweden) and the well-established internal administrative controls at his disposal, the estimates presented to the General Assembly have, on the whole I believe, been conservative. Of course, one can disagree with the need for certain activities or programs, and we do and did, but by and large, these are the outgrowth of decisions by the Assembly or other governmental organs, decisions which the Secretary General has no alternative but to carry out.

The estimates submitted by the Secretary General are carefully reviewed in detail by a small advisory committee of nine experts appointed by the General Assembly for this purpose. The United States has a member on this committee. Like an Appropriations Committee of the Congress, its report usually indicates where economies can be made and efficiency improved. As a consequence, its recommendations are usually adopted when the budget estimates of the Secretary General and report of this expert committee are considered by the General Assembly in its committee of the whole, known as the Administrative and Budgetary Committee, or the Fifth Committee.

I can assure you that the Fifth Committee reviews with thoroughness the estimates and the other details connected with the financial administration of the United Nations. A remarkable sense of responsibility and concern for efficiency and economy are shown by the majority of participating governments. It may be of interest to know that this is one area in which the U. S. S. R. and the United States, as the two largest contributors, vote together more often than not.

The United States, though it has but one vote, exercises nevertheless a significant role in the work of the Fifth Committee. It is worthy of note that the United States has generally been represented on this committee by a Member of Congress. Since the beginning of the organization, there have been only two exceptions to this practice. It is the kind of committee where there is genuine give and take and where reason usually prevails. This, together with the obvious financial stake of the United States in the United Nations, means that the voice of the United States is both sought after and respected. Although this does not mean that everyone always agrees with us—it would be unhealthy if they did—it does usually lead to reasonable accommodations of differences. This is true not only on strictly budgetary matters but it extends also to the broader administrative problems considered by this committee.

ADMINISTRATIVE TRIBUNAL

I wish to mention that the efforts of the United States over a period of years to bring the judgments of the independent United States Administrative Tribunal under review were finally successful in the tenth session. The procedure evolved was a compromise embodying varying points of view, but the important objective from the United States standpoint was achieved, in that such judgments are no longer final but can be taken to a higher judicial body—the International Court of Justice. This provides a mean for member states to be heard when their interests are involved and should prevent the recurrence of the controversy which arose over some awards made by the Administrative Tribunal in 1953.

In speaking on the Administrative Tribunal before a plenary session of the General Assembly I said:

"The primary objective of the procedure adopted has been to provide a way in which the possible concern of member states with respect to future administrative tribunal judgments could be dealt with by judicial process. * * *

"In the opinion of my Government the resolution adopted * * * presents us with a method of solving a vexing problem by a procedure which recognizes the basic principles of judicial review, which protects the interests of the staff and of the Secretary General, and which provides a method for meeting any concern of member states which may arise in the future as the result of administrative tribunal judgments."

UNITED NATIONS COSTS

Let us now turn our attention to the amount and the purpose of the United Nations expenditures over the years. In 1946, the regular expenditures of the United Nations amounted to approximately $19 million. The budget authorized for 1956 is $48,566,350, more than 2½ times as much. What does the difference represent? The expenditures for 1946 were largely devoted to organizing the United Nations and servicing meetings of the primary governmental organs—the Assembly, the Security Council, the Economic and Social Council, and the Trusteeship Council.

In 1956, one can note that the budget of $48.5 million not only covers servicing of regular meetings, it also provides for expenses connected with the vastly successful scientific conference on peaceful uses of atomic energy at Geneva in 1955 and for a wide range of activities that are contributing to the maintenance of peace and security, to economic development and improvement of living standards, to the protection of refugees, and to the orderly development of territories toward self-government. A few specific examples of this type of activity include: the operations of an observer mission in India and Pakistan and the conciliation and truce missions in Palestine; the administration of a plebiscite in British Togoland; the collection on a worldwide basis and publication of needed economic data and analyses; and assistance to numerous governments in improving social welfare services. I could easily spend the rest of my time enumerating all the activities which the United Nations undertakes in any one year.

Instead of doing this, I refer you to the most recent annual report of the Secretary General, because I should like to turn to some comparisons that will make it easier for us in the United States to understand what we are getting for our money. This $48.5 million budget will result, when other income is taken into account, in an assessment upon the United States of approximately $16 million.

On the basis of relative capacity to pay, modified by the United Nations recognition that it is not healthy for any one country to contribute more than one-third, the United States share of the budget is presently calculated at 33⅓ percent. Given what I have indicated as the scope of United Nations activities which presently cost the United States $16 million, it is interesting to note what this compares to in terms of national programs. It about equals the amount the United States Forest Service spends currently in constructing roads and trails in national forests.

I discussed at some length on December 16 the United Nations budget before the General Assembly's plenary session. In my remarks, I said: "* * * the United States will support the appropriation recommended * * * for 1956. We do so in recognition of two facts: (1) that the Secretary General and the General Assembly have, over the past 2 years, made a real effort and considerable progress in reducing the regular budget; and (2) that a sizable amount of the increased assessments being voted for 1956 is of a nonrecurring character."

I further stated that "these increases fall largely into four categories of expenditures; activities related to peaceful uses of atomic energy, technical assistance in the social welfare and human rights field, operation of field offices and special missions, and salary adjustments. * * *"

I concluded by stating: "* * * my delegation firmly believes that, by continued pursuance of sound financial principles, the United Nations, during its second decade, will increase in influence and effectiveness as the greatest force for helping man to realize his hopes for bringing about a peaceful world."

COSTS OF THE UNITED NATIONS SYSTEM OVER 10 YEARS

While we are relating costs and value received in respect to international programs to costs of national programs, let me broaden the perspective by giving you some interesting figures extending beyond just the annual regular budget of the United Nations. During my service on the United States delegation I had the opportunity of also looking into the regular expenditures of the United Nations specialized agencies and the amounts which have been voluntarily contributed by both member governments of the United Nations and nonmember governments for special large scale assistance programs operated under United Nations aegis. I might say here that both the small expert advisory committee and the fifth committee on which I served are giving increasing attention to better coordination of the administrative and budgetary practices of the United Nations and its specialized agencies.

For the 10-year period from 1946 to 1955 inclusive, the total funds devoted by the international community to the work of the United Nations agencies with the exception of the International Bank and Monetary Fund have amounted to $1,751,063,198. Of this total, $686,344,569 represents the amount spent through the regular assessed budgets of the United Nations and the currently existing specialized agencies—Food and Agriculture Organization, International Labor Organization, International Civil Aviation Organization, United Nations Educational, Scientific and Cultural Organization, Universal Postal Union, World Health Organization, World Meteorological Organization, and the International Telecommunications Union. Six hundred and fifty-two million twenty-six thousand seven hundred and fourteen dollars has been spent on the current voluntarily financed operational programs of the United Nations: The International Children's Fund to promote maternal and child welfare; the Techanical Assistance Program for Economic Development; the Palestine Relief and Works Agency to provide food, shelter, and gainful employment for nearly 900,000 refugees; the Korean Reconstruction Agency, to relieve the suffering and repair the devastation caused by aggression; the Refugee Fund to find permanent solutions for limited groups of refugees; and the joint support program of ICAO to finance certain services essential to the safety of international air navigation. The final portion of this $1,751,063,198 is accounted for by the $412,691,915 spent by the International Refugee Organization during its short existence from 1947–1950.

The United States contribution to this 10-year total amounts to $893,425,948; $219,331,126 on an assessed basis, to present agencies; $436,978,466 on a voluntary basis; and $237,116,356 to the one-time IRO. In other words, it costs the United States an average of 54 cents per person per year for the 10-year period.

Another way of putting it is that the total amount contributed by the United States to the whole complex of United Nations activities over 10 years as a leading partner in an enterprise engaged in promoting peace, raising standards of living, feeding the hungry, caring for the displaced and homeless, and fighting disease and ignorance—I repeat, this 10-year total—is small compared to United States annual expenditures for defense.

The President's 1957 budget calls for $42.4 billion for protection. This covers the Army, the Navy, the Air Force, expenditures for atomic energy, foreign aid, defense production expansion and related programs. I am in favor of these appropriations. I would not cut our defense a single cent. The comparison I am making is useful in the development of adequate perspectives.

To achieve a peaceful world, we must have programs in addition to military defense. Another interesting comparison is the fact that the sum total of the cost of the United Nations agencies to the United States over 10 years is less than what United States citizens voluntarily spent in 1 month in 1954 on recreation alone. One can well ask whether this is too much to pay for one of our insurance policies against the outbreak of another world war.

EVALUATION OF THE UNITED NATIONS SYSTEM

Why is it, then, that we continue to hear so much criticism of the cost of the United Nations? In one sense I suppose it can be said to be human nature. What man or woman here present isn't aware of a husband's continual complaint about all the money being spent on the food budget even though we men expect ample meals and relish good cooking. But in a deeper sense, the criticism must be regarded as the surface manifestation of the misconceptions, doubts, and antagonisms surrounding the fact of United States participation in international organizations. It also reflects honest and somewhat misguided disagreement with the programs and policies of these organizations. All of this is to be expected in a free and democratic society.

It does, however, place an enormous responsibility on the people who are in such a position to become well acquainted with the workings of the United Nations and its specialized agencies. We must be sure that there are adequate safeguards of United States interests, particularly in matters of expenditures. It is especially incumbent on us to explain why and how these particular mechanisms are important instrumentalities by which governments can contribute to the building of a peaceful world. We need to tell the story of what these agencies are actively doing to combat disease, poverty, hunger, and illiteracy.

In emphasizing our special responsibility for interpretation, I do not suggest blind advocacy. On the contrary, I would say that the exercise of this responsibility carries with it an obligation to appreciate the limitations as well as the possibilities of these particular instrumentalities, to acknowledge and help correct the mistakes as well as to applaud the successes. For this reason I believe the House Foreign Affairs Subcommittee on International Organizations and Movements, of which I am a member, will be rendering a valuable service to the cause of the United Nations Specialized Agencies and United States participation therein when it completes its present hearings and study, started on February 20 and designed to provide an evaluation of the importance of the work of these agencies to the United States.

UNITED STATES LEADERSHIP IN UNITED NATIONS AND SPECIALIZED AGENCIES

Returning now to my stated purpose at the outset of this speech, I believe you will agree that it can be fairly concluded that the United Nations and its specialized agencies are well worth their present cost and more, if it becomes necessary. They afford a quicker and less expensive way of handling complex matters which arise in diplomatic relations today. They provide an avenue through which the rising expectations and demands of rapidly developing peoples can be channeled and met in a peaceful, evolutionary, and cooperative manner. They help governments to develop the methods and habit of cooperation and of working toward economic goals by democratic methods.

All of the above would be compelling reasons for United States participation even if there were no aggressive challenge from the Soviet Union. With this challenge, the United Nations and specialized agencies take on added significance for the United States. They provide a forum of open and observable competition which all the world can and does watch closely. This affords us a unique opportunity to disclose the diabolical nature of international communism. The record shows that, to date, we have nothing to fear and have made the most of the opportunity.

The free world countries by overwhelming majorities have outvoted the Soviet bloc on all important matters which have been at issue between us. As the result of the Soviet Union's recent dramatic shift in tactics, however, we face a new challenge. In the words of warning issues by the United States delegation of which I was a member, "The present period in history may one day be recognized as a major turning point in the struggle between communism and freedom. It appears to be clearly a shift in the cold war, in which economic and social problems have moved to the forefront."

The maintenance of United States leadership in the United Nations and the specialized agencies becomes more important now than ever before. The United Nations system provides for effective machinery to meet the task which is ahead and which has been characterized by the President, in his recent state of the Union message, as the necessity of waging the peace with all the tools and ideas and means at hand. The President in his message stated, "In the pursuit of our national purposes, we have been steadfast in our support of the United Nations, now entering its second decade with a wider membership and ever increasing influence and usefulness."

The United States of America finds itself in the high position of world leadership. We are leading the free world in one of the greatest struggles to make certain the continuation of freedom that has ever engaged the attention of mankind. We must exercise this leadership in various fields: in the economic field, as was emphasized by the United States delegation to the 10th General Assembly; in the military, as is so eloquently portrayed by the suggested appropriations for defense in the President's budget for the next fiscal year; in the field of international organizations, which I have been discussing today; and in the spiritual field, since at the heart of our free system and our free civilization are the noblest and highest ideals to which the human spirit is capable of aspiring.

What a tremendous opportunity stretches before us. An opportunity to combat hunger, disease, illiteracy and poverty through the big four of the specialized agencies of the United Nations as well as through United Nations technical assistance and our own bilateral programs. We have an opportunity to continue to exercise ever greater political leadership in the general assembly and the various organs of the United Nations. By fully grasping this opportunity, the Republic of the United States will be able to make an imperishable contribution in this worldwide struggle to ensure the continuation of free civilization. Never has a nation had a greater opportunity to make its influence and power felt for the well being and happiness of all mankind. Destiny has designated this Republic as the leader of the free world in this global encounter. Inspired and impelled by the noble ideals that has made us what we are today, we cannot and we will not fail.

Let's Learn To Live With Plenty

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. ROOSEVELT. Mr. Speaker, the author of the treatise which is reprinted below is one of the outstanding Americans of today. Murray D. Lincoln is not only president of CARE—Cooperative for American Remittances to Everywhere—but he is a trustee of the National Planning Association and of the International Cooperative Alliance. From 1934 to 1942 he was a member of the board of directors of the American Farm Bureau Federation. In 1943 he was a delegate to the first United Nations meeting on food and agriculture and has been considered an expert on agricultural problems of various kinds. He has served his country on many presidential committees, notably rural credit.

The treatise follows:

LET'S LEARN TO LIVE WITH PLENTY

(Statement by Murray D. Lincoln, president, the Cooperative League of the United States America, before the Joint Committee on the Economic Report, in Washington, February 9, 1956)

That part of the President's Economic Report having to do with the problems of agriculture seems to me to be factual and perceptive. The President says, "It is imperative that we strengthen farm programs on the basis of a realistic appraisal of the present situation." With this I heartily agree. I also agree that "the first and most pressing problem requiring the attention of Congress is the continued decline of agricultural income." I think further that the report is right, and significantly so, in reminding us that part of our present problem of surpluses derives from the stimulation agriculture was given during the last two world wars.

I have an uncomfortable feeling about the present situation. It reminds me too much of what I went through during the twenties as secretary of the Ohio Farm Bureau. I saw then, as I see now, the steady decline of farm income while other incomes stayed high or went higher. I listened then to the argument that because farmers represented a relatively small part of our population it didn't make too much difference what happened to agriculture. Indeed, the popular notion was that a decline in our economy was impossible. You gentlemen, I'm sure, remember as I do what President Coolidge said on the very eve of our greatest depression: "The country can regard the present with satisfaction and the future with optimism." Well, we know now that President Coolidge was wrong. We know now that what was happening to agriculture in the twenties was only a forerunner of what was to happen to our whole economy in the thirties.

To me, too much of what is happening today has the look and the sound of where I came in 30-odd years ago. And in all

sincerity I say that unless we find the answer to today's farm problem now, our whole economy will again be depressed as it was in the thirties. I am afraid the process may already have started.

WAR AND FARM PROSPERITY

Reviewing my experience as it relates to farm problems is not always pleasant. For these problems not only seem to suggest impending economic depression. They're also associated in my mind with something worse, and that is war. From the history of this century, I can't escape the impression that the farmer is really prosperous only just before, during, and just after a war. Other folks may enjoy prosperity in peacetime. But not the farmer.

This is something I find hard to take. I have to accept the record, but I still can't believe what the record seems to show—that we must have war if the farmer is to prosper. War is no solution, and it never has been. Furthermore, it seems obvious now, at this critical point in human history, that civilization cannot withstand another war. Now, it seems to me, we've got to find our solutions where they really belong, in a world at peace.

The President's report correctly attributes part of our current agricultural distress to wartime speedups in production. Logically, then, part of the adjustment we are now trying to work out should be charged to the cost of war—just as we've charged up the costs of reconversion in industry.

The nature of the times also demands that the cost of developing and keeping our agricultural plant in shape for emergencies be borne by the entire economy, just as the whole economy stands the cost of building airplanes and guided missiles and maintaining airbases around the world and all the other things we have to do to keep our military prepared. I make a point of this because too often we hear it said that what farmers ask for is unreasonable. I have particularly in mind the recent article in Harper's magazine—now very much in evidence in the CONGRESSIONAL RECORD—entitled "The Country Slickers Take Us Again."

TIME FOR AN ABOUT-FACE

With this much, I think the President's report and I are in substantial agreement. But when it comes to the solutions proposed in the report, and with what they imply, I'm afraid I must take exceptions. I say emphatically that we will never find a way out of our dilemma by going down the road we're on. I respect the motives and the efforts of the many people, both in Government and out, who have worked on the programs now in use. At the same time, I believe we need desperately to about-face. Let me explain why.

I cannot accept the premise that our vast surpluses are an unmitigated evil. On the contrary, I think that the ability of this country to produce an abundance of food and fiber is one of our most priceles asets. Our unique contribution to western civilization has been the discovery that, through the organization of science, industry, and resources, a relatively small number of people on farms can produce enough food and fiber to supply an entire population. It is this that has brought us the highest living standard in the world. Our problem is not that we have learned to produce too much, but that we haven't yet found constructive ways to use what we produce.

As I see it, "about-face" involves finding ways and means by which we can literally shift our entire economy—its procedures, programs, and policies—from those based on scarcities to those that are based on plenty. In other words, we need to learn to live with plenty—something that no people of any country has ever been required to do.

Living with plenty means we have to do the opposite of much that we do now. Now we plan not to use our resources. That's what we did when we killed pigs and plowed up cotton and wheat. That, essentially, is what is now planned in the soil bank; it adds up to not using our acres. But to live realistically with plenty takes an opposite course, a course that would have us use all our resources intelligently, with the goal of satisfying all the real needs and desires of people everywhere.

SCARCITY DEEPLY INGRAINED

Planning for living with plenty will be most difficult. Scarcity devices are deeply embedded in the warp and woof of our economy. Every economic segment uses them; business with its monopolies, its fair trade laws, its tariffs, its trade agreements openly and not so openly arrived at; labor with its featherbedding, its closed shop, its limits on workers' productivity; and agriculture with all the devices just mentioned, and more too. Many of these devices of scarcity have been written into laws. And granted, up to now, in the years of scarcity, some of them have been justified. Many believe they are still needed. I don't. I believe, instead, that the age of abundance is here.

For the first time in history, we stand on the threshold of plenty. We now know that abundance is possible if we can solve the key problem—how to develop it on all fronts and distribute it democratically so all get its benefits.

The sole purpose of production is consumption. Food is produced by farmers; it is consumed by everyone. The purpose of production is perverted when farmers grow for warehouses and not for consumption. We must stop producing food for the Government loan instead of for the housewife. We must work out ways and means by which we can get all people all the kinds and amounts of food they need and want. Throughout the world people reach first for the bread box. They reach for the bread box before they reach for the bullet box, or even the ballot box.

FOOD IS THE BASE

Food figures in almost every economic and social problem. It's the most important trade commodity. It's of prime importance in determining the health of a people. Obviously, it's a most important matter of national policy.

Because this is true, I believe that only as we discover and work out a satisfactory national food policy which starts with the needs of people will we ever find a satisfactory answer to our farm problem.

This brings me to my first specific suggestion, something the President's report seems to have omitted. The report does say, "The decline in gross farm income has been accompanied by an even sharper decline in net income." But to me, as significant as this, if not more so, is the unmentioned fact that farmers today are getting a smaller percentage of the consumer's food dollar than at any time since 1940. And here is where I believe we ought to put up a sign: "Stop, look, look into."

In 1955 the farmer received less than 41 cents of each dollar spent for food by the consumer. A further decrease is in sight for this year. Before we adopt more scarcity devices, or at least while we are adopting them, why don't we see what might be done to lower the cost of things which farmers buy and which go into his cost of production? At the same time, why don't we see if we can't cut the cost of distribution so consumers will pay less for food?

This twilight zone, the difference between what farmers get and what consumers pay, cannot be explained away by saying that 59 cents of every dollar spent for food goes to satisfy housewives' demands for services and packaging.

Several times bills have been introduced into Congress for an investigation of this dark corner. Apparently there has always been too much opposition to get the investigation authorized. Yet it's self-evident that all subsidies take money from all taxpayers and this fact has often made me wonder why, with all that wide participation, no farm program enacted has ever disturbed the middleman's take, no matter how big it gets.

Consumers spend $75 billion for domestically produced food. Out of this farmers get less than 20 percent net, while the processing and distributing industries—the middlemen—take 60 percent, or $45 billion. If what we are looking for is (a) to boost the low level of farm incomes and (b) to get more and better food to more people at lower prices, we ought to find out if savings in this distribution pattern could not help accomplish both.

WHAT THE FARMER PAYS

And if we are trying to find out where food costs can be cut for the benefit of farmers and consumers, let's have a hard look to see what the farmer does with the money he gets for the food he sells. Of the $30 billion he receives, he spends approximately $16 billion on machinery, gasoline, fertilizer and other supplies. Are the prices he pays for these necessities out of line? Everybody knows they are high and that they have been rising. If they are too high—because of monopolies, price-rigging or other such scarcity devices—the farmer is not only paying the piper but the consumer is carrying an extra price load because these costs are pyramided straight through from the implement factory to the neighborhood supermarket.

It adds up—when costs of raw materials for farming are high, costs of food cannot be low. If there is monopoly or inefficiency among middlemen, consumers must suffer. A good many people—living alone or in families—are priced out of the market for the foods they want and need. One family of every 11 in our country has an income of $1,000 per year or less. Eight million families, 1 in every 5, get $2,000 or under. To this group and to the 18 million families in the $2,000 to $5,000 bracket, high food prices are obvious deterrents to increased food consumption.

For the good of the farmer who can so ill afford to have his diminishing income chiseled away further; for the good of the consumer, who buys less than she wants or needs because prices are high; for the good of all of us, as taxpayers, who in the last analysis pay the bills for farm subsidies; for the good of the entire economy which is in danger of being dragged down in the morass of farm depression—I propose that Congress immediately undertake a full-scale investigation of the true situation among food middlemen and farm suppliers.

Let's get the facts and let those facts guide us in shaping a national food policy. Remember that the suppliers and the middlemen are as much in the business of food production as are the farmers. All must be included in a single policy.

The farmer desperately needs benefits right now on the income side. There's no doubt about that. His condition reminds me of an experience of mine of many years ago. My first job was as an agricultural county agent back in Connecticut. I remember asking one of the first farmers I met back there what his source of income was. He said, "Young man, we don't have a source of income, we just live on lack of expense."

That's not so funny when you see what is happening right around us. Lots of farmers are doing just that—living on lack of expense. If you want to see how that works, take a small farm worth $15,000. One of my relatives owns such a farm, and I know what happens to him. He owns the farm outright. If he didn't, he'd be paying $600

interest on a mortgage each year. He's living on that item of lack of expense. To keep up his place, with needed repairs and improvements, he should spend at least the same amount—$600. But he doesn't. He can't afford to. Instead he lives on that item of lack of expense, too.

So it goes. And as he lives on lack of expense, this farmer becomes less and less a customer. He's headed for disaster because he is in the same position as the small grocery man whose family gets along by eating the groceries off his shelves.

PERPETUAL MOTION DOWNWARDS

The farmer can't solve his problem by living on lack of expense, so he tries to get his income up in other ways. Like almost any other farmer, I know firsthand about some of those other ways. When the price of milk dropped in 1954, I felt it pretty quick. To make up for that reduction in income I put on more cows and deferred some necessary expenditures. What else can a farmer do but produce more of the same crop to try to get the same amount of money as before? It's perpetual motion downwards and it always ends the same way—with breadlines knee deep in wheat.

What to do? The Government definitely has a part to play—an important part, but not everything. With Government help, farmers can do much to help themselves.

In saying this I don't mean to say that farmers have not been trying to help themselves. I think that farmers have done as much, if not more, proportionately, than other groups in our society. But they can do much more. They can do it through cooperatives.

Coperatives are designed to operate at the exact cost of the service they are set up to provide. Were cooperatives to function in an integrated structure from the source of machinery and feed through delivery of the processed food to the consumer, price spreads would shrink, farmers' income would improve and consumer purchasing power would gain.

That kind of cooperative structure would embrace more than farmers alone; it would also include the expanding group of part-time farmers, as well as workers in the mines, mills, factories, warehouses and retail stores, along with businessmen and consumers—to the benefit of all. Here, I believe, is one way to a true solution of our dilemma, and it's a solution that is already past the pilot plant stage. Groups of farmers alone, as well as farmers and consumers together, have in many places actually demonstrated that through cooperatives they can increase income for farmers while they lower food prices for consumers.

I have just seen a report of a cooperative in Waukegan, Ill. It's not a new venture. It has been in business 34 years, so it's past the experimental stage. This cooperative belongs to 8,000 consumers who buy from it and to the 60 farmers who supply it with milk. The farmers, because they are small in number, have proportionately a larger percentage on the board. Both producers and consumers share in the savings. The farmers get a 1-percent premium on their annual milk sales (about $1 million last year) when the consumers get a 3-percent patronage refund on across-the-board purchases. Now that's a tiny cooperative, but it shows what can be done. Carried over on the same basis to the $75 billion of food sales, a 3-percent patronage refund to consumers would put two and a quarter added billion dollars in the pockets of consumers. And 1 percent more for farmers would give them $300 million on their $30 billion gross of food sales, or an additional 3 percent more on net income.

What I am talking about in Waukegan is a combination only of farmers and consumers. What is required are cooperatives in each stage from the production of machinery and feed through the delivery of processed food for the consumers. If as much as 5 percent of $2¼ billion were to be chopped off the cost of processing and distribution while 5 percent more, or $800 million, were to be taken off the cost of farm supplies, the two items added together would equal 22 percent of what farmers now get for all their labor and all their use of the land.

TRUE FREE ENTERPRISE

I understand free enterprise to mean that people, and not government, do most of the job of creating and moving the goods and services in this economy. That's what I'm talking about. In this case of agriculture, the cooperative is the machinery by wich the goods and services can be most efficiently moved into use. Because the co-op is owned by its users it is machinery that functions for them as such—without profit. But the savings created by this nonprofit machinery go to the owner-users and become their profit in the form of increased income. This, I submit, is in the best tradition of American individualism and free enterprise.

It is of paramount importance, of course, that we all lend our best efforts to maintain a free democratic society. Voluntary effort, such as that of cooperatives, goes out the window with the coming of any form of statism. After conferring recently with the CARE mission chiefs and others stationed abroad, I can't help but be impressed with the need to make a free society work in the interest of all the people. There are millions in other countries who apparently sincerely believe that, because of the complexity of the present-day world, people cannot solve their problems through the democratic process. These are reasonjs why I urge you to consider the value of cooperatives in this crisis.

PROVING VALUE BY TEST

Most of what I say here about cooperatives comes out of my own experience. During my 28-year tenure as executive secretary of the Ohio Farm Bureau, our first big test came in the aftermath of the depression of 1920–21. One development in these early twenties was the cooperative purchasing of fertilizer. Later, similar developments in feed, petroleum and farm supplies brought home to Ohio farmers the economic value of the cooperative idea. Over the years it saved them many millions of dollars. And when, by 1926, farmers faced the problem of the high cost of auto insurance on the farm, they were again ready to tackle it the cooperative way.

We knew nothing about the insurance business then, but we did know that farmers needed, wanted, and deserved farm rates instead of city rates. We went ahead. Soon we were offering people auto insurance at a saving of up to 40 percent. In the first 9 months of that depression year, 1932, our insurance business showed a net gain of 33 percent. And, as some of you know, we now have over 2 million policyholders and assets of approximately one-quarter of a billion dollars.

One of the best examples of how cooperative action—with the help of Government—brought improvement in the farmers' standard of living is the story of our Ohio rural electric cooperatives. Prior to 1935, only 18 percent of the farmers had electricity. The utility companies did not believe farmers would ever use enough power to warrant building lines. We went to work on this with the REA and today the figure approaches 100 percent. Power rates all over the State have dropped as a consequence.

Ohio has no monopoly on cooperatives. There are thousands, large and small, helping farmers and consumers all across the United States. One of the most interesting new developments is in New York State where the farmer-members of the National Grape Cooperative Association are now acquiring ownership of the facilities of the world famous Welch Grape Juice Co. The transfer of ownership will take place next year under an agreement signed in 1952. The grape growers will then cooperatively own the great Welch plant. With expanded membership and rising sales, the income and living standards of these farmers will increase substantially. As Welch's president points out, "This will enable more people to enjoy a real participation in ownership and profits. It is free enterprise at its finest." And in my opinion, this transition to cooperative ownership now taking place in New York State sets a pattern capable of widespread application. I favor this method because I strongly adhere to the principle that the people who produce a product ought to participate in control and ownership of the company whose existence is made possible by that product.

AN AMERICAN SOLUTION

This way—through cooperatives—of solving the food problem has significance for all Americans. It is in cooperatives that you find equality and full mutual confidence in control. It is in cooperatives that you find an absence of compulsion of minorities. There is no other form of legal institution that a large body of people can use that is so constituted that control cannot be diverted from the purpose of benefiting a lot of people to the benefiting of a few. The cooperative even protects people against themselves, because of the legal provision by which they must of necessity distribute earnings, not on the basis of stock ownership, but on the use of the institution. This makes for more economic benefit to the individual member, and at the same time strengthens the democratic process.

If anybody else has an idea for a better kind of legal institution that meets all these qualifications, I wish he'd trot it out. I'd be glad to give him my support. I don't present cooperation as a cure-all; I'm concerned with the future of democracy and our economy and I feel we should pool our efforts and join in determining what can be best for the majority of the people, not what contributes to our own selfish individual or group interest.

I have tried to outline here the distinguishing characteristics of what voluntary cooperatives do. There are other things that cooperatives don't do that are just as important. They do not, for example, become classbound or statebound, and this avoids—if cooperatives are properly developed—the danger of rule by Communist collectivism, feudal dictatorship or statism of any kind.

Cooperatives merit Government help because the goals of cooperatives are also important national goals. Believing this, I'd like to propose the establishment of a Government auxiliary agency such as REA or the old RFC or the present FHA with its guaranteed loans. This auxiliary would promote and assist in the financing and setting up of cooperatives for groups of Americans who desire to undertake cooperative action in food or other fields. It would make credit available on a perfectly normal business basis. This is necessary because credit in adequate amounts is not available from existing financial institutions, not even from the farm credit setup.

EMERGENCY MEASURES

The present crisis calls for emergency action:

Emergency loans should be made available to save farm homes in danger of loss by foreclosure. Many younger farmers, especially GI's, are in danger of losing their homes this year.

A special program to modernize or replace farm homes is needed. Farmers, as I pointed out earlier, cannot set aside the money needed for this and present Federal housing aid discriminates against farm homes, which lag far behind city housing.

Understandably, farmers today have little money available for capital investment. Yet they must make replacements of equipment if they are to survive. On replacements and on purchases of necessary new equipment, farmers should be given the same deal that industry enjoys—the opportunity to amortize the price of the equipment over its expected life.

Some parts of the Nation—such as the Great Plains—are in greater need than others. They need special treatment—not only, however, of a kind to alleviate their distress. Importantly, they need it also in the form of incentives which would encourage many of them to shift their land out of wheat into more needed crops or into conservation reserves. This same situation exists in some cotton areas. The President's recommended soil bank will be of temporary help in this regard. The Government might also make a contribution by taking out of production the millions of acres which it owns and has leased to farm operators or to stockmen. I strongly recommend that this be done.

Distress exists in some degree over all rural America. Federal action to provide technical training for farm youth and to encourage local industries is essential. There must also be help by which farmers get monetary assistance if they wish to enter new lines of work.

But not all farmers do badly—in fact some get an inordinate amount of Government help—and some get big money growing crops not for consumption but exclusively for sale to the Government. We need more equitable distribution of price supports and other income benefits. In 1953, 1.9 percent of farmers received 25 percent of price support income benefits; 7.1 percent also got 25 percent; the remaining 91 percent got 50 percent. In California, in 1953, the five largest cotton growers got an average of $649,335. Certainly that proves the need for legislation which would put a dollar limit on the amount of Government benefits going to any one farmer or farming unit. This is in line with the sound recommendation of the President's farm message.

Again in line with the message—relieving farmers from paying gasoline and sales tax would also help conserve the farmer's income.

In making a transition to a more rational system we cannot pull out the only true price underpinning which the farmer has—price supports. We can, however, legislate a changeover in the price support pattern so that consumers are not penalized by the fact that farmers continue to get benefits.

DISPOSING SURPLUSES

The overhang of surpluses must be reduced—as we all know. However, I am not sure that anyone knows just how big surpluses are or what they consist of. In any discussion of surplus we ought to deduct from consideration those carryover stocks which are necessary as reserves to maintain an ever-normal national cupboard. Only when that deduction is made will we know the size of our surplus.

No American should lack a good diet at the same time that we have farm surpluses, but the cost of that food should be charged to national welfare, not agriculture. A food stamp plan of the kind used in the late thirties is need and should now be enacted. Incidentally, the food stamp plan will work internationally, because it does not interfere with commercial markets or with producers in other countries. It is used only to feed those who could not buy anyway. We should help other countries install their own food stamp plans.

Another form of surplus disposal which meets both producer and consumer goals might be through the subsidized new uses for surplus foods for strictly commercial purposes. This subsidy is comparable to aiding an infant industry by tariff protection, which is an old familiar subject here in Congress. The idea is that the infant industry should eventually grow up and become self-supporting.

The utilization of skim milk provides one example. Bread is a cheap food but one that is incomplete in the nutritional sense. Addition of skim milk powder to a staple food like bread is a convenient means of getting high quality animal protein into the diets of the ill-fed. Up to 6 percent of skim milk powder can be added to bread dough without altering the baking process. Even if only 1 percent of skim milk powder is added, as much as a third of the total United States surplus could be consumed in India alone. I favor research into other such methods for use at home and abroad.

We ought also to expand to the utmost—for the good of our people, young and old—school-lunch programs and nutritional aid to folks in hospitals and other institutions. I think other States and perhaps the Federal Government might adopt direct distribution of surplus foods to people on relief as is now done in Pennsylvania and is just being introduced in New York.

Distribution by charitable groups can be increased to the benefit not only of the hungry inside this country but the hungry everywhere. As CARE and religious and other groups have proved, distribution of surplus for charitable purposes has international as well as national application.

The most important of the ways to dispose of our surplus internationally is through the use of the United Nations. By using the U. N. we at once gain friends and avoid charges of dumping by producers in the recipient and other exporting countries.

FOOD AS CAPITAL

Arrangements which push immediate disposal of foodstuffs under conditions which also promote economic development are opening up as most important. This is using food as capital and is twice blessed; by moving surpluses into immediate consumption and by contributing at the same time to the creation of stronger and wider markets in the future. We should, I believe, encourage this whether done bilaterally or multilaterally. We should also encourage food-as-capital dispositions through private nonprofit agencies to nonprofit groups in hungry lands.

The picture of a cotton producer wanting for bread in one country while a wheat grower in another country goes shirtless dramatizes the present situation. Exchange of goods would help solve both the problems, but to effect that exchange requires a climate of international trade permitting free movement.

I know that barter alone will not solve the trade problem, since free movement of food and fiber is restricted by action of many individual governments. The United States has placed import quotas on certain dairy products, cotton, wheat, and feed grains. Wherever possible we should let our bars down in return for getting other countries who have blocked United States trade in food and fibers to drop their quantitative import controls and currency exchange restrictions. Anything that does not hurt other countries which we can do to increase trade ought now to be done, including the acceptance of foreign currencies for surplus.

This foreign situation is inevitably linked with the total food and farm problem. It seems to me that the only truly effective way to meet the threat of communism in the underdeveloped countries is to help the people themselves develop what we call a free society, organizing it as they like so that it produces the kind of benefits they want. I don't think we can ever impose our particular brand of society on them, nor do I think we should. All we should do is so conduct ourselves that they are helped to see the benefits of the good things we do and to avoid the errors we have made.

That's why I think we should seek ways and means of using our surpluses in such a way as to help hungry countries get enough food so that more of their people can come out of agriculture and into industry. That will get them on the way to producing the same kind of abundance that over the years we have achieved. I think we can use food as capital. Not so much to give it to them as to lend it to them, just as we have done amongst ourselves and in many areas of the world. We need to do much more along this line and not to tie these things to military requirements.

PARITY INSURANCE

Wherever we pick up this problem of surpluses—abroad or at home—we find it thorny and difficult. Permanent solutions are hard to agree on and take long to institute. Temporary solutions have flaws.

In full understanding of this I want to make a suggestion which, it seems to me, warrants your attention. I would like to propose a program of parity insurance.

The plan would work like this. At the beginning of each crop year the farmer would be offered an insurance policy by the Department of Agriculture which would assure him the difference between the free market price for his products and a definite parity price. Actuarial principles would be applied: The greater the need for the product, the lower the insurance premium; the greater the risk of oversupply, the higher the premium. In this way the output for each commodity would be kept in line with consumer needs. Commodities would go into the free market, benefiting the consumer through lower prices and reducing the necessity for surplus storage.

But the ultimate answer to the so-called farm problem lies in intelligent planning and in an ever-expanding economy. Every rise in domestic purchasing power gets more food used. For this reason I place the highest value on full-employment policies, social-security, old-age and welfare programs. These, along with the growth of self-help organizations such as cooperatives, will raise farm income by putting a floor under purchasing power.

The prospects of some crops, wheat and cotton particularly, are permanently impaired. The farmer who continues to place his main reliance on these displaced farm products is always in danger of becoming a displaced farmer. Farm policies which encourage growing these or other crops for warehouses are failing. Called for now is an accent on policies which, while they protect the farmer's rights to a fair share of the national income, also result in getting more food to more people at lower prices. Living with plenty means displacing poverty and not displacing farmers.

Race Relations and the Housing and Home Finance Agency

EXTENSION OF REMARKS

OF

HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1956

Mr. DIGGS. Mr. Speaker, under unanimous consent I include in the RECORD the following article from the October 6, 1955, issue of the Reporter, concerning the ouster of Dr. Frank S. Horne and Mrs. Corienne R. Morrow from the Housing and Home Finance Agency and

what the writer points out to be the relationship between these ousters and the deterioration in the policies of the agency during the present administration with respect to providing adequate and nondiscriminatory housing for minority groups under the public housing program. The case of Dr. Horne and Mrs. Morrow further indicates the blow which has been and is being struck in undermining the merit system with respect to persons seeking a career in the civil service.

The article follows:

SEGREGATION HOUSING AND THE HORNE CASE

(By Charles Abrams)

When Frank S. Horne, a Government expert on racial relations, was fired last July, Federal Housing Administrator Albert M. Cole blamed it all on "budgetary considerations." But Cole has not concealed the fact that the orders to fire Horne and his assistant, another Negro named Corienne R. Morrow, came from the Republican National Committee. This admission and the strange facts surrounding the dismissal suggests that it may be the culminating step in the Republican Party's effort to scuttle the racial relations service and many of the gains it has made in its long fight against racial discrimination in American neighborhoods.

Horne's ideas have been a target of the real estate lobby ever since 1933, when he was hired by Nathan Straus to help set up the Racial Relations Service for the Federal public housing program. The great Negro migration of the 1920's had produced a nationwide campaign to segregate minorities in American neighborhoods. Dozens of real estate textbooks and professional magazines were urging the compulsory exclusion of minorities. The descendants of English, Germans, Scots, Irish, and Scandinavians were rated the best neighbors; northern Italians, Czechs, Poles, Lithuanians, and Greeks were somewhat questionable; and Russian Jews, southern Italians, Negroes, and Mexicans were considered undesirable. Hundreds of civic associations were organized to keep "intruders" out. Racial covenants against Negroes and frequently against Jews and aliens honeycombed whole neighborhoods and often whole cities. The powerful National Association of Real Estate Boards bound its membership to the cause through a "code of ethics," and local realty groups importuned the Nation to keep its better neighborhoods "100 percent pure" white. Not only had the courts of 15 States ruled restrictive covenants to be legal and agreed to enforce them by sheriff's writ, but even the Supreme Court had given the covenant its implicit blessing in 1926.

ADVERSE INFLUENCES

When the Roosevelt administration took office and set up its various housing agencies in an effort to prime an economic recovery, two schools of thought emerged. The Federal Housing Administration and the Home Loan Bank System were staffed largely by experts from the private real-estate field who favored the racial-exclusion theory. They succeeded in having the Federal Government adopt the discriminatory policies of the real-setate market and implement them with Federal mortgage insurance, aid, and prestige. Official Government manuals from 1935 to about 1949 warned against "adverse influences" such as smoke, odor, fog, and "inharmonious racial or nationality groups." "Appeal," according to the FHA, is measured by "social class". It warned against "lower class occupancy" or "a lower level of society" and went so far as to recommend the use of restrictive covenants and setting up barriers such as high-speed traffic arteries to keep the "lower levels" in their places. This was giving Federal sanction to race discrimination, but it seemed to many the accepted and the "practical" way of dealing with the housing problem, and neither political party made an issue of it.

But the Racial Relations Service under Frank S. Horne strove to introduce a more enlightened attitude into the public-housing program. Horne assembled and trained a staff of experts to help local housing authorities with their racial problems. Before long, 33,000 Negroes were living in projects with white neighbors next door or across the hall.

With the consolidation of the housing agencies after the Second World War, the Racial Relations Service became part of the Housing and Home Finance Agency. At first it could make little headway against powerful forces both inside and outside the Government that favored discrimination in housing. But by the end of the war public opinion had changed materially. Governmentally sponsored discrimination seemed incongruous in face of the United Nations Charter, the Nazi trials, the Act of Chapultepec, and other postwar pronouncements on what we had hoped we had won in the war. President Truman's Commission on Higher Education demanded the repeal of segregation laws, and the President's Committee on Civil Rights not only condemned segregation in housing but urged the elimination of all segregation "based on race, color, creed, or national origin, from American life."

In the hopeful postwar atmosphere there were many gains. An investigation into segregation in the Capital was followed by the Government's intervening on the side of Negroes in a legal fight against restrictive covenants. The Supreme Court forbade the enforcement of such covenants, and FHA officials grudgingly agreed not to insure mortgages on covenanted property.

The Supreme Court's unanimous condemnation of school segregation in 1954 after President Eisenhower had taken office seemed to invite a bipartisan agreement that racial discrimination was to be rooted out of American life entirely. The climate of the decade authorized it, and American moral leadership in the world impelled it. On October 25, 1952, in fact, it had appeared that candidate Eisenhower would rise to the challenge when he told an audience in Harlem: "Wherever the Federal Government has responsibility, wherever it collects taxes from you to spend money, whether it be in a contract for recreational facilities, or anything else that it does for a citizen of the United States, there will be no discrimination as long as I can help it in private or public life based upon such things as color or creed or religion—never." A similar pronouncement was made by Housing Administrator Cole on October 12, 1953: "I see no sense in maintaining color cartels in the business of housing. * * * Insofar as Federal housing operations are concerned * * * discrimination because of race is contrary to public policy and * * * equal treatment of all citizens must be the settled policy of the Government." A year later he confirmed that minority families "must rapidly be brought into the free market."

During this period it seemed certain that Horne and his racial relations service would have considerable and increasing influence on the Government housing program. But in 1953, at the same time Cole was promising to end housing discrimination, he suddenly replaced Horne with a Negro real-estate operator named Joseph R. Ray, who was not known as a firebrand. When a storm of protest blew up in which Cole was accused of yielding to patronage pressures and undermining the racial relations service, Cole made Horne his special assistant to develop "new approaches" and reiterated his stand against discrimination.

But the men who molded Republican strategy were beginning to see the racial issue in a different light. They had watered down the civil-rights plank of the 1952 platform for what seemed to them solid political reasons. President Truman's strong position on civil rights had made the South open territory for republicanism. For decades, moreover, there has been a marked tendency for traditionally Republican Negroes to leave the rural South and show up in the urban North as Democratic voters. And although the Negro influx has increased Democratic strength in the overcrowded sections of Northern cities, that increase is being offset by new Republican strength in the all-white suburbs, on the borders of which Negroes are pressing for living space. In some areas—Dearborn, Mich., for example—mayors have won elections by fighting Negro "intrusion" openly. Devious zoning ordinances and other devices for exclusion reflect the new suburban sentiment. Finally, building and real-estate interests, working through the Housing Agency and the President's advisory committee on housing, have insisted that Horne's ideas would hamper the building boom.

The Supreme Court's decision in 1955 implementing its prior holding against school segregation was all very well, but the politicians decided to play it down, convinced, with 1956 approaching, that the time had come to go slow.

GOING SLOW

On June 8, 1955, President Eisenhower condemned the use of antidiscrimination riders appended to National Guard, housing, and other appropriation measures as "clouding" the issue.

As if to support his chief's new line, Cole told a House committee on July 14 that the Government shouldn't "move too precipitously" in eliminating racial segregation from the Federal housing programs. Legislative proposals to make FHA nondiscriminatory were necessarily "vague and uncertain," he said, because local conditions vary.

In expressly barring segregation in schools, the Supreme Court has, by implication at least, banned it in all other publicly supported operations, but it has become quite clear that the Government has no more intention of supporting the Court's decision by administrative action than it wants the legislature to reinforce it by legislative action. A week after Cole enunciated the new policy he fired Horne and Mrs. Morrow.

Horne's demotion in 1953 could be ascribed to nothing more sinister than patronage considerations, but his discharge on July 22 of this year can only be considered part of a plan to scuttle the Racial Relations Service and all that it stood for. The job was undertaken about a year ago and has been carried out with methodical precision:

Ten official positions in the Service that had been assigned to FHA were removed from civil-service classification to make political appointments possible. The post of Racial Relations Officer for the important Northeastern area, vacated a year ago, has remained unfilled.

Only 3 of the 6 officials assigned to the Administrator's staff remain. One was stripped of his duties, and the other two, Dr. Horne and Mrs. Morrow, were fired.

Four of the five officials assigned to race relations and relocation duties in the urban renewal program have been told to forget the race-relations part of their jobs. The fifth was taken off the Director's staff and the board of review. New appointments to vacant posts have been postponed indefinitely.

Flimsy charges of disloyalty have been leveled at three key staff members. The charges were thrown out after hearings, but the members were suspended from work for months.

A. Maceo Smith, formerly national president of the Alpha Phi Alpha Fraternity and a board member of the National Association for the Advancement of Colored People, was asked to resign his job as FHA Racial Relations Adviser in Fort Worth, Tex., after his picture appeared in a Negro magazine as the winner of a commercial award. Lending his prestige to such purposes was called conduct unbecoming a Federal official. The charge was dropped, but a few weeks ago he was told to resign his directorship of the State NAACP or quit.

In sum, the function of the Racial Relations Service since Horne's separation from it has degenerated into that of official apologist for official acceptance of segregation.

As if to underline the connection between Horne's dismissal, the devastation of the Racial Relations Service, and the new policy on race relations, most of the gains that had been made during the years "Horne and his ideas" had some influence in the formulation of public policy have been erased in the last few months:

On February 7, 1955, the requirement that local housing authorities show that public-housing projects will make "equitable provision for eligible families of all races" and that tenants will be selected according to urgency of their need was shorn of its enforcement provisions. The housing needs of nonwhites, of course, are much more urgent than those of whites.

On March 8, 1955, a requirement that protected minority groups against the diminution of the overall housing supply in a community through demolition operations was deleted from the Public Housing Administration's Manual.

On April 11, 1955, the requirement that "substantially the same quality, service, facilities, and conveniences with respect to all standards and criteria" be provided to all races was also removed.

The urban renewal program, originally designed to increase the housing supply as well as to eliminate slums, has been steadily perverted into a device for getting rid of minorities. Capitalizing on the value of the phrase "slum clearance," the Administration has approved hardly any projects on vacant land that would increase the housing supply. Most of the approved projects call for the clearance of Negro settlements and those of Puerto Ricans and other minorities. Though capital subsidies are given to private builders, almost none of the new accommodations are available to the displaced minorities. A proposal by the Racial Relations advisers to limit demolition operations to areas where the evicted families could find adequate shelter within their means was rejected.

The public-housing program, which had provided additional accommodations for the overcrowded racial minorities and other low-income families by building on vacant land as well as on slum sites, has been curtailed and turned into a convenient tool for the private redevelopers. The redevelopers, who were required by law to relocate the displaced families, now count on the public-housing program to accept their evictees. Since only an insignificant fraction of those displaced can be accommodated by the small public-housing program, the practice has in fact produced a wholesale dislocation of nonwhites. The administration's answer to the "great migration" has been a great eviction.

On August 8, 1955, the requirement that local housing authorities guarantee no discrimination in the execution of contracts for utilities, services, and supplies was eliminated.

The promise that mortgage money from Federal sources would be made available to racial minorities under the much-vaunted Voluntary Mortgage Program has turned out to be a dead letter. At one point Cole called a meeting of the undercapitalized Negro insurance companies and other Negro financial institutions and exhorted them to take care of "their people."

A CHOICE TO BE MADE

In an attempt to quiet the protest that followed his dismissal of Horne, Cole offered him a specially created job as adviser on international housing, thereby admitting that "budgetary considerations" had nothing to do with it. (The 1956 appropriation for Cole's agency, incidentally, is nearly twice that of 1955.) Horne turned the offer down and has taken his case before the Civil Service Commission. Whatever the result may be, though, Horne is obviously through. And so is the Race Relations Service.

And yet perhaps Horne's dismissal has done at least some good in dispelling complacency about the Supreme Court's school decisions. The segregation that has been banned in schools may, in fact, now be achieved by blasting minorities out of their homes in the name of slum clearance and segregating them under the protection of public policy. In fact this process has already begun.

Horne's dismissal will also have served a useful purpose if it dramatizes the need for a racial-relations service that cannot be scuttled at the will of some politicians or debased into a convenient screen for publicly sanctioned bigotry in housing. To be effective, the service must be independent. It must be staffed with professional experts, not professional politicians. It must be assured of continuity, be permitted to work unhampered in the field, have official cooperation, and be voted adequate funds.

There should be similar supervision over every Federal department that dispenses Federal moneys. For as the credit and power of the Federal Government permeate ever-widening areas of the national economy, a choice must be made between subordinating the Government's higher public ethic to that of the marketplace and raising the ethic of the marketplace to that of the Constitution.

Juliette Gordon Low, Founder of the Girl Scouts of America

EXTENSION OF REMARKS

OF

HON. PRINCE H. PRESTON, JR.

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1956

Mr. PRESTON. Mr. Speaker, under leave to extend my remarks, I would like to insert in the RECORD a timely and informative article concerning the Girl Scouts of America, who, as you know, are this week celebrating their 44th birthday anniversary.

This article, which appeared in the Reader's Digest for March 1956, relates some interesting memories of the life of Juliette Gordon Low, an honored native of Savannah, Ga., who founded the Girl Scout movement in 1912. Interest in this timely article is heightened by the fact that it was written by the late Mrs. Low's nephew, Arthur Gordon, who is himself a distinguished author.

It is with a great deal of pleasure that I commend to you this piece on the founder of the Girl Scouts of America:

I REMEMBER AUNT DAISY

(By Arthur Gordon)

Ever since my Aunt Daisy turned up on a postage stamp, I've been worried about her. Once your picture is on a stamp, I've noticed, you're not a person any more, you're an institution. When Daisy could be bought for 3 cents, it put her in the same category with Clara Barton, Susan B. Anthony and Whistler's mother—all awfully solemn and awfully dead. I never thought she belonged there.

It's true that in 1912 she founded the Girl Scouts of America, a possibly stamp-worthy act. It's also true that sometime this year the Scouts will complete their restoration of her birthplace, our old house on Oglethorpe Avenue in Savannah, as a sort of living museum of scouting. This is an equally fine thing. What worries me is that, with all these honors, an increasingly visible halo will begin to encircle Daisy's memory, and people will cease to know what she was actually like.

This would be a pity, because she was like no one else on land or sea. I was only 14 when she died, but I can remember her as vividly as if she were still relieving our boredom by standing statuesquely on her venerable head with her skirts held firmly between her knees. By then she was already in her late fifty's, a compact little woman with iron-gray hair, warm brown eyes, a firm mouth and a very determined chin. Looking back, it seems to me now that she was always either roaring with laughter, often self-directed, or foaming with indignation about some injustice to man or beast.

She was christened Juliette Gordon, but from the beginning everybody called her Daisy. The salient facts are already known to millions of Girl Scouts. How she was born in Savannah on Halloween, 1860, and grew up in the Reconstruction Era with 3 sisters and 2 brothers (my father was the youngest). How she married a wealthy Englishman, William Low, and shortly afterward was rendered deaf by a series of ear infections. How finally, as a childless widow, she met Sir Robert Baden-Powell, founder of the Boy Scouts, and from him drew the ideas and inspiration that led to the founding of the Girl Scouts of America.

These are the facts, all right, but they give no idea of the color and excitement and confusion that always surrounded Daisy. She could ride, shoot, paint and act, was a good linguist, a fair poet, and a really talented sculptress. On the other hand, she couldn't spell, was vastly unpunctual (her favorite watch had only one hand) and her absent-mindedness could be fantastic. She was the only woman I ever heard of who sent out invitations for a large dance, then forgot all about it. That night she was found sitting in bed, gloomily sorting out bills and wondering if she was really hearing an orchestra downstairs. She was delighted to learn that she was.

Despite her deafness, the early years of Daisy's married life were happy ones in Victorian society. Daisy's high spirits and seething energy both pained and enchanted the British. Rudyard Kipling used to recall plaintively how she snatched him away from his port and cigar one night and made him go salmon-fishing in his evening clothes.

I can testify from my own experience that Daisy made an odd fishing companion. When I was about 10 and sensitive to public opinion, she came to take care of us children while our parents were away. When she discovered that I had a small rowboat (in which I practically lived), she insisted on going fishing with me. My contemporaries watched these expeditions spellbound, for in addition to wearing an enormous floppy hat and several thick veils, Dairy also brought along a hammer with which I was supposed to rap the fish smartly on the head as fast as they were caught to keep them from suffering. These experiments in euthanasia were soon the talk of the river. I was mightily relieved when my parents returned and relieved Aunt Daisy of her charge.

Daisy loved all animals, regardless of size, shape or condition, and was forever bringing home strays. One time she even appeared with a quite dead dog that she claimed was in a state of suspended animation, and tried to revive it with an electric vibrator. One cold night she got to worrying about a cow that inhabited a stable at the rear of our house. She took the guest-room blankets and, descending to the stable, pinned them tenderly around the astonished animal.

Although her deafness was a constant trial to her, Daisy could always joke about it. Once, listening to a speech of which she could not hear a word, she decided the speaker wasn't getting enough encouragement. So she applauded loud and long, and only discovered later that what she was cheering was a glowing eulogy of herself.

Daisy was full of natural vitality. Once, traveling in Egypt, she begged off from a sight-seeing trip, claiming that she had a headache. When the others got back they found that Daisy, assisted by five breathless Arabs, had made a record ascent of the Great Pyramid.

She still had plenty of this sort of energy left when, in 1912, at the age of 52, she returned to Savannah armed with an English Girl Guide handbook and a determination to bring scouting—or guiding as it was called then—to the girls of America.

At first no one took her seriously. She was deaf; she was middle-aged; she had never been involved in any large-scale public work in her life. Actually, her deafness was an asset in starting the Girl Scouts—when she asked people to assume this or that responsibility, and they refused, she would thank them sweetly for accepting, and often shame them into it. Her friends, however, were used to her explosive fads that never lasted long. The family teased her unmercifully about the "Girl Scoots," and waited for her interest to fade.

But it didn't. She went from city to city, making speeches, organizing troops, choosing leaders, rewriting handbooks—bearing all the expense herself, although by this time her funds were limited. In 1914 she sold her pearls to help pay for the rising costs. By 1916, almost 5,000 girls were enrolled in the American Girl Scouts. Today there are 2 million and more than a quarter of a million leaders.

Altogether, Daisy had 15 years of enjoying her brain child and watching it grow. Toward the end of her life she turned the organization's direction over to others.

She died, of cancer, in 1927. Children are usually unaware of illness in adults, and I was no exception. One day Daisy came for midday dinner with us at the old house, but left before the meal was over. She turned at the diningroom door and said good-bye to me. I waved casually, but then something made me get up and follow her to the front door and give her an awkward hug. I never saw her again.

That was almost 30 years ago. But her warmth and here enthusiasm—the most endearing of all human traits—are still very much alive.

Committee for Montazzolesi Children's Welfare

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. WILLIAMS of New Jersey. Mr. Speaker, all of us in this body were especially conscious of the warm bond of friendship between the people of the United States and the people of the Republic of Italy when President Giovanni Gronchi visited us recently and addressed a joint session of the Congress. Preservation of this close feeling is vital to the welfare of both nations. Our Government has done much to help our Italian friends. Much more remains to be done, and perhaps emphasis should now be on private, rather than public, efforts.

Recently I called the attention of this body to the support given by many Americans to Boys Towns of Italy, a magnificient program designed to give war orphans the opportunity of achieving a meaningful way of life. A new expression of our friendship for Italy was born recently in a community in my district—Scotch Plains, N. J. A group of my constituents have formed the Committee for Montazzolesi Children's Welfare, choosing as their honorary chairmen Don Nicola Masciuli, of Montazzoli, Italy, and Rev. John S. Nelligan, pastor of St. Bartholomew the Apostle Church, Scotch Plains, at whose invitation Don Masciuli had visted the United States last summer.

This organization has dedicated its efforts to raising funds for the establishment of a children's nursery in Montazzoli. The officers are Paul Di Francesco, president; Warren Sangiuliano, vice president; Felix Novello, secretary; and Arthur Venneri, treasurer. These men—indeed, all the members and contributors to the Committee for Montazzolesi Children's Welfare—are to be commended for their dedicated work on a project which embodies as little else can the friendship we hold for Italy and the determination we feel to help Italian children get a healthy start toward productive and happy lives.

The U. S. S. R. Takes Young People From the Communist Bloc and Uncommitted Nations, Trains Them, and Sends Them Back as Missionaries of Revolution

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, at the recent dinner meeting of the nationalities division of the Democratic Party in New York City on March 4, Gov. G. Mennen Williams, of Michigan, made a most challenging address, as chairman of the division. The Governor stressed the importance of expanding our program of exchange of visitors with foreign nations.

It seems to me—

The Governor said—

this is the most effective way to get at the imperative need of our times—the exportation of the democratic idea.

Governor Williams went on to voice his opinion that this country should be "constantly bringing to America large numbers of people from foreign lands, to see for themselves what democracy is like; and we should be sending forth from America large numbers of our own people, particularly young people, to learn the aspirations and ways of other nations, and to carry the gospel of democracy to those lands." By such programs he feels that we could "accomplish more in the direction of human understanding and solidarity—the only foundation upon which lasting peace can be based—than by any other single means."

Since this great speech by Michigan's Governor contains recommendations of the highest importance to our present situation, it gives me great pleasure to include excerpts from it here:

EXCERPTS FROM ADDRESS BY GOV. G. MENNEN WILLIAMS, OF MICHIGAN, AT DINNER HONORING MAJ. MARIO G. REMO, NEW YORK, N. Y., MARCH 4, 1956

While we are working for liberalization of our immigration laws, let us work also for a corollary goal—a vast expansion of our present program of exchanging visitors with other nations.

It seems to me this is the most effective way to get at the imperative need of our times—the exportation of the democratic idea. Ideas are a function of human beings, and there can be no better way of promoting an idea than through the personal work of human beings.

The Communists know this. That is why they do not depend upon tracts and doctrines alone to spread their idea. Instead, they take young men and women of all nations into the schools of Moscow, train them in the ideology of communism, and send them back to their own countries as missionaries of revolution. One young zealot in an Asian village, working among his own people, is worth more to the Communist cause than a battalion of Russians speaking foreign ideas in an alien tongue.

In this matter the children of darkness are certainly wiser in their generation than the children of light. Our great universities, it is true, are doing a lot in this respect. Many thousands of young students from foreign lands are absorbing with their American education the ideals of human brotherhood and civil equality upon which this Nation has been built. Let us hope they will return to their own lands as missionaries of democracy.

But it seems to me we should be constantly bringing to America large numbers of people from foreign lands, to see for themselves what democracy is like; and we should be sending forth from America large numbers of our own people, particularly young people, to learn the aspirations and ways of other nations, and to carry the gospel of democracy to those lands.

Recently I was talking about this with the consul for a foreign government in Detroit. This gentleman remarked that the leading Communist of his country had recently declared that three-fourths of American workers were destitute and impoverished.

"It's a wonder to me," he said, "that your State Department does not immediately challenge that Communist leader. I cannot understand why you don't say to my country, 'Give us a hundred of your rank-and-file workers, and let us bring them to America for 2 months, and let them see for themselves how American workers live.' Those hundred workers, when they returned with photographs of the parking lots of American factories filled with workers' new cars, when they told their stories of the homes in which American workers live, would be better missionaries against communism than all the diplomats or soldiers you could send to my country."

We should have a similar program for professional people—engineers, doctors, teach-

ers, lawyers, and every other branch of endeavor—so that the entire impact of our democratic system can be carried back to other lands.

Not only would such programs help to counteract the lies of Soviet propaganda, but they would also help to make clear why the American Nation can bear no ill will to the other peoples of the world, because the American people are the people of the whole world. America is England, it is France, it is China, it is Poland, it is Africa, it is every nation of the earth because the blood and cultures of all races have been blended here into a people whose ties are to the whole human race.

It seems to me we could thus accomplish more in the direction of human understanding and solidarity—the only foundation upon which lasting peace can be based—than by any other single means.

A Bill To Provide Insurance for Motor Vehicle Employees of the Post Office Department

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. LESINSKI. Mr. Speaker, Tuesday, March 13, I had introduced a bill, H. R. 9911, which would provide for the insuring against accidents of the employees of the Post Office Department who drive vehicles in the carrying out of their duties.

Under present law, there is no protection whatsoever for the individual postal employee who is assigned to the duty of driving a Post Office Department vehicle if he is involved in an accident. True, the Department itself has authority under the Federal Tort Claims Act to make settlements up to a certain amount with any injured party. However, this does not preclude the possibility of the driver of a postal vehicle also being sued and having a judgment rendered against him, irrespective of whether or not the Department has or has not acknowledged liability and made a settlement. There have been a considerable number of instances reported of situations where individual employees find judgments rendered against them for accidents for which the Department accepts no responsibility and makes no payment.

At the present time there is no provision for insurance to cover the possible liability of these drivers for damages or injuries caused by the vehicle they are operating in the performance of official duties. Equity and good conscience certainly dictate that some provision should be made to provide insurance coverage for these drivers who are sometimes called upon to operate trucks or other vehicles that may not be in completely satisfactory operating condition. Additionally, in many cases weather conditions and other traffic hazards increase the possibility of accidents. We all know the motto of the postal employees: "Neither snow, nor rain, nor heat, nor gloom of night shall stay these couriers from the swift completion of their appointed rounds." These employees are in what might be termed a hazardous situation because of the service they render, their devotion to duty, their customary habit of driving vehicles whenever postal service is needed regardless of prevailing conditions. Because of this, they are placed in extraordinary situations, above and beyond that which most drivers face, in which there is much greater danger of sustaining accidents.

The probable cost of such large-fleet insurance coverage for postal vehicle drivers as recommended in my bill would not be prohibitive and would certainly be a sound investment for the Government when compared with the highly desirable measure of protection and assurance it would provide for these employees and their families.

A Blessing to Rural Residents: Electricity Has Worked a Miracle

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. SIKES. Mr. Speaker, under permission granted to extend my own remarks and to include extraneous material, I wish to insert in the CONGRESSIONAL RECORD an editorial appearing in the February 16, 1956, issue of the Breeze, De Funiak Springs, Fla., concerning the Choctawhatchee Electric Cooperative, at De Funiak Springs, and the Rural Electrification Administration:

A BLESSING TO RURAL RESIDENTS: ELECTRICITY HAS WORKED A MIRACLE

Probably the biggest change that has taken place in living conditions in rural areas of the Nation in the past few years has been occasioned by the availability of electricity to these areas, mostly through the agency of the REA.

Residents living any place in the county now have all the conveniences of those living in town, so far as lights, cooking, heating, air conditioning, refrigeration, plenty of water are concerned.

The Choctawhatchee Electric Cooperative is looked up to as a model of how such an organization should be run, and the manager of the district, John Pentecost, is regarded as one of the most able administrators in the whole REA system.

It might be of interest to read of the REA situation in general, as sent out from Washington on Sunday:

"REA BRIGHT SPOT IN UNITED STATES FARM GLOOM

"Just about everyone agrees that times are getting a little tough down on the farm.

"But you wouldn't get that idea at all if your information were limited to what's going on in the rural-electrification field.

"Take the word of Ancher Nelsen, youthful Minnesota farm-reared Administrator of the Rural Electrification Administration (REA).

" 'The situation never looked brighter for the rural cooperatives and private power concerns which are supplying power to the Nation's farms,' he said at the conclusion of a recent REA Advisory Committee meeting.

" 'Farms are buying more and more electrical equipment and their needs for power are growing and growing,' he added.

"Members of the committee—which represent leaders in the rural power field—agreed with Nelsen.

"Of the 1,078 cooperatives and other agencies which have borrowed money from the REA to finance rural power projects, only about 15 are behind in loan repayments. Three-fourths of the borrowers are paying ahead of schedule."

Nelsen said that on the average borrowers have increased their inventory values 25 percent during the past year. Many are applying for new loans to expand their facilities to meet increasing demands.

"This picture of booming conditions in this field of farm service is sharply in contrast with that of general economic conditions in agriculture. Farm prices have dropped nearly 30 percent from the record high set in 1951. Likewise, farm income has declined about the same amount in the last 9 years. Farm mortgage debt has been increasing."

Nelsen reasoned it this way:

"Squeezed between high production costs and declining returns for his products, the farmer has found it necessary to see where and how he might reduce those costs.

"Many farmers have found that they could reduce their need for hired hands by installing more power equipment—both electrical and petroleum-powered. The work could be done more cheaply through use of such equipment than by manpower.

"A consequent decline in use of hand labor has been reflected in a big step up in demands for electrical appliances and electrical power. Agriculture Department reports show that there are 3 percent fewer workers in agriculture now than a year earlier and 7 percent less than for the 1950–54 average.

"Likewise, the annual farm wage bill has dropped from a 1953 peak of $2,140,000,000 to less than $2 billion."

Textile Report Prophetic

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following excellent editorial which meets with my hearty approval, that appeared in an edition of the Lawrence Evening Tribune, Lawrence, Mass.:

TEXTILE REPORT PROPHETIC

The report of the New England Governors' Textile Committee on the Textile Industry and the New England Economy was prophetic in one respect at least. It warned that "we are threatened by a two-price agricultural system, which would make raw materials available to foreign competitors at low prices."

The report was released Monday. On Tuesday, Ezra Taft Benson, Secretary of Agriculture, announced that after August 1 the Government will offer all surpluses of cotton for sale abroad at the "world market" price, which will mean almost a 25 percent reduction on the cotton thus exported. According to Mr. Benson this program is designed to "recapture our lost world cotton markets," but, apparently, if the program succeeds, it will be at the expense of this country's cotton textile industry.

Cotton textile imports now have the advantage of cheaper labor costs. If they are given the added advantage of being able to buy American cotton in almost unlimited

quantities at a price 25 percent lower than the price the American manufacturer has to pay, it stands to reason that the competitive differential will be even more of a handicap for cotton of domestic manufacture.

We quote from the report of the New England governors' committee:

"American textile producers are put at a disadvantage by Federal farm policies, which tend to raise the price of both cotton and wool, and even make raw cotton available to foreign countries on special terms. * * *

"The administration has leaned toward a two-price system for cotton—with a record hoard of 9 million bales the temptation [a temptation succumbed to.—Editor] is great to sell abroad at low prices. Under the Agricultural Trade Development Acts of 1954, the administration expects to dispose of $700 million of agriculture products abroad in 3 years and exchange 500,000 bales of cotton for foreign currencies, the latter to be used to build up foreign economies, purchase military supplies, etc. In this manner cotton is made available to foreign competitiors at special prices if not virtually given away."

It possibly would be better to burn the surplus of cotton to make a beacon which would summon all commonsense to rally around the proposition that rigid price supports are indefensible except as means of wooing the farm vote. Any politician supporting rigid supports would thus stand indicted as a freebooter of politics.

Why Not Nixon?

EXTENSION OF REMARKS
OF
HON. GERALD R. FORD, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. FORD. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Grand Rapids (Mich.) Press of Thursday, March 8, 1956, entitled "Why Not Nixon?"

WHY NOT NIXON?

Ever since President Eisenhower announced that he will seek a second term the chief question has been whether RICHARD NIXON will be his running mate. Before the President's heart attack it was taken for granted that Nixon would run for Vice President again if Mr. Eisenhower sought the top nomination. It was almost universally accepted also that if Mr. Eisenhower decided not to run Nixon would be a leading contender for the presidential nomination.

But since last September the complexion of things has changed, even though Nixon hasn't. He is still the same man who was viewed as a strong vote-getter in his own right in 1952. His views have not changed, he hasn't altered his way of living, no scandals have been raked up to cloud his reputation. Politically he is as strong as ever, perhaps even stronger, with State Republican organizations. He knows more about the Presidency and its responsibilities than he did 3 years ago and has the advantage of 3 years' experience in the executive department.

Why, then, is nominating NIXON for the second position on the ticket being questioned? The only general reason given is that he is too young. But he is 3 years older than he was when he was nominated the first time. Of course, his detractors will argue, no one believed then that he might be called on to fill the office of President. But that just isn't true. The people take that possibility into consideration. They did when ALBEN BARKLEY, then in his seventies, ran for Vice President with Harry Truman. A great deal was made of BARKLEY'S advanced age and that, according to the actuarial tables, he didn't have much chance of surviving Mr. Truman, but both men still are around. The point is, however, that the people apparently weren't much concerned over the age question.

Have they ever been? The records suggest that candidates' ages have been a lesser consideration. Theodore Roosevelt was 42 when elected Vice President and only 43 when he succeeded McKinley. Roosevelt served almost all of McKinley's second term and a full term of his own, and still left the White House, not yet 50 years old. Grant was only 46 when he was first elected and Cleveland only 47. Of more recent Presidents, Franklin Roosevelt, Coolidge, and Taft were only 51 when they became President.

NIXON now is 43 and already has spent more time in Washington, as Representative, Senator and Vice President, than most Presidents have spent there before their election.

Probably one of the reasons why NIXON has become a special target is that he has been considerably more active in his job than were any of his predecessors. The position of Vice President itself looks more attractive than it did. NIXON, we should say, is paying the inevitable pentalty of having made something of his position and having refused to retire to the usual obscurity of the Vice Presidency. We doubt that there would be any question about NIXON now if he had been content to remain in the background.

General Aniline & Film Corp.

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. WILLIAMS of New Jersey. Mr. Speaker, I would like to call the attention of the Congress to the following resolution that was forwarded to me from the Union County (N. J.) Central Labor Union. It pertains to the General Aniline & Film Corp. and urges legislation to permit the sale of this company to private American ownership.

The resolution follows:

Therefore be it resolved, That in this current session of the 84th Congress this organization calls upon the Members in Congress of the State of New Jersey to assist in the enactment of legislation now before the 84th Congress either in the form of legislative measures (bills) S. 1405, S. 2227, H. R. 80, H. R. 3608, and/or H. R. 6730, which would permit the disposition of the aforesaid corporation through public sale to private American interests—in the shortest time possible: be it further

Resolved, That the delegates of the Union County Central Labor Union, AFL, adopt this resolution and transmit in resolution form this petition to the New Jersey State Federation of Labor and the New Jersey congressional delegation requesting its support in this subject in behalf of its affiliated member Local No. 146, General Industrial Workers Union, AFL–CIO, who represent the union employees of the General Aniline & Film Corp. in New Jersey.

GENERAL INDUSTRIAL WORKERS UNION,
LOCAL 146, AFL–CIO.,
VINCENT SPINA, *Secretary.*

FEBRUARY 27, 1956.

Approved by all AFL unions in Union County.

Guard the Faith of St. Patrick

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following well-written editorial from the National Hibernian Digest, a bimonthly digest dedicated to friendship, unity, and true Christian charity:

In a few weeks we shall be celebrating the feast day of St. Patrick, patron saint of Ireland, and one of the most respected and powerful saints in the church calendar. No one is completely sure of the birthplace of St. Patrick. He was brought as a slave to Ireland, and upon his release, returned to his native land, and studied for the priesthood. Having accomplished that, and having been elevated to the bishopric, he asked for and was assigned the Irish nation.

There is no question about his success in Ireland. Today, 1,500 years after his birth, his memory is still honored by millions of Irish people all over the world, and indeed, other races and other peoples, have joined with the Irish in the annual salute to his memory.

St. Patrick brought the gift of Christianity to Ireland. Despite 1,500 years of war, disturbance, famine, pestilence, and disaster, the light of catholicism never shone more bright, or the lamp of Christianity more brilliant. Ireland is one of the few really Catholic nations in the world that has never wavered and never faltered. And when the going got rough, when economic crisis and terrible rebellion wracked the hearts and minds of the people, the faith that Patrick brought never stumbled. Instead, if anything, it grew more strong and more vivid as the road grew more obstinate.

There must be something in the spirit of the Irish at home that makes this so. Patrick himself had to overcome the pagan religion then in force in Ireland. He had to overthrow royalty and tradition to bring the faith of Christ. Since his death, Ireland has gone through almost every kind of disaster that any nation could possibly face. And behind every disaster lay the shining promise of plenty—at the price of their faith. The Irish never thought twice for the answer. The faith must stay, no matter what the cost. When Oliver Cromwell sent them to "Hell or Connaught," they hit back with the Mass, said among the bleak mountains and barren valleys of the island. And it was in this atmosphere that the Ancient Order of Hibernians was born—born to guard the priests and to bring the Mass to the people.

It took long years of bitter struggle by Daniel O'Connell to give the Catholic people the right to vote. He accomplished that with the Catholic Emancipation Act of 1829, and sold his argument with the thundering expression that has lived throughout the ages, "That which is morally wrong, can never be politically right."

In 1849, the main stay of the Irish table—the humble potato—failed, and again the Irish faced obliteration. Yet, at the height of that awful time, with millions dying and millions emigrating, with England refusing to lift the trade barriers that would have brought relief, the faith that Patrick brought stayed in the forefront, and many a dying peasant pushed his precariously garnered food aside to wait for the coming of the priest.

Ireland's sons and daughters scattered throughout the world in 1849, but those who stayed behind carried on to make their land a better place to live. In 1867, the nation

again went through the pangs of civil war, as brother fought brother and father fought son in the war for their independence. In 1914, thousands of Irish went to war with the promise of home rule as their reward. The promise was never kept, and in 1916, bullets again whined over the streets of Dublin, as patriotic Ireland struck again. In 1922, a partial victory came with the establishment of the Irish Free State, and self-government for 26 of the 32 counties.

Behind every disaster has been the question of religion. And the Irish, with the tenacity, courage and determination of their race, have never asked for or given any quarter. They have continued to demand religious freedom as well as political freedom. At one time they got neither. Today in the Republic of Ireland, they have both, but in Northern Ireland they still have neither. To be a Catholic means you are unable to find a job, and the scourge of gerrymander has made the British Government in northern Ireland practically unassailable.

Let us, the Irish away from home, on this St. Patrick's Day, reiterate our inherent spirit to guard our faith as our forefathers did. Let us continue the fight for freedom of mind as well as freedom of action. Our brave ancestors showed the way. They did not yield their faith, no matter how bright the promise or how rich the reward. Let us, members of the Ancient Order of Hibernians, continue to guard the faith of St. Patrick, as our founding fathers did on the hills of Ireland.

Basic Farm Issue

EXTENSION OF REMARKS
OF
HON. E. ROSS ADAIR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. ADAIR. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Kendallville (Ind.) News-Sun which reflects the thinking of many people with respect to proposed farm legislation:

BASIC FARM ISSUE

Huge, price-depressing surpluses of some agricultural commodities have been a major factor in preventing farmers from sharing more fully in the Nation's unprecedented prosperity. Farm economists estimate that net income of farmers last year would have been $2 billion higher had it not been for the oversupply of agricultural commodities.

The 9-point farm program submitted to Congress by President Eisenhower makes sense because it strikes boldly at this overriding problem of surpluses. The so-called acreage-reserve feature of the President's soil bank plan would, in effect, use the surplus to reduce the surplus. In return for reducing their plantings of such crops as corn, wheat, and cotton below the allotted acreage, farmers would receive cashable certificates drawn against Government stockpiles of these commodities.

As production is reduced, total supplies of these crops would be pulled down to normal levels. This in turn, would mean strengthened prices in the market place for farm commodities generally. Another argument for this approach is that it provides for its own termination. When the surpluses are liquidated, the acreage-reserve program is automatically ended.

It is now costing the Federal Government about $1 million a day for storage and carrying charges on its huge inventory of farm commodities. There is always the risk of further loss through deterioration in quality. In the long run, it would cost much less to proceed with the orderly liquidation of Government-owned farm commodities now than to perpetuate a storage program.

The conservation reserve provision of the President's soil bank proposal is also designed to bring total agricultural production into better balance with current requirements. Altogether, it is anticipated that some 40 to 45 million acres would be taken out of production under this plan. It would assist farmers in making necessary land use adjustments. It would build soil fertility against the day when our growing population or a national emergency will require increased agricultural production.

Except for 1951, when the Korean war was at its peak, farm income has moved lower each year since 1947. The President pointed up this serious situation when he said: "I urge the Congress to pass this program with maximum speed, for delay can only aggravate and multiply the difficulties already sorely harassing millions of our farm people."

Farmers will benefit early this year if Congress approves the soil bank and other farm program proposals of the President before spring planting time. Even a few weeks of needless delay now would postpone participation by many farmers for another year.

The President's program will provide effective tools for dealing with agriculture's more pressing problems. It should be passed now—and without crippling amendments.

Alabama Public Opinion and Autherine Lucy—A Law Has Little Chance of Enforcement Unless It Has Support of a Large Majority

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. HUDDLESTON. Mr. Speaker, on Wednesday, March 14, 1956, there appeared in many of the daily newspapers of our country an article by the well-known columnist, Dorothy Thompson. Miss Thompson makes note of the fact that "laws reflect reform rather than induce it, and laws that violate the current sense of a community never bring social peace." She refers to the recent occurrence at the University of Alabama when a Negro, through Federal court order, attempted to gain admission as a student.

Miss Thompson has never indicated any particular sympathy with the southern position on race matters. Her views, therefore, merit serious study by those, in Congress and out, who are critical of the manner in which we of the South are attempting to solve our local problems.

Under leave to extend my remarks, I include Miss Thompson's article:

In a democracy—a state based upon continuing public consent—law must reflect the existing state of consciousness and conscience. Otherwise it will not be voluntarily upheld. Law rests primarily upon public opinion, and only ultimately upon force. If it does not have the voluntary consent of a large majority, it cannot be enforced except by procedures that violate the principle of consent and hence the basis of the state.

Laws can be enforced against individual lawbreakers by indictment, arraignment, and trial. But laws cannot thus be enforced against a nation, state, or community. As Edmund Burke said long ago, "I know no way to bring an indictment against a whole people."

In despotisms there are ways, but not in states based upon popular consent.

To indict a nation, state, or community and enforce the law against it, requires war. That is the fallacy of the concept of enforcing peace.

Innumerable historical instances illustrate these axioms. Prohibition of the sale of alcoholic beverages was, for a time, the law of the land, clearly embodied in a constitutional amendment. But the law did not reflect the existing conscience of a majority or large minority. To have enforced it would have required a policeman in every pantry. Ultimately, therefore, the amendment and the law had to be repealed.

Yet there are still total abstainers, and prohibition States and communities where the law is easily enforced because it commands public consent.

The attempt to enforce a Federal law upon States with differing conditions of consciousness and conscience brought on the Civil War, an illustration that one cannot indict, arraign, or try, a community by the normal process of law enforcement.

These reflections are impersonal. They do not register the writer's prejudices or convictions regarding segregation. They are not moral but operational judgments.

The State University of Alabama refused to admit a Negro student and on more or less meretricious grounds. Miss Lucy certainly had the law of the land on her side. But she did not have the law or the opinion of the State of Alabama on her side. The issue was not, therefore, between Miss Lucy and the university trustees, but between two powers.

Miss Lucy's application, also, was not that of an individual seeking the right to an education. She could have obtained that at no greater cost in hundreds of other institutions. She appeared, in fact, not as a student but as a tester of the law in behalf of the NAACP.

The university's trustees temporarily refused to receive her on the ground that in the climate of opinion of the community and university they could not answer for her life. This may have been, and we hope was, an exaggeration. Her life could, presumably, have been protected by a bodyguard of Federal police to watch over her day and night. In that case, she would have been, in effect, a prisoner.

But it would still not solve the problem. For entering a university means more than physical presence. It involves acceptance as an equal member of the student community. If anyone, for any reason, is rejected by a community, which by its nature requires intimate association, the possibility of violence is always present. But without violence passive resistance can defeat the content, if not the text, of the law.

Law is a series of thou shalt nots. But matters involving intimate human relations require positive affirmations. No law can compel one person to feel affection or even tolerance for another. Passive resistance, which cannot be prosecuted, uses the weapon of ostracism. An ostracized student is not a member of the student body. She is out even if she is in.

The argument that clinched the Supreme Court decision was that segregation produces in our Negro population a psychological injury. But the law cannot deal with psychological injuries. There is no legal way to prevent one human being or many from injuring the feelings of others. The judges may be excellent lawyers. But they were bad psychologists.

Law can refuse to legalize divorce. That of at least one nation does. But no law, nor even the powerful disciplines of the Catholic Church, can enforce cohabitation or marital happiness. To attempt to do so would create a condition of murderous cruelty.

Americans have too strong a predilection to believe that reform can be accomplished by passing a law. Laws reflect reform rather than induce it, and laws that violate the current sense of a community never bring social peace.

Train the Indians

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. BERRY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert an editorial from the Pierre (S. Dak.) Capital Journal entitled "Train the Indians," as reprinted in the Rapid City (S. Dak.) Daily Journal:

TRAIN THE INDIANS

Representative E. Y. BERRY has introduced another bill in Congress proposing to authorize a program of trade-school instruction for the Indian citizens of the United States.

An earlier bill introduced by BERRY was limited to members of the Sioux Tribes, and it failed to receive support. The new bill is not limited to any tribe or any State, and an announcement from BERRY's office says it has the support of the Department of the Interior and, as a result, a better change of approval by the Congress.

We sincerely hope this proves to be the case. We are convinced of the real need for such a program. It is apparent to anyone who is familiar with the economic situation of the Indians of South Dakota that the solution of their personal problems must be found in providing employment for them. The assumption that an aboriginal tribal culture can provide a decent standard of living for any people today is a false one. The assumption that an Indian can enter the labor market of American industry without any skill in any trade is equally false. He must be taught some skill; and once he is taught a skill in some trade he is fully capable of supporting himself and his family and is no longer a problem for American society.

Unfortunately there are people in the United States who still think that the proper policy for the Indians is to condemn them to live on reservation lands, which are incapable of supporting an equivalent white population. There is a wholly mistaken belief that the Indians ought to rely for their existence upon stringing beads or weaving blankets or making pottery. That proposition is nonsense. The Indian citizen of South Dakota would like to be a skilled mechanic in some trade and to earn a paycheck each week. He knows that this is the best chance he has of being able to obtain and hold a job.

There is no need to set up any special institution for giving such instruction. All that is needed is to provide for the support of the young men and women who would be taking such training in regular trade schools, just as was done with war veterans. It would not be unduly costly, and it would surely pay off in the long run.

A Lincoln's Day Address

EXTENSION OF REMARKS
OF
HON. WINSTON L. PROUTY
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. PROUTY. Mr. Speaker, I am very happy to insert in the RECORD an excellent Lincoln Day address delivered by my distinguished predecessor, the Honorable Charles A. Plumley, before the joint assembly of the Vermont Legislature, on February 12, 1953.

Although this address was given some 3 years ago, it is just as timely and thought-provoking today as at the time of delivery:

MR. PLUMLEY'S ADDRESS

Mr. President and Madam Speaker, I try to dodge all these opportunities to talk because I made it my business to talk for some 17 or 20 years but I just could not resist the temptation to accept the invitation to talk once more from this desk. I was particularly pleased to hear by friend Loren Pierce this morning. I am always astounded at that retentive and photographic memory. I should tell you confidently, that Loren and I were admitted to practice law in the same class in 1903 which is a long long while ago, but starting with those days when we sat side by side and with those days when we walked into the Supreme Court and they went down the list alphabetically we prayed God that when they got to the P's they would say Pierce and Plumley as they did, as admitted. Our friendship has been very strong and very close, so close that when I announced myself as a candidate for Congress 20 years ago let us say, Loren came to see me and he said you know Charles I think I'm going to run against you and I said that is perfectly all right, let the best man win, and we went to Burlington and talked and there was quite a crowd there on that occasion. Loren spoke first and he ended his speech by saying, now confidentially, if I can't have this job I want Charlie to have it; and when I made my speech I ended the same way, I said confidentially if I can't have this job, which I am going to have, I would like to have Loren have it and that has been the basis of our friendship over the years.

Talking about memory I am always astounded, and so would you be but he can do it, he could get up here and start with the first line of Hamlet, Shakespeare's Hamlet and go through it without missing a period or a comma. He reminds me in reverse of our old friend Dean Roberts, a former member of this House, who in his later years as dean of the university confided to one of the students whom he didn't recognize immediately, he said you know I'm losing my memory—there are three things I can't remember, I can't remember names, and I can't remember faces, and I can't remember what the third thing is I can't remember. That isn't what I came down here to talk about.

Remembering Lincoln, these are truly tragic days in the history of this Republic, the maintenance and the continuance of which was the burden of the responsibility borne, but not lightly laid, on the shoulders of the man the anniversary of whose birth we observe.

"It is for us the living," said he, "to see to it that this Nation, under God, shall have a new birth of freedom and that government of the people, by the people, and for the people shall not perish from the earth."

This is the burden and the challenge of our undertaking, today. Shall we meet it? Can we bear it?

In the grandeur of his soul Abraham Lincoln visioned a world unshackled, willed to us the duty and the obligation to carry high the torch of liberty he threw into our hands; to the end that all men everywhere eventually shall be truly free. Will we measure up to our opportunity?

The era in which he lived and moved was but the beginning of things for the United States of America, whose destiny he prophetically saw was foreordained as the savior of the world.

His rugged, honest, steadfast perseverance and stanch Americanism still stands as examples, as objectives which the Nation and all of us as individuals may well try to emulate. Unwavering in his loyalty to the fundamentals of American Government, his genuine respect for the Constitution, and his great concern for the destiny of the Republic ended only with his death.

A redeemed and reunited Republic is his monument today, under a leadership such as gives hope that he did not live nor die in vain.

These United States of ours which he saved were welded out of an incongruous mass of indeterminate elements almost as numerous and as diversified as those which the scientists have discovered to be as common as those between us and the planets.

The prism of brains through which the ray of light of the possibilities for man's achievement has registered, and been separated, makes it possible for us to identify our individual responsibility and to assume our burden. How well this man Lincoln foresaw that which was bound to be. We must meet the test of the prism and emerge "like a light which the fierce winds have no power to extinguish."

We honor ourselves today as we observe the anniversary of the birth of Abraham Lincoln, the uncommon commoner, great emancipator, and recognized savior of our Nation.

We face in this hour a crisis greater than Lincoln ever met. We have no right, however, to lose what he and those who sacrificed and died for it made possible for us to enjoy.

In our indifference, self-satisfied conceit, and complacency, we do not yet half comprehend the peril which confronts us nor realize that a catastrophe such as the world has never experienced threatens to destroy us, to obliterate all we have, all we have been and have hoped to be.

It is high time we understand that were Lincoln here today, he might well be heard to say again:

"The fiery trial through which we pass will light us down in honor or dishonor to the latest generation. We shall nobly save or meanly lose the last, best hope of earth."

He would have made and would make the people realize that the slogan "America self-contained" is as dead as the bullrushes around little Moses, that independence does not mean isolation, that as a policy isolation is as meaningless as the mumblings of a moron. He would have made us see that our real hope of victory lies in our ability to comprehend the fact that there is not a day, an hour, or a minute to be lost; that it is our fight; that each and every American must plunge into the fight on the home-front with everything he has—not tomorrow, or next week, but today.

A communistic conspiracy of all the basest, foulest, most wicked, anti-Christian criminals in history, saturated with a crazy determination to crush our civilization, threatens to stop all human progress, destroy

the work of centuries, and establish a new order over our dead bodies.

Still the American people do not realize their peril. They do not appreciate the fact that the most serious and fateful hour that has ever confronted civilization has struck. This battle between right and wrong is a total war, a war to the finish. We do not need to get hysterical. We have, however, a right to be thoroughly scared by what has happened and is happening. Despite all we can do now, it is true today that it might be too little as well as too late.

All masks have been dropped, all doubts have vanished. Real values stand, at last revealed.

Shall this freedom of speech and thought and action in which we have indulged, which we have enjoyed, be guaranteed, perpetuated, or surrendered? There can be but one answer.

There is no power on earth that could have prevented, avoided, or averted this final trial, this ultimate test of the strength of all those things for which Christianity, and free men stand as against the totalitarian and antichrist doctrines of those who have undertaken to enslave us.

Ours has been and is a place and a position carved out for us and marked by fate for tragic sorrow and for undying honor. This struggle between right and wrong is as old as the beginning of things. It is never-ending.

This fight which will be grim and long, and entirely ruthless, and bloody, and dirty, will bring us grief, heartaches, disappointment, and disaster, unending.

It can cost us the loss of lives we prize beyond all treasure and may lead us down into the valley of the shadow of enormous and terrible suffering, endangering all we hold sacred and dear and prize the most yet. There can be no turning back; there shall not be.

So, today, as we are attacked by the most wicked, crazy, ruthless aggressors the world has ever seen, there can be but one answer to them and all that for which they stand. We shall not submit. We will not permit, we will not accept this Bolshevik shape of things to come. We cannot do it and live.

"We must be free or die who speak the
tongue that Shakespeare spoke;
The faith and morals hold which Milton
held."

Historians tell us that it is always to be remembered with respect to Lincoln as President that never did a President enter upon an office with less means at his command, outside his own strength of heart, and steadiness of understanding, for inspiring confidence in the people, and so winning it for himself as did Abraham Lincoln; and yet after 3 years of stormy administration none of our Presidents, unless it be Washington, ever stand so firmly in the confidence of the people.

His wisdom, they agree, was made up of a knowledge of things as well as of men; his sagacity resulted from a clear perception and honest acknowledgment of difficulties, which enabled him to see that the only durable triumph of political opinion is based not on abstract right, but upon so much of justice, the highest attainable at any given moment in human affairs, as may be had in the balance of mutual concession. Of course he had an ideal, but it was the ideal of a practical statesman, namely to aim at the best, and to take the next best, if lucky enough to get even that.

As to his faith in God it is also agreed that it was qualified by a very well founded distrust of the wisdom of man. That should be an answer to carping critics.

His cautious but steady advances, militarily, during the war was like that of a Roman Army. He left behind him a firm road on which public confidence followed as he took America with him wherever he went. What he gained, he occupied. His advanced posts became his colonies.

Accused of inconsistency, he said that the foolish and the dead alone never change their opinion. The very homeliness of his genius was its distinction. His kingship was conspicuous by its work day homespun. Says James Russell Lowell, "Never was a ruler so absolute as he, nor so little conscious of it: for he was the incarnate common sense of the people." And Lowell goes on to say:

"The course of a great statesman resembles that of navigable rivers, avoiding immovable obstacles with noble bends of concession, seeking the broad levels of opinion on which men soonest settle and longest dwell, following and marking the almost imperceptible slopes of national tendency, yet always aiming at direct advances, always recruited from sources nearer heaven, and sometimes bursting open paths of progress and fruitful human commerce through what seemed the eternal barriers of both. It is loyalty to great ends, even though forced to combine the small and opposing motives of selfish men to accomplish them; it is the anchored cling to solid principles of duty and action, which knows how to swing the tide, but is never carried away by it—that we demand in public men, and not the sameness of policy, or a conscientious persistency in what is impracticable."

It was Abraham Lincoln who first said:

"You cannot bring about prosperity by discouraging thrift. You cannot strengthen the weak by weakening the strong. You cannot help the wage earner by pulling down the wage payer. You cannot further the brotherhood of man by encouraging class hatred. You cannot establish sound security on borrowed money. You cannot keep out of trouble by spending more than you own. You cannot build character and courage by taking away man's initiative and independence. You cannot help a man permanently by doing for them what they could do for themselves."

As the Honorable Wendell Phillip Stafford, distinguished orator and jurist, son of Vermont said; and I heard him as he addressed a Joint Assembly of this State of Vermont on February 21, 1929:

"Lincoln was both a great mathematician and a mystic. Declaring that the greatest word in the dictionary was 'demonstration,' he trusted his intuitions quite as much as he did his reason. Describing his education, for the Congressional Dictionary, as 'defective,' he does not shrink from meeting any antagonist who enters the arena. He worsts the most consummate debater of his time, throws him out of the ring entirely—takes the wind out of Seward's sails by his 'Divided House' speech, wins the nomination over Chase, Cameron, Bates, and Seward, and when elected takes up the desperate task of government with his old political enemies for his Cabinet advisors, quietly confident that he is more than a match for them all. Stanton sneers at him as 'that imbecile in the White House'; and what is Lincoln's revenge? Only this, that Stanton stood beside his corpse and said, 'Here lies the greatest ruler of men the world has ever seen.' Born in abject poverty, spending most of his life in squalid or commonplace surroundings, he takes his seat for the ages in a marble temple that Phidias might have fashioned, whose walls on either hand are inscribed with his own words, that will outlast the temple. Could contradiction any further go?

"There is a place we all know well in the White Mountains where the rocks are thrown together in confusion, as if at cross-purposes with one another, high on the precipitous mountain wall. But if you stand in the right spot they all combine to form the majestic features which red men took to be the image of the Great Spirit. Is there a point where we may stand and see all the contradictions in this strange character come together in one harmonious and awe-inspiring whole? I believe there is. Who can doubt that from beginning to end of this man's life, an unseen almighty power was working with steady hand and unalterable purpose, using him as the instrument for its own vast design, and allowing him now and again to glimpse of that which was intended, of the hard road that he must travel, and the painful crown he was to wear?

Today every spark of inventive genius, every inheritance of the pioneering spirit, every native skill, all of those things that have helped to make this country what it is, every faith we hold, every liberty we cherish, all that we are or ever hope to be calls us into action to defend our own, now.

We face stark realities such as our fathers faced, greater in magnitude and with potential danger to us than those they mastered, in a test more severe than has ever before met in our day or by any generation. The fate of the civilized world is in balance. We hold it in our hands. The scales tremble, for they are weighted against us. The responsibility is ours. We cannot evade, we will not avoid it.

We accept and appreciate the terrible peril that confronts us, welcome the opportunity to meet and overcome it and to show the world the stuff of which we are made. The fiber will hold.

"The colors have not faded, nor has rot
Weakened the fabric of our ancient might.
Through centuries our forefathers have
guarded
Freedom and justice with a jealous pride.
We are the heirs of those whose deeds were
lauded;
Do we disgrace them? Let the world de-
cide."

Freedom and liberty and equality under the law and our standards of living are worth the cost, whatever the price we may be called upon to pay, in sweat or flood or treasure, to win this war, else civilization is an empty dream and all the efforts of our forebears and ourselves for the right are but a tale that is told.

In this realization and in our determination lies the only hope of our emancipation. It is the will for the preservation of freedom which motivates us today. It is felt the world over among those who love freedom. It is that will and that determination which our enemies underestimate which they must meet, to which they finally shall yield, in unconditional surrender.

Against the aggressor hordes that affront and confront us we have: "Set up our banners. We are not ashamed to show the cause for which we fight."

"We are full slow to rouse; and deaf and
blind
To danger till the day is almost lost;
Then, as one man, welded in heart and
mind,
We fight to victory, and scorn the cost;
There is no foe we have not dared to meet,
And none we will not face—expect defeat."

Today, we again proclaim our determination to emancipate ourselves, to uphold and defend the Constitution of the United States, to preserve and conserve all of those guaranteed liberties and freedoms for which it stands and shall forever stand; to save, safeguard, and transmit to posterity the democratic form of government that is ours, its principles of justice, freedom, and equality. To this end we dedicate ourselves, the undivided genius of our people, all we hold dear and sacred, with one duty, one desire, and an unbeatable determination to win this war for civilization.

Let us, then, today remember Lincoln, as the mystic chords of memory, stretching from every battlefield and patriot grave to every living heart and hearthstone all over this broad land, impel us to undertake to make his dream come true, to the end that this Nation under God shall not perish from the earth.

The day of our isolation as a nation has sunk out of sight with yesterday's sun, with our Atlantis, under the water of experience which covers the globe of theory with the irrepressible, irresistible flood of reality.

The postwar crises we will have to meet present not only great dangers but wonderful opportunities for America. The military victory we shall eventually have accomplished spells only the beginning of the trials and tribulations which are to be ours to overcome. Our military victory will be only the prelude of our victory to be won. The past will be only the prolog.

The blueprint for the freedom of the world, for the new world order, in the peace which shall follow, shall be the Constitution of the United States of America, a government of laws and not a government of men.

These days are dark and dreary and in thousands of homes the light of life has gone out to keep burning and furnish the fuel for the torch of liberty held high over the head of every American.

Our boys are dying on Korean battlefields. Theirs is no light and casual gift to the cause of the better world for which they fight. They are giving their all. Their sacrifice is supreme, and falling and dying they challenge us to carry on, to make any and all and every necessary sacrifice to speed the better day for which they so gallantly die. We shall not build a new world order at any lesser cost or on any other foundation. We shall build a better world as a monument to those who have given their lives to make is possible and as a tribute to our own self-respect. We can do no less.

There was a dream that men could one day speak the thoughts of their own choosing. There was a hope that men could one day stroll through streets at evening, unafraid. There was a prayer that each could speak to his own God, in his own church. That dream, that hope, that prayer became America. Great strength, youthful heart, vast enterprise, and hard work made it so. Now, that same America is the dream, the hope, the prayer of the world. Our freedom its dream. Our strength its hope. Our swift race against time its prayer. We must not fail to share our freedom with it, afterward.

Remembering that "It is for us the living to be dedicated to the great task remaining before us," honoring the memory of the man the anniversary of whose birth be observe, let us conclude by saying to him as did Joseph Auslander, recently in his poem entitled:

"GIVE US YOUR DREAM

"Because you knew black nights of unbelief,
The sleepless agony, the stark despair,
Sustain us when we struggle with our grief,
Help us to find the strength you found in prayer.

"Because, being human, you could understand,
And, being humble, could all faults forgive;
O take us like small children by the hand;
Teach us in truth and tolerance to live.

"Give us your faith to fight for and to treasure;
Give us your dream to prove the soul's true worth—
The faith for which you gave the last full measure,
The dream that shall not perish from the earth."

Count In "O'Moran," Too

EXTENSION OF REMARKS
OF
HON. ALBERT P. MORANO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. MORANO. Mr. Speaker, a story about St. Patrick's Day was dispatched this week to the Gannett newspapers, including the Hartford Times, a great metropolitan daily in my home State, under the byline of Mr. William A. Garrett. It tells of the many members of Irish blood now giving devoted and distinguished service, as men and women with ancestral roots in the Auld Sod have served throughout our history, in the Congress of the finest and freest Nation ever conceived. Bill Garrett, among the ablest of Washington correspondents, does me honor to list "O'Moran"—which, begorrah, I am verdantly happy to be called by my many Irish friends each year at this time.

Incidentally, I have been "O'Moran" on this celebrated day, for nigh on to 3 years. It all began during discussion on the Fogarty resolution, when sides were being drawn on the issue of uniting Ireland. Pressed by my colleagues as to my stand I finally replied, "For 364 days a year I am AL MORANO. But today, boys, you may call me 'O'Moran.'" This has entitled me to an honorary status as a St. Patrick's Day celebrant along with the O'Briens, the Kelleys and Harrigans.

To all sons (and daughters) of Erin, of whom my home State has many thousands, may I extend good wishes this St. Patrick's Day, and thank the good Lord for letting us have so many of them.

This is Bill Garrett's story:

WASHINGTON, March 12.—On Saturday, St. Patrick's Day, Uncle Sam himself can rightfully join Harrigan in singing the praises of "All the Irish Blood That's in Me."

Of all the national groups that peopled the American Colonies, the National Geographic Society pointed out today, the Irish were the most numerous.

There is quite a reflection of this in Congress itself, which has scores of men and women with Irish names—from Albany's LEO O'BRIEN to Illinois' THOMAS J. O'BRIEN and Brooklyn's EDNA F. KELLY to Pennsylvania's AUGUSTINE B. KELLEY.

The biggest Irishman on Capitol Hill is New Jersey's T. JAMES TUMULTY, who also happens to be the biggest, physically, of all legislators, whatever their extraction.

Connecticut's Capitol delegation is close to 50 percent Irish. It is exactly that every St. Patrick's Day, when an "O'Moran" pops up where Representative ALBERT P. MORANO once stood. That's the way MORANO wants it, and his Irish colleagues—PURTELL, DODD, and, yes, PATTERSON—welcome him to the clan.

The earliest Irish settlers were propertied folk driven from their native soil by Oliver Cromwell. In the big rush following 1700 were many artisans as well as Catholics and Presbyterians seeking religious freedom. So many fled to Massachusetts that in 1720 a court ordered that "Certain families recently arrived * * * be warned to move off."

The Irish moved to New York State and northern New England, but still life wasn't easy. Those who founded Londonderry, N. H., in 1720 once were attacked by an armed band while in church. There they introduced the white Irish potato to New England. Some of them founded another Londonderry in Vermont.

In all, according to Geographic, the Irish planted more than 7,000 Emerald Isle place names on the American map, including 24 Dublins. (There are two villages of the name in Connecticut, one in Southington, the other in Colchester.)

In 2 years before the Revolution, Ireland's Ulster County alone sent 30,000 emigrants. When war flamed, the Irish so outnumbered other patriots that one loyalist, testifying in Britain, declared half the Continental Army came from Ireland.

Commodore John Barry, senior officer of the United States Navy, from its establishment in 1794 to his death in 1803, was Irish. So was Brig. Gen. Richard Montgomery, first American officer to die in the Revolution.

After the Revolution, 4 native-born Irishmen and 4 descendants helped frame the Constitution. Another, James Hoban, designed the White House. Seven Presidents of Irish descent later lived there: Jackson, Polk, Buchanan, Arthur, McKinley, Wilson, Truman. The first governors of five States (including Illinois) were Celts.

A big wave of Irish immigrants hit America after the potato-crop failure in 1846. In 10 years 914,119 arrived. The tide surged again during the Irish land war toward the end of the 19th century.

Immigration declined thereafter, but Irish influence has continued to spread.

Irish Prime Minister John A. Costello probably will give it some new impetus when he visits here this week.

The Jaycee Creed

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. WILLIAMS of New Jersey. Mr. Speaker, recently I had the opportunity of meeting with the Junior Chamber of Commerce of Fanwood and Scotch Plains, N. J., on the occasion of their charter night. I was greatly impressed by the inspired character of that evening's activities and by the enthusiasm of the new members, of whom J. T. Griffin is president, J. G. Johnson and D. R. Bowes are first and second vice presidents, R. J. Gartland is treasurer, and W. M. Teets is secretary. At that time, too, I had the pleasure of reading the Jaycee creed, which is so simple and yet so eloquent a statement that I feel impelled to call it to the attention of the Congress. I particularly want to commend this new junior chamber of commerce for its fine efforts to live up to this most worthy creed:

THE JAYCEE CREED

We believe:

That faith in God gives meaning and purpose to human life.

That the brotherhood of man transcends the sovereignty of nation.

That economic justice can best be won by freemen through free enterprise.

That government should be of laws rather than of men.

That earth's great treasure lies in human personality.

And that service to humanity is the best work of life.

The Wall Street Journal Warns the Soviet Bid to Swap Inventions and Know-How Poses Puzzler for United States

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, the Wall Street Journal reported in a front-page story on March 12, 1956, that the Dresser Industries, of Dallas, Tex., has made a contract with the Soviet Government to bring the radically new Russian turbine oil drill to America.

Commenting on this in the New York Herald Tribune this morning, Joseph and Stewart Alsop said that—

Great efforts have been made, causing much ill feeling among our allies, to prevent the Soviets from getting the benefit of Western know-how in this matter of petroleum extraction. But now it turns out, if O'Connor (vice president of Dresser Industries) is right, that the people with the superior know-how are the Soviets. And there is at least one good reason for thinking that O'Connor probably is right, too.

In brief, Soviet crude oil production has increased by over 80 percent in the last 5 years, thus overcoming the much-touted oil fuel shortage, while American domestic crude oil production has gone up by only 22 percent in the same period.

The Alsop brothers go on to say that there is plenty of other evidence of the same sort of progress the Soivets are making in other fields. Steel products are a sensitive export category, yet a technical mission of European steel masters, headed by Sir Robert Shone, director of the British Iron and Steel Board, found recently that the Soviet steel plants were actually more efficient than three-quarters of the steel plants in Great Britain, where the industrial revolution began.

The issues involved here being of the greatest importance, I am including the articles from the Wall Street Journal and the New York Herald Tribune for the information of my colleagues:

[From the Wall Street Journal of March 12, 1956]

BAN OR BOON?—SOVIET BID TO SWAP INVENTIONS, KNOW-HOW POSES PUZZLER FOR UNITED STATES—RUSSIANS OFFER OIL DRILL TO DRESSER INDUSTRIES, BUT PLUMP FOR TWO-WAY DEAL—SHADES OF MR. KAPELYUSHNIKOV

(By Henry Gemmill)

PARIS.—A gray-haired Texan is hustling home from Moscow with a document that may revolutionize America's oil drilling and will certainly galvanize Washington officialdom into a difficult policy decision.

The problem posed for officials in the State and Commerce Departments: Shall American manufacturers of "strategic" products be permitted to exchange inventions and technological skills with the Russians?

Saying "No" will be difficult in this important test case, for the swap which the Texan will present for clearance appears to be all to America's advantage.

MR. O'CONNOR'S CONTRACT

J. B. O'Connor, executive vice president of Dresser Industries of Dallas, is bringing with him a contract which, if approved by Washington, will grant his firm the right to make in the States a turbine oil drill, radically different from the traditional variety. In Mr. O'Connor's experienced opinion it is far better than anything Yank engineers have developed, and he has traveled as far as western Siberia to watch it in action.

The Russians claim it not only cuts enormously the time and expense of tapping oil pools—by drilling up to 10 times faster than conventional drills—but permits their exploitation in a completely different manner. For one thing, they declare, the drill makes it possible to drill strange multibranched wells which can suck petroleum out of fields hitherto considered exhausted.

There's skepticism among United States oilmen about the claims by Russians for the turbo drill, and interestingly enough, some of it comes from the president of Dresser Industries, H. N. Mallon, who says he hasn't been in touch with Mr. O'Connor since he visited Russia. "It is my personal opinion," says Mr. Mallon, "that there is no drill in Russia or anywhere else that can drill 10 times as fast as American drills."

He adds that Dresser Industries has no intention of releasing any publicity about any deals with the Russians and doesn't know what kind of deal Mr. O'Connor made with the Russians.

TWO-WAY STREET

If the deal goes through, Dresser will naturally pay royalties—the amount has not been made public—for each turbodrill made in America. If this were all there was to the deal, Washington could scarcely find any room for deliberating over it. But like most international licensing arrangements, this one is intended to be a two-way street. In return for the Soviet oil-drill designs, Dresser Industries will be obligated to provide certain oil technology to the Russians.

Just what the Russians will get is not clear; tight-lipped Mr. O'Connor is not taking about this aspect of the contract at all. Other sources explain the arrangement this way: While it doesn't open Dresser's whole bag of oil-production tricks to the Russians, it requires at the very least that the United States firm, if it improves the Soviet-designed turbobit as it certainly expects to do, will have the duty to teach the Russians the details of the improvements and grant them the right to use them.

In an open-end arrangement of this sort it is difficult if not impossible to predict which party would benefit the most in the long run. But United States officials, confronted by Mr. O'Connor's proposal, may soon be obliged to make an educated guess on that very question. And they must do their guessing against the background of an 8-year-old cold-war ban on exports of petroleum extracting and processing equipment to the U. S. S. R. and her satellites on grounds such gear is strategic.

A SWAP AND A SMILE?

Exporting information instead of equipment is something else again, to be sure. It's possible the United States Government's East-West trade controllers might smile on such swaps as Mr. O'Connor will propose, particularly since the American technological advances would probably be no secret to the Soviets anyway. A favorable ruling could open the gates to many more such transactions, in other industries besides oil, for there are numerous signs that the U. S. S. R. would like to develop East-West trade in technology.

One such indicator: Foreign Trade Minister Ivan Kabanov set up a little ceremony when the contract with Mr. O'Connor was signed March 2, and made this pointed comment to the American: "I hope this is the beginning of a new relationship between us (Russia and America). We can do business but that depends on you."

The Soviet, in its quest for American technology, has often displayed basic bargaining weakness—for instance, it has little to teach the United States about agriculture and a great deal to learn. But in industrial science, as this turbodrill deal indicates, it may well be in a more favorable bargaining position. The turbodrill is not just a sudden wild Russian idea, as yet unproved. Soviet scientists have been tinkering at it since 1925 when M. A. Kapelyushnikov designed the first; it was inferior in performance to the traditional rotary drill. New teams went at the job in relays but their sucecss has come with a rush since the war. By 1940 some 3 percent of the nation's drilling was being done by the new turbine bits; by 1954 they assertedly had taken over 65 percent of Russian drilling operations.

FASTER, CHEAPER DRILLING

Official Russian documents state that the new tools have cut the time scheduled for drilling wells in the eastern oil districts of the Soviet Union from 20 to 40 days, from a former 150 to 200 days. They declare the cost of boring a given distance of shaft has been cut to one-third of ordinary rotary drilling expense.

It could be argued that Russian necessity was the mother of the turbodrill invention. The Soviet has found it difficult to produce enough high-quality steel pipe for traditional rotary drilling.

The traditional technique requires the bit, digging deep in the earth, to be turned by links of rotating pipe stretching all the way to the top, where power is applied. The strain on the pipe, which may be a mile or two long, is terrific, even with the best steel it is not unusual for a driller to "lose" his drill when the piping snaps. Furthermore, energy losses to friction as the pipe turns are large, experts say that 400 horsepower applied to the top of the pipe in a deep well may yield 30 horsepower at the bit. The Russian turbobit assertedly permits use of light and cheap pipe without fear of its breaking, because it is not rotated in the rock. Instead, a turbine is attached to the bottom end of the pipe; this spins from the pressure of water pumped down into the well. The turbine in turn spins the bit. The Russians say this results in "effective turbodrill face capacity" of 450 horsepower. Mr. O'Connor stated at the Moscow signing ceremony that the turbodrill cuts through rock at 10 times the speed of a rotary drill.

The turbobit has been designed, the Russians say, so that it can be bent sharply at great depth and carried off in a horizontal direction. This trick, they say, permits major alterations in exploitation of oilfields.

BRANCHING FOR OIL

They declare they are getting oil out of "exhausted" fields by boring "branches" at the bottom of wells, in the depleted oil-bearing structure. These holes shoot off in all directions—one diagram in a Soviet technical document shows a well splitting off into no less than 10 different holes—and gather up the scanty oil like the roots of a plant.

In new fields the Russians say they can sometimes increase output by "finishing off the shaft in a nearly horizontal direction along the productive rock layer."

By drilling out at a slight steady slant the Russians contend they can tap a large part of a field with a number of wells tightly clustered at the surface. This apparently simplifies servicing the wells when they begin producing, and reduces the problem of gathering the oil.

Recently Russia has introduced the method of drilling two wells simultaneously from one derrick tended by one crew; the wells of course drift apart as they descend.

Though the idea of the turbodrill is simple, getting one that would work proved exceedingly difficult, and the fact these bugs were apparently eliminated indicates engineering resourcefulness. A couple of examples: The vanes of the turbine, cramped into a tiny space, were at first inefficient in capturing the power of the flowing water. Their profiles were altered after engineers studied research data on wing aerodynamics.

The first turbodrills had ordinary roller bearings; these disintegrated because of intense vibration from the drill and because rock particles worked their way into the metal. The solution was to substitute rubber bearings.

NEW DESIGNS

The Russians are still trying to make improvements. They are developing a system of changing worn bits without pulling up the drill pipe; they have designed a turbodrill that can be raised and lowered through the inside of an 8-inch casing. In position at the bottom the bit expands to nearly 12 inches in diameter when in operation, cutting a hole large enough for the pipe to follow. Dresser's contract would give it rights to make this equipment when and if it is perfected.

The Russians have made no secret of their progress; they described it in some detail at the World Petroleum Congress in Rome last year and much was known about their attempts even before the war. But many Americans were inclined to shrug off the whole idea as exaggeration if not fabrication.

Dresser was one company which did not. The company had been a supplier of equipment to the Soviet in preembargo years, and its officials had contact with Russian experts. Mr. O'Connor spent 3 months in Russia in 1947, early in the cold war, but did not at that time succeed in negotiating rights to the turbodrill. This time he accomplished it in 2 weeks of arduous inspection trips and very hard bargaining.

[From the New York Herald Tribune of March 14, 1956]

MATTER OF FACT

(By Joseph and Stewart Alsop)

THE GONE HORSE

The dreamy unreality of most current discussion of world problems is wonderfully well illustrated by the noisy Senate row about East-West trade.

Several Democratic Senators are in a towering rage, real or pretended, because the Eisenhower administration has reluctantly allowed our allies to increase their trade with the Soviet bloc. In reply to the Senators' criticism, Secretary of Commerce Sinclair Weeks has chiefly mumbled that the whole subject is classified. This is a very fashionable answer nowadays.

Meanwhile, anyone who troubles to read that not very highly classified publication, the Wall Street Journal, must suspect that the Senators and Secretary Weeks are arguing about locking the barn door long after the horse has gone.

From the moment the embargo system was set up, equipment for extracting and purchasing petroleum products has always stood near the top of the list of forbidden exports to the Soviets. In this field the western lead was believed to be very great. Since the fuel-oil shortage was also believed to be one of the chief weaknesses of the Soviet economy, the strictest rules were made to perpetuate that shortage. And now the Wall Street Journal has turned these rules into an ironical joke, with a single story.

The story is about a Texas concern, the Dresser Industries, of Dallas, whose vice president, J. B. O'Connor, has made a contract with the Soviet Government to bring the radically new Russian turbine oil drill to America. O'Connor will certainly suffer if he is shown to be talking through his hat; yet he boldly claims that this Russian turbodrill is up to 10 times as efficient as the conventional oil-well drills in use in this country and throughout the Western World. The technicalities behind this claim have no place here. But the joke it indicates is very clear, indeed.

Great efforts have been made, causing much ill feeling among our Allies, to prevent the Soviets from getting the benefit of western know-how in this matter of petroleum extraction. But now it turns out, if O'Connor is right, that the people with the superior know-how are the Soviets. And there is at least one good reason for thinking that O'Connor probably is right, too.

In brief, Soviet crude-oil production has increased by over 80 percent in the last 5 years, thus overcoming the much-touted oil-fuel shortage, while American domestic crude-oil production has gone up by only 22 percent in the same period.

Furthermore, there is plenty of other evidence of the same sort in other fields. Steel products are regarded as a sensitive export category, for example. Yet a technical mission of European steelmasters recently found that the large, integrated Soviet steel plants were actually more efficient than three-quarters of the steel plants in Great Britain, where the industrial revolution began. This finding was supported by the leader of the mission, the able executive director of the British Iron and Steel Board, Sir Robert Shone.

According to Sir Robert, the big Soviet plants are about as efficient, in terms of output per worker, as the "top end" of the British steel industry. "No instrument one could think of was lacking," Sir Robert said. These and other findings of the steel masters' mission so upset Secretary of the Treasury George M. Humphrey that he is reported to have sounded the alarm on the highest level of the United States Government—which was a trifle odd, since the intelligence reports have been telling Humphrey the same story for at least 2 years before the steel masters went to the Soviet Union.

Again, machine tool exports to the Soviets are mostly strictly embargoed. Yet the tough and experienced engineers of the American Automation Mission found that Russian machine tools were both finely designed and excellently made. They further concluded that current Soviet machine tool output was higher than American machine tool output. And they found that some Soviet ideas about automation techniques looked like advances on prevailing American ideas.

Much other evidence along the same lines might also be mentioned, but this should be enough to make the point. In sum, the Soviet economy has grown very greatly and Soviet technology has advanced very rapidly in the period since the war. For these reasons, the famous embargo is now beginning to be self-defeating. In certain very special areas the controls may still be worth the inter-allied friction that they cause. But all the experts agree that in most areas the embargo now causes less inconvenience to the Soviets than to the American policymakers.

Tradewise, in fact, the experts think we ought to stop worrying about the embargo and start worrying about the final conclusion of Sir Robert Shone. Shone embodied his conclusions in a warning that if the Soviets chose to export steel products they could undersell most Western countries, deliver on their contracts, and make a rather handsome profit, too, because of their cheap labor. Since the experts further think that the Soviets are now beginning to have an exportable steel surplus, Sir Robert's warning ought to be taken very seriously indeed.

President Hoover Urges Federal Budget and Accounting Reforms

EXTENSION OF REMARKS

OF

HON. GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1956

Mr. LIPSCOMB. Mr. Speaker, former President Herbert Hoover appeared on March 15, 1956, before the National Action Conference on the Hoover Reports sponsored by the Chamber of Commerce of the United States to again urge adoption of the Hoover Commission's recommendations for Federal budget and accounting reforms.

I believe that the Congress should move as rapidly as possible to a serious and thorough consideration of the Hoover Commission's recommendations for Federal budget and accounting reforms in view of the billions of dollars in savings that are estimated to be possible as the result of adoption of these recommendations. Senator PAYNE and 21 other distinguished Members of the Senate introduced on February 14, 1956, a bill, S. 3199, to implement the majority of the recommendations of the Hoover Commission on budgeting and accounting. I introduced in the House on February 20, 1955, an exact companion bill, H. R. 9402, to bring before the House for enactment these same recommendations. I believe that these bills should be given early and urgent consideration by the Congress.

I would, therefore, commend to the attention of the Members of the Congress the following remarks of President Hoover:

ADDRESS BY HERBERT HOOVER BEFORE THE CHAMBER OF COMMERCE OF THE UNITED STATES, WASHINGTON, D. C., MARCH 15, 1956

I should first pay tribute to the chamber for its energetic and understanding support of the recommendations of the Commission on Organization of the Executive Branch of the Government. Time does not permit that I traverse the whole wide area of the Commission's recommendations.

There are, however, reforms in two areas of Government that were dealt with by both the first Commission and the second Commission. They reach into every agency of the Government. They have been the scene of nearly 2 years' investigation on both occasions. Reforms have been recommended in each case by able and experienced men. There is no ideological conflict in them. There is no political controversy in them. They permit much lament and little oratory.

They are reforms in the civil service and in budgeting and accounting. These are housekeeping jobs. The usual practice is to sweep such reforms under the carpet, but now they eat holes in the carpet.

They are technical and bristle with statistics. But of all men in the country, you are best fitted to understand them. And you can save billions of dollars of taxes if you can get them adopted.

REFORM IN THE CIVIL SERVICE

There are about 2,300,000 employees in the Federal service, of whom 2,000,000 entered through some merit test. As a body, they are industrious and devoted public servants. But they have increased from 600,000 in 24 years and have increased the payroll cost from about $1 billion per an-

num to $9 billion. During this vast and rapid growth, their organization has failed to keep pace with the shift in improved methods, the economic and political experience of the Nation.

There were 20 men on the combined Task Force and Commisison membership of the first Commission who agreed on many needed reforms, and some of these were adopted. The task force of the second Commission, under President Dodds, of Princeton University, was comprised of 10 members, and 10 of the members of the Commission itself supported its recommendations. These 20 men included 3 former Civil Service Commissioners from both political parties, 14 who had had previous important governmental experience, and 6 who were appointed for their experience in personnel service in private enterprise. They comprised men from both political parties. No political issues were ever raised or discussed.

These men agreed on three major weaknesses in the Government personnel service:

1. About 500,000 persons leave the service every year, a turnover of over 25 percent per annum. That percentage of turnover would bankrupt any private enterprise twice a year.

2. The method of promotion and pay fails to produce and hold the kind of top executive skill and talent needed in any great organization. Ours is a Government of changing political parties, and it is the civil service which must carry on the Government housekeeping from administration to administration.

3. Ours is a two-party Government. Political parties come into power with a mandate as to policies which the majority of the people wish established. There are not enough policymaking positions today subject to party choice to carry out these mandates.

Do not get scared that we are proposing a spoils system, as I shall show you later; we wish merely to change less than one-tenth of 1 percent of the total number.

OUR RECOMMENDATIONS

While these 20 men on the task force and Commission made many recommendations for improvement, I propose to discuss only their recommendations on these three major weaknesses. They are revolutionary.

To make the civil service an attractive, life profession, and thus to decrease turnover and especially to retain talent for the top administrative jobs, we proposed to create a senior civil service. Employees in this group would be chosen from the civil service on the basis of character and talent alone, irrespective of the present basis of promotion. We propose they should receive pay security and prestige, which would keep Government talent from being constantly grabbed by business.

The value of such a policy has been shown by our military forces which recognize seniority and other automatic bases of promotion up to certain levels. Beyond those levels a senior military service is chosen from the force by an autonomous board on the basis of character and talent. If our top military officers had been chosen on the civil-service basis of promotion, the deadwood at the top could have lost us two world wars; thus our senior civil service proposal has warranty in national experience.

The present salaries and fringe benefits in our top civil service are below those in the top military service, and worse still, they are far below those in private enterprise.

I have made a rough canvass of a number of large private enterprise concerns as to the number of top men they require and the salaries they pay. I sought answers to four questions:

1. What was their total annual expenditures?

2. What was their total number of employees?

3. How many employees did they have receiving $15,000 a year and over?

4. Likewise, receiving $20,000 a year and over?

Adding up these concerns, I found that on an expenditures basis we ought to have 14,000 employees at $15,000 per annum and over in the Federal Government.

Based on the proportionate number of employees, the Federal Government ought to have 8,000 reeciving $15,000 and over.

The Federal Government has 1,364.

On the basis of $20,000 a year and over, I found that on an expenditures basis the Federal Government ought to have 6,100, and based on the number of employees it ought to have 3,600.

The Federal Government has 633.

I also found that private enterprise has about 1,000 persons at $40,000 a year and over.

The Federal Government has only one.

This was not a complete investigation, but from these rough figures you can get a glimpse of why talent leaves Government service and why we have this gigantic turnover.

However, I am not talking about $40,000 a year in the civil service. In the senior civil service we propose that we should start with $15,000 per annum and rise to $22,000.

A career in Government has attractions of its own, but, if we want executive talent and character to stay in Government, we must do much better than we are doing now.

We need a much larger number of these top executives. A good top executive at any salary can save 10 times his salary.

Now to turn to the third weakness, that of policymaking positions. In my view, the President needs to have perhaps 2,000 more policymaking positions subject to appointment by him. As I have said, that would be about one-tenth of 1 percent of the present civil service, but it relates to the fundamental responsibility of maintaining two-party Government. Nonpolitical civil-service people should not be required to make policy or to defend administration policy.

You can make a rough calculation as to what this gigantic turnover of 500,000, or over 25 percent per annum, costs. The Commission found that the machinery of replacement costs the Government about $500 a person. You can add to that at least $1,000 of the beginner's salary, which produces no results while he is learning his job. If this turnover could be reduced by 200,000 a year, you could multiply it into billions of dollars in savings.

BUDGETING AND ACCOUNTING

The vital subject of budgeting and accounting was exhaustively canvassed by the first Commission 6 years ago, aided by a task force of outstanding public accountants already familiar with Government methods. Their major recommendations originally were opposed by the Comptroller General, the Budget Director, the Secretary of the Treasury, and the chairmen of the congressional Appropriation Committees. It took 3 years even for parts of it to sink in. Legislative and Presidential acts since did make improvements, but these reforms are wholly incomplete.

Still more reform seems needed, since many of the principles and practices of present budgeting and accounting are inherited from the Budgeting and Accounting Act of 35 years ago, when the Government was certainly much smaller. In this time Government expenditures have increased from $4 billion to $65 billion, and the number of civilian and military employees from about 850,000 to more than 5,200,000. Moreover, the budget is so complicated that the very book which describes it annually comprises 1,200 pages of fine print, with millions of figures, and weighs over 5 pounds. If the average man can understand it, he is fitted for the $64,000 prize.

Budgeting is much more than just preparing figures and estimates of proposed expenditures. The budgeting functions are vital to the whole management of Government. In the preparation of the budget lies not only the control of departmental expenditures but also the power to insist on efficient methods of conduct in the spending agencies. And within a more effective budgeting system lies the restoration of the fuller control of the national purse to the Congress, which has in great degree been lost. Ever since Runnymede, the control of the purse by the legislative body has been a foundation stone in liberty itself.

The second Commission again had the aid of a task force of 7 outstanding accountants and business executives under Col. J. Harold Stewart, with 3 competent consultants. They adopted many of the recommendations of the first Commission but went further to wider reforms. Nine members of the Commission joined in their major recommendations, so that here are 19 experienced men who spent much of their time for 2 years on this problem. And this time I am told that the recommendations are approved by the Comptroller General, the Director of the Budget, and most of the other executive leaders in the Government. The question now is adequate legislation.

Their major recommendations are:

1. To strengthen the Bureau of the Budget.

2. The full adoption by the administration and the Congress of the performance budget based on functions, activities, and projects which was recommended by the first Commission in 1947 and adopted by the Defense Department in 1950.

3. An annual accrual budget based on actual costs, not upon obligations and contracts awarded, and services which require future payment of money or departmental assertions of probable long, future obligations. Private industry generally does this, and it has been successfully adopted by the Atomic Energy Commission.

The purpose of the Commission's recommendations is to greatly simplify the budget and in that way the people can understand it and, as I have said, can restore to the Congress the control of the purse.

As one example of loss of control of the purse, the departments at the end of the fiscal year 1954 had an estimated $68 billion of unspent appropriations which they could use over future years without review by the Congress, and of this an estimated $22.8 billion had not even a suggestion of being obligated. Here is where Congress lost control of the purse.

ACCOUNTING

Efficient accounting is also one of our Government problems. Accounting means more than just tabulating expenditures. Proper accounting methods are needed in Government, as well as in industry, to provide the information for effective management. It has been estimated that 90,000 full-time employees and tens of thousands of additional man-years in part-time efforts are required to compile the financial facts which Government agencies now need and to assure the public of integrity in Government spending.

The present law governing accounting was passed in 1950 and includes part of the first Commission's recommendations, but the Government accounting still needs:

1. A plan of uniform accounting by the agencies so that an accurate, intelligent statement of expenditures can be presented to the public.

2. Advancement of more modern accounting methods through the appointment of a director for accounting in the Bureau of the Budget whose specific duty would be to work out a planned system jointly with the Comptroller General and the Treasury.

3. Appointment of comptrollers in more of the larger agencies to advise the head of the agency on financial matters and to enforce the policies laid down by the Comp-

troller General and the new Assistant Director of Accounting from the Bureau of the Budget and to recruit and train qualified accounting personnel.

4. A number of reforms affecting the present allotment system, the revolving funds property accounting, and other problems.

You are surely aware by this time that budgeting and accounting are important matters, but I can throw in a little added interest by reading to you the last paragraph of the task force's introduction to its report:

"The benefits which would result from improved financial management cannot be calculated with any degree of precision, but we believe the resultant dollar savings could reasonably be expected to amount to $4 billion, which is approximately 8½ percent of the controllable budget expenditures."

IN CONCLUSION

Your chamber is comprised wholly of men to whom personnel problems, budgeting and accounting problems are your daily toil and the haunt of your sleep. I am sure that in these reforms the Congress will value your opinions. Here are two goals at which to aim at once, and they reach much further than saving money and taxes. Competence and leadership in the housekeeping of our Government are a contribution to freedom in every American home.

The Role of American Newspapers in Handling News on Government Affairs

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. BERRY. Mr. Speaker, under leave to extend my remarks in RECORD, I am inserting an editorial from the Winner (S. Dak.) Advocate, under date of March 8, 1956, outlining the role of American newspapers in handling news on government affairs. Editor John L. Rigg has clearly pointed out the responsibilities of governing bodies in making all of the facts available, and the duties of the press in presenting this information in an unbiased manner:

Down in Kansas the newspapers are banning together to form a committee to see to it that newspapers have access to information from various governmental bodies * * * information that is considered of public interest.

It's just one of the constant battles newspapers must carry on if there is to be a reason for their existence.

Of course there is always a chance that an official body or office might want secrecy in order to cover up assorted shady deals. But a large part of the Kansas newspapers' purpose is more of an educational than police nature.

Many governing bodies, particularly at local levels, have two reasons for wanting to keep the press in the dark.

One reason is that some folks think the public can be better served if the public doesn't know what is going on. Such people are not dishonest. They merely want to do their work in their own way without being bothered by the boss, i. e., the public.

Another reason is that some officials do not trust the newspapers involved. Unfortunately some newspapers have justified such lack of trust.

A newspaper can mishandle public information by slanting its reports, by overemphasizing the trivial and playing down the important, by reporting some sides of a question and ignoring others.

This Kansas group, as well as newspapers throughout South Dakota, has two jobs: One is to emphasize to various governing bodies, committees and offices that complete, honest reporting on public affairs is advantageous to them as well as a basic principle of American Government. The other is to caution the press against abuse of the right to know and to inform.

Continuing High Morale in the Armed Services Demands the Enactment of a Uniform Program of Adequate Medical Care for Families and Dependents of Servicemen

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 1, 1956

Mr. DONOHUE. Mr. Speaker, there is scheduled to be shortly presented to this House a bill designed to provide a uniform improved program of medical care for the dependents of members of the armed services. The particular bill which we shall be asked to consider is titled "H. R. 9429."

My original interest in this important subject came about from observation, during my own World War II service in the Navy, of the beneficial effects upon my fellow servicemen of their knowledge that their dependents at home were receiving proper medical care in their absence, and unfortunately my observation of the demoralizing effects of the information from their dependents that they were not receiving proper medical attention and too often could not obtain it. My continuing high interest in this important subject was aroused from my experience here these past several years and my opposing efforts to the Army proposal to close the Murphy Army Hospital in my congressional district, the only general hospital in the New England region. Out of this experience, and without prejudice, I must say that I have never yet been given what I consider to be a full and sufficient reason for the Army's persistent planning toward reduction and closing of military hospitals, not only within my area, but in several other areas throughout the country. To the contrary, it seems to me that their program and attitude on this subject has been strikingly contradictory.

On the one hand, they complain about the difficulty of keeping good people in the armed services for a career and they continually ask the Congress to provide additional incentives to encourage reenlistments and to attract individuals to the military life. Most of their proposals along this line are for increases in pay, but it is remarkable how often their recommendations contain appeals for major increases for the highest officer rank and meager increases for the enlisted personnel. From the repeated stories we read of the multitudinous retirements of personages in the highest ranks at comparatively early ages and their almost immediate placements in the highest paying brackets of business and industry, it is difficult for anyone to see the need for any greater incentives for the higher military rankings. It leads one to suspect that the real purpose too often is to provide higher pension levels for early retirement.

Be that as it may, I have never heard of a single case of a ranking military officer who had any trouble getting full medical care for his dependents at military facilities. Unfortunately, I have heard of too many cases where the dependents of noncommissioned service people have had extreme difficulty, and in some instances, have been turned away. Of course, in too many areas there are no military medical facilities within a reasonable distance and they are thus deprived of proper medical attention.

It may well be that sometimes, as is, I think, sincerely stated by military authorities, the application of existing laws to the particular entitlement is vague and technical. If that is so, then this legislation we will soon act upon is a sound step toward resolving that difficulty of interpretation.

H. R. 9429 is designed to provide a uniform program of medical care for military dependents and grant them a statutory entitlement to such care on a uniform basis throughout all of the uniformed services. In other words, there will be no disparity among the types of care provided nor will there be any disparity among the types of dependents included, nor should there be any further confusion in the minds of military officials as to who is entitled to what care under what branch of the military. In short, enactment of this legislation will provide by statute a uniform program of medical care which will at last nearly fulfill the high obligation of the Federal Government to provide adequate treatment for the dependents of those who serve this Nation in uniform.

Mr. Speaker, in the President's last state of the Union message, he reiterated his previous comments upon the importance of this proposed legislation in the following language:

This year I renew my request of last year for legislation to provide medical care for military dependents and a more equitable survivors' benefit program.

Both the Secretary of Defense and the Assistant Secretary of Defense for Manpower and Reserve endorsed and enlarged upon the Presidential appeal.

Mr. Speaker, military morale is of vital concern, not only to the Defense Department, but to the Congress, in meeting our responsibilities to adequately provide for national defense. A military unit is no better than the spirit that exists among its members and the morale of their families, despite what-

ever powerful war weapons that may be possessed.

Assurances to military personnel that their families and dependents, and of course their own medical needs will be fully, competently, and humanely provided for is a major factor in the continuing maintenance of high spirit and morale. Such assurance is also the greatest appeal of encouragement for continuing reenlistments and desire for a military career that can be established. It is obvious, of course, that the continuously training career serviceman means the best prepared and most efficient combat force, on an economical basis, that can be had. Surely that is what we vitally need in these times of continuing tension, unrest, and ever-threatening Communist aggression. The adoption of this legislation is, then, of obvious and vital importance to the continuing safety and welfare of the American people. I earnestly hope it is accorded unanimous approval when it is presented to the House.

Mr. Speaker, in the hearings on this measure before the House Armed Services Committee, it was authoritatively estimated that 40 percent of the dependents of members of the armed services do not now have medical care available to them in service facilities.

Realizing with reasonable certainty that this legislation will be enacted into law, may I further earnestly hope and trust that the Army and the Defense Department will not unwittingly continue to thwart the projected intent of the Congress contained in this legislation to provide full medical care to military dependents by perverting insistence upon closing more and more of the very military medical hospitals and facilities that must be kept in operation if the objectives of this bill are to be honestly and conscientiously carried out.

University of Buffalo

EXTENSION OF REMARKS
OF
HON. EDMUND P. RADWAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. RADWAN. Mr. Speaker, we in Buffalo can once again take justifiable pride in our splendid university. Freedoms Foundation has honored the University of Buffalo with award of the George Washington honor medal, plus $200, for its conference on American student life and higher education, held last June for 40 foreign Fulbright scholars.

There is cause for additional pride, in the plan for disposition of the cash award. In order to achieve a multiplier effect, it is proposed that for the next 4 years an annual award of $50 in silver will be presented to the resident of, or student in, Erie and Niagara counties who makes the greatest contribution to international understanding, with the nominations being judged by the Student Council of the College of Arts and Sciences. This was announced by Dr. Richard H. Heindel, dean of that college who further stated:

I believe the plan is appropriate in view of the nature of the conference which won the award and the fact that international understanding is a crucial element in the American way of life. Besides, it enables us to recognize that many persons and organizations from the two counties pitched in to make the conference a success.

Among the local cooperating agencies last June were Canisius College, Niagara University, State Teachers College, and the Albright Art Gallery.

The Administration's Continuing Polio Fiasco

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. MULTER. Mr. Speaker, I direct to the attention of our colleagues the following report by Messrs. Don Sheard and George Carpozi, Jr., which appeared in the New York Journal-American for March 9, 1956, on the current polio vaccine shortage.

The article points up that one of the reasons for the production bottleneck is the long-time lags by the United States Public Health Department in approving new batches of Salk vaccine. This report only serves to confirm the remarks I made on the floor of the House last year on August 1, 1955, during the consideration of the Poliomyelitis Vaccination Assistance Act of 1955. I stated then, and I say now, that the Administration has mishandled the entire problem, and that the legislation then under consideration would not solve the issue by merely appropriating more money so as to make the vaccine available. The public is only too familiar with the repeated, but unsuccessful, requests that the Congress made to the executive department in an effort to obtain an expression of views from the Cabinet official charged with the responsibility for this program, so that adequate and necessary legislation could be passed to assure the public that the vaccine would be in ample supply. The article that follows should serve to remind the American people of one more reason for refusing to continue this administration in office:

POLIO VACCINE SHORTAGE LIMITS SHOTS TO BROOKLYN

(By Don Sheard and George Carpozi, Jr.)

Because of a critical shortage of Salk anti-polio vaccine, the citywide program to inoculate children between 6 months and 5 years of age beginning next Thursday will be restricted to Brooklyn.

Inoculations in the other boroughs must wait until new supplies are received, and the outlook for early delivery is not good.

There are about 200,000 youngsters in the age group, but there is only enough vaccine for 3,000, according to Dr. Morris Greenberg, director of the health department's bureau of preventable diseases, who is in charge of the program.

"We are expecting an early shipment of vaccine for 90,000 children," Dr. Greenberg told the New York Journal-American, "but when it will come we don't know."

At the same time, doctors throughout the city and the metropolitan area report their supplies of Salk vaccine almost exhausted. Many physicians have none at all.

While the city's 5-to-9-year-old age group has been inoculated—this age group is most susceptible to paralytic polio—only 1 in 1,000 in other age groups has been inoculated. The same situation prevails in New Jersey.

An investigation by this newspaper discloses that the bottleneck has been in production.

Two reasons are advanced for the delay: Longtime lags by the United States Public Health Department in approving new batches of Salk vaccine manufactured by the country's five pharmaceutical houses, which are licensed to produce the vaccine.

Reluctance of the manufacturers to go all out in production, presumably because the program lacks an adequate profit incentive.

A spokesman of the National Foundation for Infantile Paralysis said production is still "zigging and zagging".

"It does not seem," he asserted, "that there will be enough vaccine for everyone before the onset of the polio season."

He attributed the Government's tardiness to the fact that the committee which approves the vaccine does not meet but once every three weeks in Washington. That affects production and distribution.

Manufacturers reportedly are annoyed by the rigid supervision of their production.

Distribution of the serum, previously handled by the National Foundation, is now entirely controlled by the United States Public Health Department, which allocates it to States on the basis of supply and demand. The demand is based on the number of children in the eligible ages—6 months to 14 years.

In New York, the State department of health allocates the vaccine according to a ratio of 70 percent to municipal health departments and 30 percent to wholesale drug distributors, who supply doctors.

Physicians in the metropolitan area revealed they had each received a total of 5 Salk vials, each containing 9 cubic centimeters, or enough for 45 children.

Most doctors said the demand was 3 and 4 times that.

CAN'T GET SECOND SHOTS

In New Jersey, physicians reported they gave many children first shots but were unable to get more vaccine for the required second shot, usually administered two weeks after the first.

A Bergen County doctor told this newspaper:

"Only one in a thousand who should have gotten the series, received the shots."

At the moment, some of the Nation's vaccine producers are sounding rainbow-tinted promises that by June there will be enough Salk vaccine "to pour down your throats."

They have been saying that since last September and by now the optimism has worn thin with the Health Department and the National Foundation.

Parke Davis & Co. told the Journal-American that 1 million cubic centimeters (1 cubic centimeter is a shot) is ready, waiting for Federal approval, and release by June.

Eli Lilly & Co. reported a "50 percent increase" in production and expects to have "more than 50 million cubic centimeters by midsummer."

The other manufacturers, Pitman Moore, Sharpe & Dohme, and Wyeth, conceded they were "in production" but gave no figures.

In the midst of the shortage, the mass inoculation program which started last spring in the school system, for children 5

to 9 years of age, comes to an end this month.

COST HURTS MANY

All city children up to 15 years of age—there are about 1,750,000 in that bracket—must then either go to their own physicians for Salk shorts or, if their parents can't afford it, to school doctors.

"At least half of the families in the city can't afford private doctors," Dr. Greenberg said. "The city will have to inoculate them—when it gets the supply."

Up to February, a total of 480,000 youngsters had received one injection and 390,000 received the second.

The program that is scheduled to start March 15, under the supervision of the Health Department will be a continuing one—if the supply of Salk vaccine ever gets here.

Hungarian Independence Day

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. CRAMER. Mr. Speaker, today there is being celebrated throughout the world the anniversary of the Hungarian revolution of 1848, which is Hungary's Freedom Day. We here in this free Nation under a republican form of government should pause today to pay tribute to the many patriots of that great country who have shown their zeal in quest of the liberties and freedoms which we in America enjoy, and perhaps in many instances take too much for granted.

In reviewing this epic struggle which is commemorated today, it is my hope that the many millions of liberty loving patriots behind the Iron Curtain today, together with the other millions in the free world outside of Hungary who are of Hungarian lineage, will, on this occasion be strengthened and heartened anew by this commemoration to the principles of freedom for which they have previously so valiantly fought, and an effort in which the United States joins them on this day.

The following historical recount is submitted on the request of Dr. Zoltan M. Szaz, a naturalized citizen of the United States, formerly of Hungary:

HUNGARIAN INDEPENDENCE DAY MARCH 15

(By Dr. Zoltan M. Szaz)

March 15 is the anniversary of the Hungarian liberal revolution of 1848. A that day, the Hungarian youth at Budapest revolted, and enforced the acceptance of several democratic reforms calling for representative government and the correction of authoritarian abuses with the freedoms of assembly and press, including censorship. The day is also remembered as the day when the leader of Hungarian youth, the well-known poet Alexander Petofi circulated a stirring revolutionary song full of patriotic passion that was destined to become the 'Marseillaise' of the Hungarian revolution.

The reforms were accepted by the Emperor without resistance in the beginning, and in April 1848 the first Hungarian government responsible to the parliament elected by popular franchise was inaugurated. However, with the turn of events in Prague and Vienna, Austrian armies invaded Hungary in the fall, but after initial successes they were repelled in the spring of 1849. Therefore, in the summer of 1849 the Emperor appealed to the Russian Tsar who ordered his armies against the Hungarians. This was the first Russian invasion of Hungary in the country's history. In the ensuing struggle, Alexander Petofi, 26 years old, died on the battlefield, while the regent, Louis Kossuth, had to flee the country, and the leading generals and the first prime minister were executed after summary trials. Kossuth visited many countries endeavoring to secure support for the Hungarian cause, and spent part of 1852 in the United States where he was welcomed with great hospitality with many Kossuth clubs coming into existence. There exists a Kossuth County in the State of Iowa even today.

The anniversary always reminds every Hungarian of the rich national and democratic traditions of Hungarian history. It bears witness to the unbowing will to independence and freedom entrenched in Hungarian spirit if encountering tyranny and national oppression. It might be worthwhile to note that in 1848 besides the Germans and Italians, Hungarians were the first people in Central Europe to espouse the cause of constitutional government and national self-determination against authoritarianism and absolutism that failed to take into consideration the desires of its people. Furthermore, constitutionalism was always a basic pillar in Hungarian political life ever since the Golden Bull, the Hungarian equivalent of the Magna Carta, signed only 7 years after the latter in 1222, which essentially restricted the power of the King by guaranties of individual liberties.

Today, Hungary is again under the yoke of a more thorough and vicious tyranny than in 1848, after having fought unsuccessfully the invading Soviet armies and subsequent Communist subversion. Thus, the commemoration of March 15 gives hope to the Hungarians behind the Iron Curtain and everywhere in the world, that Hungary shall again be free, as foreign oppressors never succeeded in breaking the will of her people to freedom and self-determination.

Shining examples of resistance to oppression in the recent past were, besides Cardinal Mindszenty, Bishop William Apor, of Gyor, shot by drunken Soviet soldateska on Good Friday of 1945 defending the honor of Hungarian women who took refuge in his wine cellar when the Soviets conquered the town, the Lutheran bishop Ordas sentenced to several years of imprisonment, and the parson and his parishioners of Pocspetro sentenced to death or long-term imprisonment for forcibly resisting the nationalization of their schools by the government in 1948.

Johnson Should Head Texas Democratic Delegation

EXTENSION OF REMARKS
OF
HON. HOMER THORNBERRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. THORNBERRY. Mr. Speaker, on Wednesday last, the Speaker of the House, Mr. RAYBURN, released to the newspapers in Texas a copy of a telegram he had sent to Senator LYNDON B. JOHNSON. In it, he proposed that Senator JOHNSON accept the nomination as Texas' favorite-son candidate and lead the Texas delegation to the National Democratic Convention.

Senator JOHNSON said that he would like time to think the proposal over, and he asked that his fellow Texans do likewise: to consider it and explore it carefully. Mr. Speaker, a good many Texas newspapers have now reacted favorably to Mr. RAYBURN's suggestion, and I have here a sampling of editorial opinion from these newspapers.

Under unanimous consent, I insert these editorials in the Appendix of the RECORD. What they have to say about a great American, our fine majority leader in the Senate, is especially noteworthy:

[From the Austin American of March 10, 1956]

JOHNSON CHOICE WINS QUICK COMMENDATION

SAM RAYBURN'S proposal that Texans unite on Senator LYNDON JOHNSON as the favorite son for Texas' Democratic nominating votes, and his further suggestion that Senator JOHNSON be made chairman of the Texas delegation, have brought immediate favorable response from many quarters.

Predicate of the favorite son pledge that Texas' nominating votes be cast for JOHNSON for President was laid nearly 2 years ago by Gov. Allan Shivers. This idea seems to have firm support in all quarters; and in the minds of many, the spectacular Texas leader may figure in a much more important role if the anti-southern extra-liberals fail to dominate the Chicago convention.

RAYBURN'S second barrel brought repercussions, in that the State Democratic executive committee's chairman already had suggested that, under precedent, Governor Shivers would in effect be the prospective chairman of the delegation if he wanted it.

But since Governor Shivers recently has disavowed seeking reelection this year, he in any event will pass out of the picture as titular head of the official Democratic Party in September. So will the present State executive committee, when a new one will be built around the nominee as Governor Shivers' successor.

The immediately favorable response to the choice of Senator JOHNSON both as the favorite son and as delegation chairman stemmed from the judgment that he is the only rallying point on which Texans can agree, and that he thus would avert the repetition of the two decades of conflict between the two major intra-party factions.

This viewpoint has been expressed typically, in editorials of the Waco News-Tribune and of the Wichita Falls Times, and it has been echoed in other parts of the State.

As the News-Tribune pungently stated it:

"Texas Democrats, by giving Senator JOHNSON the recognition of a favorite son for the nomination, could remove for the first time in years the prospect of a divided and weakened appearance under the Texas banner at the national convention. The act also would be a fitting tribute to a man who has served Texas and the Nation extremely well in the United States Senate for 7 eventful years. LYNDON JOHNSON deserves the highest honor his State can give him.

"It's a long time until May, when the State convention meets to choose the Democrats who will speak for Texas in Chicago. There are numerous issues and disputes and feuds to produce confusion, to add to discord, in the ranks of the Democrats of Texas. But the tender of State party leadership in the national convention to Senator JOHNSON is one move that could unite 99 percent of the State's Democrats. And if they ever needed a point on which they could get together it is this spring.

"A season of harmony, in the spirit of reasonableness, could work wonders for the party and do the entire State much permanent good. LYNDON JOHNSON's philosophy

makes him ideal as the symbol of such a new day for Texans."

Wichita Falls Times spoke out that JOHNSON is the man for the job. It congratulated Speaker RAYBURN for his forthright conviction and good judgment in suggesting such an able leader as LYNDON JOHNSON to be the State's favorite son and chairman of the Texas delegation.

It declared that under his outspoken leadership, Texas without a doubt would have a real voice in the proceedings of the national convention and would work for the nominees of the Democratic Party.

[From the Waco News-Tribune of March 9, 1956]

TEXAS DEMOCRATS COULD MAKE HAY WITH JOHNSON

Texas saw plenty of evidence last fall that Senator LYNDON B. JOHNSON'S qualities of reasonable leadership could produce harmony in the ranks of the Texas Democratic Party, long riddled by factional strife.

Senator JOHNSON is above factionalism. His record as Democratic leader in the United States Senate, a record of achievement unsurpassed and seldom equaled in the history of that body, proves his ability to persuade others to sink their personal differences in the interest of the Nation's welfare.

Speaker SAM RAYBURN, in suggesting that Senator JOHNSON be accorded the honor of leader and standard bearer of the Texas delegation to the National Democratic Convention in Chicago, is merely saying what a great many other Texas Democrats said last fall when LYNDON JOHNSON was in the limelight of party events. No other Texan matches his national stature at this time, and no other Texan can, by his personality and intellect, attract as diversified a following in party matters today as can LYNDON B. JOHNSON.

Texas Democrats, by giving Senator LYNDON B. JOHNSON the recognition of a favorite son nomination for the United States Presidential candidacy, could remove for the first time in years the prospect of a divided and weakened appearance under the Texas banner at the national convention. The act also would be a fitting tribute to a man who has served Texas and the Nation extremely well in the United States Senate for 7 eventful years. LYNDON JOHNSON deserves the highest honor his State can give him.

It's a long time until May, when the State convention meets to choose the Democrats who will speak for Texas in Chicago. There are numerous issues and disputes and feuds to produce confusion, to add to discord, in the ranks of the Democrats of Texas. But the tender of State party leadership to the national convention to Senator JOHNSON is one move that could unite 99 percent of the State's Democrats, and if they ever needed a point on which they could get together it is this spring.

Political sharpshooting, parading of old bitterness, and other pettifogging won't make the Democratic Party in Texas strong. A season of harmony, in the spirit of reasonableness, could work wonders for the party and do the entire State much permanent good. LYNDON JOHNSON'S philosophy makes him ideal as the symbol of such a new day for Texans.

[From the San Antonio News of March 8, 1956]

JOHNSON SHOULD HEAD TEXAS DEMOCRATIC DELEGATION

Senator LYNDON B. JOHNSON is the logical choice for chairman of the Texas delegation to the Democratic National Convention in Chicago in August, where he also would certainly be due the honor of favorite-son status as a token of the State's and the party's appreciation for his outstanding public services.

House Speaker SAM RAYBURN, recognized leader of the loyalist or liberal Democratic faction in Texas, has indicated a willingness to join in statesmanlike compromise to place JOHNSON at the head of the delegation, saying:

"Under his demonstrated leadership I think Texas would have a real voice in the national convention."

We wholeheartedly agree. In fact, this newspaper first suggested that course in October 1955: asserting:

"He is no doubt the only man in Texas who could hold together anything like a representative delegation from this State."

We believe that Senator JOHNSON would accept that responsibility—the only apparent chance—for restoring a measure of harmony to the faction-rent Democratic Party in Texas.

And we strongly urge that Gov. Allan Shivers and the other leaders of the more conservative wing of the Democratic Party in this State match RAYBURN'S good commonsense in this instance by similarly agreeing to support the selection of JOHNSON to head the Texas delegation.

Senator JOHNSON'S middle-of-the-road moderate approach to national and party issues undoubtedly reflects the political philosophy of the great majority of rank-and-file Texas Democrats. And no one else can match his rare combination of political genius, soundly principled statesmanship, and widespread popular support among all elements of the Texas electorate.

For the past several presidential years, the Texas Democratic Party has been hurtfully split down the middle by the seemingly interminable political war between its two major factions. The opposing forces are now once again alined for a no-holds-barred battle in the local and State conventions in May for control of the Texas delegation, with the result again likely to be inconclusive, divisive, and harmful to this State's potential influence in the national convention.

We believe that the people are fed up with this factional fighting and want a representative delegation that can speak as a genuine cross-section of the Democratic Party in Texas. And it is virtually certain that can be achieved only under the leadership of Senator JOHNSON, who has won the unreserved respect of both major wings of the national party for his splendid achievements as Senate majority leader.

In view of President Eisenhower's decision to seek reelection, it is generally understood that Senator JOHNSON does not contemplate any serious bid for the Democratic nomination this year and favor for according him status as Texas' "favorite son" candidate should not be taken as implying that he should. However, that move, which would further increase his national stature, could have considerable significance in looking toward the presidential election year of 1960, which might be quite a different matter.

As a politically independent newspaper, we are sincerely and earnestly interested in having the best and strongest possible leadership in both major parties. And with Senator JOHNSON heading this State's delegate to Chicago, the Texas Democratic Party would have the best opportunity in many years for achieving both constructive internal compromise and a more influential voice in national affairs.

[From the Victoria Advocate of March 11, 1956]

IT'S JOHNSON FOR FAVORITE SON

As the Advocate pointed out some time ago, Senator LYNDON B. JOHNSON is in exactly the right position to be presented to the 1956 Democratic National Convention as Texas' "favorite son" candidate for president.

As was predicted then, a really serious movement in this direction had to wait on the Senator's full recovery from his heart attack of last year, for a demonstration of his continued effectiveness as majority leader, and for a "kickoff."

The kickoff was supplied this week by Speaker SAM RAYBURN, who pointed out that JOHNSON might very well look better and better to the convention as it gets under way, and that he could become a candidate behind whom the quarreling factions of the Democratic party could unite.

The Senator has indicated that, while he will not seek to force himself into the designation, he would consider it an honor and would accept.

Actually, the State can hardly afford not to present the Senator as its favorite son. As a man of great stature nationally, of course, he would be a much more potent favorite son than many who have been presented to conventions by delegations from assorted States in the past.

Moreover, neither the role of favorite son nor the role of the party's candidate, even if he happened to receive the nomination but lost the election should seriously harm his political future.

This is an opportunity for Texas to honor one of themselves who has served admirably his Nation and his State, under trying circumstances which would have been too much for a lesser man to handle.

It is an opportunity which must not be passed up.

[From the San Angelo Standard-Times of March 10, 1956]

SENATOR JOHNSON LOGICAL MAN TO LEAD RETURN TO PARTY

The Democratic Party of Texas, which Governor Shivers created as an entity distinct and separate from the National Democratic Party, has served Texas well.

It was effective in coalescing Texas' opposition to the tidelands steal. It was a perfect vehicle for carrying conservative Texas into the Eisenhower camp in 1952. And it has been indispensable to Governor Shivers in maintaining his control over the Democratic machinery of the State.

But basically the Democratic Party of Texas has always been a fiction. For 4 years it has successfully asserted its right to participate in the National Democratic Party without submitting to the national party's discipline.

In reality, the Democratic Party of Texas has been an independent party, maintaining its power with the help of an appropriated name and the leadership of an able and courageous Governor.

But now its days are numbered.

This week SAM RAYBURN, Speaker of the House, suggested that Senator LYNDON B. JOHNSON be the "favorite son" candidate of the Texas Democrats at the national convention. This would put Senator JOHNSON in charge of any delegation Texas sends to the convention.

No Democrat of statewide standing (including Governor Shivers) can publicly oppose Senator JOHNSON as the "favorite son" and delegation chief without great embarrassment. It is difficult to foresee any strong opposition to RAYBURN'S proposal; and, in the absence of opposition, it is sure to go through.

This means that Democratic Party functionaries and workers of almost all political complexions will unite behind Senator JOHNSON, leaving the Democratic Party of Texas isolated and impotent.

It means that JOHNSON will emerge as undisputed leader of the party in this State, eclipsing the Governor and every other political figure on the horizon.

It means that the united Democrats under JOHNSON will enjoy the advantage of an

appealing cause—return to the party fold, harmony, etc.—while the remaining Shiverscrats have only a lost cause—interposition.

During the 1952 campaigns, the Shiverscrats had real issues in the tidelands and corruption in the Truman Administration. Interposition is not such an issue. Except in east Texas, interposition is generally regarded as an ancient fiction useful only as a point of debate for lawyers not otherwise employed.

It appears that the Democratic Party workers in Texas are rapidly returning to their natural affiliation as loyal adherents of the national party.

No observer or politicians, however, should confuse the return of Texas Democrats to the discipline of the national party with a general movement of Texas independents toward Democratic national candidates and away from Eisenhower. Eisenhower is more popular today among Texans than he was in 1952. It is unlikely that the personal attraction of any of our Texas Democrats can dim the appeal of a great President.

[From the San Antonio Express of March 8, 1956]

SENATOR JOHNSON REFLECTS TEXAS POLITICAL TEMPER

Texas Democrats know they are headed into a first-class scrap among themselves this summer unless they can rally behind a moderate, peacemaking leader.

The logical leader, of course, is Senator LYNDON B. JOHNSON, majority leader of the United States Senate.

Such course was suggested Wednesday by Congressman SAM RAYBURN, the veteran, able Speaker of the United States House of Representatives. Congressman RAYBURN'S view is a reasonable one: under Senator JOHNSON'S chairmanship, the Texas delegation would have a potent voice at the national convention in Chicago.

Senator JOHNSON is a middle-road, moderate-conservative. That is also the political temperament of Texas majority.

As a peacemaking plan, we endorse Mr. SAM'S proposal to make Texas senior Senator the delegation chairman in Chicago. We further endorse the Speaker's suggestion that Texas Democrats put Senator JOHNSON forth as a favorite-son candidate for the presidential nomination, it being generally understood the Senator is making no serious bid for the nomination in view of President Eisenhower's availability for a second term.

And certainly, going to the national convention as Texas' favorite son and leader of the Lone Star Democrats will put LYNDON JOHNSON in the spotlight as a man to be reckoned with as a potential 1960 presidential nominee.

[From the Abilene Reporter-News of March 9, 1956]

TEXAS POLITICS ASTIR

Texas' internal politics, as well as its role in the National Democratic Party picture, hotted up this week with the proposal from Bonham by Speaker SAM RAYBURN that Senator LYNDON B. JOHNSON become Texas' favorite-son candidate for the presidential nomination.

The role of favorite son usually carries with it control of a State's delegation to the national convention, and it was this delegation-heading role of JOHNSON as proposed by RAYBURN that shook the State's politicos to their foundations.

At first, Lt. Gov. Ben Ramsey, the compromise choice for Texas' National Democratic chairman, came out strongly for the Rayburn proposal, but later he modified this to say that his endorsement applied only to JOHNSON'S favorite-son role.

This quick shift of Ramsey underscored a simple but potent fact: Governor Shivers has ambitions to lead the delegation to the national convention. The Governor himself had merely said "no comment" regarding the Rayburn proposal as this was written, and his close friends were equally cautious. It is possible the Ramsey shift reflected the Governor's attitude; that is, that JOHNSON as a favorite son was acceptable, by heading the delegation to the convention is something else again.

"Mr. SAM" himself left no room for doubt on that point. His statement declared JOHNSON is the key to the State's political troubles, by which we take it to mean the need for reuniting the party factions in the State.

But RAYBURN added significantly: "When he is made the favorite son I think it would well follow that he should be chairman to the Chicago convention"—that is, chairman of the Texas delegation.

However this squabble works out, the national party might go further and fare worse than to select Senator JOHNSON, majority leader of the Senate, as chairman of the national convention itself. A man who has shown surpassing skill in guiding the Senate over many a rough shoal should be able to serve as ringmaster of a national convention with one hand tied behind his back.

[From the Temple Telegram of March 9, 1956]

SHREWD STROKE BY RAYBURN MAY BRING TEXAS DEMOCRATIC UNITY

With one shrewd stroke, Speaker SAM RAYBURN has just about unraveled the practical problem facing the Democratic Party in Texas this year.

Mr. RAYBURN proposes that Senator LYNDON JOHNSON be made the Texas "favorite son" candidate for the Democratic Presidential nomination, and that JOHNSON in that capacity head the Texas delegation to the national Democratic Convention.

That gentleman left dangling from the end of the limb is Governor Allan Shivers, who has no hope of "favorite son" designation but has rather desperately wanted to control the Texas delegation to the national convention.

In fact, most of the skirmishing and work done by the contending Democratic groups in Texas in recent months has been on this very question: Who shall head the delegation and how shall the delegation be instructed?

RAYBURN'S plan not only makes obvious sense, but has additional plus values. JOHNSON is the ranking Texas Democrat, and with the exception of RAYBURN himself the only Texan of sufficient national status to be regarded seriously as a Presidential candidate, "favorite son" or otherwise. And if he has that designation, he is clearly the right choice to head the delegation.

The plan cuts away much of the support Shivers might have had in his fight to control the delegation, which he and his supporters have planned to wage in the coming precinct, county and State convention. Most of his supporters are simply not going to be in position to oppose JOHNSON.

And this plan will largely repair, if not heal, the party breach in Texas. It already has the strong approval of the Democrats who stuck with the party in 1952. But it can't accurately be termed a "loyalist plot" because JOHNSON has been careful not to identify himself with either side of the Texas struggle. He stuck with his party all the way, but stayed out of the internal battling in Texas insofar as possible. For that reason, the 1952 bolters have no valid grounds on which to oppose him.

JOHNSON'S desire to function as a Democratic peacemaker in Texas became publicly apparent last fall when he took that position in his speech at the now-famous Whitney dinner. And his reply to the RAYBURN proposal Wednesday underlines the position he took earlier: He said he will consider the proposal, and that he hopes all Texas Democrats will do the same.

It is safe to predict that they will, and just about as safe to predict that their decision will be favorable.

For the first time in years, there is now a good chance for a clear-cut decision within the Democratic Party in Texas, and for a subsequent unity that has been and is sorely needed.

The American Bar Association Fails the American People

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. MULTER. Mr. Speaker, a few days ago I received an invitation to join the American Bar Association.

I had been a member for many years but discontinued my membership because of the association's irreprehensible and utterly indefensible action in rejecting the application for membership of a very able and distinguished New York City jurist, for the sole reason that he is a Negro. Many times since I had been approached to rejoin and on each of these occasions I was told that the association's policy in this respect had been changed.

Upon examining the application form that I received a few days ago, I experienced once more the disappointing conviction that the association's policy has not undergone any substantial variation. The sixth line of the application form requires the applicant to indicate his race by making an appropriate mark after one of the following: "Caucasian," "Mongolian," "Indian," and "Negro." Why not go the rest of the way, and put in a request for the applicant to name his religion?

Is it conceivable that an association of lawyers, of advocates, of individuals who are suposed to be the paladins and praetorians of justice and who are supposed to dedicate their lives to the cause of justice, should forget the basic principles of justice upon which the supreme law of our land is founded "that all men are created equal."

In connection with its membership drive, the American Bar Association transmits to potential applicants a booklet descriptive of its achievements, present activities, its services, and objectives. Among its list of achievements, the association declares it "has consistently pursued, and is today carrying on with increased vigor, a campaign to instill in the public mind an understanding of the fundamental principles of the Constitution and a keener appreciation of the privileges of American citizenship."

I take this opportunity to remind the association that it abuses and destroys its right to exist if in recruiting members some persons are in fact considered less worthy than others—only because there is a difference in the color of their skin. The spirit of racial superiority is utterly

in conflict with those basic principles that form the foundation of a true democratic way of life.

Here, indeed, we may apply the maxim that the association should practice what it preaches if it wants men to follow its preachments and to regard the organization as the protagonist of the principles of human justice. It is high time the American Bar Association changed its policy.

If it does not do so, then I suggest it drop the word "American" from its name. The simple words "bar association" will be more appropriate.

Bill To Amend Bankhead-Jones Farm Tenant Act

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. DIXON. Mr. Speaker, today I introduced a bill which would authorize the Secretary of Agriculture to make loans to the operators of farms which are smaller than those capable of supporting family units.

This bill is intended to supplement the purposes of H. R. 8834 and H. R. 8835, which I earlier in the session introduced to liberalize credit through the Farmers Home Administration, to worthy farmers who cannot obtain credit from private sources, but who can repay such loans is given liberal enough terms. In essence, this bill would:

First. Authorize real estate loans to owner-operators of family-type farms for the refinancing of debts. Insured loans for this purpose may not exceed $45 million per fiscal year. This would authorize refinancing as the sole purpose of the loan where it is now limited to an incidental loan purpose.

Second. Authorize real estate and operating loans under titles I and II of the act on less than adequate farms where satisfactory off-farm income is to be available. This would permit the Department to more adequately serve the credit needs of farmers and ranchers for housing and other farm buildings and assist low-income farmers under the Rural Development Program.

Third. Increase the aggregate amount of insured loans for a fiscal year from $100 million to $125 million.

Fourth. Eliminate the present limitation on insured loans of not exceeding 90 percent of the fair and reasonable value of the farm, thereby placing the insured loans and direct loans under title I on the same basis.

Fifth. Eliminating the requirements that loans may not be made in excess of the average value of efficient family-type farm management units in the county, thereby making it possible to serve any family-type farm operator who is otherwise eligible for credit services under the act.

Sixth. Provide that, not to exceed 10 percent of the annual appropriation for operating loans under title II may be used for loans in excess of $10,000 but in no event in excess of $20,000.

Seventh. Permit in justifiable cases, due to causes beyond the borrower's control, outstanding loans to be renewed or extended for a period not to exceed 11 years and also authorize the agency to make further loans in such cases during the 11-year period. Present limitation is 7 years.

Eighth. Change the name of loans under title II from "Production and Subsistence Loans" to "Operating Loans."

Ninth. Extend and revise the authority under the statute for the compromise, adjustment, and reduction of debts for loans being serviced by the agency. These suggested amendments are based upon operating experience that would improve the loan-servicing aspects of the agency's program.

Tenth. There are several other minor changes of less significance but which would improve the administration of the program.

A Bill To Establish a Plan and Appropriate Procedures for the Promotion of Employees of the Government on the Basis of Merit

EXTENSION OF REMARKS
OF
HON. JOHN E. MOSS, JR.
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. MOSS. Mr. Speaker, the record will show that I have consistently been a strong supporter of our career employees and the civil-service merit system. Unfortunately, similar support has not been universal for there has been a disposition in some quarters to discredit the civil-service system and Government employees. We have noted with great concern efforts to wreck the merit system by adoption of procedures for the filling of positions by appointment or promotion on the basis of political endorsement.

I have waited and hoped that the Civil Service Commission under its charter as chief architect and protector of the merit system would step forward and offer a sensible, workable, and long overdue program for the promotion of Federal employees on the basis of merit. My hope has not been fulfilled and the wait has been in vain—for no such move has been made and it seems clear that none is to be expected.

However, I am hopeful that the lack of attention by the Civil Service Commission to this very important matter is due to inertia rather than opposition to a program for the promotion of employees on the basis of merit. I say that for the following good reason: No claim is being made that the program proposed in the bill I am about to introduce is complete or beyond improvement in every respect or minute detail. Therefore, should the Civil Service Commission recognize deficiencies in certain areas, I invite their cooperation to the end that they be overcome and an acceptable program be developed and quickly enacted into law. I suggest that on this occasion no useful purpose would be served by forwarding to the Congress a run-of-the-mine objection letter in the event they are not in complete agreement with every little detail. Rather it is hoped that the Civil Service Commission will offer constructive suggestions.

Mr. Speaker, I introduce for appropriate reference a bill to establish a plan and appropriate procedures for the promotion of employees of the Government on the basis of merit. An identical bill is being introduced today in the Senate by Senator OLIN D. JOHNSTON, of South Carolina.

I am attaching a statement herewith explaining the provisions of the bill:

MOSS' EXPLANATION OF BILL

The purpose of this bill is to provide a plan and procedure for the promoting of Government employees to positions of increased responsibility on the basis of merit. While such a plan will in greater measure facilitate the placing of qualified employees in positions having greater responsibility, it will at the same time provide an appropriate incentive for employees to make the public service a career.

It is the normal desire of every employee to be accorded recognition for superior service, and after mastering the requirements of a particular position, to expect consideration for promotion to a higher position which will give him added responsibility and demand a higher degree of resourcefulness and competence. For the individual employee, this avenue of advancement is an incentive to do his job well and to make it possible to move on to another position in which he will be better paid and in which his capabilities will be better utilized. For the Government, a promotion program can produce the advantage of high employee morale and increased productivity.

In the absence of a well-defined policy and operating procedure under which all employees receive the consideration they deserve, promotions are too often made on the basis of political or personal favoritism. Opportunities for advancement are often awarded to those whose experience, training, or performance do not qualify them for more exacting assignments.

TITLE I

Title I is designed to establish a promotional system for positions in the executive branch of the Federal Government and of the government of the District of Columbia which are in the competitive civil service.

The bill provides for the creation of a promotional board in each department and agency to direct the operation of the promotional system. The promotional board will consist of a chairman designated by the Civil Service Commission and two other members selected jointly by the chairman and the head of the agency in which the board is to function.

It will be one of the responsibilities of each board to see to it that employees are informed of promotional opportunities. This feature of the program is of paramount importance, because it has been the unfortunate experience of many an employee that a position to which he might have aspired had been filled before he learned that a vacancy existed.

The examinations are, under terms of this bill, to be objective and give maximum

weight to experience, length of service, and demonstrated ability. Written examinations will be required only to the extent that they may be necessary.

The bill sets forth in some detail the method to be used in grading examinations, and for appraising the education, experience, and other qualifications of persons who desire to be placed on promotional lists, and stipulates that the lists shall be established by grade or level of responsibility. The bill also describes the method of certification of eligibles from the promotional lists and of their selection for appointment.

A procedure is provided for appeal from the rating given in a promotional examination. An employee also may appeal if he feels that he has been prevented by a supervisor or a fellow employee from taking an examination or otherwise availing himself of the promotional procedure.

TITLE II

Title II is designed to establish a promotional system for positions in the Postal Field Service. The system is tailored to fit the special needs of the postal service just as title I is tailored to fit the needs of the Government exclusive of the postal service.

Tribute to John McCormack

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. ADDONIZIO. Mr. Speaker, with the Congress being honored today by the visit of the Honorable John A. Costello, Prime Minister of Ireland, and with the approach of the feast of St. Patrick, this is a fitting time to call attention to the following tribute to the great John McCormack who is equally beloved in his native and adopted lands. The author of the article is Mr. George J. Shevlin, 108 Esther Street, New Smyrna Beach, Fla., who heard John McCormack sing on two occasions, once at a concert for servicemen at the Metropolitan Opera House in 1917. I know all the Members will enjoy reading Mr. Shevlin's interesting tribute which follows:

TRIBUTE TO JOHN MCCORMACK

One of the most beloved gentlemen of Irish birth, ever to capture the hearts of Americans, was the late John McCormack, internationally famous tenor of the operatic and concert world. His great charm and personality was like a glow that filled the great concert halls whenever he appeared. Born in Athlone, Ireland, he became an American citizen in 1914. His life was made up of three fundamentals: his faith, his work, and his family. A fourth should be added: his devotion to his friends. It might also be said that he had a great zest for living. The wonderful story of his domestic life was indeed rich with happiness and filled with love and devotion to his family. In her book I Hear You Calling Me, Countess McCormack writes of her husband John (to whom she was married 37 years)—"he was such a forceful character that it was difficult to keep up with him." His enthusiasm for people, places, music, art and other forms of beauty was unbounded. There was no pretense about him. Lover and admired by the great artists of his day their acclaim was summed up in the words of Madame Schumann in 1918 when she praised. "his exquisite vocal production, marvelous breath control, perfection in coloring the tone and inimitable manner of telling a story in song with ease and patience." Much has been written concerning the rare excellence of John McCormack's voice which he always regarded with sincerity—as a gift from his Maker—and for him to make the best of it. In his memoirs John McCormack writes one song, more than any other, has been identified with my career and my success all over the world is: I Hear You Calling Me. I have sung it in London, Dublin, Berlin, Prague and in far off Australia, New Zealand, Japan, China, South Africa, in fact, all over the United States.

In the interest of charity John McCormack gave generously of his time and services. In recognition of his services to Catholic charities he was honored by His Holiness Pope Pius XI with the title of Papal Count.

At the beginning of World War I he offered (at his own expense) a fund raising concert tour of the United States for the benefit of the American Red Cross. This was accepted and the financial returns have never been equaled in the annals of the American Red Cross.

Typical of the great spirit of good fellowship which he projected was contained in a letter received from the commander, United States Naval Department of Training Camp Activities and sent to John McCormack's manager, i. e., "It may be of interest to you to learn that in my program at League Island navy yard last night—my audience of 1,500 men sang a toast to John McCormack in honor of his becoming an American citizen. I do not think that any of us will ever forget the great inspiration that came with this unusual incident. The men stood and we sang Mother Machree and we followed this with the Star-Spangled Banner and three healthy cheers of Mr. McCormack—who we feel has been one of the greatest instruments for good this country has ever known."

In 1945 while in middle life death came to this great personality in his beloved Dublin, Ireland. Following his death there appeared in the London Sunday Times the following extracts from a tribute by Ernest Newman, famous music critic and long time friend of John McCormack: "I never knew him in his public or private singing to be guilty of a lapse of taste—of making an effect for mere effects sake. He was a patrician artist, dignified even in apparent undress, with a respect for art that is rarely met among tenors. There is no one to take his place.

From Sister Joseph Cyril, his nurse, came the following remarks: "John McCormack now lives only as a memory and I not only hope but pray and feel certain that the desire has long since been realized which he expressed the day he said to me: 'When I go to Heaven I will be able to rival the angels there when I will join them in singing the praises of God.' May he rest in peace."

Middle East Situation

EXTENSION OF REMARKS
OF
HON. CHARLES C. DIGGS, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. DIGGS. Mr. Speaker, by failing to assert a firm stand in the interest of maintaining peace through action to provide Israel with strength to offset Communist aid to Arabia, the United States leaves herself morally indefensible with respect to any future alliance against her between those we would like to consider friendly nations and the Communist world. This is not to say that we should encourage or aid an arms race in the Middle East. It is a historic fact, however, that the free world cannot with impunity ignore an obvious imbalance of power such as exists between Israel and Arabia, with Communist aid and the unwitting aid of democratic nations flowing freely to Arab States, a people numbering some 45 million, and the lack of counterbalancing assistance to Israel, with her population of less than 2 million. This preponderance of power on the part of the Arab States, with Communist abetment, is an invitation and a temptation to open hostilities and aggression.

Under unanimous consent I ask to have printed in the RECORD the following editorial from the Jewish News of March 2, 1956, with its thought-provoking analysis of this situation and the consequences to be expected if our State Department continues its bungling actions:

THE HUMILIATING MESS IN WASHINGTON

There is chaos in our Nation's Capital.

The mess in Washington has assumed a moral aspect with the extension of military assistance to the vast Arabian oil-producing area.

There are inquiries and probes. There will be more of them. But even if the State Department should again reverse itself, as it did within 43 hours between the on-again, off-again embargo on the Saudi Arabian tank shipment, and should grant to Israel her meager request for some heavy arms with which to defend herself, the inconsistency of our State Department can no longer be either explained or excused.

Attempts have been made by the State Department and by the darlings of the Arab propagandists in this country, under the leadership of Dorothy Thompson and Dr. Garland E. Hopkins, to clamp down on discussion of Middle Eastern affairs in the forthcoming presidential political campaign. President Eisenhower has allned himself with that viewpoint. He, his Secretary of State, and their associates, have, by a most inconsistent act—that of sending arms to the Arabs while admonishing Israel that as guardians of our Government's destinies they are bent upon avoiding an arms race—nullified their advice and have thus ended another irrational policy.

The time has come for frank speaking. There are 1,700,000 Israelis, including 250,000 Moslems and Christians who share the fate of 1,450,000 Jews in that little land in the Middle East. These people are surrounded by 45 million Arabs. The peace of Israel's 8,000 square miles of land is endangered by guns, tanks, bombers, MIG's, pointed at a defenseless people from 3 million square miles of enemy territory. The arch enemy of democracy, the Soviet bloc, is providing the arms for the threatened assault on the Holy Land. The democratic nations have resorted to lip service in their protests against Soviet intrusions in that area. But while blaspheming with insincere resentment, Great Britain openly armed the Arabs, and our country became a party to an international sin.

The time has long passed when we must apologize for strong words, or for sentiments uttered in newspapers published in areas heavily populated with Jews. That was a trick of the enemies of decency. The proper approach is evidenced in such expressions as we have read in the Detroit News, in the editorial Where Does This End? on February 21:

"If we have so enslaved diplomacy to military considerations it seems time to take a clearer look at where we are headed. Arming our friends under the implied threat that otherwise they will join our enemies has the smell of blackmail and the look of diplomatic bankruptcy. The only possible move to recover a posture of peace now is to permit commensurate arms sales to Israel. But where does this sort of whipsawing stop short of war?"

The Chicago Daily Sun-Times editorial, Blunder on Arms, calls the Saudi Arabian shipment "bungling." Newspaper throughout the land, radio commentators, men of good will among all faiths, are horrified by the contradictory, inexplicably heartless policies of our State Department.

Dr. Max Lerner refers to President Eisenhower's statement in his natural gas veto message in anger of the "arrogant" corruption that created "doubt concerning the integrity of governmental processes," and asks: "Will he now apply the same moral standards to Dulles and the State Department, and veto their flagrant policy of favoring the Arabs? Or will he allow a fatal doubt to cling to an American policy involving not just gas and profits but world peace and the blood of peaceful people?"

Now, there must be no end to blunt speaking. We call to witness again Dr. Lerner, one of our country's most eminent students of world affairs, whose New York Post Arms, Oil and Blood column makes these justified charges, on the score of the State Department's apparent secret handling of the tank shipment to Saudi Arabia:

"The issue of the attempted concealment of the facts is a phase of the more serious issue of the camouflage of principle. Many Americans had taken in good faith the State Department fears of a Middle East arms race. Now it turns out that Dulles, Hoover, George Allen and company never for a moment meant it. They used the no-arms-race argument in refusing defensive arms for Israel, but discarded it when they shipped tanks to Saudi Arabia.

"Dulles has placed the American Government in an impossible situation. He showed high indignation at the arms deal between Russia and Egypt. Now our own arms deal weakens the indignation power of Dulles.

"The State Department has a curious group of defenders now. One is Dorothy Thompson, who used to hate the Nazis, then turned to hating the Communists, and now turns her hatred against the Jews both in Israel and America, whom she lumps together as "Zionists." One might have thought she would hesitate to propagandize thus for those who have just received Communist arms. The other is Garland Evans Hopkins, who is playing the Goebbels line about Jews putting Israel ahead of their own country.

"The ironic fact is that not all the yielding to Arab blackmail (after all, says Miss Thompson, we need their oil and their permission for an air base) will do us much good in the end. The Arabs must reason that an American government ready to betray the Israelis to them could have no moral answer when the Arabs, in turn, betray America to Russia,

"How about the effect on the leaders and people of Israel? They may conclude that the cat is now out of the bag, and that despite Dulles' pious cliches he never for a moment intended to hold the balance evenly between the Arabs and Israelis. Seeing how quickly the embargo was lifted again, they may conclude that the blackmail of oil profits and the air-base lease will count for more than the nightmare vision of an Arab bombardment of Tel Aviv and Haifa.

"Our first task is to prevent a war. If we do this by getting the Arabs to sit down at the peace table, then let us forget about arms to anyone. But the Arabs do not listen to our peace pleas. Hence we must make certain that their growing armed strength will not embolden them to attack. A neutral policy of giving arms to neither side will be dangerous, since the Communist flow of arms to Egypt (and now to Syria) leaves Israel at the mercy of the Arab League. The only immediate step we can take to avoid war is to help Israel defend itself, and thus warn Egypt and Syria away from the adventure."

The facts cry aloud against injustice and in defense of every rational move to protect the peace of the Middle East and of the world. How long will our leaders yield to blackmail? How much longer will Jew-haters dominate the scene at a time when every effort must be made not merely to avert a war by unrealistic demarcation lines and unhappy bungling of arms sales, but through serious efforts to secure genuine peace agreements between the contending elements in the unhappy Middle Eastern struggle?

The time to answer these questions, Mr. Dulles, is now.

Bill To Amend Credit Union Act

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. PATMAN. Mr. Speaker, I am inserting herewith a proposed amendment to the Credit Union Act I am introducing today, along with an explanation of the proposal. It is as follows:

Following amendment of the Federal Credit Union Act as proposed, the sections referred to would read, through the amended parts, as follows (portions in brackets being the additions):

"Section 7 (5), Federal Credit Union Act (12 U. S. C., sec. 1757 (5)): To make loans with maturities not exceeding 3 years to its members for provident or productive purposes upon such terms and conditions as this chapter and the bylaws provide and as the credit committee [(except as provided in section 11 (d) of this chapter)] may approve, at rates of interest not exceeding 1 percent per month on unpaid balances (inclusive of all charges incident to making the loan): *Provided*, That no loans to a director, officer, or member of a committee shall exceed the amount of his holdings in the Federal credit union as represented by shares thereof."

"Section 11 (d), Federal Credit Union Act (12 U. S. C., sec. 1761 (d)): The credit committee shall hold such meetings as the business of the Federal credit union may require and not less frequently than once a month (of which meetings due notice shall be given to members of the committee) to consider applications for loans. No loan shall be made unless approved by a majority of the entire committee and by all the members of the committee who are present at the meeting at which the application is considered: [*Provided, however*, (i) the credit committee may delegate to the treasurer or assistant treasurer authority to approve a loan to a member of a Federal credit union which is secured in its entirety by an assignment of shares in such Federal credit union owned by such member which are not impaired by pledge or assignment as security on any other loan to such member or others, and (ii) the credit committee may appoint one or more loan officers, who may be the treasurer or assistant treasurer, and delegate to him (them) power to approve or disapprove loans within limitations authorized by the committee on any such loan officer. The applicant for a loan may appeal from the decision of the loan officer to the credit committee. No loan officer, including the treasurer or assistant treasurer, if appointed as such, shall have authority to disburse funds of the Federal credit union for any loan which has been approved by him except as to loans secured in accordance with subdivision (i) of this subsection. No more than one member of the credit committee may be appointed as a loan officer. A loan officer may be compensated to the extent authorized by the board of directors. All loans approved by treasurer, assistant treasurer, or a loan officer shall be reviewed by the credit committee at its next regular meeting]."

There are two purposes in the proposed legislation. The first is to permit the credit committee of a Federal credit union to delegate to the treasurer or assistant treasurer authority to approve a loan which is fully secured by the member's shares in the credit union, and to disburse funds therefor. In this respect, if the treasurer or assistant treasurer has authority to approve and disburse a loan secured by shares it might prevent the member withdrawing them to meet his needs, particularly if he must have funds immediately. Members usually prefer to borrow than to withdraw savings.

The second purpose is to give the credit committee the right to appoint one or more loan officers and delegate to him (them) power to approve or disapprove loans within limitations determined by the committee, with the applicant having the right to appeal from the decision of the loan officer to the credit committee. No loan officer would have authority to disburse funds for any loan which he has approved as a loan officer, if he is also a disbursing officer of the credit union, except as to loans fully secured by the borrowing member's shares.

The credit committee will have the responsibility of appointing the loan officer, and all loans made in accordance with either of the foregoing provisions must be reviewed by the committee at its next regular meeting.

The enactment of these amendments to the Federal Credit Union Act would enable federally chartered credit unions to render more prompt and efficient service to their borrowing members.

Outstanding Bowling Records

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. FLOOD. Mr. Speaker, I would like to take this opportunity to congratulate the members of the Wyoming Valley Bowling Association, which includes a large portion of my constituency of Luzerne County, Pa., for the outstanding record which they have achieved in recent nationwide bowling competition.

One team, comprised of George Billick, George Tomek, Michael Cuce and Frank Clause, rolled the Nation's highest 3-game total for a 4-man team—a composite score of 2,673, in a nationwide match held last January.

Two other constituents of mine—Harry Zoeller and George Pacropis—in

competition held at Fort Wayne, Ind., rolled the 8th highest doubles total in the history of the American Bowling Congress. Their total for 3 games was 1,365.

I am very proud of the national records which these gentlemen have established, and anyone who is conversant and experienced in the sport of bowling will agree with me that these men have done an outstanding job in representing their respective teams as well as the Wyoming Valley Bowling Association.

I wish them all even greater success in future nationwide competition.

Pell City Courthouse Dedication

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. HUDDLESTON. Mr. Speaker, under leave to extend my remarks, I include in the CONGRESSIONAL RECORD a statement made by my colleague, Mr. ROBERTS, of Alabama, at the dedication of the magnificent new county courthouse in Pell City, Ala., on March 3:

PELL CITY COURTHOUSE DEDICATION

It is a great honor to be here with all of you today on this occasion of the dedication of the new county courthouse. This magnificent new courthouse can truly be claimed one of the most beautiful in the Nation and it is only fitting that it should grace our lovely St. Clair County.

The history of St. Clair County is fascinating and, indeed, one which is truly American. The county was created by an act of the Alabama Territorial Legislature in November 1818, and was named in honor of the very prominent Revolutionary War soldier, Gen. Arthur St. Clair. As man pushed the frontier southward and westward, St. Clair County played an important role. Here in 1813 Gen. Andrew Jackson erected Fort Strother just above the shallow ford across the Coosa River which in 1540 had been visited by DeSoto's expedition. Fort Strother was vital as a base of operations against the Creeks during the Creek Indian War.

The heritage of St. Clair County with its area of 641 square miles, is one in which all of us can take pride. The first county courthouse was begun in Ashville in 1821. The branch courthouse in Pell City was begun in 1903. Now today we witness this magnificent new edifice, a symbol of the faith and the pride which the citizens of this community and the county have in their fine local government.

At this time I should also like to pay my respects to the Honorable Judge Forman, who has been probate judge of St. Clair County since 1935. Judge Forman, in cooperation with the able members of the County Commission has done much to guide the growth and progress of our county.

On this very pleasant occasion I wish to extend my congratulations to this community and the county. I feel that this lovely new building symbolizes the faith, so characteristic of all of you—your faith in the progress in the future.

The building of this courthouse is the beginning of a new era in the history of St. Clair County. With one of the finest road systems in the State, through the efforts of your able probate judge and members of the county commission, the foundation has been well laid for the progress that is to come. Industry will be balanced with agriculture. Recently the Alabama Power Co. announced the building of 5 dams—2 of which will border on St. Clair County. The hydroelectric power developed at these dams will furnish the necessary electricity which industry is seeking.

It is the duty of the Congress, under the Constitution, to develop our great waterway, the Coosa River, which is more than 659 miles long and extends from the city of Rome, Ga., to Mobile, Ala. And, it is going to be developed.

The Bible says, "Where there is no vision, the people perish." Let us have the vision today to realize our responsibilities and to develop our young people who must take over the reins of leadership in a few years. Let us here resolve that as we dedicate this magnificent edifice that we at the same time shall dedicate ourselves to the continuing development of this great county to the end that it may take its place in the forefront of Alabama's 67 counties and with its great natural resources it may make a great contribution to the defense, health and welfare of our State and our Nation. Let us all remember, as said in the 127th Psalm:

"Except the Lord build the House
They labour in vain that build it
Except the Lord keepeth the city
The watchman waketh but in vain."

Opportunity to Plan

EXTENSION OF REMARKS
OF
HON. BYRON G. ROGERS
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. ROGERS of Colorado. Mr. Speaker, I ask unanimous consent to have inserted in the Appendix of the RECORD an excellent editorial that appeared in the Denver Post, Denver, Colo., March 10, 1956:

OPPORTUNITY TO PLAN

The best news that Colorado has heard in many, many years is the news that the House of Representatives passed the upper Colorado River storage project bill, and that any differences between the House version and the Senate version approved last year will be quickly accepted by the Senate.

The bare fact of passage of the bill is welcome, but the real impact of the House version has not been emphasized. It is this: That, at the urging of Gov. Edwin C. Johnson, the House version provides for a division of the profits that will be made from the big storage reservoirs. Each of the four States will receive a certain percentage—Colorado's is 46 percent—of these profits, earmarked for use in developing the water resources of that State. And this guaranty of a steady source of funds for development and use of water within the borders of Colorado means that the industrial and agricultural development of the Western Slope—one of the most richly mineralized areas on earth—may be undertaken in a planned and orderly fashion.

It is impossible to exaggerate the importance of the assured source of funds for water development. Until Governor Johnson, over the protests of some newspapers that he was rocking the boat and the complete indifference of others, made it clear to the Bureau of Reclamation and the States of Utah, Wyoming, and New Mexico that Colorado intended to insist on an equitable plan for developing the river, there was no assurance that Colorado would receive anything of importance from the project. The bill that all but the governor supported contained so many projects in other States that practically all the power profits for generations would have been required to pay for them, and Colorado, which supplies over 70 percent of the water to the river, would have had to beg the Congress every year for appropriations for developing its own water.

With the division of power profits agreed upon, Colorado may take its time in determining precisely how our water is to be developed. We can study the needs of agriculture, of our western slope cities, and of future industries based on our vast deposits of uranium, oil shale and coal. We have the opportunity to plan our future without the fear that someone else will steal our chance if we don't take it. We can almost guarantee a future as bright as our intelligence allows.

And every citizen of Colorado should remember that we have Governor Johnson and his determined insistence on equity on the Colorado to thank for these blessings.

Critics Seethe as Dulles Travels

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column written by Constantine Brown which appeared in the Washington Star on Tuesday, March 6, 1956, in which Mr. Brown states that Democratic and Republican leaders in Congress are annoyed at Secretary Dulles' current trip to the Far East at a time when a serious crisis is developing in the Middle East:

CRITICS SEETHE AS DULLES TRAVELS—SECRETARY'S TRIP DURING MID-EAST CRISIS BRINGS NEW BLASTS AT DIPLOMACY BY AIR

(By Constantine Brown)

There is increased annoyance among Republican and Democratic leaders in Congress that at a time when a crisis may set the whole Middle East ablaze Secretary of State Dulles is once more traveling far from his important knitting in Washington.

The tendency of Mr. Dulles to establish a new kind of "diplomacy by air" may be in keeping with 20th-century progress. But many legislators who appreciate the seriousness of our situation would prefer that Mr. Dulles take fewer trips and handle our affairs directly from Washington in close cooperation with Congress.

There is no question that Mr. Dulles' deputy, Herbert Hoover, Jr., is an able man. But he does not enjoy the same prestige as his chief with White House advisers who stick their fingers more deeply into the diplomatic pie when Mr. Dulles is away or with his own underlings who "prepare" policies.

The international situation, insofar as we are concerned, is deteriorating alarmingly. The bland expressions of optimism from high officials that there is no reason for alarm certainly do not make an impression on Moscow's skillful maneuvers. The latest Syrian-Israeli incident certainly belies Mr. Dulles' statement on February 24 that we have the Russians on the run.

So serious has the Middle Eastern situation become that the Pentagon, at the request of the State Department, has taken steps to have marines available immediately in the Middle East to protect American lives and property.

Considering the high tension and fanaticism prevailing in the Middle East it is hard to say what may happen to our citizens or to the Marines if they are landed for the protection of Americans.

The British have taken similar steps by sending additional paratroops and transport planes to Malta and Cyprus. It is possible, however, that an intervention to protect their citizens in any Middle Eastern country could be misinterpreted by the Arabs. The summary dismissal of Gen. John Bagot Glugg has created much bitterness in Britain. This is being cleverly exploited by the Soviet agents throughout the Arab lands. The arrival of British forces, more than that of American Marines, could set off an open conflict. It certainly would provoke shouts of "colonialism."

The Soviet Union has been working hard to provoke another "war by proxy" as it did in Korea. The difference is that the Korean conflict was more of a local nature, involving mainly the United States, while an Israeli-Arab conflict involving British and American token forces for the protection of their citizens might have unlimited consequences.

Some optimists in Washington maintain that the situation is not as serious as it appears on the surface. After all, they say, don't we have the United Nations whose role is to keep the peace of the world by a collective effort of all peaceloving countries which form that assemblage? So far the U. N. has proved even less effective than the old League of Nations.

The Soviet Union is definitely behind the Israeli-Arab conflict and has had a share in Jordan King Hussein's dismissal of General Glubb. Is there any chance that the Soviet Union would vote in the U. N. Security Council for measures designed to improve the present situation and to prevent violent outbreaks in the Middle East?

Ever since it was officially known that Moscow had decided to provide the Arab States with modern military equipment, it has been painfully clear to the few realists in the State Department and to an overwhelming number of military men in the Pentagon that Russia intends to create another war by proxy in which she would have to contribute only weapons and military advisers while the others will have to shed blood. Such an outbreak would place America and Britain in a hopeless position. This may sound like pessimism in these days of peace and prosperity at home. It is, however, a reality recognized in Washington by all those who do not follow the policy of hiding their heads in the sand or adopt political "Couéism" that every day in every way things are getting better and better.

Letter and Petition Regarding Alcoholic Beverage Advertising

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. METCALF. Mr. Speaker, I have just received the following letter on behalf of legislation to prohibit the transportation of alcoholic beverage advertising in interstate commerce and its broadcasting over the air:

HELENA MONT., *March 10, 1956.*

Hon. LEE METCALF,
Washington, D. C.

DEAR MR. METCALF: We are enclosing petitions concerning the Slier and Langer bills. We are very much concerned that something be done to stop this harmful advertising. Will you kindly include the number of signers in the CONGRESSIONAL RECORD?

Sincerely,
Mr. and Mrs. H. W. EKLUND.

Enclosed with this letter was the following petition, signed by 32 residents of Helena:

We, the undersigned, respectfully petition you to exercise the proper discretion vested in you by passing legislation to prohibit the transportation of alcoholic beverage advertising in interstate commerce and its broadcasting over the air, a practice which nullifies the rights of the State under the 21st amendment to control the sale of such beverages.

At a time when 1 out of 10 drinkers is becoming an alcoholic there should be no encouragement to increasing the use of such beverages. Children and youth are being misled to consider them harmless, especially by the audio and visual suggestion of radio and television.

A Bill To Limit the Total Amount of Price Support Which May Be Made Available With Respect to the Products of Any Farm

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. DIXON. Mr. Speaker, we have in this country some 4.7 million farms, of which some 480,000 produce about 51 percent of the total value of all farm products sold. As you can see, these are the largest and most efficient farms operated by farmers with the highest income.

Under our price-support program, the largest commodity loans have been made not to family-sized farms, but to corporation farms which are found among this 9 percent or 480,000 farms which produce over half of all our agricultural products. For example, two corporation farms received cotton loans last year in excess of $1 million; 2 received wheat loans in excess of $325,000, and 2 received corn loans in excess of $100,000.

I seriously doubt, Mr. Speaker, that these largest farms require unlimited price-support assistance. Our objective, as President Eisenhower pointed out in his special agricultural message in early January, is to protect the family-sized farm. For this reason, I send to the desk for introduction a bill which provides that price support shall not be made available during any calendar year with respect to the products of any one farm of a total value, determined on the basis of the support price, in excess of $100,000.

It is the large corporation farm encouraged by a rigid 90 percent price program that has been producing wheat, cotton, and corn for Government storage warehouses, rather than for human consumption. This they have been able to do by applying to their land just the right amounts of labor and equipment which enables them to produce the largest output at the lowest possible cost per unit of output. This, of course, results in the highest gross income which is possible to achieve with their particular size of farm, or, as the economist puts it, "scale of plant."

A measure of their success in filling Government warehouses is provided by the inventory levels of wheat, corn, and cotton held by the Commodity Credit Corporation as of January 31, 1956, the latest date for which this data is available. At that time the Commodity Credit Corporation held in inventory: 871,691,644 bushels of wheat, 746,698,536 bushels of corn, 6,684,441 bales of cotton.

This limitation of $100,000 is high enough to give full protection to efficiently operated family farms and in this respect follows the recommendation President Eisenhower made in his special agricultural message. It is also high enough to prevent any adverse effect upon the price-support program, and the total amounts of commodities which some producers might put on the market as a result of the limitation will not be so great that they would materially affect the market price.

Deserved Praise

EXTENSION OF REMARKS
OF
HON. ALBERT W. CRETELLA
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. CRETELLA. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert a news article and two editorials concerning by colleague from downstate Connecticut, the Honorable ALBERT P. MORANO, who last week announced his candidacy for a fourth term as Congressman from Fairfield County, Conn.

The editorials from the Stamford Advocate and the Bridgeport Post, both dated March 9, contain well-deserved tributes to a popular and able Representative. It is a pleasure for me to bring them to the attention of my colleagues:

[From the Bridgport Post of March 9, 1956]

ANOTHER HAT IN THE RING

There has been no doubt, no months of anxious waiting, no question of fitness or ability to serve, in regard to the political candidacy of a man close to all of us in Fairfield County. We are pleased to note that Representative ALBERT P. MORANO, Greenwich Republican, will seek reelection in November.

AL MORANO has been, in the minds of practically all our citizens, Democrats as well as

Republicans, a "good Congressman," and he deserves a fourth term.

He has built up a record for public service as a Member of the National Legislature, but more particularly as the Representative of the people of the Fourth District. He has been constantly ready, as thousands of people know, to go into immediate action when a constituent wrote to him or telephoned to him for something he needed, or wanted done in Washington. Whatever requests have been put to him he has answered with friendly interest.

As a member of the important Foreign Affairs Committee, he has worked closely with the Eisenhower administration and the foreign policy as enunciated by the President and Secretary Dulles. He has only recently defended the administration policy against attack by the Democrats, expressing regrets that it had become a partisan issue with them instead of the more desirable bipartisan course advocated by the President.

Mr. MORANO's renomination is assured, and since the district is overwhelmingly Republican, his return to Congress is almost a certainty. It would be most difficult to unseat him, not because his party is stronger, but because of his record, and the service he has rendered at all times to all our citizens.

[From the Stamford Advocate of March 9, 1956]

MR. MORANO RUNS AGAIN

Representative ALBERT P. MORANO has announced that he will run again for the Congress.

We suggest that he will have as little difficulty in securing the nomination from his party as Ike will in San Francisco.

Mr. MORANO was elected in 1950 for the first time by a majority of 23,094. In 1952, undoubtedly aided by the Eisenhower landslide, he received a majority of a mere 32,706. This did not discourage him and in 1954 he massed a 56,808 majority. They say there is a point of diminishing return but, somehow, we don't believe Mr. MORANO has reached it yet.

Representative MORANO is a member of the important House Foreign Affairs Committee. He has promised that, if the opposition insists, he will acquaint the people with the "great progress in our foreign relations made by the Eisenhower administration." This should lead to an interesting campaign. We can hardly wait to hear the objections Mr. MORANO's opponents will make to the ending of the Korean bloodshed, the strengthening of our alliances to a point where Russia has had to give up its policy of military aggression, and our close cooperation with Britain on world problems.

The district has been well served by Mr. MORANO. It is good to know that he is willing to continue in its service.

A Bill To Require the Bureau of the Census To Develop Farm Income Data by Economic Class of Farm

EXTENSION OF REMARKS

OF

HON. HENRY ALDOUS DIXON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1956

Mr. DIXON. Mr. Speaker, it has become evident to me that one of the first steps in formulating agricultural legislation which can meet the problems of different types of farmers depends upon our obtaining accurate annual farm income data by economic class of farm. Average farm income figures and per capita income figures in agriculture do not provide adequate guides for the formulation of legislation designed to increase the economic well-being of farmers.

For example, the 1954 Agricultural Census reveals that we have 4.7 million farms. Two million of the larger commercial farms, although mostly family-type in nature, produce nearly 85 percent of our annual marketable crop value and their owners receive nearly 80 percent of net farm income. On the other hand, 2.7 million of the smaller family-type commercial farms, residential farms and part-time farms produce only about 15 percent of the annual marketable crop value and receive about 20 percent of the net farm income.

It is obvious from these data, that average per capita and family incomes derived by dividing 4.7 million farms into the 19.9 billion dollars of agricultural income which farmers receive from all sources distorts completely the economic well-being of various types of farms. Obviously most of the 4.7 million farms that produce 85 percent of our annual crop values and get 87 percent of our net farm income provide their owners with per capita and family incomes much higher than the average. Such averages also add to the fact that the per capita and average incomes of most of these farmers are just as high as the average per capita and family incomes of nonfarm workers, but when the incomes of the owners of 2.7 million smaller farms are combined with the 4.7 million I have just mentioned and the total divided into net farm income, the latter's incomes appear much higher than they really are and the former's incomes are much smaller than they really are.

Now then, with respect to price support policies, it should be obvious that 90 percent price supports will never narrow the gap between average per capita and family farm and nonfarm incomes because over half of our farms produce very little, therefore, can sell very little and because they have little to sell they cannot obtain price supports. For a great number of the owners and operators of the 2.7 million small farms, other types of programs can better serve to increase their economic levels of living than price support programs.

If the Members of the Congress had annual data showing the distribution of income by economic class of farms, they would better be able to legislate policies for different phases of productive farms. For example, the Census Bureau defines a farm as 3 acres or more of land if the annual value of agricultural products produced amounted to $150 or more. Places of less than 3 acres are counted as farms if the annual value of sales of agricultural commodities amounted to $150 or more. With the use of such a definition of a farm being relied upon, it is important that we have annual data giving us the number of farms, for example, which produced products valued at $25,000 or more; the size of the per capita and average family incomes of their owners and operators; and at the other end of the scale, it is important that we have the same data relative to the number of farms which sold products valued at between $250 and $1,200; and the average per capita and family incomes which those farms returned their owners or operators. When such data are available on an annual basis, it will be much easier for not only the Members of Congress, but the general public as well, to better understand the types of programs which can best meet the needs of different types and sizes of farms.

For this reason, Mr. Speaker, I send to the desk for introduction, a bill which would require the Bureau of the Census in conducting current population surveys to include and publish annually money and nonmoney income data relating to per capita and family farm income by economic class of farm.

This is introduced as a companion bill to S. 3145 introduced by Senator WATKINS.

Resolution of Young Republicans of California

EXTENSION OF REMARKS

OF

HON. WILLIAM S. MAILLIARD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 13, 1956

Mr. MAILLIARD. Mr. Speaker, the young Republicans of California met in a most interesting and stimulating convention last month. After their study of many important issues of the day, a number of well-considered resolutions were adopted. Among these was one dealing with the problem of Government economy and efficiency as treated by the Hoover Commission. I call this resolution to the attention of the House and particularly to the members of committees concerned:

Whereas the recommendations of the Hoover Commission represent a considerable study by interested, able, and conscientious citizens under the able leadership of one of our great Americans, the Honorable Herbert Clark Hoover; and

Whereas many of the recommendations will reduce or eliminate waste and inefficiency in Government caused by antiquated methods and needless duplication; and

Whereas many of the recommendations of the Hoover Commission are designed to eliminate costly governmental enterprises, inefficiently operating and tending to compete with private enterprise, thus opening avenues for the demoralization and destruction of our free economy; and

Whereas the executive department of the Government has given serious consideration to the recommendations of the Hoover Commission and has made steady progress in effecting and incorporating them where feasible and proper: Be it

Resolved, That the Young Republicans of California hereby call upon the Congress of the United States to follow the lead of the President and give careful and considered attention to the recommendations of the the Hoover Commission to the end that legislation implementing and effecting the economies proposed by the Hoover Commission be enacted without further delay.

Better Than a Shortage

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit the following editorial taken from the Des Moines Register of March 12, 1956:

BETTER THAN A SHORTAGE

A reader has asked us to review the facts on the accumulation of farm commodities under Government price-support programs.

At the end of World War II, Government holdings of farm commodities were low—in fact dangerously low in view of the needs for European recovery and relief. This situation continued during the early postwar years. Reserves of corn were down to 172 million bushels by October 1, 1946, and wheat reserves declined to 84 million bushels in 1947. Stocks of cotton were large but were soon reduced by heavy shipments to Western Europe.

The grain situation in 1948 was critical, because the short corn crop of 1947 came at a time when reserves were extremely low.

However, in 1948 and 1949, the Government began to store large supplies of potatoes, eggs, and other products under the price-support program. Also, the business recession in 1949 and the decrease in foreign demand resulted in some accumulation of cotton, wheat, and corn.

By early 1950, the Commodity Credit Corporation had on hand more than 4 billion dollars worth of farm commodities. Department of Agriculture officials began to worry about the surplus problem and to talk about reductions in price supports and cuts in production.

However, the Korean war relieved this surplus situation in short order.

After the end of the fighting in Korea, Government holdings of commodities and loans on commodities began to rise rapidly. The following table shows the value of the CCC inventories on the dates given, plus the loans outstanding to farmers on stored commodities.

[In billions of dollars]

	Inventory	Loans	Total
Dec. 31, 1951	1.3	.8	2.1
Dec. 31, 1952	1.1	1.4	2.5
Dec. 31, 1953	2.7	3.1	5.8
Dec. 31, 1954	4.2	2.9	7.1
Dec. 31, 1955	6.1	2.6	8.7

This is a sensational rise in Government holdings of farm products and the rise is still going on. As of January 31, 1956, the total investment of the CCC had reached $8.9 billion.

No matter how you look at it, this surplus is too large. Price support policies which have created the problem need to be changed so that national reserves can be held at a reasonable level.

But just to keep the facts in perspective, let's not forget that there have been some good things about the accumulation of the surplus.

First, having a plentiful reserve is better than being short. The present situation is more comfortable than the threat of scarcity in 1947. The reserves are mostly in grain and cotton, durable commodities that will keep well in storage if properly handled and rotated. Even if some of the stocks should eventually go to waste, the cost would be pretty small as an item in national defense. And these reserves should be considered partly as a national security measure.

Second, the accumulation of the reserves helped protect farmers' incomes during a period of declining foreign demand. Secretary Benson says the surplus has cut farmers' realized net incomes by 20 percent in 1955. This is hard to understand. Apparently he means that market prices would be higher if the surplus didn't exist. But he forgets that farmers received high prices for the commodities in surplus, and he ignores the fact that market prices would have been lower the last several years if the Government had not insulated these supplies from the market.

Sure, the price support method of protecting farm income is clumsy and inefficient. Yes, high price supports have made the adjustment problem worse by encouraging farmers to produce more of the basic crops. Still, the fact remains that these supports kept the farm income higher than it otherwise would have been.

So the much-maligned surplus is not altogether bad.

That Federal Building

EXTENSION OF REMARKS
OF
HON. WILLIAM S. MAILLIARD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. MAILLIARD. Mr. Speaker, the General Services Administration has recently submitted its prospectus for a new Federal Office Building in San Francisco to the Committees on Public Works for approval under the Lease-Purchase Act. The prospectus was approved by the Bureau of the Budget and was submitted only after the very intensive investigation which a project of this size should have.

One of our city's prominent newspapers, the San Francisco Examiner, has commented editorially in concise terms as to the pressing need for an early start on the building. Since the Senate Public Works Committee has already acted affirmatively, I am bringing this editorial to the attention of my colleagues, particularly those on the Public Works Committee, in the hope that early approval of this project will be possible on the part of the House.

The editorial follows:

[From the San Francisco Examiner of March 5, 1956]

THAT FEDERAL BUILDING

If Members of the House and Senate Public works Committees could see for themselves how Federal offices are scattered in 30 ill-suited locations around San Francisco we have no doubt they would approve quickly the pending lease-purchase proposal for a new Federal building here.

Though designated a Federal courthouse and office building, the planned structure could better be called a Federal regional headquarters building. For San Francisco is the Government's subcapital for the Western States, Hawaii, and Alaska. The Government maintains here a long roll call of regional agency headquarters jammed into everything from a hotel building to an abandoned mint.

That is one of the two big reasons a building of such substantial size is needed. The other is the prodigious growth not only of the San Francisco Bay area and northern California but the entire West.

Cities tend to exaggerate their growth and their needs when seeking something from Uncle Sam. In this instance we have a refreshing switch. Not San Franciscans, but Bureau of the Budget officials in Washington, decided the building as first planned was too modest. They came here, studied the need and the growth rate, and insisted on the $45 million structure now contemplated.

We have no doubt, too, that as good men with figures they concluded it was absurd for the Government to go on paying out $1 million a year in rental and operational expenses on leased buildings never designed for governmental use.

In addition to returning three downtown properties to the tax rolls, and itself providing a needed source of local taxation, the lease-purchase transaction will correct an old injustice inflicted on San Francisco. This was the taking of the Empire Hotel in the early war years. Though necessary as a war measure, Government occupation has continued through a decade of peace. The return of the hotel building to the purpose for which it was designed will be one more of the many blessings to flow from a new regional Federal building.

The Birthday of Andrew Jackson

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the March 10, 1956, issue of the East Side News, a weekly newspaper published in the 19th Congressional District, in commemoration of the birthday of Andrew Jackson, March 15, 1767:

THE BIRTHDAY OF ANDREW JACKSON

(By Harry H. Schlacht)

"In the universe of God there is no accident.
From the fall of the sparrow to the fall of
An empire or the sweep of a planet, all is
according
To divine providence whose laws are everlasting."

Next Thursday is the birthday of Andrew Jackson.

He was the seventh President of the United States.

He was born on the border line between North and South Carolina on March 15, 1767.

He was the son of Scotch-Irish immigrant parentage.

The story of Old Hickory is always inspiring and always new, whether told in romantic eloquence or plain recital of facts.

Once in a long time the grim sisters who weave the warp and woof of our existence run, through an otherwise drab and uniform surface, a thread the brilliance of whose colors causes it to stand out even though it is buried among thousands of others.

Such a thread was Andrew Jackson.

He was one of the great heroes of our history.

He was the general of our victorious forces in the Battle of New Orleans.

He was a man of superb courage.

He was a hero of his day and ours.

He was the product of an age in which gentleness was not at a premium.

He was the product of our soil.

He is the symbol of Americanism.

He was fatherless in infancy.

He was prisoner of war at the age of 13 in the Revolution.

He was known as the "Great Commoner," yet he was a man of uncommon ability.

He was not schooled in military strategy, yet he was a great general.

He was not schooled in law, yet he was a great judge.

He was not schooled in political science, yet he was a great statesman.

He was in a class by himself in the history of Presidents.

Directly across from the White House, in Washington, stands an equestrian statue of Andrew Jackson.

On the pedestal is written in deathless phrase: "Our Federal Union; it must be preserved."

He led the people to a victory that literally preserved free and popular government for posterity.

He felt that the Nation must be protected not only from foreign foes but from foes within.

He vetoed the recharter of the Bank of the United States which exercised unlimited power in the issuing of money .

He saved the economic democracy of the Union for its westward expansion.

He did not indulge in the defeatist policy of surrendering vital principles upon which free Government rests.

He held fast to the true American dreams which has made America the greatest Nation on earth.

Thomas Jefferson was the philosopher of democracy.

Andrew Jackson was the crusader and the sword.

He did not create the democracy, but he did raise the people to the reassertion of their rights.

He did not set up a government, of, by and for the people, but he did force a government to respond to the voice of the people.

We know that in the story of life as Jackson wrote it for himself there is no single line that we could cancel, no single word that we would erase.

May God give us more men of the character, courage and ability that was Andrew Jackson.

May he ever be an inspiration to all of us.

May his stature ever grow.

Long live the memory of this great man.

"Be strong,
It matters not how deep the wrong,
How hard the battle goes, the days are long,
Faint not, fight on, tomorrow brings the song."

Investigation of Tax-Free Foundations Urged

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Whereas the American Legion has gone on record at its 36th national convention through the passage of Resolution No. 658 calling upon Congress to investigate tax-free foundations: Now, therefore, be it

Resolved by the 37th annual national convention of the American Legion, assembled in Miami, Fla., October 10–13, 1955, That it does hereby mandate the national legislative commission to secure the authorization by either or both Houses of Congress in the next session, of a new investigation adequately financed, to determine the following:

1. Those tax-free foundations, organizations, or agencies which are or have been making grants or gifts to, affording financial support to, or using their funds for the support of communism, its aims or objectives, or of the Communist Party or any agency, organization, activity, or purpose subordinate thereto, controlled thereby, or subject to the influence thereof.

2. The amount and source of all funds disbursed by any such tax-free foundations, organizations, or agencies.

3. The names of all recipients, and the nature of the activities or purposes for which such funds were expended by said tax-free foundations, organizations, or agencies.

Arms for Israel

EXTENSION OF REMARKS
OF
HON. LAURENCE CURTIS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. CURTIS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to present to my colleagues a resolution adopted in the House of Representatives of the Commonwealth of Massachusetts on February 20. The resolution, which follows, specifically requests additional arms for Israel and an immediate United States-Israel mutual security pact:

RESOLUTIONS MEMORIALIZING CONGRESS TO IMPLEMENT THE TRIPARTITE DECLARATION OF THE UNITED STATES, GREAT BRITAIN, AND FRANCE GUARANTEEING THE BORDERS OF ISRAEL

Whereas the General Asssembly of the United Nations resolved upon the creation of a Jewish State in Palestine, on November 29, 1947; and

Whereas the Government of the United States, by its immediate recognition of the State of Israel on May 14, 1948, was the first sovereign government so to do; and

Whereas the armies of six Arab states, directly flouting the said United Nations Resolution, invaded the borders of the State of Israel on May 14, 1948; and

Whereas the State of Israel, by force of her own arms and in conformity with the aforesaid resolution, expelled the invading, aggressor Arab states and secured her sovereignty within the present borders; and

Whereas on May 25, 1950, the United States, Great Britain and France guaranteed these established borders by a tripartite declaration; and

Whereas the Government of Egypt, by accepting arms from Communist countries has provided the Soviet Union with the means for injecting Communist influence into the Middle East; and

Whereas the acceptance of said arms by Egypt creates an imbalance of power, threatening the peace of the Middle East, and thereby the precipitation of global conflict; and

Whereas the State of Israel has requested from the Department of State of the United States the permission to purchase specified arms to meet this threat, and this request remains pending: Therefore be it

Resolved, That the House of Representatives of the General Court of Massachusetts calls upon the Representatives of the people of the Commonwealth of Massachusetts in the Congress of the United States to take such action as may be necessary to implement the spirit of this resolution, and to urge upon the Department of State:

1. That the Government of the United States make available to the State of Israel, for purchase, such arms as she requires to guarantee her security, and to be an effective bulwark against Communist inroads in the Middle East; and

2. That the Government of the United States negotiate a mutual security pact with the State of Israel, to the end that peace be secured in the Middle East, and the existence of Israel, as a bastion of democracy, be assured.

Civil Rights

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. HOLTZMAN. Mr. Speaker, one of the most important and far-reaching issues before us today is the cause of civil rights. There has been much said about it in the press, on the radio and television, in the Congress, and by private organizations and individuals.

However, rather than mouth high-sounding phrases which in themselves accomplish nothing, we must continue to exert every possible effort to ensure that each and every citizen in this country, regardless of race, creed, color or national origin, shall enjoy equal treatment under the law as guaranteed by our Constitution and Bill of Rights.

We have made good progress on the civil-rights front in the last 20 years, but much remains to be done. Many more Americans today are aware of the problems facing us, and have contributed greatly in the past to the victories that we have won against bigotry and intolerance.

Unfortunately, many areas in our country, notably in the South, still enforce discrimination and segregation, mostly as a result of custom and practice, or through ignorance. These are the areas where we must concentrate our efforts so that our Negro or other minority groups will be able to exercise their rights to vote, to attend public affairs, to have access to public facilities, and to attend the public school of their choice.

Many of the southern Members of Congress have recently signed a declaration of constitutional principles, and have pledged themselves to prevent the enforcement of the recent decision of the United States Supreme Court ordering the end of segregation. This manifesto reflects the Southern point of view that the Supreme Court decision is an encroachment on States' rights.

One of our liberal Senators has suggested that a petition in response to the Dixie declaration, circulated among the other Member of Congress, would get many more signatures. It seems much more practical to me at this time, how-

ever, to urge further consideration of the civil rights bills which have been pending in Congress for a number of years—the anti-poll-tax bill, the antilynch bill, the fair employment practices bill, and so forth.

With racial tensions mounting it is time the Congress took some concrete action on civil rights legislation. To delay further will be dangerous, and will hamper seriously the moral progress of our country.

At the present time the problem of civil rights and the fight against discrimination are continuing ones, which we must face realistically, and which must be solved if we are to be true to our own democratic principles, and if we are to maintain and direct the course of the free world. We are no longer a Nation unto ourselves. We live among other nations who look to us for inspiration and leadership. Freedom is our heritage, and we must protect the rights and privileges granted by law to all our citizens, or we lose face in the eyes of the world.

Since the days of our forefathers we have been steadfast in our professed belief that all men are created equal. We must practice what we preach, lest we lend credence to the Communist accusations of divisions and injustices in our own country.

The Hoover Commission

EXTENSION OF REMARKS
OF
HON. CHARLES RAPER JONAS
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. JONAS. Mr. Speaker, under leave to extend my remarks, I include the following resolution which was unanimously adopted by the City Council of Charlotte, N. C., at a regular meeting held on March 7, 1956, endorsing the objectives of the Hoover Commission:

RESOLUTION RELATIVE TO ENDORSING AND COMMENDING THE OBJECTIVES OF THE HOOVER COMMISSION

Whereas the efficient and economical conduct of governmental affairs is vitally important to the maintenancy of our American tradition of free self-government; and

Whereas the City Council of the City of Charlotte has consistently supported and endorsed the principles of sound management and economy in the operation of Government; and

Whereas the first bipartisan Commission on Organization of the Executive Branch of the Government—Hoover Commission—made a study of Government—1947-49—which resulted in many important improvements and economies in Federal operations; and

Whereas the bipartisan new Hoover Commission, unanimously created by Congress in 1953, has completed a comprehensive and factual 2-year study of the Federal Government, and has submitted a report containing 314 specific recommendations for reducing waste and duplication, increasing efficiency, and eliminating needless Government competition with private business: Now, therefore, be it

Resolved, That we, the members of the City Council of the City of Charlotte, assembled this 7th day of March 1956, endorse and commend the objectives of the Hoover Commission and urge the administration and Congress to work together on a bipartisan basis toward prompt and full consideration of the recommendations of the Commission; and be it further

Resolved, That the council and its members give support to all efforts to inform citizens concerning the findings of the Commission and to induce greater citizen participation in governmental affairs through expressions of interest in official discussion and action on the Commission's recommendations.

An Open Letter to the Navy

EXTENSION OF REMARKS
OF
HON. JOHN JARMAN
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. JARMAN. Mr. Speaker, earlier this week, I had the honor of introducing in the Appendix an editorial from the Norman Transcript dealing with the need for retaining the Naval Air Technical Training Center in Norman, Okla.

I introduce today an open letter by the editor of the Norman Transcript, Mr. Fred E. Tarman, appearing in that paper's Wednesday, March 7 edition, to the Secretary of the Navy which succinctly states some of the strong reasons for retaining the base in Norman:

AN OPEN LETTER TO THE NAVY

Hon. CHARLES S. THOMAS,
Secretary of the Navy,
Washington, D. C

DEAR MR. THOMAS: You have given our congressional delegation and our chamber of commerce representatives a most courteous hearing, and the people of Norman are grateful to you for it.

You expressed regret that your operating personnel has reached the conclusion that the Norman NATTC should be transferred to Memphis. You state the need for economies requires the move, and that the savings would be $1,100,000 the first year and $2,500,000 a year thereafter.

The people of Norman recognize the need for economy in the operation of the Navy.

Our Senators and Congressmen contend that in view of the perilous world situation this would be false economy; that defense needs will call for reopening the base here in the next few years. That sounds reasonable to us.

But more important still than the issue of costs is the welfare of our boys in service.

Some of our sons, like those of parents all over the country, are in the Navy, and we are deeply interested in the physical, moral and spiritual conditions which surround them while they are training for service.

We believe that Norman is the finest community in the Nation, from the standpoint of the advantages of our city and its relations with the Navy Base, in which you operate.

We believe with all of our hearts that the friendliness of our people, our schools and churches, our adequate housing, and the cultural atmosphere generated here by the University of Oklahoma, are worth far more to the Navy than the $2,500,000 additional which your people say it would cost to continue the NATTC.

We believe parents of boys all over the country who are entering the Navy from time to time, would agree 100 percent with us.

Norman is a city of churches, homes and schools. We have no gouging of Navy personnel by merchants, no liquor joints, no houses of prostitution, no gambling joints, no underworld preying on our servicemen. Mr. Secretary, you know as well as we that Memphis, a city of nearly half a million persons, has some or all of those evil things.

The value of the Norman base to the Navy is attested by the fact that it has on the one hand very few cases of discipline among the students trained here, far fewer than the Memphis installations. On the other hand, less than 2 percent of the men sent here fail to graduate from the course, again a high mark, we are told, among Navy schools.

Navy men who are stationed here say that the morale among the permanent personnel of the school, as well as the trainees, is the best they have ever seen, because of favorable surroundings.

We plead with you, Mr. Secretary, to consider the human element in this situation as well as the dollars and cents involved.

We believe that our servicemen, everywhere, deserve better surroundings than they have, and that your objective should be to operate in more fine small cities like Norman rather than abandon one of the very best you have and send these trainees to a metropolitan city like Memphis.

We hope you will come and see this installation and the community in which it is located before you take action on the recommendation to close it.

Yours very truly,
FRED E. TARMAN, *Editor.*

From St. Patrick's Isle

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times:

FROM ST. PATRICK'S ISLE

St. Patrick's Day this year will be special. Prime Minister John A. Costello arrived in the United States yesterday from Dublin and will be the prize guest at New York's parade on Saturday. The Republic of Ireland could not have sent a citizen more deserving of honor.

There is no statesman in office today of whom one can honestly and without flattery say nicer things than one can of Mr. Costello. This is because a matter of character can be added to political importance and professional brilliance—the Prime Minister is one of Eire's successful lawyers. Mr. Costello has integrity, courage, high principles, and is a deeply religious family man.

No reader of a New York newspaper needs to be told what a special place this city has in its collective heart for any leader from the Irish Republic. When Mayor Wagner visited Dublin last year he pointed out that New York is much the largest Irish city in the world. Dublin, the No. 1 city of the Irish Republic, has a mere 522,000 inhabitants.

There is something—many things, in fact—about John Costello that makes him the personification of modern Ireland. He has been in the forefront of the struggle for

the independence and rebirth of Ireland. As a young lawyer he gained fame in defending the leaders of the 1916 Easter rebellion against the British. He was attorney general in the first Government of the then Irish Free State in 1923, and has been in the Dail Eireann—Parliament—pretty steadily. From 1948 to 1951 he was Prime Minister of a coalition that no one thought would last a year, and since May 1954 he has headed another coalition.

The 2-week visit to the United States will be all too short, but it was well timed and it is bound to be fruitful. It goes without saying that it will be cordial, and we hope it will also be a happy sojourn for the Prime Minister.

Senate Wisely Rejects Rigid Price Supports

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. BEAMER. Mr. Speaker, usually House Members insert editorials from their home districts in the CONGRESSIONAL RECORD. However, it is refreshing and encouraging to find expressions from other parts of the United States that coincide with the many expressions of opinions from our own district.

For this reason, I include in the Appendix of the RECORD an editorial from the Mobile (Ala.) Register dated March 10, 1956:

SENATE WISELY REJECTS RIGID HIGH PRICE SUPPORTS

The Senate has taken a logical action in rejecting a proposal to restore fixed 90-percent farm price supports.

Its rejection of this proposal means in effect that the Senate voted to retain the flexible system of supports ranging from 70 to 90 percent of parity, depending on the farm market supply situation.

There is more economic sense in a price support formula that is adjustable to conditions than in a rigid high formula applied with absolute inflexibility regardless of conditions.

The 54-to-41 vote against 90-percent supports was a surprising margin in view of the recent predictions of an exceedingly close vote. Some observes had forecast a difference of no more than 3 or 4 votes, and apparently none had expected a decisive 13-vote margin.

In commenting the other day on the price support issue, over which bitter debate developed in the Senate, an Illinois Member of the House, Representative CHARLES W. VURSELL made a remark which Congress would do well to follow more consistently in dealing with the farm problem.

"You cannot solve the farm problems by waving a political wand," said Representative VURSELL. "To solve them we must throw politics out the window, get the facts and treat the cause of the problem."

That is genuinely good counsel, but unfortunately too many in Congress, both Republicans and Democrats, have played politics with the farm problem.

In an obvious reference to backers of the Democratic-sponsored proposal to put a guaranteed 90 percent support level back into effect, Mr. VURSELL said:

"Those seeking to gain political advantage now charge flexible price supports with bringing about lower prices, when, in fact, they know that the over $8 billion surplus in farm commodities, piled up under high 90 percent rigid support prices, is the real cause that is depressing farm prices."

He answered critics of the flexible support system with the statement that "notwithstanding that the flexible support law did not begin to take effect on basic commodities until the harvest of last year, there has been a constant barrage of criticism * * * that the flexible * * * program has failed."

We believe all thinking Americans, farmers and others, will agree that, as Congressman VURSELL said, "agriculture is far too important to the welfare of the farmers and the economy of our Nation to be used as a political football in the hope of securing the farmers' vote."

Playing politics in Washington with the farm problem is a disservice to the national economy and therefore a disservice to all the people.

The Register commends the Illinois congressman, Mr. VURSELL, for insisting that Congress "throw politics out the window" in dealing with the farm problem. We also commend his advice to the thoughtful consideration of his congressional colleagues, irrespective of political party affiliation.

Support Prices

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. VURSELL. Mr. Speaker, with leave to extend my remarks, I am inserting in the RECORD a letter I received from Mr. Chester J. McCord, of Newton, Ill., for many years one of the leading dairy farmers in my section of the State. This letter puts in understandable language, in a few words, the reason why 90 percent support on basic crops should not be continued:

McCORD'S JERSEYS,
LOCUST KNOLL FARMS,
Newton, Ill., March 8, 1956.

Congressman CHARLES VURSELL,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN VURSELL: The Senate bill 3183 which came out of the Senate Agriculture Committee has two major provisions. The soil-bank plan and a return to 90 percent of parity supports on basic crops. These provisions are inconsistent. The soil-bank plan is designed to empty our warehouses and 90 percent of parity supports will fill them up again.

Rather than to present a lot of my own personal ideas, of which you would have a rather large job of analyzing every single person's ideas, I hope you will study the farm-program principles as presented by the Illinois Agricultural Association and the American Farm Bureau as these are the results of the thinking of a large group of farmers of Illinois and the United States. These soil-bank principles are the results of policy-developing meetings that were held in every township in every county in Illinois and most of the United States. To make a soil-bank program work, the incentive will have to be attractive enough to encourage farmers to set aside enough acres so there will actually be a reduction of the basic crops.

After studying these soil-bank principles, I hope you will help Congress pass a farm bill that will really stabilize our agriculture.

Thanks and sincerely,

CHESTER J. MCCORD.

The Discoverer of Anthracite Coal

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following feature article which appeared in the Allentown (Pa.) Sunday Call-Chronicle, November 13, 1955, in which the writer, George Korson, narrates the discovery of anthracite coal by Philip Ginder in the year 1791. Mr. Speaker, I feel that this body would be interested in knowing that Philip Ginder's descendants include Maj. Gen. P. D. Ginder, presently Special Assistant for Reserve Components, Office of the Chief of Staff, United States Army, and General Ginder's 82-year-old father, who resides in Weatherly, Pa., near my hometown of Wilkes-Barre. I am sure you will find the following article extremely interesting:

MEET PHILIP GINDER—NEW HERO OF AMERICAN FOLKLORE

(By George Korson)

(EDITOR'S NOTE.—The unveiling of what well could become a new national folk hero of Pennsylvania German origin took place recently at Pennsylvania State College in a lecture delivered at the 65th annual meeting of the Pennsylvania German Society. The hero is Philip Ginder, the discoverer of anthracite coal, and the lecture was delivered by George Korson, of Washington, D. C. Although much has been written and said of Philip Ginder, the paper written and delivered by Korson pulls together many hitherto loose ends in Ginder's history and also reveals new facets of his discovery. Korson, a former resident of Allentown and a reporter for the Evening Chronicle, is widely known as a distinguished student of history and folklore. In 1951 Korson was named editor of the Red Cross magazine, official publication of the American Red Cross. Following are excerpts from Korson's lecture.)

It took nature millions of years to make the raw product of anthracite and for millions of years the coal lay hidden waiting for its discovery by man. One day in 1791 this opportunity came to a German settler, Philip Ginder, atop Sharp Mountain, at what is now Summit Hill Borough, Carbon County.

Ginder was hunting that day, so runs the legend, when a sudden fall of rain caused him to direct his weary footsteps homeward, even though he had not shot any game. Plodding along he stumbled over some strange rocks. Dusk was falling but there was enough light for him to see that they were black. His curiosity aroused, he put several stones into his pocket for closer examination at home. There, in the flickering light of his fireplace, Ginder found the stones were indeed unlike any he had ever seen. They gleamed.

In that whole district, there was only one man who could advise him about his strange find. That was his fellow-German, Col. Jacob Weiss, of Fort Allen, now Weissport. The

colonel showed great interest in the black stones and asked permission to show them to friends in Philadelphia. Those men, including Michael Hillegas and Charles Cist, were convinced that this was indeed coal, and they were eager to go into the mining business.

Colonel Weiss was authorized to reward Ginder for guiding him to the outcropping. Ginder declined cash. All he wanted was for the colonel to help him get a commonwealth of Pennsylvania warrant to a tract of land containing a millsite some distance from the site of his discovery. To this Weiss readily agreed, and Ginder came into possession of the tract.

EARLIER EVENTS

There are some anthracite historic events antedating Ginder, however. Scull's map of Pennsylvania indicated the existence of coal near Pottsville as early as 1770. But the earliest recorded discovery tok place in 1762 when advance agents of the Susquehanna Co., surveying a section of the Wyoming Valley, reported finding an outcropping along the Susquehanna River near Wilkes-Barre.

Now, while important to the chronology of the white man's early experiences with anthracite, these prior dates nevertheless represented scattered events lacking in continuity. Philip Ginder's discovery, on the other hand, was the first in a sequence of events extending from 1791 right down into our time. It was followed almost immediately by the first systematic effort to mine coal and put it into the general market—that is, by Col. Jacob Weiss' Lehigh Coal Mine Co., by its succession of lessees including Charles Miner and Jacob Cist, of Wilkes-Barre, and by the Lehigh Coal & Navigation Co.

TRUE DISCOVERER

With the approach of Ginder's centennial, the Mauch Chunk Democrat of August 9, 1890, answered dissenters in these words:

"The question who first found or discovered particles of anthracite, or where or endeavored to find use for it as a fuel, or who was the first or most successful experimenter will probably never be known or ascertained. The only question is, when and where was the beginning of anthracite mining and marketing with success? The true answer is, the Lehigh region, from the great vein on Summit Hill discovered by Philip Ginder in 1791."

The same line of reasoning apparently was followed by the United States Geological Survey when it recognized the Lehigh Coal & Navigation Co.'s shipment of 365 tons of coal in 1820 as the official beginning of the anthracite industry. And where did the 365 tons of coal come from? From the Sharp Mountain tract discovered by Ginder.

Little is yet known about Phillip Ginder's personal life. He came to America from Germany by way of Holland on the ship *Neptune*, and took his oath of loyalty to the Provincial Government at the courthouse in Philadelphia on October 25, 1746. The Pennsylvania Archives, Third Series, lists him as a landowner and taxpayer in Penn Township, Northampton (now Carbon) County.

LARGE FAMILY

Philip Ginder and his wife, Magdalene had two sons, Philip Jr., and Jacob, and from them has descended a numerous progeny scattered over the country, but many descendants are still living in Carbon County. The famous progenitor took up some land along the Lehigh River somewhere near Mauch Chunk, according to family tradition, and made his living cultivating the soil and hunting the wild game that then roamed the virgin forests of Carbon County. Bear meat, venison, and furs not needed at home were exchanged for necessities at the nearest trading post or store.

Meager though these details may be they are enough to convince us that Philip Ginder was made of flesh and blood, which is more than could be said for some American folk heroes. His evolution from real to legend followed the standard pattern of folklore heroes.

Seventeen years ago, in my book, Minstrels of the Mine Patch, I made this observation as part of an article on the folk hero: "While Ginder's title may be challenged in some quarters, there is no doubt whatever that popular tradition recognizes him as the actual discoverer. The Ginder legend has crystallized and its place in American folklore is secure."

ORAL ORIGIN

In line with the well-established principle of folklore, the Ginder legend had an oral origin and circulated by word of mouth for nearly two decades before attaining the dignity and permanence of print. The story was launched the moment Ginder brought his specimens of "stone coal" to Colonel Weiss. It was inevitable that this event should create a sensation in the sparsely settled community—a frontier, really. To keep warm and for cooking, pioneer families had only wood to burn, and often it was wood that they themselves had cut down, and the iron industry used charcoal made from wood. We may well imagine how tongues were excited by the news of a new fuel's being discovered in their very neighborhood.

By 1792 the discovery story spread to wherever Colonel Weiss attempted to sell shares in the Lehigh Coal Mine Co. In 1793 mining operations actually were started at the Ginder site and that led to wider dissemination of the tale by the Germans employed there.

LEGEND PRINTED

It was not until 1829, as far as I can determine, that the Ginder legend was first printed anywhere, and certainly the first time outside the anthracite region itself. In 1829 Hazard's Register of Pennsylvania published a paper by Dr. Thomas C. James, a prominent physician of Philadelphia, which he had read before the Historical Society of Pennsylvania. After a lapse of 25 years, it must be noted, Dr. James recollected that in the autumn of 1804 he and a fellow Philadelphian, Anthony Morris, when lost in the wilderness of the Mahoning Valley found a night's lodging in Philip Ginder's grist mill. The next day they were guided to the summit of Sharp Mountain where "honest Philip"—those were Dr. James' words; to repeat where honest Philip amused them with the story of his discovery.

Dr. James' account of the discovery and early beginnings of the anthracite industry was the original source of many articles on the subject that have appeared since then in history books, folklore collections, magazines and newspapers, and scholarly papers. Many writers have perpetuated Dr. James' misspelling of the folk hero's name with a "t."

FOLK HEROES

Folklore has developed as a science to the point where we can classify folk heroes with some degree of accuracy. There are certain features common to the folk heroes of all times and of all peoples and culture. Ginder belongs to the benefactor type because what he did benefited the community, State, and the Nation, and because of his altruism. You will recall that when Colonel Weiss offered him a cash reward, Ginder, in effect, replied as follows: "I don't want to be paid for a little neighborly favor like showing you where I found the coal. But, if you still want to show your appreciation there is something you can do for me. I know of a tract of unclaimed land that I would like to possess by warrant of the Commonwealth of Pennsylvania. As you see, I'm a simple farmer without much education and you could help me get the papers."

Colonel Weiss apparently deemed this a reasonable request and promised to help "honest Philip" in realizing his dream. According to Dr. James, Ginder told him that some time later this land was taken away from him by a stranger who produced documents showing him to be the owner by right of a prior survey. This development introduces a pathetic, even a dramatic note into the Ginder legend. The family does not precisely know where this land was located.

LOST PROPERTY?

This summer I obtained from a descendant a typewritten copy of a parchment deed dated April 25, 1799, between two Miller families conveying a parcel of land that is referred to as being part of a large tract that Philip Ginder and his wife, Magdelena, had obtained by patent from the Commonwealth of Pennsylvania on March 17, 1797, and which passed into the hands of Adam Miller the following year. Is this the documentation for that part of the legend that holds Philip Ginder had lost his property because of a prior claim? It might be but, frankly, I don't yet know. This fresh lead came to me too late to investigate for this paper.

Anyway, what it does show is Ginder's place of residence near Mauch Chunk in 1797. By a curious coincidence, in the summer of that very year, a brisk economic boom in the Wyoming Valley, about 50 miles to the north, had attracted a Massachusetts Yankee named John Chapman whom legendry was to transform into Johnny Appleseed, one of the most famous of American folk heroes. By autumn, while Ginder was harvesting his crops, Johnny Appleseed was starting out from Wilkes-Barre on a long hike westward across the northern tier of Pennsylvania to a place on the upper Allegheny River now occupied by the city of Warren. It was along the Big Brokenstraw flowing into the Allegheny 6 miles below Warren that Johnny Appleseed made his first planting, whether of history or tradition, according to Robert Price, his biographer.

FOLKLORE BEDFELLOWS

I bring Johnny Appleseed into the picture because I think he and Ginder made good folklore bedfellows. Both have roots in Pennsylvania. Both had dignity, integrity, gentleness, and altruism. Each was a benefactor-type of hero in the scientific sense. Each started something from the best of motives that has become a perpetual memorial; in Johnny Appleseed's case the apple orchards of western Pennsylvania, Ohio, and Indiana; and in Ginder's case the anthracite industry. An apple symbolizes John Chapman's career, and any lustrous piece of anthracite can serve as a symbol for Philip Ginder.

And there is still another, significant resemblance that suggests a folkloristic kinship between them. Both achieved the final glory of folk heroes—a death of mystery.

In this connection, more than 20 years ago I made a tour of Carbon County cemeteries in the company of David P. Ginder of Lehighton, then the discoverer's oldest living descendant in Church Cemetery near Ashfield, we located the grave of Jacob Ginder, one of the folk hero's 2 sons, and in a cemetery near Weatherly, we found the last burial place of the hero's grandson, Philip.

STILL A MYSTERY

But nowhere could we find a stone marker for the progenitor, Philip Ginder. This summer the Ginder family historian, Philip M. Ginder, informed me that his famous ancestor's last resting place was still a mystery. This poses a tremendous challenge to scholars and other researchers. Who can locate Philip Ginder's grave?

Philip M. Ginder, by the way, vice president of the New Jersey Zinc Co., is a great-great grandson of the discoverer. So is his cousin, Maj. Gen. Phillip DeWitt Ginder, World War II and Korean war hero, who this summer took command of the Fifth Army with headquarters in Chicago. They repre-

sent the type of progeny that have descended from the original Philip Ginder.

In 1891, upon the 100th anniversary of Ginder's discovery, a bill was introduced in the Pennsylvania State Senate appropriating $1,000, "for the erection of a monument to the memory of Philip Ginder, the discoverer of anthracite coal in Pennsylvania." On second reading the amount was increased to $2,000, and the bill was finally passed in the Senate by an overwhelming majority. But the House Committee on Appropriations killed the measure.

HONORED

However, Ginder has not gone unhonored in the Panther Valley and Carbon County. In 1941 the people of the Panther Valley celebrated the 150th anniversary of the Ginder discovery from August 28 through September 1. As part of the program a large granite memorial honoring Ginder was dedicated in the town park at Summit Hill where the borough's high school and stadium already bore his name.

Much more might be done by way of recognition. Since he was of German ancestry, the Pennsylvania German Society is the appropriate body to lend assistance.

Ginder now is an informal symbol of the anthracite industry, and he could be made one officially. Certainly all groups in the anthracite region now united in a determination to revive the industry could rally behind this symbol. And the Pennsylvania German region, which shares him in common with the anthracite region, could join in the crusade.

"He lived for others," is Philip Ginder's eternal epitaph. "He lived for others."

NAACP Director Responds to Representative's Bash-Head Psychology

EXTENSION OF REMARKS
OF
HON. CHARLES C. DIGGS, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. DIGGS. Mr. Speaker, under unanimous consent, I include in the RECORD a letter addressed to Representative John Calhoun Hart, member of the General Assembly of Columbia, S. C. I call it to the particular attention of the distinguished gentlemen of the southern bloc who have just presented in the Chambers of Congress an infamous manifesto, the burden and intolerable shame of which will be carried throughout American history. I call it also to the attention of every Member of Congress and citizen of America who lives daily in the faith and the up-reaching ideals of Democracy. The letter was written by Mr. Clarence Mitchell, director of the Washington bureau of the National Association for the Advancement of Colored People, following his return to Washington from Florence, S. C., and his noting of a news account in which Representative Hart declared that "bashing Mitchell's head would have had a highly salutary effect on integration psychology in the Florence area." This remark was in reference to the arrest of Mr. Mitchell and the Reverend Horace Sharper, in Florence, S. C., for entering the main door of a train station to purchase a ticket to Washington, D. C. My colleagues, and the American public, of course, know that this was a defiant violation of the Interstate Commerce Commission's ruling prohibiting discrimination and segregation relative to interstate passengers.

It is significant that all should note the undermining of Federal Government, of the laws of the land in this action, and that all should consider with it the wanton undermining of highest law and order—the basic foundation of our Democratic processes—as expressed in the South's manifesto and in the newspaper article to which Mr. Mitchell refers. This is the pattern of terror tactics, violence, and lawlessness which the South has arrogantly adopted. It is to be compared and evaluated against the consistent pattern of use of democratic processes adopted by the Negro in his fight for protection under existing constitutional guaranties. The Alabama protest, the use of the courts of the land in school decisions, the recent visitations of approximately 2,000 delegates, white and Negro, with their respective Congressmen to plead Democracy's cause, Mr. Mitchell's invitation to Representative Hart—all are evidence for the world to see that the Negro will fight for his rights, but he will do so protecting Democracy and upholding the Constitution of the Nation which is his by heritage, by blood, sweat, tears, and the supreme sacrifice of life.

Mr. Mitchell's letter to Representative Hart follows:

MARCH 7, 1956.

Representative JOHN CALHOUN HART,
Member of the General Assembly,
Columbia, S. C.

DEAR MR. HART: According to newspaper reports, you have issued a prepared statement in which you say that my arrest on February 27, 1956, in Florence, S. C., because I exercised the constitutional rights accorded to an interstate traveler, was handled in a jellyfish manner. You are quoted as saying, "Bashing Mitchell's head would have had a highly salutary effect on integration psychology in the Florence area."

The wording of your statement suggests that you are a man who has been exposed to training in some institution of higher learning or at least that you are capable of expressing your meaning in words not ordinarily used by the average person. Therefore, I assume that you made your statement after careful thought. That is why it is a cause for concern.

If the white citizens of South Carolina would be free to do violence to persons who are exercising rights guaranteed by Federal law, what would there be to stop them from also assaulting policemen who seek to make them obey traffic regulations?

What would there be to stop white persons who disagree with you from invading the legislature of South Carolina and driving you from your desk by force and intimidation?

Because of my faith in my fellow Americans in the South and North, I challenge you to come to Washington. A friend has agreed to pay the cost of your railroad transportation to this city. I will meet you at the station myself.

I would like to take you to the United States Supreme Court where you can observe for yourself the expressions of respect on the faces of your fellow citizens of all races who come to see that great tribunal.

I would like to escort you to the House of Representatives of the United States where you may see Americans from the North and the South, colored and white, working together, in spite of widely different views, on the Committee on Education and Labor, on the Committee on Veterans Affairs, and the Committee on Government Operations.

Finally, I would like to take you to the Foreign Affairs Committee of the House of Representatives, which is headed by your fellow South Carolinian, Representative JAMES P. RICHARDS. Mr. RICHARDS has traveled about the world in the performance of his official duties. He also receives numerous reports from the Department of State on international relations. I am sure he could tell you that in today's world our country is the best hope of democracy for all people.

On the other hand, statements such as that made by you are picked up by our enemies abroad and used to undermine our position of leadership in the free world.

If you accept my invitation, I am certain that you will want to retract your appeal for violence when you return to South Carolina.

Sincerely yours,

CLARENCE MITCHELL,
Director, Washington Bureau.

In Memory of Henry S. Blake

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. AVERY. Mr. Speaker, under leave to extend and revise my remarks, I would like to insert three editorials from leading newspapers in my congressional district in Kansas, all of them paying tribute to the late Henry S. Blake, president, publisher, and general manage of Capper Publications, Inc., of Topeka.

Mr. Blake, who was fatally striken by a heart attack at his home last Saturday, was a man of great ability and integrity and his efforts always were directed toward bettering the lives of his fellow man. I had luncheon with Mr. Blade the day of his death and I can state unequivocally that his last thoughts were of his friends and associates. The loss of Mr. Blake certainly will be felt by all of us.

The following editorials were all published under date of March 12, 1956. The first is from Mr. Blake's home newspaper, the Topeka Daily Capital, Topeka, Kans.; the second from the Topeka State Journal, Topeka, Kans.; and the third from the Clay Center Dispatch, Clay Center, Kans. The editorials, which are typical of other Kansas newspaper editorials written about Mr. Blake's death, follow:

[From the Topeka (Kans.) Daily Capital of March 12, 1956]

"THIRTY" FOR HENRY S. BLAKE

When Henry S. Blake, whose sudden death shocked his associates and a host of friends, joined the Capper Publications on January 1, 1920, Arthur Capper had completed his second term as Governor of Kansas. The founder of the institution that bears his name was beginning a 30-year career of service to his country in Washington. Senator Capper needed men on whom he could de-

pend, and found a capable associate in his new director of circulation.

Mr. Blake came well recommended as a top circulation man. His previous experience had been with large daily newspapers where competition was keen, and often tough. He met the requirements of ability and integrity which were to gain him recognition as one of the Nation's outstanding executives in the publishing field.

One of Senator Capper's principal secrets of success was his uncanny ability to select associates he trusted, and who placed loyalty to the organization above all else. Henry Blake was one of those choices and he was to become a worthy successor of the founder of the publications.

Possessed of abundant energy, Mr. Blake was capable of carrying a heavier workload than almost any other member of the large Capper family. He participated in many outside activities—church, school, civic affairs, and as a member of many national organizations. He was devoted to his family, and the two sons and a daughter became fine citizens, themselves active in many endeavors.

Next to the Capper Publications, Mr. Blake loved the farm. This was natural, for the Capper Farm Press, to which he was devoted, gained enormous circulation because the magazines were the best media of education available to the agricultural population of mid-America. As Mr. Blake advanced from director of circulation to business manager, then general manager and vice president, and eventually head of the corporation, he still had time to look after his farms.

The friendly spirit that always has been a dominant factor in this organization was a guiding light for Henry Blake. He was a friend to every employee, sharing the joys and griefs, giving good advice, and lending helpful cooperation.

Under Mr. Blake's skillful management the publications weathered the depression of the 1930's and during the past 15 years have experienced a remarkable expansion. The confidence Senator Capper had in the man he selected to succeed him as head of the business was well justified. The Blake influence had been felt, not only in Topeka and Kansas, but in such nationally prominent organizations as the National Association of Manufacturers, United States Chamber of Commerce, and American Newspaper Publishers Association. The high esteem in which he was held is manifest in the many messages being received from all over the Nation.

The love for children which was deeply engraved in Mr. Blake's heart inspired him to work for a stronger Capper Foundation for Crippled Children. He enthusiastically continued the program of promotion for 4-H Club work begun many years ago by Senator Capper. The entire Capper publications organization—magazines, newspapers, radio stations, and more recently WIBW-TV—was directed to spare no efforts in behalf of the younger generation.

He also was vitally concerned for the welfare and continued support of the schools, both local and at the State level. Under Mr. Blake's direction, the Daily Capital exerted its influence toward prevention of crippling legislation during sessions of the State legislature.

The many associates who have worked with President Blake over the years will miss him. His sudden death was a severe shock, not only to those closely associated with him in the publications, but to a host of friends all over Kansas and the Nation.

Every man and woman in the organization feels a heartfelt sympathy with the Blake family, whose members have sustained a shocking loss. He was a wise and kindly father, a devoted companion to Mrs. Grace Blake, and was extremely proud of his grandchildren.

Topeka and Kansas have lost a valuable adopted son, who spent 36 years working for their best interests.

Board members, officers, and personnel in key positions who worked closely with both Senator Capper and Mr. Blake will carry on the Capper publications and other enterprises.

[From the Topeka (Kans.) State Journal of March 12, 1956]

HENRY S. BLAKE

Henry S. Blake, head of Capper publications since the death of the Senator in 1951, was a strong man. It is a hard blow when a strong man dies. When Henry Blake's life winked out Saturday evening, many people over the Nation felt the sharp pang of loss, and will feel it more before their grief is wrung out, as indeed even with time, it hardly ever will be. To his State, his community, his hosts of friends and acquaintances, near and far, as to his hundreds of professional and business associates, and most of all to his adoring, closely-knit family, the shock of his death is keen, the pain deep.

The Daily Capital headed by Mr. Blake, and the State Journal, although separate in ownership and in editorial organization and policy, have cooperated and shared in the costs of printing and circulating the two newspapers, as so many similarly situated papers in other cities have done. In this relationship our newspaper had intimate contact with Henry Blake, finding him unfailingly courteous and amiable, a man of seemingly inexhaustible energy and drive, and an executive of vision and capacity for large undertakings. If occasional differences of opinion arose, as on public issues, the differences were the natural ones that come in the relationships of all people whose minds are active and free, and who value their independence. Mr. Blake, as was Senator Arthur Capper before him, was an able and respected colleague in the Kansas Fourth Estate.

This head of nationally recognized publishing enterprises was most of all a warmhearted friend to those who knew him best. He was a man of tender impulse and jolly manner, a man who loved all children and nature, who enjoyed and knew a great deal about good literature, who reveled in clean fun and an apt anecdote, who had come up to his prominence in the American way of opportunity, a religious man who was first of all devoted to his wife of 46 years and to their children and grandchildren.

Yes, it is hard to see a strong man go. We are sorry that Henry Blake's "30" must now be affixed to his career. But a strong man leaves a long remembrance.

[From the Clay Center (Kans.) Dispatch of March 12, 1956]

A RECORD OF SERVICE AND ACHIEVEMENT

Henry Blake's death leaves an unusually fine record of service to the people of Topeka and the State of Kansas in general and special achievement in the publishing field.

A real community leader, he did much to help civic and governmental groups in Topeka and Kansas attain outstanding goals.

In the newspaper field, his achievements perhaps were not noted by the general public but have received general commendation from thoughtful publishers all over the State.

The Topeka Daily Capital, under his leadership, has become a fine example for all publishers to follow—printing facts and information in its news columns and giving voice to opinions in its editorial columns.

As the head of all Capper publications, Henry Blake had proven his ability on the record, and it is a record all can look to with pride. More men of his caliber are needed and the loss of one leaves a vacancy that is hard to fill.

Korean War Prisoner's Mother Asks Aid in Freeing Son as U. N., United States Refuse

---

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1956

Mr. BURDICK. Mr. Speaker, I have here an excerpt from the Ledger of March 8, 1956, which is published by Don Carpenter, editor, Montrose, Calif. If there is no objection, I should like to insert this in the RECORD:

KOREA WAR PRISONER'S MOTHER ASKS AID IN FREEING SON AS U. N., UNITED STATES REFUSE—PFC. ORVILLE LINEBAUGH STILL HELD BY CHINSES REDS AFTER CAPTURE ON JULY 27, 1950

Failing in her efforts to have her country go to the aid of her soldier son held a prisoner of the Chinese Reds and refused aid by the United Nations who "conducted" the Korean war, Mrs. Alice Anderson, of La Crescenta, has taken her plight to the American people. She has asked that citizens write to Congressmen, Senators, and the State Department protesting the fact that her son is still held prisoner after a war that long since ended, in violation of terms of the truce.

Mrs. Anderson stated yesterday that her son, Pfc. Orville Linebaugh, wearing the uniform of the United States Army, had entered the Korean conflict in July 1950. After 1 day in actual combat, the young machine-gunner remained to assist some wounded American boys as his unit retreated and he was captured by the Reds.

He was listed as missing in action on July 27, 1950. Then in September 1953, he was on the list as presumed still being held. In February 1954, he was declared dead. In November 1955, Mrs. Anderson, who resides at 4521 Frederick, La Crescenta, received word that he had been captured. He is now on the list of 500 American soldiers alive in a North Korean prison camp.

Immediately, Mrs. Anderson began her effort to have the young soldier released and sent home. She wrote to the Army, and received a letter from Assistant Secretary F. O. Wilcox, of the State Department, stating that the Korean conflict was a "United Nations war," fought with a United Nations force, under the United Nations flag, and that the United States was not responsible for prisoners.

She turned then to the United Nations, joining a group of 43 mothers of other war prisoners in their plea to the U. N. Making a pilgrimage to New York, they were denied an audience with American Ambassador to the United Nations, Henry Cabot Lodge, Jr. They went also to Washington in April of 1954, when they asked to see President Dwight Eisenhower at the White House.

President Eisenhower also refused to see the mothers of the Korean war prisoners.

Now she is asking that her neighbors in the Crescenta-Canada Valley write their Congressmen and Senators, asking action toward the release of American fighting men still held prisoner after the United Nations war.

Mrs. Anderson stated that Congressman EDGAR HIESTAND, of this district, and Senator WILLIAM KNOWLAND, of California, have both been wonderful in their efforts to secure release for the prisoners. She added that Senator JOSEPH MCCARTHY had also tried to help, before he was censured by his colleague in the Senate.

The mothers as a unit are now pressing a suit against the United States Government, demanding release of the prisoners and $1 million in payment. If the case is heard, Gens. Douglas MacArthur, James Van Fleet, and Mark Clark, and Adm. Turner Joy and others will be called as witnesses. The Andersons moved to the valley from Escondido just after their son had joined the Army in 1950.

Confusing the Issue

EXTENSION OF REMARKS
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. BROYHILL. Mr. Speaker, under leave to extend my remarks, I should like to include the following editorial which appeared in the publication Engineering News-Record under date of March 1, 1956:

CONFUSING THE ISSUE

Promoters of bigger and better engineering and scientific training in the United States—bless them—are depreciating their endeavors by overplaying the "keep up with the Russians" idea. Beyond the fact that the Russians are past masters at misusing statistics, and can outclaim us no matter what we do, the use of fear as an argument to persuade an American boy or girl to take up the study of engineering is absurd. The incentive of visible opportunity—to earn a living, to do interesting work, to achieve a position of respect and leadership, to make worthwhile contributions to society—is what makes sense in this country.

Both educators and business men have made great strides in improving this incentive in recent years. They should dedicate themselves to its further improvement, and stop looking over their shoulders at the Russians.

Actually it is difficult to pick any fields in which the Russians can show any near equality, let alone superiority, of the United States. We have a developed, dynamic industrial economy whereas Russia is frantically trying to lift itself from a level we have long since passed. Its need to increase its supply of engineers and technicians is thus much more pronounced than ours. Moreover, Russia can claim quick results since it can force its people into whatever molds that some economic planner of the moment wishes—and can shift production at will from doctors, to engineers, to pharmacists, or even to hockey players.

In this connection we send a team of amateurs to the Olympics to compete with Russian professionals, and get soundly trounced, when we have a half-dozen professional teams of our own who could consistently beat the Russians. If comparisons are made realistically, the Russians are no more ahead of us in engineering education than in hockey. The effectiveness of engineers and scientists is not measured by numbers but by ability. We may even be turning out as many engineers as Russia if we used the same yardstick to define an engineer. Instead, we attempt to compete with the Russians on their own specifications.

We need more engineers and scientists than we now have. We need to interest more young people in engineering and scientific careers—for example by improving and popularizing high school courses in mathematics and physics in accordance with the well-chosen theme of recent National Engineers Week. But we need them for our own specific purposes and not just because the Russians claim to be turning them out in wholesale lots. Drumming up fear of Russian educational activities is just confusing the issue.

Unity Can Prevent Power Shortage

EXTENSION OF REMARKS
OF
HON. HOWARD H. BAKER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. BAKER. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial which appeared in the Knoxville News-Sentinel, of Knoxville, Tenn., on Tuesday, March 13:

UNITY CAN PREVENT POWER SHORTAGE

For the good of the whole valley, now is the time for unity among the three Directors of the Tennessee Valley Authority.

Our valley is faced with a probable power shortage by late 1958.

It can be averted only by starting construction now of additional units at existing TVA steam plants.

TVA has made this clear. The President and his Budget Bureau have agreed.

They have asked Congress for a supplemental appropriation of $3,500,000 for the current fiscal year to start construction of an additional unit at the John Sevier steam plant. The President and the Budget recommended, also, two additional units at the New Johnsonville plant.

Mr. Eisenhower explained these requests by saying that "since nearly all major hydroelectric sites in the valley have been developed, the new steam units will be needed to meet currently anticipated power loads through the calendar year 1958."

He suggested that the remainder of the cost of the Sevier unit, beyond the $3,500,000, and the entire cost of the two new Johnsonville units, be paid by TVA's issuance of its own revenue bonds. To issue such bonds, a special TVA self-financing bill must be enacted.

The President's idea was a good one. But it appears pretty clear it isn't going to be achieved for these reasons:

1. A House Appropriations Subcommittee has refused to make the $3,500,000 appropriation out of the Treasury; and

2. The TVA self-financing bill appears to be pigeonholed in both House and Senate committees.

This leaves but one way open for TVA to protect the valley against the power shortage. That is for the Authority to spend its own corporate funds to start the John Sevier unit immediately, and the New Johnsonville units eventually.

The House subcommittee heard testimony from the three TVA directors on the issue of TVA thus using its own funds. They were supported by the TVA general counsel who concluded in a detailed legal opinion that "expenditure of revenues by TVA for individual generating units at existing plants" is clearly authorized by law.

Two TVA directors agreed with this. The third, Brig. Gen. H. D. Vogel, the chairman, an appointee of President Eisenhower, reportedly opposed it.

The subcommittee's decision to reaffirm TVA's right to spend its own corporate funds for additions to existing steam plants was approved by a strict party vote. This forecasts trouble when the issue comes before the full House Appropriations Committee this week.

It is tremendously important that the affirmation of TVA's rights be approved not only by that committee, but by the House and Senate, too. The alternative will be the threatened power shortage.

We have a feeling that if the TVA directors, all three of them, will get behind the proposed reaffirmation of the agency's right to spend its revenues for these vital but limited purposes, White House, Budget Bureau, and congressional approval are likely to follow.

It would be better to authorize TVA to issue its own bonds. But that is in the far distant future. Hence, we believe it's better for the country and the valley for TVA to use its own corporate funds—in this carefully restricted and legal way, which in no wise envisions any geographical expansion of its operations—than to appropriate new money out of the Federal Treasury.

A unified TVA board can this very week help win approval for a start of the John Sevier unit by placing its unanimous opinion before the House committee. A unified TVA board can prevent a power shortage.

Petition to the Commissioner of Indian Affairs and to Senators and Congressmen

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. BURDICK. Mr. Speaker, I have here a petition concerning per capita payments and the election of tribal councilmen on the Fort Berthold Indian Reservation, which I should like to have inserted in the RECORD:

PETITION

For a full per capita payment, out of the balance of the Garrison Dam moneys, and for an early election of the tribal councilmen, and for any business that will benefit the Fort Berthold Indian Reservation.

Mrs. Ella P. Waters, Levi Waters, Mrs. Harry Gillitte, Mrs. Elizabeth Burdell, Mrs. Sybert Perkins, Eugene White, Sr., Elizabeth P. Perkins, Lorraine Perkins, Freda Morin, Lee Ross, Reginia Perkins, B. J. Youngbird, Jessie Youngbird, Robert Walks, Ralph Walks, Margart Wilkinson, George Young Bear, Lillie Wolf, Earnest Wilkinson, Philip Atkins, Wilford Lockwood, Patrick Malnourie, George Morsette, Mable H. Wolf, Ben Heart, Bessie Elk, Leo Young Wolf, Mrs. Many Ribs, Mrs. Mary Young Wolf, Joe Fox, Susan Fox, Grover Yellow Bird, Doroty Yellow Bird, Mrs. Philomine Felix, James Conklin, Sidney L. Fox, Isaai Fox, Eleanor Conklin, Walter P. Chief, Helen Gough, Winnie Seminole, Philip W. Starr, Jr., Woodrow W. Starr, Cynthia Smith, Leon Fox, Anna D. Wilde, Pearl Howard, Mary Sage, Romona Drags Wolf, Adlia Stephenson, Jackson Ripley, Gladys Ripley, Ella R. Ripley, Eugene Spotted Horse, Evan Gillitte, Evadne Gillitte, Frank Heart, Jean Perkins, Romona B. Heart, Mrs. Tom White, Sr., Lena White, Irene Rush, Victor Elk, Delancy Goodall, Mrs. Finley Blake, Louis Brown, Wilbert R. Fox, William R. Fox, Laidman Fox, James Driver, Mrs. Verna Driver, Joyce Black Hawk, Cora Snow, Lawerance Good Bear, Mary E. Good Bear, Phoebe Smith, Joseph Smith, Gerrgiline Black Hawk, Chas. Grant, Owdle Painte, Leona Hale, Lucy Rogers, Elizabeth Grinnell, Gwendolyn Painte, Marie Commings, Dora Smith, Geneva Smith, Priscilla Bird, Mary Conklin, Ella

Driver, Joe Driver, Jessie W. Owl, Joe Young Bird, Fannie Young Bird, Harry Beaks, Philip Snow, Lenora Beaks, Eva B. Beaks, Vera Beaks, Grace M. Crow, Medicine Crow, Charlis Grady, Ernestine Smith, B. H. Wilde, Franklin Howard, Christine Young, Francis Young, May Packineau, Anne Lockwood, Pauline Fox, Emma Bearstail, Grace Charging, Mark Necklace, Lottie Necklace, Robert Bird Bear, Reginald Wells, John Bearstail, Susan Malnourie, Thomas Wells, Ralph W. Wells III, Elaine Irewin, Herman Youngbird, George Foote, Sr., Alma Mahto, Celva Foote, Charles A. Foote, John Rabbithead, Dorthy Rabbithead Jim Martin, Alfreda Young Bird, Grace Grinnell, Francis Besten, Adilbert Lone Bear, Aline Lone Bear, Inez Lone Bear, Gertrude Beston, Mrs. Lulu Hale, Mary L. Gillette, Albert Gillette, Fanny Wolf, Clarence Perkins, Jr., Minnie Spotted Wolf, Rollo Jones, Leslie Mahto, Timothy White Body, Izora Dye, Lambert Packineau, Charles Bearstail, Benedictina M. Bearstail, Kenneth Charging, Ralph Wells, Jr., Olive Wells, Ralph Wells, Sr.

Californians Pay Tribute to Senator Carl Hayden on 45th Anniversary of His Service in Congress

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. ENGLE. Mr. Speaker, when Senator CARL HAYDEN, of Arizona, passed his 45th year of service in the Congress, the fact was noted throughout the Nation. Senator CARL HAYDEN is one of the most respected men in Government today. It is not well known, however, that he is a graduate of Stanford University in the State of California. And, I suspect, that even some Members of Congress will be surprised to learn that in northern California he is regarded as one of our best friends, and throughout the years has stood stanchly beside us in pushing appropriations for California's Central Valley project. On the occasion of the 45th anniversary of service, the Sacramento Bee, a newspaper published in our State capital, paid a deserved tribute to Senator HAYDEN, in the column Echoes From Capitol Hill, written by Mr. Edward H. Dickson, their Washington staff writer, which I attach for the information of the Members:

ECHOES FROM CAPITOL HILL
(By Edward H. Dickson)

The men in Congress who make the headlines are not always the ones who are the most influential or the most respected by their colleagues.

While a little demagoguery is relished even by the most intellectual student of public affairs and at election time frequently is required of a politician wishing to continue as a statesman, congressional effectiveness often is achieved by keeping the eyes, ears and mind open and the mouth closed.

What makes this subject timely is that Senator CARL HAYDEN, Democrat, of Arizona, the dean of Congress, is starting his 45th year of service.

While not a mute man by any manner of means when the occasion requires, HAYDEN has seen the orators come and go and, because of his long experience, when somebody starts to save the Union can honestly remark:

"This is where I came in."

HAYDEN is an old son of the Stanford Red, having left his native State to attend the Palo Alto institution 3 months after Herbert Hoover's graduation.

He played football and, in case there are any congressional upstarts who think he lacks the ability and training to slug it out verbally, was one of the university's star debaters.

After college days he returned to Arizona, where he was elected a city councilman, then a county treasurer and later sheriff.

His experience as sheriff still enters into some of his thinking.

Probing into reasons why some event has occurred and who instigated it, HAYDEN will remark:

"Now speaking as an old sheriff, isn't the reason this?"

He is right much more often than he is wrong and nobody is ever waived out of a league when he consistently hits better than .500.

When Arizona was admitted to the Union in 1912, HAYDEN came to the National Capital as a Member of the House of Representatives.

While he had been successful in local Arizona politics, he recognized that in Washington he was in a different league. So instead of telling everybody about his Arizona record he went around to congressional oldtimers and sought their advice about what to do to be reelected.

They told him rule No. 1 is never to neglect the home folks and if he abided by that conscientiously he could forget the rest of the book.

Accordingly he laid hands on 14,000 farmer bulletins and distributed them throughout his State. He sent them out with a letter saying he would welcome ideas on legislation.

Apparently there was a farm problem in those days, too, because the suggestions rolled in and HAYDEN found himself in disagreement with his constituents.

He faced up to the unhappy situation and sat down and wrote letters telling the voters why he could not agree.

HAYDEN, who was exceedingly friendly in pushing appropriations for California's Central Valley project and is recognized by Republicans as well as Democrats as the foremost congressional authority on western reclamation, has followed the advice of former Congressman Frederick C. Talbott, of Maryland, in shaping his congressional career.

Talbott told him:

"If you want to gain the respect of your colleagues, keep quiet and be a work horse."

Career Service

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. HOLTZMAN. Mr. Speaker, I read the other day that Philip Young, Chairman of the Civil Service Commission, has urged that the politicians do not make a political football out of career service during the coming campaign, on the ground that this might impair the morale of civil servants.

I seem to recall that Mr. Young gave comfort to the numbers game played by the administration in order to convey the notion that loads of security risks were fired by his Department even though he was later obliged to admit that over 90 percent of the firings were routine and totally unrelated to subversion. I seem to recall that under Chairman Young appointments had to be cleared through the Republican National Committee. His newly expressed concern for the morale and prestige of the Department leaves me as cold as Mr. Benson's plea to avoid discussion of our farm policy, and Mr. Dulles' exhortation to eliminate debate on our foreign policy from the coming campaign.

Somehow, I feel no pity for those who sold "corruption, communism, and Korea" in 1952.

Resolution by Philadelphia Emergency Conference of Jewish Organizations

EXTENSION OF REMARKS
OF
HON. WILLIAM J. GREEN, JR.
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. GREEN of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following resolution which was adopted by 39 organizations with an affiliated membership of over 150,000 in the city of Philadelphia, at a large mass meeting held at the Bellevue-Stratford Hotel, Philadelphia, on Sunday evening, March 4, 1956:

DECLARATION

PREAMBLE

At the call of the president of the Philadelphia region of 38 major organizations representing upward of 135,000 members, this emergency conference has convened in Philadelphia to consider the deep crisis in the Near East which threatens the security of America and the free world and directly menaces the future of Israel.

I. THE BALANCE OF ARMS

Soviet imperialism is enveloping the Near East. The Czech-Egyptian arms agreement, supplemented by negotiations and agreements with Syria and other Arab States, exposes the entire area to penetration by Communist arms, agents, technicians and propagandists.

Communist weapons can only equip Egypt and Arab States to accelerate their attacks, to intimidate Israel, and to spawn neutralist Arab alliances in the Soviet design to obstruct the efforts of the democracies to strengthen the frontiers of freedom. Moreover, the United Kingdom equips the Jordan Arab Legion and the Iraqui Army and has supplied large shipments of tanks and other material to Egypt. Our Government has made arms available to Iraq without requiring reimbursement and has furnished military equipment, including tanks, to Saudi Arabia and other Arab States.

This is a violation of the Tripartite Declaration of 1950 by which the United States, the United Kingdom, and France committed themselves to prevent aggression and to maintain the military balance in the Near

East. This military balance has now been destroyed.

Israel has constantly appealed to the United States for arms to restore that balance so that she may defend herself from aggression long and publicly threatened by the Arab States. This is vital if war is to be averted in the Near East.

We call upon the Department of State to grant Israel's request to buy arms for defense immediately.

II. A SECURITY GUARANTY

Our Government has entered into security pacts with 44 nations in Europe and Asia to unite the peoples of the free world in the preservation of peace. It should extend this system of collective security to Israel. Such an undertaking would be a logical development of the Tripartite Declaration.

On August 26, 1955, Secretary of State John Foster Dulles advocated security guaranties with Israel and with the Arab States, but conditioned them on Arab-Israel agreement. But the mounting threat of war, growing out of the export to Egypt and other Arab States of Communist arms and intrigue, makes it imperative that our Government enter into such treaty engagements without waiting for final agreements between Israel and its neighbors.

An engagement by the United States to help preserve the peace should not be conditioned on Arab consent and thus made subject to Arab veto.

We therefore urge our Government immediately to negotiate a security treaty with Israel and with such of the Arab States as are ready to join in the promotion and preservation of the peace.

We trust that Congress will give favorable consideration to such treaties or any other legislation for maintaining an arms balance and safeguarding collective security.

III. ECONOMIC DEVELOPMENT

A large-scale program for economic development in the Near East is now being planned by our Government. The raising of living standards and the encouragement of regional economic cooperation will promote peace and democratic institutions. Israel is a graphic demonstration project of how American aid can stimulate development within a country which guards individual liberty and preserves free institutions.

We note with approval the repeated declarations of the Israel Government of its willingness to accept the principle of compensation for abandoned Arab refugee property, and in this connection, we welcome the announcement by Secretary of State Dulles that our Government is ready to assist in programs looking to the compensation and resettlement of the Arab refugees. As organizations interested in the problems of all humanity, we applaud these efforts and we encourage the governments involved to expedite the solution.

We trust that American aid to Israel will continue and urge that any large-scale economic program for the Near East be contingent on cooperation by all nations in the region and will bring about the termination of all blockades and boycotts, which defeat and obstruct the efforts of our Government to raise living standards.

IV. THE PROBLEMS OF THE PEACE

We call upon our Government to make every effort to promote an honorable peace settlement in the Near East.

Israel's repeated offers to enter into peace negotiations have been rebuffed by the Arab states which have made impossible demands on Israel for territorial and other concessions.

We note with regret an official utterance by the United Kingdom advocating that Israel yield territory to purchase Arab acceptance of Israel's existence, a view echoed in some quarters in our Government. We are opposed to any efforts to force unacceptable conditions which violate the integrity and sovereignty of the parties. We urge our Government to decline to advocate peace on such terms or conditions.

Our country rejects appeasement as a policy for ourselves. We must not impose it as a policy on others.

Tiny Israel has 8,000 square miles and a growing population. Her land-rich Arab neighbors are spread across an area of 2.5 million square miles. Any pressure on Israel for concession of territory would serve to reward those who have turned to the Kremlin and to encourage them to make new and unending demands. The dismemberment of Israel would be as catastrophic for America and the free world as the dismemberment of Czechoslovakia was for European democracy.

We earnestly pray that our Government will always be guided by the highest moral and ethical principles in efforts to achieve peace in the Near East. To aid in the defense of Israel at this critical hour is to strengthen America's own best interests.

THE ARAB BOYCOTT

The Arab countries maintain an unrelenting boycott and blockade of Israel in violation of United Nations decisions and principles. These practices have been directed not only against Israel. Americans dealing with Arab countries have been warned against any kind of commerce with Israel and have been asked to disclose the religious affiliation of employees. American citizens have been denied visas to enter Arab countries solely on the ground of their religion—a discrimination which has been practiced even against members of the Armed Forces. Such discrimination is repugnant to American principles and international law. We urge our Government to take vigorous measures to terminate such practices.

ARAB PROPAGANDA AGAINST AMERICANS

Diplomatic representatives of certain Arab governments in the United States have infringed upon American hospitality by using the public platform to vilify Americans to their friendship for Israel. They have spread propaganda injurious to American Jewish citizens and institutions, and have even acted in concert with notorious hatemongers. We urge our Government to inform the Arab governments responsible that this country does not tolerate the abuse of American citizens by foreign diplomats or attempts on their part to foment hatreds and to set Americans against Americans.

The American Jewish community will forever be proud of the significant role it has played in the rebirth of Israel. Accordingly, this Philadelphia conference of American Jewish leadership reaffirms its determination to work for Israel's security, to promote her strength, to consolidate her economy and to help her fulfill her great destiny under devine guidance.

We are now engaged in a titanic contest with the Soviet Union to win the friendship and adherence of many millions of uncommitted peoples throughout the world. These millions will test the vitality and moral strength of democracy by the readiness of our country to stand firmly with those who, like ourselves, are dedicated to the practice and preservation of freedom and peace.

Connecticut Zooms in Population Count

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. SADLAK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article which appeared in the March 1956 issue of the Information Letter published by the Connecticut Development Commission, which I am sure my colleagues will find both interesting and enlightening:

CONNECTICUT ZOOMS IN POPULAR COUNT

Connecticut has passed 2 other States in population in the past 5 years to become the 26th largest State in the Union, the Census Bureau reported last month. In land area, Connecticut is the third smallest in the country.

The State, with a 1955 population of 2,241,000, skipped past Oklahoma and Mississippi in the period from 1950 to 1955. Too, Connecticut grew faster in population percentagewise than the 5 other New England States, gaining 11.6 percent, or 234,000 residents since 1950. Connecticut's expansion was at an annual rate of 2.1 percent while the New England States as a whole increased just 1.2 percent annually.

The countrywide tabulations made by the Census Bureau showed that only a dozen other States had higher percentage increases than Connecticut. The Bureau's figures also indicate that Connecticut's senior citizens—those 65 years or older—have grown 13.7 percent in number since 1950.

Elpidio Quirino: Symbol of Democracy in the Philippines

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. DINGELL. Mr. Speaker, Elpidio Quirino, to whom I would like to pay tribute today, rose from obscurity to become the second President of the Philippine Republic. On his way to that office, he became an eminent lawyer, a distinguished and shrewd legislator and a keen economist. Like many of our own American leaders, he was a self-made man.

He was born of humble parents on November 16, 1890. His early life was a constant struggle against poverty. Notwithstanding numerous hardships, he was determined to receive an education, and by working his way through college he finally received his law degree.

He was an instrumental force in the struggle for Philippine independence: it was largely as a result of his efforts that our Congress passed the Tydings-McDuffie Act in 1932 setting July 4, 1946, as the date for independence. Quirino was also a drafter of the Philippine Republic's Constitution, which was accepted by his people on May 15, 1935.

In addition to being a wise man active in his country's affairs, Quirino was also a brave one. Tangible evidence of his courage was his refusal to compromise with the Japanese invaders. In December of 1941 he rejected a post offered to him by the puppet government. He chose rather to resist the encroacher and became a leader of the underground movement. In an act of heartless cruelty the Japanese retaliated by massacring his wife and three children.

Perhaps Quirino's greatest contribution to the Philippine nation was his

prodigious efforts to rehabilitate and reconstruct his country after the war. As first Vice President of the Philippine Republic, he was the man most responsible for negotiating for the American aid that bolstered the Philippines' sagging economy.

He became the leader of his government upon the death of President Manual Roxas on April 15, 1948. Under his administration, with the continued assistance of United States financial and technical aid, the Philippines made rapid economic progress. His knowledge of economics was an aid in stabilizing the currency and in placing the budget in a satisfactory position.

Elpidio Quirino was also a stanch foe of communism. The elimination of the Communist Huk menace on the islands, while he was in office, assisted national as well as free world security by preventing the expansion of communism in southeast Asia. He was also credited with urging a defense past similar to the North Atlantic Organization which culminated in the formation of the Southeast Asia Defense Organization.

Quirino always displayed tenacity and preserverance while encountering any adversity. Even his political adversaries were the first to admit that he was a fighter; and that in defeat he was never morose and in victory never arrogant. The fact that the Philippines are today considered "a showplace of democracy in the Far East" is in large measure due to his great statesmanship. The Philippines have lost a great leader, and Americans everywhere have lost a friend.

Unwarranted Charges of Violation of the Walter-McCarran Immigration Law

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. WALTER. Mr. Speaker, on numerous occasions during the last month I have received communications concerning the legality of the admission of Leopold D. Silberstein to the United States.

As the result of a careful investigation of the charges, I have reached the conclusion that they have been made for an ulterior purpose—I say this because there is no question about the legality of Mr. Silberstein's admission to the United States, or that he was not qualified in every respect for the United States citizenship he enjoys.

Mr. Silberstein is the president of the Penn-Texas Corp. incorporated under the laws of the State of Pennsylvania in which State the home office of the company is located. Because of wise reorganization procedures, 1,000 Pennsylvanians whose jobs were in jeopardy are now enjoying full employment.

It is indeed unfortunate that the time of busy investigative forces should be consumed in making investigations of unwarranted charges of violations of the Walter-McCarran immigration law.

Israel and the Eisenhower Administration

EXTENSION OF REMARKS
OF
HON. IRWIN D. DAVIDSON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. DAVIDSON. Mr. Speaker, on February 8, 1956, I addressed this House concerning the horrendous crisis in the Middle East. I attempted to describe the seething caldron which the Communists are stirring with a ladle of hate and which threatens at this very moment to spill over a world which cannot under any circumstance abide another war. I attempted, as an American, to show that it was a matter of enlightened self-interest to preserve peace in the Middle East and not to allow a friendly democracy, however small, to stand alone against the obvious Arab plan to attack and destroy her. I pleaded that this great Nation extend to Israel, a creation of the United Nations, the hand of friendship and encouragement in the form of a security pact just as we have done with 44 other nations in the family of those yet free. I beseeched that Israel be permitted to purchase defensive arms to defend herself and deter this cruel aggression.

Alas, I fear my words are inadequate with this administration; they fall on deaf and callous ears.

Following that speech, a colleague approached me. He is a man for whom I have profound respect and affectionate regard. He sits as a distinguished member of our House Foreign Affairs Committee. He complimented me upon my efforts and favored me with a most candid and revealing dissertation on the subject. The point of view which he expressed was, I believe, an accurate reflection of this administration's position with regard to the Arab-Israeli exigency. He told me that he appreciated my concern, but wished me to give consideration to the State Department's point of view. His suggestion was that Israel should not waste what little money it might have for defensive arms. "It might be better," he said, "to rely upon the United Nations which created Israel to protect it." This concept, I believe needs be answered.

In November 1947 the United Nations decided upon the establishment of the State of Israel. Within days, the Arabs started war. In an attempt to negate the action of the United Nations, they attacked from all sides. No one interfered. No member of the U. N. gave help to Israel, or attempted to stay that attack even when Jerusalem was partly destroyed. The brave Israelis, numbering less than 600,000, beat back the oncoming hordes, 40 million of them, with their bare hands. They did not consider themselves heroes. They were the people who came out from Dachau and Auschwitz and the ghetto of Warsaw. In the protection of their lives and the lives of their children, they were brave, and they were sustained with a single secret weapon, two words: "Ein Brara," no choice. No one came to their assistance. They fought their battle for survival alone.

If the whole question of Israel's security were left to the Security Council, there would surely be a Russian veto. The United States refuses to enter into a security pact with Israel in conformity with the spirit of the United Nations, a consummation devoutly to be wished. But even if it did, which is patently now quite doubtful, help would come too late. A plane flies from Cairo to Tel Aviv in a matter of a few minutes.

At this point, I wish to make crystal clear Israel does not want American boys to shed blood for her. Israel does not want war. It wants peace. In the present framework of the perilous situation that exists, the Arabs refuse to talk peace. They refuse to enter the same room with Israel representatives. They refuse to recognize Israel's very existence.

Recently on television, Dr. Farid Zeineddine, the Syrian Ambassador to the United States, said that Israel's very existence was an aggression. He so referred to this little democracy, which was morally born of the conscience of the world as expressed by the United Nations. No, Israel needs peace so that it can continue its miraculous good works. It does not want arms to attack anyone. It wants defensive arms to protect itself. The people of Israel do not wish to place the responsibility for the lives of their children on the intercession of any foreign power. They are resolved, make no mistake, that the Arabs will not occupy their country. They will fight for every inch of their territory and every precious grain of sand.

Yet, Mr. Dulles, speaking for the Eisenhower administration said and I quote: "It would seem that Israel's security could be better assured in the long run through measures other than the acquisition of additional arms. These other measures include reliance on the United Nations." What does "in the long run" mean? The holocaust may be tomorrow, next week, or next month.

Israel, a friendly democracy, is asking for defensive weapons. They are not asking for bombers or submarines, but interceptive fighters, antiaircraft guns, and tanks to stand against tanks. Mr. Eisenhower, and Mr. Dulles speaking for him, abhors an arms race. Five months ago, we suffered the shock of learning about the arms deal between Egypt and the Communists. Two hundred and fifty million dollars worth of arms were practically given to Egypt—fighters, bombers, tanks, submarines. This is not the only source of arms to the Arab States. The United States itself, and England, have contributed to their imbalance of military might. It makes it so tempting and inviting for the Arab world to attack. Israel did not start an arms race, and does not want one now. There was Arab superiority, especially in aircraft, even before and during the deal with the Communists. And the Israelis were not afraid. But now the imbalance is so great and the probability of aggressive attack so imminent, that Israel calls

upon its friend in the family of free nations to help to ward off the blow.

There is a point beyond which flesh and spirit cannot prevail against cold steel. Only by the acquisition of effective defensive weapons can she deprive Egypt of the incentive to launch the attack. Even Mr. Dulles recognizes this, for he said:

I think if I were sitting where they are, I might entertain the same feeling.

Let us not be ostriches and hide our heads in the sand. Is there any one in the world who doubts that the Arabs purchased their arms to attack Israel? Does any one think that the Arabs get arms from the Communists in order to fight the Communists? The Arabs are famous for their duplicity. Did they fight in the Second World War against Hitler? The few Palestinian Jews supplied three times as many soldiers to the anti-Nazi forces as did the whole Arab world during World War II. How long shall we be fooled by Nasser's blackmail and his talking out of two sides of the mouth? Nasser outsmarted the Western World with his arms deal with the Soviet bloc. Soon he will be ready for the battle.

Yet my friend and colleague of the Foreign Affairs Committee poses the question:

Is there danger that we may drive the Arab world into the Communists' orbit?

That, too, I should like to answer. It is a point that needs clarification.

The answer is "No." As one who has visited the Middle East, I can tell you that the Arab potentates who control the destinies of their countries in many cases do so from sumptuous villas on the Riviera. Their totalitarianism and feudal domination of the Fellaheen and impoverished populace is something which does not lend itself to communism. The oriental sheiks and potentates have for too long ridden herd over their suffering masses to turn to communism, their heads would be the first to roll and they know it.

Israel has no desire to bleed again as it did in 1948. It does not wish to offer up its youth to casualty lists. The gardens, the forests, the farms, the hospitals, and schools which they built upon the cruel dry sands of their country, they do not wish to see reduced to rubble. They want peace. They still hope and pray that those who gave the world the Koran will accept the hand of those who gave the world the Bible. But Israel's hand must be made strong enough to repel the attack, to deter the incentive for that attack.

President Eisenhower himself declared that every country has a right to get arms for legitimate self-defense. This means that Israel, too, has that right. Arms as a deterrent is the declared policy of the United States. The whole world knows there is no other deterrent.

Israel is a small country, but that was also true of Ethiopia. In 1939 when Czechoslovakia was sold down the river in the Treaty of Munich by Chamberlain with Hitler, the younger Masaryk said:

In a world where there is no security for small nations, there is none for big ones.

Eight months later, World War II started.

The threat to Israel is a threat to Western civilization and standards. If the feudal Arab States were to become democracies as Israel is, there would be peace and cooperation in the Middle East. Why then shall we give lipservice to democracy? This administration thus far has made a sorry record in international affairs. Dictatorships have been helped and democracies have been left unaided. What do you think is the effect on small nations everywhere?

My friend of the Foreign Affairs Committee then asked the $64 question. "What about the oil?" Very well, if needs be, we will set up the scale and weigh the interest of oil companies against the blood of human beings. But will peace in the Middle East mean the loss of oil? Will giving Israel defensive arms to fend off its annihilation mean loss of oil? Are we not more likely to lose everything if war breaks out in the world again, if aggression is not stopped in its tracks?

The Israelis do not want war. They want to live. They have been threatened with death, but they have known death. These are people who have more space in the world when they are dead than when they are alive. In the end, they will survive and survive in freedom, no matter what the odds. But the plea I make today is in the name of morality and in the name of decency and in the name of a democratic, friendly nation whose contribution to the health, welfare, and living standards in its part of the world is perhaps one of the major reasons for Arab hate and intransigence.

Black Market for Nickel Gets Blacker Despite Rising Output

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1956

Mr. McCORMACK. Mr. Speaker, under leave to revise and extend my remarks in the Appendix, I include an article from the Wall Street Journal of March 13, 1956, entitled "Black Market for Nickel Gets Blacker Despite Rising Output." I also include a letter I wrote to Dr. Flemming, Director of ODM, on January 11, 1956, asking a number of questions about the nickel situation. To date the questions which I asked Dr. Flemming have not been answered although he acknowledged receipt of my letter on January 18, 1956, and promised a reply by January 24, 1956.

As the nickel situation worsens as stated in the Wall Street Journal, it is acknowledged by the Commerce Department that certain companies are obtaining nickel for defense purposes and illegally selling some of it through the back door for what is well known to be enormous profits. It is also found that we are exporting nickel alloys and nickel-containing scrap.

I am also advised that the stockpile requirements may need revision and that the basis for allocation of nickel for civilian purposes was established on pre-Korean usage and that the allocation program is administered not by the Government but by the producers, principally International Nickel, though BDSA is supposed to audit the producers' books to insure that equitable distribution is made. I also find that the small users of nickel, particularly the plating industry are complaining that they must buy nickel in the black market at exhorbitant prices as indicated by the Wall Street Journal article or close shop.

It seems to me that the Director of ODM who sets the stockpile goals and enforces the National Production Act and the Secretary of Commerce must bear the responsibility for the current situation and for its equitable solution.

The above-mentioned follows:

[From the Wall Street Journal of March 13, 1956]

BLACK MARKET FOR NICKEL GETS BLACKER DESPITE RISING OUTPUT

The official price has held at 64½ cents a pound since late 1954. But buyers who need extra nickel now pay about $3 a pound in the black market, up from between $1 and $1.50 a year ago. Stainless steel scrap, containing 8 percent nickel, brings a steep $400 a ton, double a year earlier. The auto industry alone spent over $10 million in 1955 on nickel premiums, one parts-making firm says.

Free world production of the silvery metal reached a record 427 million pounds in 1955, up 40 million pounds from the year before, the previous record. Output this year may exceed 440 million. But roughly 84 million went into Uncle Sam's stockpile last year, 4 million more than in 1954. The stockpile and United States defense uses probably now take about 40 percent of free world nickel output. The remaining supply isn't big enough to meet booming demand for peacetime applications.

The quantity of nickel moving in the black market probably is small in proportion to the total—the same tonnage is often offered to a number of users, tending to exaggerate offerings.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C. January 11, 1956.

Hon. ARTHUR S. FLEMMING,
Director Office of Defense Mobilization,
Washington, D. C.

DEAR DR. FLEMMING: I have reviewed your very considerate letter of December 16, 1955 and have discussed the points you have raised with responsible members of industry and wish to avail myself of your kind offer and ask some additional questions which appear germane to me at the present time. I am willing to accept your position that technically the terms "gray and black market" may be misnomers since no law or regulations are being violated. However, there is an implied regulation apparently established and administered by industry and checked for compliance by BDSA as the representative of industry.

Evidently BDSA officials agree that some nickel is being sold at very high prices and that the nickel comes from Japanese, French, and German imports (possibly 4 million pounds per year) plus secondary nickel recovered from scrap and some scattered sales from Canada.

Will you please supply the quantities from each of these sources including the breakdown of the 4 million pounds?

You mention that "probably 96 percent of the nickel consumed in 1955 came from market price sources." It has been suggested that there may be an arrangement between some scrap dealers whereby they supply the mills certain materials and receive nickel in return. In such a case, the nickel would technically be "market price source" but not in accord with the spirit of the allocation system. Has this come to you attention? If true, can either the supplier or the BDSA cope with this situation? Or O. D. M.?

I am advised that 75 percent of released stockpile nickel goes to defense purposes, mostly Air Force, and not to commercial fields as your letter seems to imply. Will you please verify this? If my statement is approximately correct, would it not be equitable to earmark all stockpile diversions for commercial users in order to break the high-price market?

Will you also advise me as to the following:

1. How have the stockpile objectives been set? By whom? When last reviewed? And what consideration was given to the fact that the source being principally from Canada is virtually domestic and free from being cut off?

2. Information I have received does not confirm your statement as to the date of the establishment of the allocation base. Will you please verify and advise if you think it should be brought up to date in view of industry changes, new businesses, etc.

3. Please furnish the historical figures showing the allocations between defense and nondefense purposes since 1949.

4. Does authority exist in ODM, BDSA or any other agency to take such action as may be needed to insure fair and equitable distribution of nickel to commercial (nondefense) users?

5. What is the legal relationship between ODM and BDSA so far as the allocation of nickel to commercial users is concerned?

6. How are the stockpile releases geared into INCO's allocations to insure fair and equitable distribution? Also other producers, Falconbridge, Sherritt-Gordon, Nicaro, Hanna, etc.?

7. How frequently does BDSA audit the producer's books? When was the last audit? What recommendations were made? Were they accepted or rejected?

8. Is ODM satisfied with the system of audits? And does it consider that there is fair and equitable allocation to the nondefense users?

9. At what price is stockpile nickel from the various sources furnished to industry?

10. What right of appeal is afforded businessmen who feel that the present allocation system is not fair and equitable?

11. I am very pleased to learn that you have taken steps to have a survey made of the nickel situation and shall look forward to the receipt of a copy of the survey report. When will the survey be concluded and the report made? And will the nondefense aspects be covered which I have referred to above?

Very sincerely yours,

JOHN W. McCORMACK.

Anniversary of Hungarian Independence

EXTENSION OF REMARKS

OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1956

Mr. FRELINGHUYSEN. Mr. Speaker, more than 100 years ago, in the year 1848, the Hungarian people under the leadership of Louis Kossuth revolted against an authoritarian regime. Unfortunately their independence was short-lived. that day of independence is still celebrated, nevertheless, in thousands of homes both in Europe and the United States. Indeed, there are today many fine men and women living in my own congressional district who have been obliged to flee from Hungary and seek refuge in our own country. They have come here to escape a newer tyranny which tightly grips their native land.

Although the Hungarian people today still suffer from oppression, the celebration of this March 15 anniversary should give them hope and inspiration. A desire for liberty is an invincible force. The cause of freedom, and the will of a people for independence cannot be quenched. We here in the United States can salute their courage and wish them well.

Hungarian Freedom Day, March 15, 1956

EXTENSION OF REMARKS

OF

HON. JOHN LESINSKI, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1956

Mr. LESINSKI. Mr. Speaker, March 15, 1848, was a memorable day in the history of the Hungarian nation. It is still celebrated by the Hungarians as the day of the liberation of Hungary from the tyrannical rule of Austria. It was on that date that the students and people of Budapest, encouraged and inspired by their marvelous leader, Louis Kossuth, started the movement to regain their freedom and equality.

Following the Congress of Vienna, Hungary was put under the control of the Austrian monarch. This Emperor had promised to rule Hungary according to her constitution and laws, but did not keep his word. In succeeding years the constitution of Hungary was suspended and its lawmaking body, the Diet, was not convoked. Instead, a campaign of terror was pursued; right of free speech and freedom of the press was suspended. The supervision of education was transferred to Vienna and a new system of education was devised. Foreign books and newspapers were barred from the country. Wholesale arrests were made. Legislators and others of liberal tendencies were arrested and charged with high treason. The accused were denied the right of defending themselves and were not permitted to face their accusers.

On March 15, 1848, while a deputation of 72 members of the Hungarian Diet, under the leadership of Louis Kossuth, was on the way to Vienna to demand of the Emperor that Hungary's rights be restored, an occasion of great importance took place in Budapest. The young men of the city circulated copies of petition containing 12 demands for the rights and liberties of the Hungarian people, together with copies of Alexander Petofy's stirring nationalistic poem, Rise Magyar. The professors and the students at the university in Budapest caught the spirit of the movement and left their classrooms to assemble on the campus. From there the whole student body marched onto the streets and mingled with the people. The people, caught up in the movement, demanded freedom of the political prisoners which was granted by the representatives of the Emperor in Budapest. Thus, while Kossuth and the deputation were on their way to Vienna, the first step to liberate Hungary from the clutches of the tyranny was taken.

This was the movement that stirred the Hungarians to fight with determination and fortitude and to become in April 1849 free and independent. However, tyranny was still reigning throughout Europe and the overwhelming odds of the powerful troops of the Quadruple Alliance soon cut short the liberty Hungary had gained.

Although the freedom achieved through the student's movement of March 15 was shortlived, the courage displayed by the Hungarian people was an example to be followed by all oppressed peoples. We see the parallel of oppression and tryanny in the captive nations of Europe today; and we have no doubt that the people of Hungary, as well as the other people behind the Iron Curtain, still have and always will have the courage and fortitude of their forefathers and will eventually when proper opportunity presents itself to arise in mass against their oppressors to gain the freedom and liberty, the love of which is inherent in them and which they cherish as they do life itself.

South Carolina's Resolution on Interposition

EXTENSION OF REMARKS

OF

HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1956

Mr. DIGGS. Mr. Speaker, under unanimous consent, I include in the RECORD a letter sent to Members of the Senate and the House of Representatives by Mr. James M. Hinton, president of the South Carolina State Conference of NAACP Branches. It is an appeal to the Congress of the United States that, in accordance with vital democratic processes, Negroes who would be denied their constitutional rights by prosegregationists be given a hearing by the same hearers of arguments for denying them such rights.

The letter follows:

HONORABLE SIRS: The South Carolina resolution on interposition, presented to you gentlemen by Members of your august bodies, does not represent the sentiment of many whites in South Carolina and few, if any, Negroes in the State. Negroes represent at least 42 percent of the population in South Carolina, and not one Negro was asked to appear before the general assembly, and to the best of my knowledge no hearing was held.

The statement attributed to Hon. J. STROM THURMOND in the Columbia State paper, "that 9 out of every 10 persons favored the resolution," is not in accord with any record taken, since none was made, prior to the resolution.

It is not our feeling that any action will be taken on the resolution, but should any action be taken, Negroes in South Carolina request a hearing from your august bodies. It is urgent that Negroes be heard on this matter, before any action is taken, since the opportunity was not given for such a hearing prior to the passage of the bill.

The South Carolina State Conference of NAACP Branches representing many Negroes in the State is in accord with the decision of the United States Supreme Court, both the decision of May 17, 1954, and the decree of May 31, 1955.

School facilities in South Carolina are far from equal, both on the elementary and undergraduate levels to say nothing about the graduate level. Desegregation is the only answer to equality of educational facilities in South Carolina.

Very truly yours,

JAMES M. HINTON,
President, South Carolina State Conference of NAACP Branches.

Ducks in the Weiner Area of Poinsett County, Ark.

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. GATHINGS. Mr. Speaker, everyone likes to extoll the virtues of his State. We Members of Congress are continuously boasting of the particular advantages that are prevalent in our own congressional districts.

Arkansas has long been in the forefront and the leader of the Nation in having the finest duck shooting to be found anywhere. Ducks flow into Arkansas in the fall of the year where a vast amount of water may be found. In addition to the many streams, lakes, and ponds, Arkansas has ideal conditions for feeding of ducks. The large rice fields of eastern Arkansas offer an excellent and abundant source of feed grain for the tremendous duck population which comes there.

A day or two ago, it was my privilege to read an article and view some pictures which appeared in the Jonesboro, Ark., Sun of Friday, March 9. I wish it would be possible for each Member of the House to see these pictures. They show millions of ducks in the Weiner area of Poinsett County, Ark. The duck population in the Weiner vicinity, which is south of Jonesboro, continues to rise appreciably. The duck capital now is Weiner, Ark., in the district which I have the honor to represent.

I would like to incorporate as a part of my remarks this splendid article which appeared in the Jonesboro Sun of Friday March 9, 1956, which is interesting reading indeed. The article is as follows:

DUCK POPULATION RISES—WEINER NEW DUCK CAPITAL OF WORLD—HUNTERS REPORT SHOOTING HERE TOPS STUTTGART

Hunters over the Nation have begun to realize in recent years that the Weiner area, south of Jonesboro, has displaced Stuttgart as "The Duck Capital of the World."

Each year more and more hunters flock into this area from out of State to take advantage of the fine duck shooting.

In the past 15 years the number of duck reservoirs has grown from about 5 to more than 30, and more and more are being built.

Last year several thousand hunters flocked into the area to take advantage of the shooting, and many of them came from points as far distant as Illinois, Michigan, Wisconsin, and most other States.

D. H. Floyd, manager of Hotel Noble, said a large number of hunters from distant points stayed at the hotel—many as long as 2 weeks, during the past season.

During the year many pictures of ducks—taken in the Weiner area were printed nationally. Sports Illustrated and other national magazines ran photos that were made on probably the most famous reservoir—W. H. Claypool's Wild Acres, located east of Weiner.

Mr. Claypool started building his now famous shooting area in 1942. Before that time he had made several tries at establishing several shooting areas, but with success only once.

"In 1927 and 1928, I leased one of the first reservoirs built in the Stuttgart area from Art Tindall, and the ducks were plentiful," he said.

However, in 1929 he purchased one-half interest in a new club located in the Bayou Meter area near Stuttgart but it did not turn out too good and he sold his interests in 1933 "at a big loss."

"I then purchased some land near Turrell, joining the Waponoca Hunting Club, and built a small pond, but it was no good," he declared. (Waponoca Hunting Club is one of the oldest clubs in the State and memberships cost about $10,000.)

Later he joined several clubs "and was able to kill a few ducks each year."

"In the fall of 1941 I was invited to Weiner to take a hunt with Ed Priestly—he and Bob Oliver owned a small pond, and it was heavily populated with ducks," Mr. Claypool explained.

After that hunt Mr. Claypool asked Mr. Priestly to try to locate some land where he could build a reservoir, and within a few days Mr. Priestly called Mr. Claypool about a place totaling 3,500 acres.

"I purchased this place the latter part of that year, and in 1942, I started building a 1,400-acre reservoir," he said.

He said at that time he thought the project was a big gamble, but "I figured if no ducks used the place, I could impound enough water to irrigate my rice crops.

"Fortunately it turned out good in both respects," he added.

In the fall of 1942 he had about 200 acres of water, but no ducks. In the fall of 1943 he had about 800 acres completed, and a considerable number of ducks.

"Since then the population has increased steadily each year, and after my place had proven so good, many other reservoirs were built in the late forties and early fifties," he explained.

When Mr. Claypool started his project there were only 5 shooting areas in the Weiner area, and today there are over 30.

"It was estimated that Wild Acres had close to a half million ducks during the past season, and this together with the large concentrations at other reservoirs and ponds all add up to the proposition that Weiner is now the new duck capital of Arkansas," he declared.

He said members of the Arkansas Game and Fish Commission have visited Wild Acres during the past 2 years and have been surprised at the large concentrations of ducks.

"Many fine moving pictures—in color—and still photographs have been taken by commission photographers, and it is now conceded that some of these are the greatest pictures ever taken of wild ducks," Mr. Claypool explained.

Many of those duck pictures—partially made on Wild Acres, will be shown on television stations over the Nation in the near future. Those shots were made by Tom Mull, director of public relations of the State game and fish commission. Those movies of ducks that show large concentrations were taken on Wild Acres.

Wild Acres and other similar areas are privately owned, but officials of the game and fish commission have conceded that the existence of such large ponds is a major factor in bringing ducks to the Weiner area and keeping them there for extended periods.

St. Patrick's Day

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. RODINO. Mr. Speaker, across 15 centuries, St. Patrick speaks to men of today the world over, and after so long, his group of followers grows each March 17. It is Ireland's patron saint's wish that has found reality, for he wrote, "Yet, though I am imperfect, I wish my brethren and kinsfolk to know the kind of me." But how difficult it is to know the kind of him, for we possess only a dozen pages of Latin script handed down by St. Patrick summarizing his long, devoted, and illustrious life.

From these few documents, together with the many legends, it is known that St. Patrick was born in Britain about A. D. 389. While still a boy, he was forcibly taken from his homeland and bound into slavery by Irish pillagers. Patrick escaped from his captors and fled to the Continent where he became a priest. After taking his vows, St. Patrick's heart turned back to the country of his captivity. The deplorable conditions of these people, and their barbaric superstitions and religion so moved him that he determined to devote the remainder of his life to their conversion. His efforts were blessed, and, surmounting all but impossible obstacles, he continued teaching until death overtook the aged saint on the day that is now set aside in his memory. We know that this saint was a lover of freedom so typical of the Irish people. And we know that he was an individualist, quick to anger and quick to humility. He shared these same emotions as do people of today, and perhaps for that reason he has won a timeless and worldwide place in Christian society.

St. Patrick's Day, and the spirit of the day, has followed the Irish immigrant all over the world. Its celebration takes the forms of religious devotions, parades, dinners, and special festivities not only in Irish circles but in all strata of social life. The parades in Dublin and in New York City are notable as are those in Boston, Savannah, and many other cities.

Until early in this century, too much of the celebration followed the false conceptions of the comic Irishman with a clay pipe which was the typical stage characterization. Several Irish writers and artists devoted themselves to communicating to the world, through their talents, the story of the real Ireland. This is the Ireland that means folklore, legend, poetry; the Ireland symbolizing tragedy of heart and passion; the Irish humor that is not slapstick but that of a different quality. So through the efforts of these few dedicated Irish artists, St. Patrick's Day now reflects the tradition and reality of Irish life to a greater degree.

St. Patrick's Day is now a day of Ireland's history, traditions, customs, folklore, and music. All of these elements are woven together with the traditional bits of green and shamrock to be shared by the people the world over.

To my many friends of Irish origin—a hearty and sincere Erin go Bragh.

Hungarian Independence Day

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. KEATING. Mr. Speaker, on March 15, 1848, a new member was added to the family of free nations. That nation was Hungary. The gaining of that independence is celebrated today all over the world by Hungarians and by friends of those gallant people. However, this year the celebration is tempered with sadness, for the people of Hungary are once again under the rule of an oppressive power.

Just as the people of this brave land fought their way to freedom in 1848, so can we hope today that they will soon regain that treasured goal. In 1848, Hungary groaned under the rule of the Hapsburg monarchy and yearned for a return to their ancient liberties. In that year, under the inspired leadership of Louis Kossuth, they secured a number of political rights.

These rights were embodied in a charter which was adopted on March 15. Among other things this memorable document guaranteed freedom of the press, abolished feudal servitude and heavy taxes on peasants, and introduced a general tax system embracing all classes.

When a national government was set up, it was fitting that its president was Louis Kossuth. The memory of this champion of freedom is held dear by all lovers of democracy. A little over a hundred years ago he made a triumphal visit to this country and was hailed as the champion of world freedom. He is well known to Americans of all origins, as well as our million citizens of Hungarian ancestry.

As we know, the freedom secured by Kossuth and his followers did not last long. But the memory of those happy days is enshrined in the hearts of Hungarians the world over.

Today, as this noble country suffers under the wicked imperialism of Soviet rule, we can all hark back to the memory of Kossuth for inspiration to carry on the fight. Let us do more than applaud the unquenchable spirit of freedom which motivates these celebrations. Now is the time to intensify our efforts to renew the hope of those imprisoned behind the Iron Curtain.

We must not let our programs of information and education bog down. They must continue to pierce the wall of lies and deceit which surround all countries overrun by the Communists.

Freedom Day is a grim one in Hungary this year. But better days will come. Hungary will once again know the glory and pride it once had. Through all their trials and tribulations they have not given up hope. We shall continue our efforts to set them free. For them we pray, as did Kossuth, that Hungary will one day be free.

Opposition to H. R. 5550

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. SAYLOR. Mr. Speaker, under leave to extend my remarks, I include the testimony given on March 8 before the Committee on Ways and Means relative to my opposition to H. R. 5550:

Mr. Chairman, I am appearing before you today in opposition to H. R. 5550. I shall not, in this brief discussion, examine the technical aspects of the proposed membership for the United States in the Organization for Trade Cooperation; that is, I am not going to impose on your time by outlining the objectionable operational features that are latent in such an organization. Other Members of Congress have exposed the dangers, the weaknesses, the insidious potential of the whole organizational and functional structure of the OTC. To avoid repetition, I shall speak as a citizen of the 22d Congressional District of Pennsylvania who is dedicated to the Constitution of the United States, who is dependent upon a healthy economy for his livelihood, and whose very survival may revolve around the decisions of this committee and the Congress in respect to the bill under consideration here today.

I use the word "survival" because in this period of grave world tension, we Americans must rely upon an industrial stockpile and upon industrial manpower as much as upon our military for our security. How foreign commerce affects industrial activity and employment is a determining factor in the effectiveness of our defense structure. This influence must therefore be taken under the most careful scrutiny, along with the other ramifications which I have pointed out, before action is taken on any legislation pertaining to foreign trade.

I oppose H. R. 5550 because it would further remove from Congress powers delegated to it by the Constitution. I say to you that had Congress not permitted its authority in the field of foreign commerce to have been slowly eroded over the past 23 years, then the State Department, which is behind H. R. 5550 and would absorb the powers surrendered by Congress, would never have had the temerity to come before this committee, or any other group on Capitol Hill, to ask for anything that resembles this bill. I do not care what party was in power prior to the time when the encroachment by the State Department on congressional powers got underway; I say that the Congress would have been so resentful of any such proposal as this as to have issued a joint message of condemnation to the responsible parties in the State Department for having dared to have prepared such an arrogant proposal.

With the passing of years, however, the executive branch of the Government has gradually usurped so much of the authority constitutionally resting in Congress that attempts at making further inroads are taken as a matter of course by the executive department. This consideration alone should be sufficient premise for members of this committee to base their decision in rejecting the bill.

It is not enough that H. R. 5550 would deprive Congress of its rightful responsibility; it would place the powers thus taken from this body in the hands of a department which is not yet above suspicion despite the years that have intervened since it was first disclosed that enemies of the American Government not only infested this Department, but also occupy some of the very top policymaking jobs. Presumably, the notoriously perfidious element within the Department has largely been dismissed, yet there remains a hard core of questionable characters whose career was born under the domination of that cell which sought to dispel any thought that the welfare of the United States should serve as the guiding light in carrying out the affairs of our Government. These employees, some of whom have advanced by reason of seniority if not ability, to policymaking positions over the past two decades, are not now capable of revising this philosophy to the extent that American people and American jobs should be given preferential treatment in negotiations with other nations.

On occasion there have been constituents from the 22d Congressional District who have come to Washington and have had cause to visit the State Department. On a number of occasions, these patriotic citizens from western Pennsylvania have expressed wonderment at the caliber of so-called diplomats employed in our State Department. Many the time I have heard it said: "Those people do not talk like Americans." "They act as though we do not belong in there, asking for something that would help someone in this country." "Those fellows talk about a new order for the world, and conditions in this country are evidently of no concern to them."

Mr. Chairman, why permit the powers of this Congress, a legislative body representing all sections of our country and all of our people, to be taken away by a detachment of supercilious egoists who do not know and do not care what is going on back in our hometowns. These fellows are not equipped and not inclined to deal with domestic problems.

I ask that you look at the history of our trade negotiations since the State Department outfit took over. They boast of having lowered our tariffs consistently from year to year. I do not challenge that contention, but I ask that you look into the record of their dealings and try to ascer-

tain what America has received in return for these concessions. I also remind you that you will not find any evidence of where the domestic economy and security have been of any consquence whatsoever when the State Department sat down with their pals from across the seas.

Do not give them this new power, Mr. Chairman. If any Congressman feels that he is not capable of assuming the responsibility in the matters of foreign commerce that were delegated to him by the drafters of the Constitution, then he should acknowledge that he does not have the capacity to fulfill his duties to the Federal Government.

The State Department, as I have said, does not know and does not care what is going on back in our towns. I can tell you what this attitude has done in many communities of my district. Fortunately, the expanding economy has absorbed an increasing number of unemployed in recent months, but these better signs would disappear in a hurry if there is any more manipulating of tariffs without regard to the impact on the domestic economy. As a matter of fact, I believe that we have one of the best examples back at home of the need for sensible restrictions on imports. Year after year, following the conclusion of World War II, increasing amounts of residual oil were shipped into the eastern industrial markets. Cheap foreign oil would take over one coal market, then another, then another. Much of that coal had been coming from central and western Pennsylvania; as a consequence, many of our mines were closed and an increasing number of our workingmen saw their jobs washed away.

Last year, after persistent attempts to place some sort of barricade against the onrush of oil from foreign refineries, we finally succeeded in incorporating in the bill extending the Foreign Trade Agreements Act, a provision recommended by the Cabinet Committee on Energy Supply and Resources Policy. It was not much, but at least it was a start toward offering some sort of protection from the inequitable competition of foreign shippers. Oil importers were notified that we meant business about holding down this tide which by now had engulfed our seaboard markets. Gradually coal's position became more firm. Public utilities and industrial plants from New England to the Chesapeake, realizing that this cheap foreign fuel was not going to continue to roll in here at ever-increasing rates, began to place their orders for coal. Our mines began to step up their activities. Last year the bituminous coal industry produced about 465 million tons, as compared with 392 million tons in the preceding year. You understand, of course, that not all of this upturn—not even a predominant proportion—was attributable to the holdback in residual oil imports. But that restriction, I assure you, had a very telling effect in the overall story. My hope is that we are going, through a united effort here on Capitol Hill, to close the faucet still more on foreign-oil shipments, so that more and more of our people can get back to work. Until these developments come to pass, thus further reducing the number of our unemployed, the district which I represent will continue to suffer from a unique situation which has come to create social as well as economic problems.

Back in Armstrong, Ind., and Cambria counties of Pennsylvania you will find many people enjoying the prosperity that prevails in most other parts of the country. What is disturbing, however, is that next-door neighbors and large segments of many communities are unemployed and must subsist on unemployment compensation, public assistance, and surplus foods. Thus you can see the perplexing problems of morale that develop under these circumstances.

As I have said, we could continue to eliminate the distress if we attack the causative factor in a logical manner, such as by proper regulation of incoming shipments of commodities from abroad.

I have mentioned the threat of improper trade laws to the national security. Here also the coal-mining regions offer supporting evidence of the injurious effect of too much foreign competition on home industry. Excessive shipments of foreign oil closed coal mines and disemployed mine workers. Should a national emergency develop when our mines are down and our miners out elsewhere over the country looking for jobs, a fuel shortage would be inevitable. And it could cost us heavily in our war effort. A year ago, a sudden strike by the Soviet Union would have found our industrial capacity in a farm more unhealthy condition than is generally realized. Our mine output was more than 100 million tons below the figure set as necessary to meet mobilization base requirements. Instead of less than 400 million tons of coal, America would suddenly have needed—on an annual basis—650 to 750 million tons. The combined bituminous and anthracite coal industries were not then capable of meeting these demands. Perhaps we are still a little short, but at least we have come a long way since then and—given the opportunity—the coal industry is going to be up to the standard stipulated by our defense authorities. Providing, of course, that we do not permit the free traders in our State Department to get hold of such things as the OTC and other instruments of destruction to the American economy and security.

I have spoken of the coal industry, but I could very easily have subsituted the glass industry, pottery, ceramics, machine tools—on record before the House Ways and Means Committee over the past several years, Mr. Chairman, are scores of industries which have been hurt by lowered tariffs and which, like coal, are essential to the national defense.

I know that some of the Committee members are thinking about the high industrial activity that is taking place at the present time in most industries which I have mentioned. I ask you, however, that you do not overlook that fact that, given the power asked for in H. R. 5550, the State Department could very quickly sign us into a situation that would disengage thousands upon thousands of workers right in my own district. In the name of those men and their families, I ask you to prevent this from happening. Do not surrender further the powers of Congress. The people back home look to their Representatives and Senators to provide them the protection necessary for maintaining their jobs. Please do not disregard their trust in you.

Speech of Paul M. Butler, Chairman, Democratic National Committee, Before the Leadership Conference on Civil Rights, March 5, 1956, Washington, D. C.

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. Paul M. Butler, chairman, Democratic National Committee:

I am glad to be here tonight in my capacity as chairman of the Democratic Party to set forth the Democratic Party's record of accomplishment and platform policy in the area of civil rights. I congratulate all of you who are associated in the sponsorship of this highly important conference on civil rights.

We who firmly believe in equal opportunity for all Americans can take pride in the recorded progress in this field. Only the most uninformed would fail to see the gains we have made since 1933 in equal opportunities—gains in jobs and income, housing, education, medical care, and other day-to-day needs of all our citizens.

Within three generations of Abraham Lincoln's proclamation that all men shall be free came the stirring leadership of Franklin D. Roosevelt proclaiming that not only shall all men be free but that they shall have equality of opportunity.

When President Roosevelt was elected in 1932, no one questioned the fact that all men were free. But too many Americans knew only the freedom to live in slums, freedom to go hungry, freedom to line up outside the cold factory gates in our industrial cities looking for jobs, freedom to lose their small plot of land in rural communities, freedom to live in fear and insecurity.

From Lincoln's Emancipation Proclamation to President Roosevelt's Fair Employment Practice was a stark period for many of our fellow Americans who were denied the freedom of equal opportunity.

But just as Lincoln backed up his words with determined action, Roosevelt likewise constantly waged the fight for equal opportunity and justice for all our citizens.

Tonight I would like to speak briefly about that earlier period in the light of recent partisan claims that equality of opportunity has become a fact only under the Eisenhower administration.

It was in 1933 that the Roosevelt administration attacked the housing problem—a basic one in the fight for equality—with special concern for adequate housing for minority groups.

Under the Roosevelt administration, the Housing and Home Finance Agency announced that there would be do discrimination or segregation in any housing that it operated.

Here, then, was a beginning. And in the years that followed thousands of families, trapped in slum areas, have streamed forth into decent, Government-built dwellings.

To the Republican Party in 1933, this was "socialism"—and it still is to most of them in 1956. But to many American families it was a step up the rung of the ladder toward a higher standard of living—a step toward equality of opportunity.

Again, it was President Roosevelt who took the first national step against discriminatory employment practices in an Executive order condemning discrimination and setting up the first Fair Employment Practices Committee to receive and investigate complaints and to enforce fair practices in work done under Government contracts. Thus another door toward equality of opportunity was opened.

It was President Roosevelt who followed through with further action in outlawing discrimination in Government contracts and in Government agencies and departments in vocational training programs.

By November of 1940, the civil service rules were amended to include prohibition of discrimination because of race; photographs were discontinued on applications as identification means; and steps were taken to eliminate any reference to race on examination and appointment forms.

Improved medical care and more hospitals, new facilities for education, social security, low-cost housing, unemployment insur-

ance—these were all New Deal programs—under which a higher standard of living and equality of opportunity were made available to all Americans.

President Roosevelt was the first to recognize that actual gains in the extension of human rights could come only through the extension of job opportunities, good wages, decent housing, education and adequate medical care. He was the first to proclaim and carry out these programs—in a new Bill of Rights, under which, in his words, "a new basis of security and prosperity can be established for all—regardless of station, race, or creed."

"All of these rights," President Roosevelt said, "spell security. And after the war is won, we must be prepared to move forward, in the implementation of these rights to new goals of human happiness and well-being."

These were a part of the 20th century emancipation proclamation conceived and executed by Franklin D. Roosevelt. Upon his passing, Harry S. Truman took up the challenge.

In December of 1945, he ordered elimination of discrimination in transferring workers from temporary war jobs.

In the following year, President Truman ruled out discrimination in making temporary appointments to Federal establishments. His regulations governing fair employment practices within the Federal establishments held agency heads strictly accountable for carrying out his nondiscrimination policy, with a Fair Employment Board created within the Civil Service Commission to review decisions of department heads and make reports and recommendations directly to the President.

It was in 1948 under President Truman that a Fair Employment Board was created in the Federal Civil Service Commission in order to eliminate any remaining remnants of racial discrimination among civil service employees.

In 1951 President Truman ordered that all Government contracts contain a fair practices clause and he established the Government Contract Compliance Committee to implement this program against discrimination under Federal contracts.

The most significant advance in the area of civil rights in the last 24 years has been in the Armed Forces of our country. Beginning in 1945 under President Truman, all branches of the services have moved forward rapidly toward the final goal of a fighting force in which there is no trace of any racial discrimination. President Truman's Executive Order of 1948 has been the biggest factor in this advance. It required equality of treatment and opportunity in the armed services without regard to race, color, religion, or national origin. President Truman implemented this order by creating the Committee on Equality of Treatment and Opportunity in the Armed Services to work closely with all branches in executing the order.

In the course of this notable change of climate in the area of civil rights through the use of the executive power of the President came important judicial decisions of the United States Supreme Court affecting human rights. Among the most important were the State forced labor law decision (1944), the white primary case (1944), the railroad firemen discrimination decisions (1944 and 1949), the mail clerk discrimination case (1945), the segregation in interstate transportation case (1946), the restrictive covenant decision (1948), the dining car segregation case (1950), several important school decisions from 1938 through 1952, and many other decisions affecting civil rights.

Furthermore, during the 20 years of Democratic administration, 6 States voluntarily outlawed the poll tax, the Civil Rights Section of the Department of Justice prosecuted violations of individual voting rights, primary elections have been opened to all citizens, and more than a million eligible voters in minority groups were enfranchised in the Southern States.

Between 1945 and 1949 8 States passed enforceable FEPC laws against overwhelming opposition by Republican legislators. In 1955 3 more States under Democratic governors enacted FEPC legislation.

I would remind you, too, that under Democratic control of the Congress, my good friend and coworker, Congressman WILLIAM L. DAWSON, of Illinois, our able vice chairman of the Democratic National Committee, was the first member of his race to become chairman of a congressional committee, and he is still chairman of the powerful Government Operations Committee.

In this healthy climate of Democratic leadership in the field of civil rights, old prejudices began to lose their force. Equal opportunity and justice for all citizens were becoming the corollaries of individual freedom.

Now that we have reviewed the 20 years of progress in civil rights under Democratic administrations, let me ask a question. What has been done in the field of civil rights under the Eisenhower administration since 1953?

What new ground has it plowed to further equality of opportunity which it so piously and so loudly espouses?

Last year, President Eisenhower without being specific said that his administration had "advanced far" in the field of civil rights.

But on the very same day that the President made this claim—in fact on the very same page of the Washington Post that reported his statement—the contrast between words and action was, to say the least, astonishingly revealed.

The headline on one story read: "Ike Cites Far Advances in Field of Civil Rights" (Aug. 9, 1955).

But on the same page, another story was headlined: "FHA Fires Dr. Horne, Race Issue Adviser."

Dr. Horne, after 19 years in Government service, was fired by Federal Housing Administrator Albert Cole—along with Dr. Horne's assistant Corinne Morrow. His summary dismissal came as a shock to those who knew Dr. Horne's long and devoted efforts toward knocking out discrimination in public housing. But is came as no shock to those who knew the Eisenhower-appointed Albert Cole.

Mr. Cole, as a Republican Congressman, was the Republican leader of the anti-public housing forces in Congress.

Since becoming administrator of FHA, he has constantly reduced the public housing program.

The New York State rent administrator, Charles Abrams, a well-known housing authority, has leveled a well-documented charge that Albert Cole is trying to scuttle the race relations service of the housing agency he heads. And the facts substantiate the charge.

I do not have to tell this audience that Frank Horne's fight for racial equality in housing has been the target of the real estate lobby ever since he helped set up the Racial Relations Service for the Federal public housing program under Franklin D. Roosevelt. But that meant nothing to this administration as it dumped him and replaced him with a representative of the real estate lobby to which Mr. Cole is beholden.

A closer examination of the Eisenhower record on civil rights discloses that his 1955 state of the Union message to the Congress did not contain even one word upon the subject of civil rights. This year his message and subsequent Republican speeches have made much ado about civil rights gains under this administration. But where are these gains? What has this administration done to produce any advance in the field of human relations in the past 3 years? Its claims of having abolished racial segregation in the District of Columbia, in the Armed Forces, in Federal contracts, in civil employment, in interstate transportation and in public schools are all a fraud upon the American people. These have been brought about as a result of the tremendous forward strides in the field of human relations under Roosevelt and Truman, by their positive actions, and by the creation of a public attitude and climate out of which the judicial decisions of the past two decades have more or less naturally flowed.

These judicial decisions were not Republican or Democratic. It is no more significant that no less than 7 of the 9 Justices of the United States Supreme Court had been appointed by Democratic Presidents than it was that the Chief Justice had at one time been a member of the Republican Party. The judicial opinions of our courts are not and must never be the products of partisan minds. Republicans who make partisan claims for credit for judicial action debase the whole system of justice in our country and demean those loyal citizens who hold high judicial posts.

The real story about civil rights and treatment of minority groups under this administration is far different from the one the Eisenhower propagandists peddle for public consumption.

Let us take integration in the armed services, for example. They claim that this administration has abolished segregation at Army post schools. But the fact is that President Eisenhower's directive was simply a device to take credit for a program and policy initiated under President Truman and accomplished almost entirely before the Eisenhower administration took office.

The whole program of eliminating segregation in our Armed Forces was started under President Roosevelt and has been carried on under Presidents Truman and Eisenhower. As the California Eagle has pointed out, President Eisenhower "has kept a course charted by his predecessors, but has not been creative in either of these fields," referring to nondiscrimination in the armed services and in Government contracts.

But even keeping this course charted by his predecessors must have been difficult for President Eisenhower. For it must be remembered that he is the same General Eisenhower who in his long military career as a commanding officer permitted racial discrimination to exist under his command for many, many years without lifting a finger or raising his voice to protest this inequality and this injustice to his fellow Americans. This is the same General Eisenhower who in his testimony before the Senate Armed Services Committee in 1948 showed himself to be something less than a champion of equal rights for all citizens. Here is what he said on April 2, 1948, in his testimony concerning segregation of United States troops:

"If you make a complete amalgamation what we are going to have is in every company the Negro is going to be relegated to the minor jobs and is never going to get his promotion to technical sergeant or master sergeant and so on because the competition is too tough * * * if we attempt merely by passing a lot of laws to force someone to like someone else, we are just going to get in trouble."

There is a lot of talk, too, by this administration as to its appointments of minority representatives to Government jobs. But what President and what party pioneered in this? New opportunities in the executive and judicial branches and in the diplomatic field of our Federal Government were opened up for the first time by Presidents Roosevelt and Truman. The Democratic Party is proud, indeed, of the records in public life of such outstanding public servants as:

The late Mary McCleod Bethune, who was Assistant Administrator of the National Youth Administration.

Judge William H. Hastie, appointed as Assistant Solictor of the Department of the Interior, Governor and Federal district judge in the Virgin Islands, as civilian aide to the Secretary of War, and in 1949 by President Truman as judge of the Circuit Court of Appeals of the United States for the Third Circuit, the first person of his race to be appointed to such a high judicial post.

Judge Irving C. Mollison, named to the United States Court of Customs and Patent Appeals.

Dr. Ralph J. Bunche, whose appointment to the State Department in 1945 marked the opening wedge of a new employment pattern in the State Department. Dr. Bunche's work as United Nations mediator in Palestine in 1948 brought him worldwide fame and the Nobel Peace prize, and he has gone on to distinguish himself in other important posts.

Edith Sampson named as United States alternate delegate to the United Nations General Assembly, and many others who were appointed by Democratic Presidents to important judicial, diplomatic, and policymaking posts.

Of course, this administration has made some appointments of minority representatives. But progress is not being made in minority recognition in public service when Democratic appointees are being fired and replaced by Republicans and no new posts are being filled by minority representatives. The real Republican record in this administration as to minority groups is revealed in this CIO News report in 1954: "For every Negro appointed to a Government post, the Eisenhower administration laid off another 200 in the Washington area alone."

But not only is there an apparent lack of genuine interest on the part of this administration in the area of civil rights, there is increasing evidence from day to day that there is an absolute unwillingness on the part of President Eisenhower himself to face up to this very real challenge that confronts our country and all its people.

When responsible citizens call upon the President to indicate what course of action he will pursue in the allocation of Federal aid to public schools, they get only deafening silence from the White House. When urgent pleas are made to Mr. Eisenhower to take some action in the field of human rights, you get only the proposal of a study commission to investigate and ascertain the facts. And when the pleas of prominent Americans for an immediate biracial conference to be held at the White House under Presidential auspices are buttressed by the editorial support of many reliable newspapers in the country, including the Washington Post, there is only total indifference.

Where is that dynamic leadership that was promised to the American people in 1952? In what area of Executive authority is there greater need today for courageous and unifying leadership for all Americans than in the cause of human rights?

It is high time for the President of the United States to assume the responsibilities of his office in this problem of civil rights before mounting tensions in our Nation do us irreparable harm. As a citizen, I join in the demand of other Americans that President Eisenhower call a biracial conference at once, in order to lay the foundations for understanding and justice for all Americans.

Turning from the accomplishments and the progress of the past under Democratic administrations, we look to the future and what remains to be accomplished in the area of human rights. Our party platform is the official statement of policy which guides us at the Democratic National Committee. We, ourselves, have no policymaking authority. Our 1952 platform is the last official statement of party policy on civil rights as well as other matters.

We are committed by that platform to continued "efforts to eradicate discrimination based on race, religion, or national origin," and "to support and advance the rights and liberties of all Americans." These include among others: "(1) The right to equal opportunity for employment; (2) the right to security of persons; and (3) the right to full and equal participation in the Nation's political life, free from arbitrary restraints."

As Chairman of the Democratic National Committee, I am hopeful that certain civil rights measures will be considered and acted upon in the present session of the Congress. First, the poll tax as a condition of voting should be eliminated. Second, the voting rights of all citizens in Federal elections, both primary and general, should be protected. Third, the civil rights section of the Justice Department should be elevated to a division of the Department, headed by an Assistant Attorney General, with adequate personnel for investigation and handling of all civil rights cases. Fourth, the antiviolence measures for both civilians and members of the Armed Forces should be enacted into law.

All of these measures are supported by the provisions in the 1952 democratic platform plank which was approved by the delegates to the national convention of that year. But we look not only to our national platform for guidance. We look to the basic charter of our existence as a Nation, the Constitution. And above and beyond that we look to the whole body of Christian-Judaic teaching for what is right and just for men endowed by their Creator with certain inalienable rights. In the eyes of God and in the provisions of our Constitution, all men are created free and equal. From that basic teaching and concept there shall be no divergence by the Democratic Party. There can be none—because ours is the party of the people, the party of human interests, the party with a heart for the rights and needs of all Americans.

Address Delivered at State of North Carolina Convention of R. O. S. of A., at Charlotte, N. C., March 13, 1956, by Hon. Francis E. Walter

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1956

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

Tonight I shall discuss a serious threat to the security of the United States—a threat which requires action by the Committee on Un-American Activities, together with the full support of the committee in this work, by you and all your fellow Americans. The issuance of American passports to Communists, and how this is inimical to the best interest of the United States, constitutes this threat.

Recently there has been syndicated in leading newspapers a series of articles dealing with the issuance of American passports. One article dealt with an American's pro-Communist conduct in India—conduct which caused India to file a formal protest with the Department of State. As pointed out in this article, the Passport Division of the Department of State had refused to issue a passport, only to have its decision overruled.

What these articles did not point out is that the issuance of passports to members of the Communist Party demonstrates the inability of top advisers in both the Departments of State and Justice to cope with the strategy of the Communist Party. The issuance of this passport, as the result of an administrative ruling, and the issuance of other passports as the result of decisions by our Federal courts, shows how completely successful the Communist Party is in its No. 1 objective. What is this objective? It is the destruction of the discretionary power of the Secretary of State in the matter of the issuance or denial of passports.

Before outlining the use which the international Communist movement has made of American passports over the last quarter of a century, let's examine the strategy behind their current objective. To understand the strategy, we must understand the organization of the Communist Party. Through this understanding, we know that as the tides change, so has the Communist organization. During the late 1920's and early thirties, the Communist Party of the United States merged with the Socialist Parties in a united front movement—a movement strikingly similar to the united front program advocated just last month by the Communist Party Congress in Russia. During the united front period of the twenties and the early thirties, many important Communist Party functionaries worked with the party without being members, as membership is defined by Webster. This organizational method permitted important Communist leaders to carry out their Communist work, while at the same time denying membership. Since 1948, as a result of the threat to the security of the Communist Party, through prosecution of the Communist Party leaders, no individual has carried a Communist Party card; likewise his name is not carried on any roll maintained by the party. This concealment of membership is what makes the Communist strategy such a threat to the security of the United States. Today, when a Communist denies party membership, his word must be accepted; if we are to understand court decisions, or accept administrative rulings in respect to passports or other matters affecting the Communist Party and its advocates.

To be extremely accurate, I should point up the several escape clauses made available to the State Department by the courts, and administrative rulings designed to please the courts. The Government need not accept an applicant's word, providing the Government is willing to destroy, or abolish, its security agencies and their methods of checking on the activities of the Communist Party. To illustrates these points, let's take the case of a Communist applying for a passport. Let's make him an attorney. The Government has in its possession evidence that in 1947 and prior thereto, he held a membership card in the Communist Party. When security measures were instituted by the party this attorney, together with other party members, stopped receiving membership cards. The attorney enters into an understanding that henceforth, he will not attend meetings, and will not be known as a member, to other members of the Communist Party. He continues to meet with party leaders in private, and he continues to legally represent the party. Several years later he applies for a passport. The Passport Office knows that the attorney was a member before he went underground, and from information supplied by investigative agencies, knows of his underground relationship with the party, up until the present time. Knowing him to be an agent of the Communist Party, they refuse him a passport. He sues the Secretary of State, and the courts order the Secretary

to either give the attorney a passport or a hearing. Now this hearing is not for the purpose of having the attorney testify as to his relationship with the Communist Party, but under the conditions established by the court, is merely a forum to force the Government to expose its informants and its evidence, without any assurance that the attorney will affirm or deny the testimony or evidence.

This is a double barrel strategy advanced by the Communists. For when the courts intervene, the discretionary power of the Secretary of State is destroyed, the Communist Party receives a complete victory. If a hearing is granted, the Communist Party learns the identity of the FBI agents within its ranks. If the Government refuses a hearing, the Communist Party member, the potential espionage agent, receives his passport.

I am reminded of a story about a Communist Party member who was arrested in Virginia for a traffic violation. During his trial he was asked if he were a member of the Communist Party. Boldly and firmly, he answered "No." After the trial, this Communist advised the district secretary of the Communist Party of his testimony. He received immediate protection, as the district secretary prepared an expulsion notice dated prior to his trial.

The denial of membership in the Communist Party cannot be accepted by the Government unless the applicant for a passport demonstrates by his statements that his break with this conspiracy was final and complete. The security of the United States will not be safeguarded through demands that the burden of proof is upon the Government. During our recent hearings dealing with Communist activities among Government employees, more than one witness admitted perjuring himself when questioned about his membership in the Communist Party, while a Government employee.

Applicants for passports sign an oath of allegiance to the United States. However, this oath cannot be accepted when it is executed by an applicant who is a member, or supporter, of the Communist conspiracy. One such applicant was a delegate to the Peking Peace Conference in 1952. He traveled to Peking on a United States passport, stamped "Not valid for travel in Communist China." In spite of this restriction, he traveled to China, even though in his application he withheld the knowledge that he was a delegate to this Communist-sponsored and controlled conference.

In my opinion, the fraud perpetrated on the United States in obtaining and traveling on this passport, was a crime, but his conduct while at the conference constituted treason. This naturalized American not only blamed the death of American servicemen in the Korean war upon the United States, but over the Communist radio, beamed around the world, he confirmed Communist China's charges that the United States had engaged in biological warfare. He based his findings on evidence presented by a Communist scientific commission and the confessions of those Americans who were Communist prisoners of war. That the commission was a fake, and the confessions forged, made no difference to this traitor.

On January 29 of last year, this man was a witness before the Committee on Un-American Activities. Was he a Communist? Was he a delegate to the Peking Peace Conference? Did he make the radio speech which was monitored in the United States? His responses to all these questions were that he refused to answer, because (1), it is improper under the 9th and 10th amendments for the Committee to inquire into the activities of private citizens; (2), because the 4th amendment prevents the searching of his mind; (3), because the 1st amendment guarantees him freedom of speech and association; and (4), the most important to him—the 5th amendment, which protects him in his fear of self-incrimination.

In discussing the Communists' use of American passports, to conduct their international espionage organization, to cause civil unrest, and to flee from their crimes, I wish to point out that North Carolina was one of the first States to be temporarily denied justice because of a fraudulent passport.

I need not recall to many of you the violent Gastonia textile strike of 1929. This was the strike which resulted in the unfortunate death of the chief of police of Gastonia. This was the strike conceived and led by the Communist Party. As you know, those responsible for the violence were convicted for their crime. The convicted Communist leaders fled North Carolina and the United States through fraudulent passports obtained with the assistance of the Communist Party in New York. Fred Beal, the leader, testified before the committee some 10 years later. He related how he was instructed in the identity of an individual whose name he was to assume. How he obtained a birth certificate belonging to his pseudonym, and thereafter obtained a passport, under which he traveled to Russia. As you know, Beal later chose jail in North Carolina to freedom in Russia.

Beal advised the Congress how his passport was taken from him in Russia. A former head of the Communist Party has testified that American and Canadian passports were the most important item necessary to the successful operation of an international espionage organization. He testified that the Communist International—whether known as "Comintern" or "Cominform"—operated an espionage school in Moscow, known as the Lenin Institute. At the Lenin Institute instructions were given in espionage and sabotage, which instructions included a course in passports. Hundreds of American Communists, most of the present leaders of the American Communist Party, learned how to obtain passports through the use of false birth records, false nationalization certificates, counterfeiting, or other fraudulent methods. These leaders learned their lesson well, because many of them have traveled on passports obtained through forged documents. Not only American Communists have traveled on American passports, but also international Communist agents who were not American citizens.

In the early 1920's, there was established in the United States and in England, a corporation known as "Arcos-America." According to its articles of incorporation, this firm dealt solely in trade between the United States and England with the Soviet Union. Soon after its organization, the British Government suspected that the corporation was a cover for military intelligence activities. In 1927, as a result of evidence obtained through raids on the corporation and its personnel, these suspicions were confirmed. The evidence was so shocking to the people of England, that that country severed diplomatic relationship with the Soviet Union. Included in the evidence obtained were documents which clearly established that the American Communist Party was being financed by the Soviet Union through this corporation. The documents established that an attorney for the Communist Party of the United States, was the individual through whom the money was transmitted, proving that membership in the Communist Party is not an important item in determining a Communist. This same attorney, in 1939, testified before the Dies committee. He testified he was not then, nor had he ever been, a member of the Communist Party.

The head of the English branch of Arcos-America, was an international Communist espionage agent, by the name of Kirchenstein. He was not an American, yet it was established that he traveled through Canada in 1922, 1923, and 1925, posing as an American. In 1929, this same Kirchenstein obtained an American passport under the name of Kleges. This was accomplished through orders received by an American Communist from the head of Soviet Military Intelligence. This same Communist traveled to Moscow to obtain these instructions, and thereafter obtained the passport through false naturalization documents, which he obtained through a fellow-Communist, who was an undertaker in Brooklyn, N. Y.

This is not an isolated case. The records relating to the use of fraudulent passports by Communists are voluminous. They include American Communists traveling under false documents into almost every country of Europe, Asia, and South America. All of this activity was carried out through instructions issued by their masters in Russia.

To deceive the American Government, they created travel agencies. The most famous in America was World Tourists. This agency was headed by Golos, the man identified by Elizabeth Bentley as one of the heads of Soviet espionage activities in America. World Tourists, which also handled the travel business of non-Communists, maintained four separate accounts, used solely to cover travel of the Communist Party and its front organizations.

Whittaker Chambers testified at length about the use made of American and Canadian passports by Communist espionage agents. He described how the Communists used members of the Young Communist League to search metropolitan newspapers to learn the identity of people who had died, but who possessed the approximate birthdate and national origin characteristics of an agent whom the Communists desired to use in their espionage apparatus. After obtaining suitable statistics, the Communist Party would then apply for a copy of a birth certificate covering the birth of an individual they found to be deceased. Under the name of a dead man, the espionage agents, armed with an American passport, would then travel the world.

Chambers identified the notorious J. Peters, the author of the Communist manual on organization, as the person in charge of this vital espionage operation.

Many Americans who fought for international communism in Spain during the Spanish civil war, have testified as to how their passports were taken from them when they arrived in Spain. They told of how they were instructed to supply false information to the State Department, in order to cover their intended destination. Others have testified that these passports were used during their validity by Communist espionage agents who were issued these same passports by the Communist headquarters in Russia.

Gerhart Eisler, a leader of the German Communist Party, illegally entered the United States in the early 1930's. After his arrival, he became a leader of the American Communist Party. In 1934, Eisler was called to Russia. Because of his illegal status, he could not apply for or receive an exit or reentry permit. Therefore, his only recourse was through a fraudulent passport. Utilizing the espionage resources of American Communist agents, he obtained a United States passport, using the naturalization certificate of a member of the Communist Party. Not until after World War II, through the work of the Committee on Un-American Activities, was Eisler exposed, tried, and convicted for a portion of his treachery against America. While on $25,000 bail, pending appeal from his conviction, he jumped bail, fled to Poland, and again assumed his position of Communist leadership.

Since World War II, the Communists have continued to use American passports to the detriment of the United States and in sup-

port of international communism. American delegates to Communist youth festivals have condemned America to the world. The worldwide peace offensive staged by the Communist conspiracy was under the leadership of American Communists. At Communist peace conferences, American Communists proclaimed to the world that America was a warmongering Nation, while Russia was the bulwark for peace. Labor delegations from America have condemned the United States as a slave labor country, while praising the Soviet Union as the workers' paradise.

These Communist delegates obtained American passports by withholding from the Government the fact that they were both delegates to these Communist conferences, and also the fact that they even intended traveling in the countries where the conferences were held. Many of these conferences, such as the Pekin Conference, which I have discussed, were in countries where travel was restricted by the Department of State.

These disclosures which I have called to your attention, brings us to the current struggle faced by the Secretary of State in an attempt to protect the security of the United States in the cases of applications for passports by Communists. It is a battle which I have indicated we are losing, if, in fact, we have not already lost.

In 1950, together with John S. Wood, of Georgia, and the late Senator McCarran of Nevada, I authored a provision to the Internal Security Act which was intended to deny passports to members of the Communist Party. Knowing the organizations of the Communist Party, I provided that passports should be denied to all persons regardless of their formal affiliation with the Communist Party, if there was in the possession of the Government, reasonable evidence that their travel would advance the cause of the Communist movement.

This is not the time for America to be weak. We need the courage of Andrew Jackson, who told Chief Justice Marshall "Now that you have issued your order, let's see you enforce it."

Delay on Sugar Legislation

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. MILLER of Nebraska. Mr. Speaker, yesterday I asked the chairman of the Agriculture Committee, Mr. COOLEY, to be present this morning in order to explain or defend his position in not bringing up the sugar bill for conference. I understand he will ask for conferees today.

It was nearly 8½ months ago that the distinguished chairman of the Agriculture Committee presented H. R. 7030 to this body and even though the committee had conducted no hearings on the bill, because of its importance, on July 30, 1955, it was passed by the House with an overwhelming majority.

On February 8 of this year, the other body passed this measure with certain amendments which would give all domestic sugar producers a more just and proportionate share of the American sugar market. On that same day the Presiding Officer of the Senate appointed conferees on the part of the Senate to adjust the differences between their bill and the House bill.

For some reason, the chairman of the Agriculture Committee has not seen fit to even appoint conferees to meet with those from the Senate who were appointed on February 8. I know the gentleman from North Carolina who heads the Agriculture Committee is a busy man but I am sure he will not plead that he is too busy to attend to the responsibilities of his office. In his original presentation of this legislation, the chairman of that committee referred to this legislation in these terms, "It is of far-reaching importance because it affects people in far-distant places and it vitally affects every one of your constituents."

In view of the urgent need of this legislation as expressed by the gentleman from North Carolina, would it not be appropriate or him to now appoint conferees and get this bill on the way. I think the Members of the House have a right to know why this important legislation is being delayed. Why did the chairman refuse to name conferees?

The beetgrowers of my district are nearing the beet-planting season. The domestic sugar producers are acutely aware that legislation is needed. It is needed now. Perhaps the gentleman from North Carolina who has not appointed the conferees can explain the delay for their benefit.

Thirty Years of Service by the Farrell Lines of New York

EXTENSION OF REMARKS
OF
HON. HERBERT C. BONNER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. BONNER. Mr. Speaker, within the maritime industry of our Nation there are many fine publications. One that recently came to our attention is the Farrell Lines News of February 1, 1956. It is noteworthy that this is purely an amateur effort written by and for the employees of the Farrell Lines, of New York, which serves an essential trade route between the United States and Africa.

An article referring to the 30 years of service of this great American steamship company is of particular interest since it demonstrates the soundness of our national maritime policy.

Under unanimous consent, I include in the RECORD this eloquent summarization of one steamship company's growth and rise:

1926–56

In history's measure and life's span 30 years is but a generation. Among privately owned American-flag, off-shore shipping enterprises, three decades is a respectable age. Accordingly, the recent anniversary of January 27, 1926, may warrant comment and the maturity attained excuse a look both ahead and astern.

Time and fortune have favored us in all things save one. Few remain who shared the thrill of the inaugural voyage of steamship *West Isleta*. A small but faithful band, we rejoice with those who have earned their leisure in retirement. We save our fondest memories for those who have embarked for Fiddlers Green.

Looking back we recall countless causes for satisfaction. The greatest of these are not to be found in ledger balances.

Trade and service has expanded sixfold. Area served has more than tripled. Employment directly provided at sea and on shore has been multiplied by six. The present fleet—four times larger, twice as fast and half as old—represents an investment of more than thirty times the original capital subscribed. And this increase has come from ploughed-back earnings only. We are proud of this record and of everyone who ever contributed to it. We hold that the results obtained are adequate compensation for all the effort and anxiety necessary to their accomplishment.

In all humility our greatest pride is that in war and peace we have served the best interests of our Nation, its allies and of all our friends in Africa, south of the Sahara.

Looking forward we are refreshed. If courage, imagination, and industry measures up to opportunity, the past can be rendered insignificant by the future.

Production of Poliomyelitis Vaccine

EXTENSION OF REMARKS
OF
HON. J. PERCY PRIEST
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. PRIEST. Mr. Speaker, every day more parents come to realize that only small amounts of poliomyelitis vaccine—falling far below present needs—are available in their communities for the vaccination of children under age 20 and expectant mothers, constituting the priority group.

In considering the extension through June 30, 1957, of the Poliomyelitis Vaccination Assistance Act of 1955, Public Law 377, 84th Congress, the Committee on Interstate and Foreign Commerce gave careful consideration to the availability of adequate supplies of safe and effective vaccine.

In order to get a first-hand impression and better appreciation of the complexities inherent in the production and testing of the Salk vaccine, the committee visited the plants and laboratories of Eli Lilly & Co., Indianapolis, Ind., which furnished approximately 70 percent of the Nation's total supply of vaccine approved during 1955 and the first 6 weeks of 1956.

In submitting its summary statement on poliomyelitis vaccine production, and the present efforts made by several drug companies to increase their production, the committee takes cognizance of presently existing shortages of available vaccine supplies. The committee desires to emphasize, on the other hand, the magnitude of the achievement resulting from the wholehearted cooperation among scientists in the pharmaceutical industry, private research institutions, and

Government agencies, that the American people today have every reasonable assurance that supplies which will become available will be both safe and effective.

Less than a year ago, approval of poliomyelitis vaccine by the Federal Government had to be suspended and public confidence in the safety of the vaccine was placed in serious jeopardy. Today, instead of being ready to criticize Government agencies and the pharmaceutical industry for existing shortages, we should be mindful of the fact that if it were not for the valiant efforts of the present producers, no safe and effective vaccine would be available at all at this time.

The committee's summary statement on poliomyelitis vaccine production follows:

COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE STATEMENT ON POLIOMYELITIS VACCINE PRODUCTION

On January 24, 1956, the Committee on Interstate and Foreign Commerce held hearings on legislation to extend through June 30,, 1957, the Poliomyelitis Vaccination Assistance Act of 1955 (Public Law 377, 84th Cong.). This legislation since then has passed the House of Representatives and the Senate, and has been approved by the President (Public Law 411, 84th Cong., 2d sess.). In considering this legislation, the paramount question in the committee's mind was the availability of adequate supplies of safe and effective vaccine.

In the course of the hearings, the Surgeon General of the Public Health Service, Dr. Leonard A. Scheele, furnished the committee, upon its request, estimates of anticipated production of vaccine during the year 1956. It was estimated that during the calendar year 1956, approximately 166 million net cubic centimeters of vaccine might become available for use. This amount, plus approximately 30 million cubic centimeters released prior to January 1, 1956, would make a total of 196 million cubic centimeters available by December 31, 1956. This quantity would suffice to make 3 injections available for each of the 65 million children under age 20 and expectant mothers, constituting the priority groups.

In furnishing these rough estimates Dr. Scheele cautioned that the figures submitted by him were subject to many contingencies. Dr. Scheele pointed out that the difficulty of making the vaccine was one of the principal factors which make it inadvisable to attempt to make firm projections or tc place too much reliance in the accuracy of such estimates.

In order to get a first-hand impression and better appreciation of the complexities inherent in the production and testing of the Salk vaccine, the committee decided to accept an invitation extended to it by Eli Lilly & Co., of Indianapolis, Ind., to visit the company's plants and laboratories. The chairman of the committee, Congressman J. PERCY PRIEST, Democrat, of Tennessee, and 13 members of the committee visited Eli Lilly's facilities on February 24 and 25, 1956. The Lilly Co. was one of two companies whose vaccine was used during the field trials conducted by the National Foundation for Infantile Paralysis in 1954. During 1955 and the first 6 weeks of 1956, almost 24 million cubic centimeters of Lilly vaccine were approved by the Federal Government. This amount represents approximately 70 percent of the Nation's total supply of vaccine approved during that period.

The visit to Eli Lilly's vaccine manufacturing facilities has provided the committee with a unique opportunity to gain some insight into the reasons why it is not a simple matter to step up production of the Salk vaccine. The biggest problem in expanding operations is obtaining trained personnel. The principal, and perhaps only, source from which such personnel can be secured on short notice is from other programs of the Lilly Co. The committee is gratified that the Lilly Co. has decided to take this important step.

Since the testing of vaccine fluid has failed to keep pace with production of vaccine fluid, the Lilly Co. has accumulated a considerable backlog awaiting testing. The company expected to complete its tests on this backlog by November 1, 1956. In view of the great need for additional vaccine supplies, the company, by shifting personnel, now expects to complete tests on this backlog by June 30, 1956. It is now the goal of Eli Lilly & Co. to test 60 million doses during the first 6 months of this year. This goal is 20 million doses greater than the amount of vaccine previously scheduled for completion by June 30, 1956.

Eugene N. Beesley, president of Eli Lilly & Co., who gave the committee these estimates, cautioned, however, just as did Dr. Scheele in submitting his estimates, that unforeseen delays may occur in the testing procedure which might cause vaccine actually available for use by June 30, 1956, to fall well below this goal.

Mr. Beesley further stated that virus fluid production would be stepped up from 4,500,000 doses per month to 6,800,000 doses per month. If this rate of fluid production is maintained successfully, and if no unforeseen delays occur in the expanded testing operations, 40 million doses of finished vaccine may be expected from the company during the last 6 months of this year.

Secretary of Health, Education, and Welfare Marion B. Folsom, after conferences with each of the five manufacturers of polio vaccine, has reported that several manufacturers were taking steps, involving additional personnel and equipment, in an effort to increase their output. However, he states accurate predictions of future supplies are impossible.

Apart from securing additional trained manpower and equipment, care must, of course, be taken that supplies of raw materials are adequate to stay abreast of the stepped-up production of polio vaccine. There have been some preliminary indications that eventually refinements in the field of tissue culture may obviate the need for monkeys or other animals now used as a source of tissue for virus production. At the present time and for the immediate future, however, monkey kidneys are the indispensable raw material required for vaccine production.

Suitable arrangements are now in existence with the Indian Government to facilitate imports of rhesus monkeys for use in medical research and in the preparation and testing of polio vaccine. As long as this cooperation on the part of the Indian Government continues, there is no reason to believe that a shortage of rhesus monkeys will become a factor limiting the supply of polio vaccine.

While the committee appreciates the desire of the American people to see that ample supplies of vaccine will become available in time to complete present vaccination programs on schedule, the commitee is deeply impressed with the complexities of the manufacturing and testing processes involved in the making of the vaccine. If the attitude of Eli Lilly & Co. is representative of the attitude of the other four companies presently engaged in the manufacture of vaccine—and the committee has no reason to doubt that this is the case—then each of the companies will produce the maximum amount of vaccine that can be produced with reasonable assurance of safety.

The committee believes that the American people would rather suffer a slight delay in present vaccination programs than see the programs jeopardized in any way by a recurrence of events which led to the suspension of vaccine approval by the Federal Government in April 1955. At that time, public confidence in the vaccine as a safe and effective weapon in the prevention of poliomyelitis was placed in jeopardy, and only through the heroic and cooperative efforts of scientists in industry, private research institutions, and Government agencies was the program resumed without permanent damage to public confidence.

While it is gratifying that forecasts for vaccine production during 1956 are optimistic, it is perhaps even more gratifying that the American people have every reasonable assurance that supplies which will be available will be both safe and effective.

Over 1,300 Unconfirmed Postmasters

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 12, 1956

Mr. HOSMER. Mr. Speaker, there are over 1,300 nominations to fill vacancies in postmasterships around the country pending confirmation by the other body. Some of these vacancies have been filled under "acting" appointments for as long as 3 years. Such a situation does not lead to good morale and efficient operation in the Post Office Department any more than it would in any other organization. True, most of us who have served as officers in the Armed Forces served under temporary appointments. But in that situation we all hoped for a quick victory, the end of the war, and the end of our military service. So the more temporary our commissions were, the better we liked it. That situation does not apply to career civil-service protected peacetime employment such as postmasterships.

Most candid observers believe that the wholesale number of pending postmaster nominations, occurring as they do in an election year, result from the fact that the White House is in the hands of one political party, while the Congress is in the hands of another. The following editorial recently carried by the Long Beach Press-Telegram suggests that such is not the best arrangement:

CONGRESS, PRESIDENT OF SAME PARTY IS BEST ARRANGEMENT

Just how much influence does a presidential election have on House and Senate races?

That question raises others that qualify it.

Which election?

Who are the candidates in the congressional races?

Which districts have local issues important enough to overshadow national issues and national political personalities?

Speculation on the congressional picture began in earnest at the same press conference in which President Eisenhower announced his willingness to seek a second term.

Richard L. Wilson, of Cowles publications, asked:

"Mr. President, do you consider the lack of Republican control of Congress to be a handicap to your administration? If you do, what action will you take to attempt to get a Republican Congress?"

Mr. Eisenhower answered:

"This is what I believe: If we are honestly dedicated to a two-party system (and) to a single party responsibility in this country—then the legislature and the executive should properly be in the same hands, so that there can be responsibility fixed without criminations and recrimination."

Even though the executive of one party may receive a large measure of support on portions of his program from a legislature under the control of the opposition party—and Mr. Eisenhower admits this has been the case during his administration—the theory put forth in the above statement is a sound and time-honored one.

In the long run the man in the White House has better luck with his programs when control of the Congress is in the hands of his own party's members.

Responsibility for what transpires also can be clearly discerned and affixed.

This sharply defined line of responsibility has an invigorating effect on the two-party system, the system Americans have found to be most satisfactory.

However, the net result at the polls on election day does not always carry the theory of single-party responsibility to its logical conclusion. Right now the Congress is under Democratic control though we have a Republican President.

Such a personality as Eisenhower must have a very definite influence on local partisan contests such as those for the House of Representatives.

But the influence of even the most popular man can be offset in a given district if that district has an overriding, nonpartisan local issue on its mind.

Again, the personality and ability of the individual candidates in the local races can outweigh the influences from the national scene.

These are the things that can cause districts to go against the trend or which can change the trend from what it might have been.

Extend Fair Labor Standards Coverage

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1956

Mr. ROOSEVELT. Mr. Speaker, the Congress at the last session amended the Fair Labor Standards Act to increase the minimum wage from 75 cents to $1 an hour. The new minimum wage went into effect on March 1, 1956. However, Congress did nothing to extend the coverage of the act. The extension of coverage is even more important to the employees of food industries than the increase in the minimum wage because of the larger number of employees who will benefit from such effective extension of coverage.

Practically all retail establishments are now exempt from both the minimum wage and overtime provision section—section 13 (a) (2) of the act. The food industries amendments would have the act cover all retail establishments with more than 5 stores or with an annual gross income of more than $500,000. The enactment of the amendments would bring the 40-hour week immediately to hundreds of thousands of retail workers.

In reference to this subject, I wish to place in the RECORD a letter received by me from the Washington office of the Amalgamated Meat Cutters and Butcher Workmen of North America concerning the need to amend the Fair Labor Standards Act to provide coverage for employees of large retail establishments. The letter, signed by Mr. Leon B. Schachter, executive board member and director, follows:

AMALGAMATED MEAT CUTTERS AND BUTCHER WORKMEN OF NORTH AMERICA,
Washington, D. C., February 24, 1956.

The Honorable JAMES ROOSEVELT,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN ROOSEVELT: This month the employees of the organized retail food stores in the Washington area began a workweek of five 8-hour days. As a result of collective bargaining between the Amalgamated Meat Cutters and Butcher Workmen (AFL-CIO), the Retail Clerks International Association (AFL-CIO), and 8 area supermarket chains, some 6,000 employees gained the 40-hour workweek. This is a new advance for the Washington union retail workers, who already earn wages of $1.55 to $2.70 an hour.

I thought this development would be of interest to you, especially in view of Congress' consideration of extending the Fair Labor Standards Act's coverage.

Retail establishments are now exempt from the Fair Labor Standards Act. Unlike most industries, they need not pay the $1 an hour minimum wage or time and one-half for work over 40 hours in 1 week.

The argument that has continuously been presented by the proponents of this exemption is that retail stores cannot afford either the minimum wage or the 40 hour week. This argument has been dinned into the ears of Congressmen and Senators for decades.

I do not deny that there are thousands of small retail stores that cannot afford coverage under the Fair Labor Standards Act. Those are the "Momma and Poppa Stores," as they are called in the trade slang.

But no one wants to cover those stores under the Fair Labor Standards Act. They would be specifically exempted. Your own 2 bills are excellent examples. Both H. R. 8553 and H. R. 6656 would cover only those retail establishments with 5 stores or a gross annual income of $500,000.

The experience of the unionized retail food industry in Washington proves that these bills are more than reasonable and are economically justified. It proves that large retail units can afford far more than the basics required by the Fair Labor Standards Act. It proves the argument against covering large retail establishments under the act is a hoax.

In fact, 1 of the 8 organized Washington food store chains is smaller than the establishments which would come under Fair Labor Standards Act through your bills. The Rochdale Consumer Cooperative has only 3 stores and a gross annual income of only $300,000. Yet it has well been able to afford the 40-hour workweek and wages 50 to 170 percent more than the FLSA minimum.

These Washington area wages are not unusually high or the workweek unusually low for the organized part of the retail food industry. The wages are average for union stores. And the workweek is duplicated throughout the country. On the west coast, for example, 40 hours has been the rule in dozens of communities. In Chicago, Philadephia, Louisville, Kansas City, St. Louis, Pittsburgh, and many other cities, that workweek is well established. In fact, about 60 percent of the Amalgamated Meat Cutters and Butcher Workmen's 130,000 retail members have that workweek written into their contracts. The rest are near that point and will reach it soon.

But as the four Washington union leaders said in a joint statement, the 40 hour workweek came to their members 18 years after the Fair Labor Standards Act brought it to workers in many other industries. They stressed the unfairness of the retail exemption.

W. F. Strong, president of the Amalgamated's Local 555, A. J. Gray, financial secretary of Amalgamated's Local 393, Truman Kennedy, financial secretary of RCIA's Local 1501, and F. H. McGuigan, business representative of RCIA's Local 639A, declared in the statement, "Because retail employees are not covered by the Fair Labor Standards Act, we have had to bring down the hours the hard way. It has been a steady process of hammering out lower workweeks in collective bargaining.

"This experience of our members demonstrates the marked unfairness and sheer discrimination of the Fair Labor Standards Act exemption of large retail establishments. Our members have had to wait 18 years for what workers in other industries received by law in 1938.

"Large retail establishments and retail chains can afford the 40-hour week and minimum wage, just as other industries. The law would bring these standards to all large retail businesses at the same time.

"Without a law, the cutting of hours had to go slower so as not to put the enlightened employer, who bargained collectively with his employees, at an unfair competitive disadvantage with the employer who worked his people as long and at as low rates as possible."

I believe those words ring true. They are valid testimony why the retail exemption of the Fair Labor Standards Act should be modified so that all establishments with 5 stores or a gross annual income of $500,000 will be covered.

Very truly yours,

LEON B. SCHACHTER,
Executive Board Member and Director, Washington Office.

Brotherhood or Stepbrotherhood?

EXTENSION OF REMARKS
OF
HON. CHARLES C. DIGGS, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1956

Mr. DIGGS. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD an address entitled "Brotherhood or Step-Brotherhood?" delivered by me on Sunday, March 11, 1956, before the Mattapan-Dorchester-Roxbury District Council of the Jewish War Veterans of the United States at their annual encampment at the Hotel Vendome, Boston, Mass.

The address follows:

BROTHERHOOD OR STEPBROTHERHOOD?

I consider it a distinguished honor to address the annual encampment of the Matta pan, Dorchester, and Roxbury district councils of the Jewish War Veterans of the United States.

My presence here today, among other things, symbolizes the intertwining of interests which has historically characterized the association of Jews and Negroes. Many of the most prosperous Jews in America can

trace their successes in business and professional fields to the substantial support of the so-called Negro market. As a matter of fact Jews have long recognized and respected the still growing $16 billion yearly purchasing power of Negroes, equal to all of Canada, which their gentile counterparts have finally become aware of in the last few years. In turn, many Negroes have been the grateful recipients of employment opportunities and philanthrophy from those of the Jewish faith. The affinity of the two groups has not been confined just to economic reciprocity. In political affairs for instance, Senator Lehman, of New York; Governor Ribicoff, of Connecticut; Attorney General Javits, of New York; and your speaker, in addition to others too numerous to mention, owe their present positions to the significant measure of confidence in their ability manifested by the Jewish and Negro voters. And I must certainly say in passing that in the process of the restoration of Israel, a prominent part was played by an American of Negro descent, Dr. Ralph Bunche. For it was Dr. Bunche who effectuated the recognition of Israel by the Arab adversaries who were attempting to annihilate the tiny republic so recently established as a national home for the Jews. How is it that American Negroes should have played a role so closely intertwined with the historic destinies of the Jewish people?

The Negro, too, has had his history of adversity and abnegation. He was brought to America, the land of the free, as a slave. He came not of his own free will, like other peoples, but in captivity and friendless. He was a hewer of wood and a drawer of water in a new continent where others were staking out the land and making their fortunes.

But the Lord relented and a new breath of freedom blew over the land, with the Emancipation Proclamation. Men, who all their lives had been considered only chattel property, were made conscious of their human dignity for the first time, and they were free at least to go and come as they pleased and live as other men lived, following their best lights.

The great cities of the North—New York, Chicago, Philadelphia, Detroit, and Cleveland—offered the newly emancipated Negro opportunities hitherto undreamed of. There he came into contact with other peoples who had undergone rejection like himself, particularly the Jews. Founded on a common experience of social adversity, a new and firm friendship grew up between the Jew and the Negro.

Students of race and human genetics furnished an abundance of evidence that the Negro and the Jew had in their inheritance many valuable treasures which would contribute to human progress. In fact, it was brought out that the social order among the so-called primitive peoples was often far more complex and intricate in nature than that of the civilized folk. It was made abundantly evident, also, that no one race had a monopoly on brains or on virtue which would justify discriminatory practices in regard to the other groups.

Hence a deep sympathy and common bond of experience linked the Negro and Jewish interests, both having suffered adversities in their social recognition. They learned to cooperate in overcoming the adversities. Thus the value of the intertwining of interests was made manifest.

In this age of great upheaval and turmoil when the hydrogen bomb looms menacingly in the future as a threat to the entire human race, we must recognize our larger obligations, our larger citizenship in the interest of humanity itself. Not only is there an intertwining of nterests between Jew and Negro but there is and should be an intertwining of interests between Jew and Gentile generally, and between all races who are mutually concerned in the fulfillment of the purposes of God.

It is 60 years since soldiers of the Jewish faith formed an organization and, while vast changes have been wrought in the life of our Nation during the intervening years, the spirit which animated the founders has never changed—the spirit of Americanism and brotherhood.

The Jewish War Veterans of the United States were cradled in the American way of life. When they came to maturity they grew in stature and influence because they were rooted in genuine American ideals. They are part and parcel of a system of society that has made this Naton great and glorious and that will never be changed by those who would try to tear down this system.

The boys of Jewish blood who stood beside their Christian comrades in the foxholes of our wars never asked those with whom they fought to what religion they belonged. They, in turn, were never questioned about their faith. The men in the foxholes had a common denominator—Democracy. Each worshipped God in his own way.

The Jewish war veterans who have emerged from the slime and dirt and heartbreak of the battlefields have taken their place in the forums of peace. It is worth mentioning and repeating from time to time that these men who fought so valiantly so that Democracy might survive are now engaged in another monumental struggle—the fight to create a peace that will banish the fear of the atom bomb and make the hearts of men and women glad that there is no longer any prospect of needless slaughter.

I would like to say a word about your organization which has become a permanent part of the general pattern of American Democracy.

In Europe, for centuries Jews were not permitted to volunteer to fight for their country. And in this country Asser Levy, the Dutch Jew, was denied permission by Governor Peter Stuyvesant to participate in the defense of the colony of New Amsterdam.

Peter Stuyvesant was only reflecting the prejudice that clouded the minds of European sovereignity. Levy had to plead with Stuyvesant to be allowed to risk his life in the common defense of the colony before he was accepted for service.

All this changed when America was born. It was one of the few countries that permitted Jews to wear the uniform of their country as honorable volunteers. More than 10,000 Jews fought in the contending armies of the Civil War. Seven of these men were awarded the Congressional Medal of Honor.

I could go on and on giving the record and it is a story abundant with deeds of heroism and sacrifice. The figures I might give are astounding—but they need no praise from me. But I would like to point out that some 250,000 Jews saw service in World War I and more than 550,000—over half a million—served in World War II.

Among them were those who had recently become citizens. Many were the descendants of those who were forced to wear the Yellow Star of David under German and Russian tyrants and who emerged from the war wearing the Purple Heart for wounds received in the service of democracy.

During World War II, the Jewish representation in the armed services was far above its pro rata allotment. A large concentration of Jewish people live in metropolitan centers. Agricultural, mining, and metal industries, and so forth, which were favored by draft exemptions did not apply to metropolitan centers, such as this Boston area. Besides the relatively large proportion of Jewish boys taken in the draft, there were approximately 35,000 Jewish volunteers. Statistics show that honors conferred on Jewish soldiers for valor in action included no less than 1,100 citations. These included the Congressional Medal of Honor, Distinguished Service Cross, Croix de Guerre, and other decorations. The records also reveal that more than 10,000 Jewish commissioned officers were in several branches of the service. The total of Jewish casualties was from 13,000 to 14,000, including 2,800 who made the supreme sacrifice.

These figures tell of a sacrificial devotion and patriotism to your country which is in line with your age-long battle for freedom.

The patriotism and the loyalty of the Jews has been tested in wartime and in peacetime. It reveals a brilliant and patriotic service to your country. The Jewish people of the United States have given far more than their share of lives and money to help in all times of crisis.

You are now sacrificing millions of dollars to help Israel survive in order to preserve your homeland and also to fight the Communist aggressor.

The preamble to the original constitution of the Jewish War Veterans of the United States—dating back to the year 1896—declared your objectives as follows:

"To maintain true allegiance to the United States of America; to foster and perpetuate true Americanism; to combat whatever tends to impair the efficiency and permanency of our free institutions; to uphold the fair name of the Jew, and fight his battles whenever unjustly assailed; to encourage the doctrine of universal liberty, equal rights, and full justice to all men; to combat the powers of bigotry and darkness wherever originating, and whatever their target; to preserve the spirit of comradeship by mutual helpfulness to comrades and their families; to instill love of country and flag, and to promote sound minds and bodies in our members and our youth; to preserve the memories and records of patriotic service performed by the men of our faith; to honor their memory, and shield from neglect the graves of our heroic dead."

With these noble aims, the Jewish War Veterans were prepared to face three wars: The Spanish-American, and World Wars I and II.

Then in 1936 in the city of Philadelphia, the crade of American liberty—20 years ago in May to be exact—your convention thoroughly revised the organization's constitution. It is my understanding the workings of your group were provided for in great detail; the duties and obligations of the National Executive Council, the National Executive Committee, and those of the several departments, district councils, ladies auxiliary, and Sons of the Jewish War Veterans defined. The duties of the various officers were prescribed, uniforms and insignia described, and a seal adopted.

It is apparent that article II of the revised constitution embodied the spirit and general purpose of the preamble to the original instrument. I will not enumerate the objects of your organization as set forth in the 1936 revision of your constitution. I do note, however, that your second objective reads "To combat the powers of bigotry and darkness wherever originating and whatever their target."

This can be summed up in one word—"brotherhood." Not stepbrotherhood.

It is an inspiring experience for me to be a part of this gathering; to speak to you concerning brotherhood, which symbolizes the fundamental moral principle on which our Nation was founded—a principle which all of us, in our churches, in our synagogues, in our organizations hold in common. This principle was stated in our Declaration of Independence in words which changed the course of human history for all times—"All men are created equal."

I call your attention to one word in that famous sentence; the word "created." The self-evident truth which our American fore-

fathers proclaimed was not simply that all men are equal—but that they are created equal. They are equal because they are equally creatures of one Creator—God—a just and loving God who commands that we be just and loving to one another.

Human brotherhood is more than mere human equality. Without a moral basis, the idea of equality is bound to be empty and vain and frightfully destructive.

Communism perfectly illustrates this fact. The equality it preaches leads to strife and hatred, envy and malice. It denounces justice, mercy and love as fatal weaknesses. It ignores the priceless value of the individual soul and looks upon man as a mere instrument of the state. It denies brotherhood and all the noble motives of the mind, and, in the end, it brings on the very antithesis of brotherhood—the ruthless domination of man by man.

It is not enough for us to condemn this evil force of communism. Our condemnations do not change the fact that it is on the march in the world today. I believe it is our duty to assume our share of responsibility for that terrible fact. If we can understand why we of the Western World share the responsibility for this tragic state of affairs, then we may gain some insight into the question of how to stop it.

Should we not concede that every success made by communism represents the shortcomings of the free, democratic world? Has the United States failed to apply the concept of human equality and brotherhood so that its example may be reflected all over the world? I fear we have tolerated injustice in various ways, and, as a result, we have seen the growth of extreme and ruthless movements under the banners of communism. In the colonial areas of the world, the principles of brotherhood which have been professed at home have often been totally ignored.

Today the greatest danger in the struggle with communism is in Asia. That should not surprise us too much—for it is in Asia that the Western Nations for centuries past have failed most tragically to carry out their own principles of human brotherhood. This has been the great area of supposed supremacy of the white man, the great area of colonial subjection, and the great area of economic exploitation. The United States is challenged today to show the Asian people that it represents not racialism, colonialism, and exploitation, but their very opposites: Individual human dignity, national independence, and free economic development for the benefit of the people.

No nation is likely to welcome an American policy if they think that policy is a mere defensive move designed to strengthen America against communism. No nation will be happy over the idea of being used as an American shield. Therefore, we must show that we seek the development and freedom and prosperity of these nations for their own sakes.

We must keep our actions in line with the ideals which must guide us abroad. America cannot afford to be indifferent to the cry of freedom anywhere in the world. Our inventive genius has so expanded our communication that isolation is a thing of the past. Now a billion eyes watch to see if there is a lag between our physical knowledge and our skill and fairness in human relations. A billion eyes watch to see whether or not we in the United States are ready to practice in our own homeland the ideal of brotherhood which we seek to promote in the world—or stepbrotherhood. I can see only one basic solution to this question, and that is the solution based on our common belief that we are all equally the creatures of God.

In Asia and Africa—where the peoples of vast former colonial areas have known the humiliation of being treated as inferior races—the way in which the United States acts to implement the rights of its own Negro citizens among other minority groups is of the highest significance. I know of no other field in which the quality of our own actions at home so directly affects our moral power in the world.

Enlightened men may differ in detail as to the best way for us to proceed. This is a question on which there should be no conflict between our political parties. Naturally, I am most anxious to see that my own party maintains an advanced position on this question.

Statesmanlike leadership is demanded to rechart the course of interracial tolerance and understanding before we find ourselves inextricably cast upon the reef. There is no room for the kind of leadership which expelled Miss Lucy but retained the identifiable white student insurrectionists at the University of Alabama without penalty of any kind. There is no room for the kind of leadership which compels the orderly protesters against the humiliating bus situation in Montgomery to face the prospect of jail or a fine, or both. There is no room for the kind of leadership which attacks the established integrity of the United States Supreme Court by the passage of interposition and even nullification resolutions. There is no room for the kind of leadership which attempts to stifle the voices of freedom, including many of your own from being heard in a Government-owned auditorium or educational institution. There is no room for the kind of leadership which endeavors to brand the NAACP as subversive, contrary to the opinion of the Attorney General of the United States, the House Un-American Activities Committee, or any other official Federal body. There is no room for the kind of leadership which denies voting privileges to Negroes through intimidation, interference, and illegal schemes. There is no room for the kind of leadership which permits the allocation of Federal funds, gathered through a process of taxing everyone, to those States who dare resist legislative and judicial commands regarding racial discrimination. There is no room for the kind of leadership which allows the most distinguished white supremist in America to become head of the very committee through which minority groups seek relief from their inequities. There is no room for the kind of leadership which pleads for moderation and gradualism in the wake of the inflexible resistance of the proponents of segregation. There is no room for the kind of leadership which seeks election support of those affected and concerned with civil rights based alone upon past performance and the slippery decrees of a party platform. There is no room for the kind of leadership which speaks one way in Washington or some northern city and another way in the South.

Even in a society as advanced in culture as the United States, we hear a lot about prejudice—associated mainly with the problem of American minorities. Not many people nowadays would be caught admitting they are prejudiced about anything. There are a few exceptions, of course; one only has to read the newspapers. Prejudice, localized in our own lives, harms few people, if any. But small feelings of prejudice that have no sensible basis can spread into race attitudes and can ultimately defeat the moral obligations of a democracy.

It was Goebbels, during the dark days of facism in Germany, who said: "Nothing will be easier than to produce a bloody revolution in America. No other country has so many racial and social tensions. We shall be able to play on many strings there."

Any American who "plays on these strings" by spreading prejudices against minorities—Catholics, Jews, Negroes, foreign-born and others—is, whether he know it or not, weakening our Nation.

History has taught us that when we discriminate against one segment of the people, we set a pattern that may be used against other groups. Hitler's persecution of the Jews, trade unionists, Communists, and Socialists was later directed against Catholics, Protestants, liberals and eventually the people of the world.

In 1855 Agraham Lincoln understood this when he said: "As a Nation we began by declaring all men are created equal. We now read it 'All men are created equal except Negroes.' When the Know Nothings get control it will read 'All men are created equal except Negroes, and foreigners, and Catholics' ".

Consideration for the Negro, the Jew, the Catholic, the foreign-born or for any other minority group rests not merely on the grounds of humanity and justice; it rests on the solid base of self-interest.

Prejudice makes all of us poorer. We cannot have an enlightened democracy with minority groups living in ignorance. We cannot have a prosperous democracy with minority groups so poor that they cannot afford to buy the goods America produces.

As Eric A. Johnston, ex-president of the United States Chamber of Commerce, declared, "Whenever we erect barriers on the grounds of race or religion, or of occupational or professional status, we hamper the fullest expansion of our economic security. Prejudice doesn't pay. Discrimination is destructive."

Prejudice—or lack of brotherhood—makes impossible any real solution of economic, social, or personal difficulties. When we blame war or social and economic troubles on some innocent minority group, we are diverting our attention from the real cause. Social ills can be remedied only through acceptance of responsibility and cooperation through democratic means to solve common problems.

How we apply brotherhood is more than a matter of mere domestic concern. Almost 13 million people in the United States were born in Europe. The mistreatment of some Mexicans in the United States echoes throughout North and South America; a race riot provokes discussions and resentments in Africa, the Philippines, and among the 800 million nonwhite people in China and India.

Throughout the world there are millions of people who believe that World War II—to which your group contributed so much—was a total war against fascism and Fascist ideas. Their concept of peace includes the hope—even the determination—that there will be no such thing as superior and inferior peoples anywhere in the world.

The story of America should prove that there are no superior or inferior people. Our country has been made great by people who came from every land under the sun—people with names like Carnegie, Sikorsky, Toscanini, Einstein, Osler, Carver, and thousands more. But it isn't only the big names—the Hall of Fame names—that have made America, any more than it is only the big names that won the war. We know that the war was fought and won by the little names—by millions who never made the headlines.

The men who built and are building America—who clear her forests, span her rivers, dig her coal, plow her fields, work her machines—the men who made America strong and free are men of every race, color, religion, and nationality. Listen to the names at rollcall, or read these names from a casualty list in the New York Times of March 29, 1945: Agostinello, Cohen, Curran, Grunwald, Hrubec, Ivanoski, Kuzian, Marshall, Thomas, Warblanski. Were any of these inferior in the eyes of true brotherhood?

All of America should be proud of these names. For what they did is more than a tribute to their individual faiths—be they Jewish, Catholic, or Protestant. Their sacrifices are a reflection of the splendid faith

which we of all races and creeds have in the strength and nobility of American democracy. It is democracy, as we practice it in this country, that has been a springboard for the vast strides we have made in so short a time. It will continue to remain the motivating factor of our daily lives.

What you, the Jewish veterans, have done in the past is now part of the history of this country. But what about the present? I could quote amazing figures and statistics. But I think the citizens of this Nation should be fully aware of your program in the field of human relations. In the present state of the world, human relationships have become a very vital part in the planning for a permanent peace.

Your organization is engaged in fighting every form of tyranny, bigotry, and intolerance. The Jewish War Veterans of the United States were among the first to speak out boldly against Hungary's persecution of Cardinal Mindszenty and the oppression visited on the Protestant clergies in central Europe. In the past you have been assailed by the Communists as a tool of big business interests on the one hand and by Gerald L. K. Smith's anti-Semitic cross and flag on the other hand.

What has been your answer to these attacks? A program of action in the field of human relations—in the field of brotherhood. You have worked with the American Legion, the Catholic War Veterans, and other major veterans' organizations. You have reminded America that racial and religious disunity can be just as harmful and menacing to the country's welfare in peace as it would have been in war.

It is my understanding that the Jewish War Veterans' service program, staffed by hundreds of professional and voluntary counselors, serves more than 110,000 veterans and veterans' dependents of all faiths. More than 30 percent of those you have aided have been non-Jewish.

There you have American democracy in action—action that is unfettered by any consideration of race or creed. That is something worth fighting for and keeping, so that we and our children and our children's children may enjoy the blessings of our glorious way of life.

I think that members of the Jewish faith may well be proud of the fact that the principle of brotherhood was proclaimed centuries ago by your teachers, rabbis, and national leaders. We read in Leviticus the command "Thou shalt love thy neighbor as thyself."

Believing in the spiritual interpretation of the universe, in peacetime the Jewish War Veterans are assisting to promote justice, amity, understanding, and cooperation among Protestants, Jews, and Catholics.

Whether we like it or not, America has been vested with the leadership of the free world and the task of defending western civilization. The success of that defense will determine the survival of our way of life and the maintenance of the dignity of man.

Until and unless bigotry, prejudice, and intolerance among intercreedal and interracial groups have disappeared from the American scene, the success of that leadership and of that defense will be in jeopardy.

Until we have achieved a practical day-to-day implementation of the principles of brotherhood, we cannot be sure that our American democracy is secure. But once we have attained throughout this fair land a unity which comes from an understanding, group by group; an appreciation of culture, group by group; and respect of racial, religious differences, group by group, American democracy will have a much firmer foundation.

America stands at the crossroads—one way points to brotherhood—the other points to intolerance and prejudice. I do not wish to minimize the seriousness of the situation—but America has survived a great many crises in the last 180 years. I think we will survive this one.

In words of the poet, Stephen Vincent Benet:

"We have made this thing, this dream.
This land unsatisfied by little ways,
Open to every man who brought good will,
This peaceless vision, groping for the stars,
Not as a huge devouring machine
Rolling and clanking with remorseless force
Over submitted bodies and the dead,
But as live earth where anything could grow
We made it and it's ours.
We shall maintain it. It shall be sustained."

May God give us the grace and the strength to maintain this land of ours in the name of brotherhood.

The Story of Margaret Truman

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, March 15, 1956

Mr. NEUBERGER. Mr. President, the Truman family is a typical American family. That is part of its charm and greatness. The story of Margaret Truman, and of her success in the difficult and competitive world of entertainment, is also a great and heart-warming story. We all rejoice in Miss Truman's recent engagement.

In the March issue of Good Housekeeping, Margaret Truman has told that story under the title of "Souvenir." Upon reading early installments of this feature, Mrs. Neuberger was so engrossed and fascinated that she felt I should include some of it in the CONGRESSIONAL RECORD. The portions selected by Mrs. Neuberger are herewith presented for inclusion in the RECORD.

Mr. President, there is something about the Truman family that I think is characteristic of a traditional American family which loves its native land. When Harry S. Truman and Bess Truman left the White House, they did not migrate to the Waldorf Towers, in New York City, or to some other exotic quarters where they never had lived before.

Their roots were down in the good soil of Missouri and to there they returned. They boarded a train and returned to Independence, Mo., where they had been born and raised. True, their daughter had her career in New York, but President Truman and his wife, the former first lady, went back to Independence—as I feel sure Lincoln would have returned to Springfield, Ill., had he been spared for retirement.

I ask unanimous consent that portions of Miss Margaret Truman's autobiography from the March 1956 issue of Good Housekeeping magazine be printed at this point in the Appendix of the RECORD.

There being no objection, the portion of the article was ordered to be printed in the RECORD, as follows:

In 1944 my father entered on a phase of his career that enveloped me in reflected light. His star rose with the sudden brilliance of a comet, and I traveled in its wake. If he had reservations about his appointments with destiny, they were concerned to a degree with me. He is a thoughtful man and did not wish to deprive me of the opportunity of making a life on my own terms.

My father did not consciously plan the course his life took. Early in 1944 he was urged to run for the Vice Presidency.

"I talked it over with Boss," my father is reported to have said to his sponsors, "and we've decided against it. I've got a daughter, and the limelight is no place for children."

While my father did not want the nomination, and while my mother was bitterly opposed to it because she understood the burdens it would lay on his shoulders, I have never expressed my own reactions. I naturally thought it was wonderful. I was proud of my father, and it didn't seem to me that being the daughter of the Vice President would bother me at all. I looked forward to it.

I wasn't aware, as most of the people of the United States were not aware, of the fairly precarious state of President Roosevelt's health. I didn't even think about the future. I just thought it was grand that people appreciated my father enough to tender him a high office in the Government. I had known a couple of Vice Presidents—Mr. Garner and Mr. Wallace—and they seemed to lead normal lives and people looked up to them. Jean Wallace's existence as daughter of the Vice President hadn't seemed too different from mine as daughter of a Senator. I didn't expect any drastic revision in my days. Anyway, I was only 20 years old and not given to profound speculation. The hysteria of the convention floor had frightened me, but I didn't expect a repetition of anything like that. I rather liked seeing my picture in the papers. Who doesn't?

As a sometime student of history, I am aware that the events of the year 1945 will be chronicled in enormous and official detail for generations to come, and schoolboys and schoolgirls unborn will memorize its dates and rack their brains for motivations, causes, and effects to write down on examination papers. As an innocent bystander with a front-row place, I can contribute little to the official record. But perhaps there is a place for unofficial history—for the wayward thoughts and the vagrant yearnings that beset the minor figure on such a stage; for the little disappointments, the unimportant fears, the mothlike anxieties that make us kin to the future and the past; for the small pleasures that make a girl in one century like a girl in any century.

I accompanied my father and mother on the funeral train to Hyde Park that night. Reports of the state funeral had only intensified the crowds along the streets. They were still packed, shoulder to shoulder, in Lafayette Square at 9:30 p. m. when the cortege left the Portico and moved along the East Drive. Down the length of Constitution Avenue the people were crowded to the walls of the buildings, and around Union Station they were massed by the thousands. Over all there still brooded that curious, heavy, almost tangible stillness. They never uttered one sound when the flag-draped casket was placed in the glass-walled, illuminated railroad car, surrounded by a fantasia of flowers. The Army Band played Nearer My God to Thee, and the train moved slowly off into the hot, damp night on its mournful journey to Hyde Park.

I will never forget that ride. Of course it was impossible to sleep. We were all too strung-up and nervous and miserable. We had begun to recover from our numbness and to experience the deep sense of personal grief that the loss of President Roosevelt

occasioned. My mother made me go to bed, for I was practically stumbling with weariness, but I lay sleepless in the dark. The train moved with the slow solemnity of the funeral march, pausing at many intervals. When we made our first stop, I raised the shade a fraction to stare out into the starless night.

I stared straight into serried ranks of faces, packed along the side of the track—thousands of them, motionless and soundless, seeming to press against the very panes of the windows. It was as if they had ceased to breathe—row on row on row of impassive, solemn faces—devoid of curiosity, but bowed down in mute sorrow or uplifted in mute reverence. It seemed an intrusion to look on their naked grief. I lowered the shade.

When we stopped at Philadelphia, I raised the shade to the top. Not only were the people pressed into every available foot of space in the railroad yards, on the station platforms, ramps, and tracks, but they ran like a silent river up the great bridge that overlooks the North Philadelphia Station and were massed on the bridge in a motionless phalanx, patient as dumb animals.

As we continued along the flare-lit tracks, I never roused during the night and looked out that the faces weren't there. And there seemed to be no sound in the world, not even in nature—not a night bird's cry of a cricket's chirp. When I remember the death of President Roosevelt, I always think of that preternatural quiet.

The tendency to believe your own publicity is a pitfall for any belle, accidental or otherwise. As late as 1952 I went down to Washington for the weekend, and it apparently seemed to my father that I was feeling my oats a bit too much. He sat down after I left and wrote me a letter. When the letter arrived, I knew by looking at the outside of the envelope that I was due for a lecture. He had addressed it "Miss Mary Margaret Truman."

It was such a wonderful letter that I want to include it here, for it seems to me to be an excellent commentary on belleship and good advice for anybody.

LETTER FROM DAD, JANUARY 28, 1952

"DEAR MARGIE: It was a most happy weekend. It always is when you are with your mommy and daddy. Your pop has been carefully watching the progress and change in his daughter, just as he watched it from 5 to 15. You've never had any advice from your dad except in your interests. When you were anxious to be a singer at 15, your dad told you to be sure you had an education first. You took his advice. Now you're faced with a successful career. Be very careful that you remember your background and bringing up. I want you to succeed in whatever you undertake. To do that you must give it all you have. Keep your balance and display all the Truman-Wallace mulishness where right and wrong are in the balance. Right must always prevail. Do not let the glamour get you. There are decent, honorable people among the very rich, just as there are among the very poor. Honor knows no class. It is just as great and as necessary at one end of the scale as at the other. No one can say which is the top. Jesus Christ was the son of a carpenter (foster son) and was one himself. He was looked down upon by the socially great of his time. So were Martin Luther, John Knox, Wycliffe, Thomas Jefferson, Andrew Jackson, and Abraham Lincoln. Remember always to keep your balance no matter how great you may become in your own time. Great men and women are assayed in future generations. Your dad will never be reckoned among the great, but you can be sure he did his level best and gave all he had to his country. There is an epitaph in Boothill Cemetery in Tombstone, Ariz., which reads, "Here lies Jack Williams, he done his damnedest." What more can a person do? I hope that will be yours and your dad's epitaph.

"Love,

"DAD."

Soviet Russia's Educational System

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, March 15, 1956

Mr. HUMPHREY. Mr. President, one of the most alert, energetic, and imaginative former Members of this body, Senator William Benton, of Connecticut, has recently returned from a tour behind the Iron Curtain where he made a careful study of the Soviet educational system. Since his return he has warned us of the tremendous achievements in quality and quantity of the Russian educational system. He has concluded that the long-run challenge of the Soviet Union may likely be in the field of education as much as in any other field.

I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Party Line From A to Z," written by former Senator Benton, and published in the magazine section of the New York Times for Sunday, January 22, 1956.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE PARTY LINE FROM A TO Z—THAT IS THE MENTAL FARE FED TO MILLIONS BY THE SOVIET GREAT ENCYCLOPEDIA

(By William Benton)

Whatever else it may be, the Great Encyclopedia of the Soviet Union is one of the most important published works in the world. For 800 million people it is the only general reference work. The Soviet leaders regard it as the undisputed source of information and the final authority on all subjects. No other encyclopedia in history has had such a wide reach.

During a recent trip to the Soviet Union I talked with five editors of this powerful but little understood publication. Our interview lasted 3¼ hours. No meeting that I had with Soviet officials during my 4-week visit behind the Iron Curtain was more interesting or arresting to me.

For the first time, encyclopedists of the free world and the Soviet world met and talked shop. We talked paper, printing, and binding. We talked sales. collections, prices, and profits. Coffee and brandy were served and we exchanged toasts. We agreed to exchange the latest editions of our encyclopedias. More important, we agreed to exchange statistics on population, production, income, and other key subjects for possible inclusion in our publications. But it was not so easy to exchange ideas.

I wondered as I entered the modern office building on Moscow's Pokrovskii Boulevard how tense or how cordial my reception might be. Ever since the first volume of the new edition of the Soviet Encyclopedia rolled off the press 5 years ago, it has been assailed in the West for its fantastic distortions of biography and history. Further, the press of the West has ridiculed the predicament of its editors under political regimes of changing personalities and hues.

I expected a strained interview, or at least an aloof one. No westerner had met with these editors before. But the West well knows what a long shadow hangs over them. A first edition of their encyclopedia, published in the turbulent years between 1926 and 1947, was in disgrace with the Soviet rulers by the time it was complete. Some of the many editors were executed. Others were sentenced to prison terms. I knew nothing about the new editors, or the techniques they must have developed to protect themselves, but on the record it seemed to me that theirs might be the most nerve-racking editing job in the world.

However, there was no sign of stiffness or strain in the five men who sat down at a long table with me and the 2 interpreters, 1 from the Russian Intourist Agency, and Mr. Robert Tucker, an American expert on Russia, who served as my assistant. Indeed, they could hardly have been more cordial. They were also relaxed.

Editor in Chief B. A. Vvedensky, a stooped, gray-haired, scholarly looking man in his late fifties, was matter-of-fact and informal. He seemed eager to please and delighted that I was there. His assistants, younger men of 45 to 50, did much of the talking. They were vital, curious—and confident.

These were manifestly men of ability who knew their jobs. The editor and his chief deputy were men who rated as scholars by the high Soviet scientific standards. Editor in Chief Vvedensky is an expert in radio technology and physics. His deputy, A. A. Zvorykin, is a professor of natural science and technology, and president of the Soviet commission working with UNESCO on a history of world culture. A second deputy, L. S. Shaumian, is an experienced journalist. Another assistant, Mr. Vishov, executive secretary of the chief editorial board, is a specialist in general history. The fifth member of the group, Mr. Revin, the encyclopedia's director of printing and publishing, had been the wartime director of the Pravda publishing house.

I had come with a list of 32 questions prepared by the Britannica's editorial board to ask the Soviet editors. But for the first hour and more, it was I who was quizzed. The Soviet editors were eager to know all about our business, production and editorial techniques. The interview became something of a round table, and a strange one. We had very much in common when we talked the technicalities of encyclopedia publishing. But when we talked content—ideas—this was another matter altogether.

Their answer to one of my first question showed what a heavy curtain divided our ways of thinking. "What," I asked, "should be the objectives of encyclopedia generally?"

The aims of the great encyclopedias of the West have always included, among others, accuracy, authority for statements, clarity of presentation and an effort at international orientation.

The Soviet editor's reply was a simple one, but it only answered my question as applied to the Soviet Encyclopedia itself. "The general approach and objective of the Soviet Encyclopedia," Mr. Vvedensky told me, "is contained in the 1949 decree of the Council of Ministers which ordered its publication."

It is just this simple for the Soviet board of editors. They are working under a Government directive which orders them to orient their encyclopedia as sharply as a political tract. For what does the 1949 decree of the Soviet Union's Council of Ministers say? It could not be plainer. "The second edition of the Great Soviet Encyclopedia,'" it declares, "should widely elucidate the world-historical victories of socialism in our country, which have been attained in the U. S. S. R. in the province of economics, science, culture, art."

Nor is this all. "With exhaustive completness," the decree continues, "it must show the superiority of Socialist culture over the culture of the capitalist world. Operating on Marxist-Leninist theory, the Encyclo-

pedia should give a party criticism of contemporary reactionary bourgeois tendencies in various provinces of science and technics."

The encyclopedia was thus planned to provide the intellectual underpinning for the Soviet world offensive in the duel for men's minds. The Soviet Government ordered it as a fighting propaganda weapon. And the Government attaches such importance to its political role that its board of editors is chosen by and is responsible only to the high Council of Ministers itself.

These editors are not a bit sensitive about the political bias of their work. Mr. Vvedensky told me with seeming satisfaction that his encyclopedia has something which Western encyclopedias lack. It has what he chose to call a "world outlook."

"While striving to maintain complete objectivity," he explained, "all articles are of course written from the position of our world outlook—Marxism-Leninism." Objectivity? By Soviet standards, this has nothing in common with an impartial approach. The Russians have a new term for what we Westerners mean by "objectivity." They call it "bourgeois objectivism," and the editors of the Soviet encyclopedia are pledged to avoid any trace of it.

Mr. Vvedensky's "world outlook" was of course far removed from what has always been understood in the West as an international outlook. This latter the Russians scornfully call "bourgeois cosmopolitanism," and the editors are doing their best to avoid it, too. The matter could not be simpler. "The Soviet Union," they assure their readers in the foreword to their first volume, "has become the center of the civilized world."

I told the Soviet editors the number of words which the Britannica devotes to articles on various countries; 220,000 to the United States, 200,000 to Britain, 125,000 to France and 100,000 to the Soviet Union. "Do you consider this a fair distribution, or not?" I asked. "Do you think we have given a fair share to Russia?"

They didn't dispute it. Indeed, the question of fairness is lost on them. They told me the space which they allocate to various countries. Their article on China is 90,000 words long. They give 70,000 words to Germany; 68,000 to the United States; 62,000 to Britain, and 55,000 to France. And the Soviet Union? This will be the subject of their final volume, an entire special volume on the U. S. S. R.

I asked them to tell me about their article on the United States. I hoped to find out whether it reflected the strong anti-American bias, the "hate America" theme of pre-Geneva. They jumped over the subject quickly. The article will be in a volume scheduled to appear next spring, they told me. They didn't want to talk about it.

"How do you plan to keep your set up to date?" I asked. "Is there any system of continuous revision?"

They said that they had no system of continuous revision. What did I mean? They appeared fascinated when I explained that the Britannica annually reviews and revises between three and four million words out of the 40 million which it contains, and that over a 10-year period every article is read and reviewed for revision by experts at least once. Nothing that I told them about our operation evoked such keen interest as this.

I well understood this interest. It stemmed first from their problem of the changing Soviet political lines and personalities. The entire new edition of the present "Great Encyclopedia" is a revision of the earlier, disgraced edition. Much that appeared in the first edition has been slashed out as "bourgeois-objectivist."

There is also the question of the vanishing concepts. Let me illustrate from the first volume. The article on Academic Freedom from the first edition has disappeared. There is now no trace of an article on Absolute Rights. Information on such concepts as these has given way to bristling articles on new subjects of a political nature such as Agitation and Aggression.

Further, there is the problem of the vanishing men. Many are the prominent Russians who were covered in the old edition but who have disappeared from the new one. Famous men and women in all walks of life have been ruthlessly turned, as in George Orwell's chilling novel "1984," from persons into "unpersons." They have been dropped into the "memory hole."

I knew that the editors already were having trouble about articles in their new edition that were demanding revision. I brought up the extreme Beria case. I asked them about their clumsy publishing performance, after Beria's execution, when they sent letters to their subscribers in Russia and abroad, recommending that a laudatory article on him be cut out of the volumes already printed and shipped.

They admitted the letter cheerfully enough. But they protested, "It was the only case of its kind in the history of the encyclopedia." They explained that they had been forced to their action by letters from outraged subscribers. Further, they insisted that the subscribers had not been ordered to cut out the offending article. They had only been given a chance to do so, and to insert substitute new pages on the Bering Sea.

"How do you decide which biographies merit inclusion in the encyclopedia?" I asked. "Especially those of living persons?"

"This is a very complicated subject," one of the editors replied. "There is a great deal of dissatisfaction," said another, "among those who don't get in." He smiled and went on, "The scientists say there are too many artists and the artists say there are too many scientists."

The Soviet editors seemed surprised when I told them that we carried only 1,000 such biographies. I explained that the Britannica prefers to wait until a man is dead for better evaluation of his work. I laughingly suggested that it would be still easier if no biographies were carried of living persons. "Of course," replied Mr. Vvedensky, a little wryly, "that is the simplest way, but it isn't always possible."

I then asked how the Soviet Encyclopedia selects the authors for its articles.

"We enlist a wide circle of authors," the editors proudly told me. The board of editors is responsible for the choice of authors, one of the editors explained, but much of the actual work of selection is done by an "apparatus" of specialists in 25 fields, who consult with institutions of higher learning.

"A total of 7,579 authors," he said, "signed articles in our first 25 volumes." Fifty-eight of these authors were "honored scientists, artists, or honored figures of technology," the absolutely top men in prestige and acclaim, according to Soviet judgment. Four hundred and seventy-seven were members of the Learned Academy of Science or of academies of science in the 16 republics. Of the rest, roughly 25 percent were professors and doctors of science, 35 percent candidates of science, 20 percent specialists without titles, and 20 percent leading officials of the Communist Party and the government.

"What do you do if the articles are poorly written?" I asked. "How do you go about checking facts such as statistics, especially in articles pertaining to foreign countries?"

The editors' reply did not deal directly with statistics or sources. "Once we receive an article," I was told, "the labor pains begin." One of the editors then launched into a description of a process which he termed "public discussion," and which has no counterpart in encyclopedia publishing in the western world. All articles are submitted to 2 or 3 reviewers, but this is only part of the verifying task. Key articles of special significance are then publicly discussed by the board of editors. They are also mailed out for public discussion.

The Soviet Encyclopedia mailed out a total of 7,780 different articles slated for publication in the first 33 volumes, I was told. Each such article is sent to 1,160 different institutions. But on the 7,780 articles which had been sent out, I was told there were in all only 8,332 commenting replies. This is an astonishingly small number.

I asked whether the replies were of value to the board of editors. "Not always," one of the editors said. "But as a rule they are useful."

I have the feeling that the articles are not sent out so much in the hope of receiving valuable replies as for the record. They are widely distributed in order to protect the editors. If here is to be trouble with an article after it is published, today's editors can point out, "We sent it to 1,160 institutions for review before we published it."

"Do you ever encounter the problem of conflicting schools of thought on a subject?" I asked, "If so, how is that solved?"

"Of course," one of the Soviet editors replied, "on some articles there are different schools of thought. The board must settle the differences. When we find two legitimate viewpoints we make the author present both."

My belief is that this happens only rarely; so I asked for an example.

"There is a dispute," he told me, "about the history of China. Just when did the feudal period begin? There are also arguments about Confucius."

"Pumps," volunteered another editor. "There is even a big argument about pumps and their development."

At one point during the interview Mr. Vvedensky, to my surprise, had a great stack of booklets brought out to show me. They were reprints of Soviet Encyclopedia articles in many languages. These are distributed in foreign countries. This is how Soviet propagandists use the prestige in the name "encyclopedia" to give authority to their claims abroad. Mr. Vvedensky assured me that the board of editors had nothing to do with these reprints.

"People abroad just make booklets of the articles that interest them," he said. He handed me a booklet on Armenian Culture, another on Art. He showed me a third entitled "History of Germany," translated for East German readers. He laughed as he gave me this last, and said, "Hardly a suitable article for the Britananica."

"An encyclopedia often can't help reflecting its time and place," I remarked. "But should it not seek to avoid this?"

This question seemed to make Mr. Vvedensky thoughtful. "It is very hard," he replied, "to find a formula." He paused a moment, then added, disarmingly, "We haven't found it yet. The editor must feel what is temporary and what is lasting."

"You must understand clearly," he cautioned me, "that the Soviet encyclopedia does not attempt crudely to put in Marxism-Leninism on each occasion. Many of our articles have nothing to do with Marxism-Leninism."

I asked him to name a few such articles. He replied that in an article such as that on cosmogony or any article on theoretical subjects such as physics, no Marxism-Leninism ideas will be mentioned. But he quickly added, "in the field of history and social movement, these must be keyed to Marxism-Leninism."

This is what we are up against when we try to exchange ideas with the Russians, even with some of the more scholarly men of the Soviet world. There is perhaps no more telling gage of a great nation's standards than its leading reference work.

There is no place under the Soviet system for an encyclopedia as the term has always been understood in the West. The frame of reference of the Russians' "Great Soviet Encyclopedia" is one that breaks with standards established from earliest times. It is the strangest encyclopedia since the invention of the word.

The Soviet editors seem proud of this. But what of their readers? The only general reference work to which they may turn for the truth about the world is a giant propaganda brochure on the Soviet system. It is a Communist political tract in 50-odd volumes. It is the currentliy embalmed dogma of Marxism-Leninism-Stalinism applied to all society, its past, present and future.

Further, the very minute the final volume goes to press, the editors will begin a new 10-volume set. They are not satisfied with their present "circulation" of 300,000 sets. Their masters desire a far wider audience.

The 10-volume set won't be a summary or condensation of the large one. It will be a completely new edition. All articles will be written for a far wider audience, for "a lower level intellectually." This is to be designed to insure that there will be no one who can read in the U. S. S. R., who cannot understand the final and authoritative version of all knowledge. Thus the Soviet propagandists propose to expand their domain into the last remaining frontiers.

Bureau of Internal Revenue Service Center

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 1, 1956

Mr. PELLY. Mr. Speaker, the Bureau of Internal Revenue is currently in the process of establishing service centers strategically located throughout the United States. These centers are to be used for the purpose of processing simple income tax returns on a mass production basis. The more complicated cases will still be handled on an individual basis and through the various district offices as at present. I am told there will eventually be five such centers throughout the country. There are two already in operation, one in Kansas City, Mo., and the other, in Lawrence, Mass. The next one is scheduled for the western region, which comprises the States of Washington, Oregon, California, Montana, Idaho, Utah, Nevada, and Arizona.

The authority for selecting the location of the western region center rests with the regional commissioner in San Francisco. I am told he will choose the location on the basis of availability of terminal railway mail service and finding a suitable facility with proper space, light, ventilation and heat, as well as consideration to obtaining qualified personnel. It is anticipated that the center will require from 200 to 400 employees skilled at typing, keypunch operating, and general clerical work. Information has come to my attention indicating that it is not the policy of the Internal Revenue Service to advertise for space. Its requirements generally are filled through the activities of Chambers of Commerce and other interested civic groups who submit proposals.

Representing as I do the metropolitan area of Seattle, Wash., conveniently located in the western area currently under consideration for development of the third service center, I am pressing the advantages that Seattle has to offer as a desirable location. I am presupposing that Seattle can meet the criteria for the establishment of the western service center. If Seattle is unable to qualify, then I would hope some other city in my State would be able to meet the requirements. But I am not asking any undue favoritism.

According to information given me, the new program of Internal Revenue Service centers is working well in the two locals already in operation, expediting as it does the processing of millions of routine tax returns to the average taxpayer and, at the same time, bringing more complicated returns under closer scrutiny than was heretofore possible. I heartily endorse this program and hope the additional centers required to make it effective nationwide will be established as soon as possible. Meanwhile, it is to be hoped also that political pressures will play no part in the final determination of location, but rather that the good of the service and the economy to the taxpayer will be determining factors. Of course, I would like to have Seattle selected but only on the merit of its case. There has been altogether too much politics in such matters as locating Government facilities in the past.

Air Service From Northern Cities to Florida Cities

EXTENSION OF REMARKS
OF
HON. JAMES A. BYRNE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. BYRNE of Pennsylvania. Mr. Speaker, for some time now hearings have been held before the Civil Aeronautics Board regarding additional service from our northern cities to Florida cities—a service obviously necessary in the eyes of those of us who sought unsuccessfully on so many occasions to obtain reservations on Florida-bound planes on the days we wanted to travel.

Pan American Airways has applied to operate from New York to Miami, using Philadelphia as a coterminal.

The mayor of Philadelphia, Richardson Dilworth; Frederic R. Mann, director of commerce for the city; the Philadelphia Inquirer and the Philadelphia Evening Bulletin; plus the Chamber of Commerce of Greater Philadelphia, have all gone on record unqualifiedly in favor of the Pan American application.

Philadelphia wants this service to Florida and Pan American is prepared to give it to us.

Under unanimous consent, I include in the RECORD a recent joint press release from Mayor Dilworth and Mr. Mann, a resolution from the board of directors of the chamber of commerce, and editorials from the Inquirer and the Bulletin.

The matters follow:

JOINT STATEMENT BY MAYOR DILWORTH AND MR. MANN, FEBRUARY 20, 1956

Richardson Dilworth, mayor of the city of Philadelphia, and Frederic R. Mann, director of commerce, today reviewed the recommendation of the Aviation Division of the Commerce Department and the Chamber of Commerce of Greater Philadelphia in the East Coast case now pending before the CAB. The mayor and the director of commerce reaffirmed the stand of the city of Philadelphia and the chamber of commerce, but emphasized that great emphasis should be placed on supporting the proposal of Pan American Airways to give direct service between Philadelphia and Miami, and single plane service direct to points beyond Miami to the Caribbean, Central and South America. No other carrier in the case offers this much-needed service south of Miami.

"Figures submitted in the Washington hearings indicated that passengers between Miami and Philadelphia in 1954 averaged 5,000 per month, and at the present time are exceeding that figure by a substantial margin. The extent of the public benefits from this through international service is shown by the fact that almost 20 percent either originated at or were destined to Latin America and Europe.

"Pan American is proposing to serve Philadelphia initially with three daily nonstop services to Miami, two of which would continue on to Latin American points. The company has stated that, although they expect to utilize DC–7B and C equipment immediately upon certification, they propose to use jet aircraft upon receipt in 1959. These aircraft will cut the flying time between Philadelphia and Miami to 1 hour and 45 minutes.

"Because of the international aspect of Pan American's proposal, which will provide through-service between Europe and South America via Philadelphia, Pan American's program will give Philadelphia considerably increased frequencies to Europe. At the outset the program calls for two through-services daily between Philadelphia and important European points. The importance of international service to Philadelphia from Latin America is demonstrated by the Port of Philadelphia's trade figures showing that 57 percent of the port's export and import tonnage in the amount of one-half billion dollars annually is with Latin America."

Mayor Dilworth and Mr. Mann stated that another important consideration in the city's decision to support Pan American was its ability to provide extra service during the heavy traffic period winter months to Florida, utilizing surplus equipment which the company has available during that period when its Atlantic traffic is at a low point. "We are impressed with the fact that all profits derived from the operation of these improved services will be applied entirely to reduce the company's subsidy requirements. These profits will, therefore, result in a corresponding saving to taxpayers."

Mayor Dilworth and Mr. Mann reaffirmed the city's desire to have Northeast Airlines' service extended into Philadelphia from New York to provide additional one-carrier service to important New England communities. In this connection, the city also want National Airlines, whose Philadelphia service now terminates at New York, to be permitted to extend its routes to Boston, Mass., and further requests the removal of the Eastern Airlines restriction in service between Philadelphia and Boston.

"While the route proceeding before the CAB originally contemplated consideration of only the domestic aspects of the airline route pattern, it was subsequently expanded to include coordination of international traf-

fic with domestic. As a consequence, the city of Philadelphia's original position has been modified accordingly," Messrs. Dilworth and Mann stated.

RESOLUTION ADOPTED BY BOARD OF DIRECTORS, CHAMBER OF COMMERCE OF GREATER PHILADELPHIA, FEBRUARY 20, 1956

Whereas the Civil Aeronautics Board in its Docket No. 3051 et al., known as the New York-Florida proceeding, is considering applications for a number of carriers by air for certificates of public convenience and necessity to transport persons, property, and mail between points along the Atlantic Seaboard, including Philadelphia, Pa., on the one hand, and certain Florida and New England cities, on the other hand; and

Whereas the Chamber of Commerce of Greater Philadelphia intervened and participated in this proceeding and in cooperation with the city of Philadelphia presented substantial evidence and filed a brief therein; and

Whereas the scope of this proceeding has been clarified by the facts of record as made before the examiner, which show that, in addition to the strictly domestic services previously known to be involved, the proceeding with respect to Philadelphia also involves proposed single carrier, one-plane service to and from Caribbean, Central and South American areas, and improved services to and from European points; and

Whereas Philadelphia, the third largest city and the second seaport of the United States, has a substantial community of interest with other Atlantic coastal area cities and all Latin-American and European countries but to and from Latin-American countries there is no through single carrier, one-plane airline services and the existing domestic and transatlantic services are not adequate to meet the needs of the business and commercial interests of Philadelphia; and

Whereas the community of interest between Philadelphia and many points in New England justify the authorization of single carrier and single-plane services; and

Whereas under the scope of this proceeding the only applicants that could provide Philadelphia with the needed one-carrier, one-plane service are Pan American World Airways, as to the Caribbean, Central and South American areas, and improved service as to European points and the Northeast Airlines as to the New England points involved: Now, therefore, be it

Resolved, That the Chamber of Commerce of Greater Philadelphia go on record in this proceeding as (1) favoring the application of Pan American World Airways as involved herein; and (2) favoring the authorization of Northeast Airlines to extend its route from its present southern terminal of New York to at least as far south as Philadelphia; and that in future procedural steps before the Civil Aeronautics Board written and oral statements be presented in support of this position.

[From the Philadelphia Inquirer of February 22, 1956]

TO GIVE DELAWARE VALLEY AIR SERVICE IT NEEDS

The strong backing given by the city administration and the chamber of commerce to Pan American World Airways' application for additional, nonstop service between Philadelphia and Miami is thoroughly warranted by the growing needs of the Delaware Valley.

This thriving area centered in Philadelphia is becoming more important to the economy of the country every day. Its 6 million people, living and working along both sides of the Delaware River, deserve nothing less than the best in modern air transportation.

Figures cited by the chamber of commerce show how the demand for air service is growing. Air travel between Philadelphia and Miami increased from 32,914 in the first 6 months of 1954 to 48,045 in a comparable period last year. The rate of increase was much greater than the average rate for Miami travel from other eastern cities.

Pan American, a line with world-wide reputation for efficient service, is one of those proposing to boost the Philadelphia-Miami service. Northeast Airlines, a smaller carrier, also has an application on file with the Civil Aeronautics Board. Service to the Florida city is now supplied by Eastern and National airlines. Both are excellent lines, but have not the equipment to provide the service to which the community is entitled.

Several factors ought to weigh heavily with the CAB in appraising these applications. One is the size and standing of Pan American, a well-entrenched operation with flying experience covering literally billions of miles. Another is the company's plans to use jet airliners when they are received in 1959, cutting the flying time from here to Miami to 1¾ hours.

Up to now Pan American has been regarded as an overseas airline. But that fact strengthens its bid for the Philadelphia-Miami certification. Two of its proposed three daily flights to Miami would continue to South America, furnishing additional service to residents of this area bound for Latin American destinations. Philadelphia's wholly satisfactory experience with Trans-World Airlines, which also operates both domestic and foreign routes, is a potent argument for extension of this kind of service.

Delaware Valley's air transport requirements are growing, along with its industries, its jobs, and its economic importance. The CAB can help meet those needs by approving Pan American's proposals for service between Philadelphia and Miami.

[From the Philadelphia Evening Bulletin of February 24, 1956]

A VITAL AIRLINE SERVICE

The importance to Philadelphia of the service which Pan American World Airways wants to inaugurate here was properly emphasized by representatives of the city at this week's hearings before the Civil Aeronautics Board.

Regular service would be provided to Puerto Rico and to South America, and additional service through Miami. In proposing to make Philadelphia a coterminal with New York for these flights, the airline would avoid some of the disruptions caused by fog.

This would be a valuable addition to Philadelphia service. Its need has been demonstrated by the growth in traffic between here and Miami. This has outpaced the travel gains from other areas.

Does Earning Power Determine Disability Rating of Our Veterans?

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1956

Mr. PATMAN. Mr. Speaker, I have just received a letter from the wife of a disabled World War II veteran of Paintsville, Ky., which poses some questions that ought to be considered by the Congress, and I am inserting it in the RECORD so that Members can note its thought-provoking queries.

Her letter follows:

DEAR REPRESENTATIVE PATMAN: I am the wife of a disabled veteran who has a Purple Heart with three Oak Leaf Clusters, as a result of duty with the infantry in Germany during World War II.

My husband tells me when he goes to the regional office of the Veterans' Administration for an examination about the first things they ask him are: How much time have you lost from your work? How much do you make a day, week, and month? Several other disabled veterans tell me they are asked these same questions. Is the Veterans' Administration basing a financial earnings report of a disabled veteran on the ability he has left to rate the disability he has lost? This, in my opinion, is not a legal question to be answered in every case.

I have heard some veterans say, "It looks like I will have to give up my job or they will take my pension." This, in my opinion, is a disgrace to human society for those men who press on now are probably the same men who pressed on in battle to victory. In plain English, the fear of disabled veterans losing their pensions, by obtaining some type of work which they can do, will and is probably making bums and outlaws out of good men who would have taken and kept their place in society by helping themselves to their capability if they were given a chance.

Most of these disabled veterans tell me that the pension check they draw was paid for by their services and blood in a war to free our country. The question I am asking is, "Is an earning power in dollars and cents a legal question for the Veterans' Administration doctors to ask a veteran when he takes an examination for compensation purposes," unless he is set up on a workability compensation and that question would be needed? My husband draws 40 percent disability and he has to work whether or not he is able, as he has himself, two children, and me to feed and support.

I shall appreciate hearing from you concerning this matter at your earliest convenience.

Respectfully yours,

Mrs. ELLA MARIE FERGUSON.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Alpha Sigma Nu Lecture of 1956 by Don Jose Ma. de Areilza

EXTENSION OF REMARKS
OF

HON. ROMAN L. HRUSKA

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Friday, March 16, 1956

Mr. HRUSKA. Mr. President, on Sunday, March 4, 1956, His Excellency, Don Jose Ma. de Areilza, Ambassador of Spain, delivered a lecture at my alma mater, the Creighton University, in Omaha, Nebr.

This was the Alpha Sigma Nu lecture of 1956, delivered at the invitation of the Very Reverend Carl N. Reinert, S. J., president of the Creighton University, the university board of regents, and the university chapter of Alpha Sigma Nu, the national Jesuit honor society.

The Ambassador spoke on the role of Spain in the defense of the free world.

At the conclusion of his lecture, the Ambassador was presented with the Creighton University distinguished service award in the field of diplomacy.

It was a great honor to my home city of Omaha and to Creighton University that the Ambassador consented to take part in this outstanding series of lectures.

I ask unanimous consent that the text of his address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows.

ALPHA SIGMA NU LECTURE OF 1956, DELIVERED BY THE AMBASSADOR OF SPAIN, DON JOSE MA. DE AREILZA, CREIGHTON UNIVERSITY, OMAHA, NEBR., MARCH 4, 1956

A few miles from the place where I was born, on the northern coast of Spain, stood a medieval castle in the center of a pleasant valley surrounded by villages. There, a man was born more than four centuries ago, whose personality had a decisive influence in the course of world history. He was the son of a noble Basque family, and as such, was educated for the military life. Ignacio de Loyola—such was his name—was thus trained in the austere discipline of the Army, and because of the rank of his family he was admitted to the royal court. He was dashing and charming and attained great success. He was supposed to have been in love with the sister of the Emperor Charles the Fifth. He went to fight the French enemy which invaded the city of Pamplona in those first years of the 16th century. A shot wounded him in his limb. Medical errors delayed his convalescence and left him with a permanent limp. But while convalescing this disabled soldier did a good deal of reading. And from a hero of the battlefield the grace of God effected his conversion. In the designs of divine providence he was destined to become a great saint. With the same enthusiasm and vigor with which he had fought in the war, he enlisted men and as a warrior of God founded a new religious order. And thus, after many years of prayer and penance, Ignacio de Loyola established the Jesuit Order, based on the strictest discipline. Loyola, thought that there was needed at that time a general mobilization of Christians to place at the service of the church in its defense of Christianity against the enemies, within and without, that were striking at the unity of the Western World.

This year, as we commemorate the fourth centenary of his death, the figure of Ignacio de Loyola is magnified in our eyes. His entrance on the scene of history coincided with the attacks of the Ottoman against Christian civilization. There was at the beginning of the 16th century both a political and intellectual upheaval which commenced the destruction of the Christian unity of the Middle Ages. On the one hand, the Renaissance had produced a climate of restlessness which, at the same time that it created masterpieces of art and literature, awakened in man that devilish conceit which thought it could emancipate man from faith and authority. Man believed that the moment had come when he might assume the central place in creation and that he might contest with God Himself the place of the Ruler of the Universe. Growing nationalism—political, economic, and religious—effected in northern Europe an upheaval of historic consequences.

Spain, a Catholic country par excellence, which had finally expelled the Moslem from its territory at about the same time that it discovered America, felt itself compelled to put all of its resources and energy at the service of Christian unity. But Ignacio de Loyola went much further. He realized that it was not possible to defeat the enemy in the battlefields for the church, unless the members of the church themselves were reformed. This was the salutary idea of Ignacio de Loyola. This was the central purpose which he had in mind in founding the Society of Jesus.

It is especially gratifying to me, as Ambassador of Spain in the United States, to speak to you this afternoon about the role of Spain in the defense of the free world. Even today dangerous winds are blowing which still threaten to destroy Christian civilization completely. There is an international conspiracy today, directed from Moscow, to destroy the basic principles of our free Western civilization which is founded on the moral precepts of Christianity. And now, as then, there are two problems, closely linked: That of military strength, and second, that of moral superiority before the enemy.

The role that Spain plays in the defense of the free world is understood by anyone who is not prejudiced, by simply glancing at a map of Europe. International communism with its great mass of nearly 800 million human beings, controlled by a totalitarian and atheistic despotism, has a great military power at its disposal. It has an aggressive purpose, in spite of the fact that for tactical reasons, they try to disguise from time to time their real intentions with the smiles and blandishments of pretended coexistence. These fool only those who wish to be fooled. Before that great mass of humanity and that vast military might the free world has established, under the inspired leadership of the United States, a veritable chain of countries which, so to speak, completely surrounds this enormous Communist bulwark, around its perimeter. But this chain that we see in maps, newspapers, and magazines, is more theoretical than real, because the military might of many of those countries is little or none, and their capacity to resist is weak or limited. In Western Europe where the problem is more important perhaps than anywhere else, since if Europe were to fall into Communist hands the final contest would be lost, the problem is more acute and serious because in spite of the alliances and pacts of the free world we all know that there exist in a good many countries—that I do not wish to name—grave difficulties of internal order, and powerful minorities of Communist-dominated labor unions and politicians will act as agents of the U. S. S. R., a fifth column to counteract the military efforts of the nations of the free world.

In case of emergency it would be unfortunately demonstrated that the United States would have, in fact, very few real allies in the free world. One of the real allies would be the Iberian Peninsula, not only because of its geographic position, whose strategic value can be seen by anyone, but also because of the high military esprit de corps of Spanish Armed Forces and the deep anti-Communist feeling of the great majority of the Nation.

Since we know by experience what it is to live under the terror of communism, we need not be told of the crimes and monstrosities committed by the Communists in the countries they dominate by fear. The United States shall always have as its stanch allies those countries which have suffered that painful experience. Spain is one of them. Without any Communist agents publicly recognized, nor with a Communist Party, and with a great desire to collaborate in the defense of our civiliaztion, Spain offers to the United States the best assistance possible for its policy of European defense. It is one of the ironies of today's politics that Spain is one of the few countries in Western Europe that has not been invited to join NATO, that is, the North Atlantic Treaty Organization, because some of its member countries which have Socialist governments do not wish to sit at the same table where Western defense is being studied, alongside an ally that is willing to fight with all its enthusiasm and loyalty and without any reservations in cooperation with the United States. I trust that this situation which is contrary to logic and commonsense shall not last much longer.

Spain had to fight and to triumph over communism during a terrible struggle which lasted 3 years—from 1936 to 1939. It is absurd to say that in 1936 a group of dissatisfied soldiers, backed by Hitler and Mussolin, decided to establish a dictatorship in Spain. This grotesque statement cannot be earnestly maintained by anyone who knows the recent history of our country. In February 1936 the so-called Popular Front, an alliance of Communists, Socialists, and left-wingers, practically took power, falsifying the results of an election that had given the victory to the conservative rightwing. Thereafter, Spain degenerated into a terrible anarchy. The Catholic minority of the rightwing tried to defend its position condemning the shameful crimes, robberies, burning churches and convents, attacks on newspapers, etc. But the only result of that effort, was the kidnapping and assassination one morning of the chief of the conservative opposition by the Government police without any explanation of the crime. This compelled all patriotic and conscientious citizens

to rise up in arms to defend their own life, and, what was just as important, the faith and spiritual heritage of their country. The war would have ended in a few months with the triumph of the forces of law, had not international communism come to the rescue of the pro-Communist Popular Front. It sent them more than 60,000 soldiers under the name of "international brigades" which were recruited in the principal cities of Europe and America. The chief of these brigades were well-known figures of the Communist world, such as Tito, the present boss of Yugoslavia; Zaessner, boss of the Communist Party of East Germany; Marty, one of the bosses of the French Communist Party; Togliatta, the boss of the Italian Communist Party. These are just a few. This military intervention of the Communist brigades prolonged the Spanish War for more than 2 years. Although German and Italian volunteers, who wanted to avoid at all costs the possibility that Spain might fall into the hands of Communist forces, came at once to our assistance, their number was scarcely 5 percent of the total fighting force of Spain.

The Spanish war ended in April 1939 with the victory of General Franco and the forces he commanded. Three months later, the Second World War broke out. In spite of the repeated accusations against Franco that he was subjected to the Nazis and Fascist forces of the Axis, Spain maintained a strict neutrality during the 6 years the war lasted. I am not the only one to state this. Here are, for example, the texts of what was said about our neutrality by illustrious statesmen. As you will recall, President Eisenhower wrote: "We are undertaking an operation (the landing in North Africa) of a quite desperate nature, which depends only to a minor degree upon military preparedness, and mainly on the reasonable hope of the continued neutrality on the part of the Spaniards, which will amount, in fact, to an effective collaboration." And Winston Churchill wrote in his memoirs: "I must say that I shall always recognize that Spain (with its neutrality) rendered a great service, not only to the United Kingdom and to the British Empire and Commonwealth, but also to the cause of the United Nations."

At the conclusion of the Second World War, and in spite of the irreproachable behavior of Spain, Soviet Russia insisted at the Potsdam Conference that Spain be considered as an outcast in the international family of nations, condemning her to isolation for being the last Fascist country in Europe. This incredible demand of communism, seeking revenge for its defeat in Spain, was accepted, incredibly by the Western Powers. Thus we were forced to live in diplomatic isolation from 1945 to 1950 and not to receive a penny for our economic development during all those years, when the great generosity of the United States spent more than $35 billions on the countries of Europe, especially on its former enemies, Italy and Germany, to repair their shattered economies.

The Korean war had to break out, with its impressive figures of dead and wounded, to awaken the consciousness of this danger and understand, in the light of such danger, the great injustice committed against Spain. And it was the United States that had the honor and privilege of being the first of the great powers of the West to understand this mistake, and, with the great generosity of the strong, to rectify it. Thus, Spain and the United States signed, 2 years later, an agreement of military and economic cooperation, whereby we offered the United States some air and naval bases in exchange for certain military and economic assistance for our country and our army. This is the true history of what has been called the case of Spain. I only want to add that it ended in complete victory for our cause, thanks first of all to our Heavenly Father who always has protected us, and also to the serenity of Generalissimo Franco, who did not yield when he was being pressed by Hitler to join him in his attack on England, and who knew how to stand firm before the whole world which kept urging him to quit his post. Franco knew that in a few years the world would do him justice. And this has been the case.

The great campaign of scandal and untruth launched against Spain during these 6 years of our international isolation, not only by the Communists themselves but also by fellow travelers of communism, gave rise to the most grotesque distortions of the truth with reference to our country and the political regime by which it is ruled, grotesque to the point of being cartoonish caricatures. For instance, there has been great scandal regarding our religious problem, to the point where it has been said that Spain had a state government which was so united to the church as to involve an extravagant mixture of personalities. Nothing has been further from the truth. In Spain there is no fusion, and no confusion, of church and state, as there is, for example, in Great Britain, where the chief of state, the King or Queen, is at the same time the head of the Church of England. The vast majority of our country is Catholic—99½ percent. Of course, there are devout, lukewarm, and bad Catholics, as there are elsewhere. But the fact remains that the non-Catholic minorities are in numbers so small as almost to be without significance. Spain has about 30 million inhabitants. The Protestant population numbers less than 25,000, or less than one-tenth percent of the population. The number of Jews is much less. Under Spanish law the right to worship is completely guaranteed these minorities. For the less than 25,000 Protesants in Spain today there stand, to my knowledge, 286 Protestant churches and chapels. Incidentally, the proportion or Protestant churches and chapels to the Protestant population is considerably higher than that of Catholic edifices to the Catholic population. In Spain the church and the state have a sphere of action totally independent. What both powers do is to collaborate harmoniously in bettering the spiritual interests of the community. Thus, the church cooperates with the state in a very efficient manner in the problem of morals, customs, and education. But it does not interfere in an active way in the problems that affect the other branches of the political and professional activities of the Spaniards. A covenant with the Holy See limits with scrupulous detail the respective jurisdiction of both powers in perfect agreement. Since the great majority of the population is Catholic it is logical that the spirit of our religion has an influence in the establishment of our laws, not because the church dictates it, but because the Spanish people so want it. The story, then, of the ecclesiastical influence in affairs of state in Spain is no different from what are the facts in countries predominantly Protestant, where the citizens have carried the principles of their religious philosophies into the legislative bodies, and have woven the same into the codifying of their private and public law.

It has also been said that the Spanish regime hates liberty and suppresses it among the people. That is the same as to say that when a man abuses alcoholic beverages, thereby endangering his life and is advised by his doctor to avoid alcohol completely for a period of time, for the good of his health, that the doctor has established a regime of hatred toward alcohol as a basic principle of existence. In Spain a badly understood concept of liberty carried the nation, from 1931 to 1936, down along the road to chaos and anarchy in less than 5 years. Those were the days of demagogery and lawlessness that brought about a series of catastrophies, crimes, violence, robberies, all without precedent in the history of our nation.

When, in order to save the country from chaos and barbarism, we had to resort to a civil war where nearly 1 million Spaniards lost their lives, to say nothing of the countless other casualties, it is easy to understand that the political regime which arose from that violence was compelled to restrain, during a long period of time, some of the so-called democratic freedoms. This was necessary until the whole country had returned to full political normalcy. First, the Second World War placed us in a difficult neutral situation and later, the international isolation forced us to maintain a difficult position for a long time. Our wish and that of the Government is to establish gradually the institutions needed to restore normal political conditions in the country. The right to popular representation and the exercise of the basic liberties of men are prominent and actively present in the minds of those who govern Spain today, men of deep political and cultural insight. It was after all, Spain who discovered in the 16th century the rights of the people through Fray Francisco de Vitoria and his school of philosophy. Vitoria from his professorial chair at the University of Salamanca faced the Emperor with reference to the judicial titles by which he was going to establish his domain over the millions of Indians in America which had been discovered and colonized by his captains. The feeling of freedom in the Spanish people is so deep and substantial that, in spite of the formal and legal restrictions, I do not believe there is in all of Europe today a more outspoken country, with greater freedom to criticize, analyze, approve or disagree with its leaders, on the street or in any other public or private place. Approximately 250,000 tourists visit Spain each year. They travel freely throughout the country talking with its inhabitants. Anyone who tells those tourists that they are visiting an enslaved country, lacking all the freedoms under a despotic government, shall laugh when they discover by themselves the truth about the Spanish way of life after a few days of living there.

It is a fact that we do not believe that liberty in the democratic manner, as exists here in the United States, is completely adaptable to the Spanish temperament and character. Just as it would be intolerable for you Americans were I to try to sell you a political ideology different from that which you have freely accepted, and to try to impose it here. In the same manner we, the Spanish people, cannot accept by force a political system or the idea that, although perfectly honorable, we do not find suitable to our needs, just as a suit that is either too big or too small to fit properly.

In closing let me say that I wish I could give you a more complete picture of what Spain is today, a clearer understanding of what is its role in the defense of the free world. But to go back to the story with which I began, of a great saint who established the Jesuit Order, I believe that the free world is not only in need of a military force with which to protect and defend itself, if necessary, but above all it is in need of a moral and spiritual reformation with which to make us better men than are our enemies.

Four hundred years ago the Catholic Church won its greatest battle the day that the great spirit of reform, through the instrumentality of two Spanish saints, Ignacio de Loyola and Theresa of Avila, restored the church to its original splendor and purity. So today the first and foremost of our objectives in the free Western World must be the correction of the vices and shortcomings of our system. In the eyes of the great mass of people of the less developed countries of Asia and Africa, the white man has commanded respect not only by superior technical and military knowledge but also by his superior morality. That moral superiority must be regained today. Our western capitalistic system has many shortcomings, many injustices, and many social differences which scarcely render it a model in the view of those salesmen of an alleged "Communist

paradise" who today are hard at work trying to sell their communism with the promise of an imaginary equality to all the impoverished peoples of the world. Ignacio de Loyola did not limit himself to this alone, but he went deeper. He fixed his attention on the individual, on man, to whose reform and salvation he dedicated his best energies. The immortal book that Saint Ignacio de Loyola bequeathed to the history of western culture was the "Book of the Spiritual Exercises." In those exercises which are like a manual of training for the army of God lies the secret of his enormous influence which endures century after century. He gazed with more penetrating intelligence than did anyone else into the depth of the human heart. He searched into the psychologic reserves of the soul and revealed as only a great man can the road to salvation and the mastery of the passions of man. Only in this interior renovation of the spirit of man, western man, which Ignacio de Loyola points out, may be found again the secret of our collective salvation. Only when man feels that he has an immortal soul, the spirit of equality really abides in him. Because we are all equal and feel equal only before God. Liberty abides within us because only within this order, and precisely within a religious ordering of life, can there be true liberty for man. After all, this was classically stated by the Latins in a definite way: Religio est libertas.

Jackson Day Address by Gov. Williams, of Michigan

EXTENSION OF REMARKS
OF
HON. PAT McNAMARA
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Friday, March 16, 1956

Mr. McNAMARA. Mr. President, last Saturday, in Detroit, the Democratic Party of Michigan had the largest Jefferson-Jackson Day dinner in the State's history. More than 2,500 persons attended.

On that occasion the Governor of Michigan, the Honorable G. Mennen Williams, delivered what I think was an outstanding address on the state of the Nation and the issues in the coming campaign.

I ask unanimous consent that excerpts from the remarks of my good friend, Governor Williams, be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

EXCERPTS FROM ADDRESS BY THE HONORABLE G. MENNEN WILLIAMS, GOVERNOR OF MICHIGAN, ANNUAL JEFFERSON-JACKSON DAY DINNER, DETROIT, MICH., MARCH 10, 1956

This is the biggest and most successful Michigan Democratic dinner on record. Let us resolve to make the 1956 campaign and election the biggest and most successful Democratic victory ever.

My congratulations to the precinct workers we honor here tonight, to the thousands of other party workers who are the shock troops of victory, and to all the rank and file of our great Michigan Democratic Party. You have shown that you can carry our Democratic standard to victory, and I know you are going to do it again in November.

My sincere best regards, also, to our Democratic members of Congress, to all our Democratic officials in the counties and the townships, and to my stalwart Democratic colleagues in the State administration and the legislature. You have shown that Democratic government is good government.

Last but certainly not least, I salute our outstanding team of party leaders, Margaret Price, our national committeewoman, Ernie Lacey, our national committeeman, Adelaide Hart, our State vice chairman, and the man who captains and correlates the work of all of us, our great chairman, Neil Staebler.

When we compare our record of Democratic achievement in Michigan with the record of Republican conduct in Washington, the contrast is clear. The Democratic record is one of achievement for all the people of the State, the Republican record one of service to special interests and neglect of the common interests of the Nation.

They talk of prosperity—and thank God most of us are prosperous in America, in spite of them—but what is the fact? The fact is that the Republican administration has put two groups in America into the billion-dollar class. General Motors in 1955 made a billion dollars in profits—and in the same year the American farmer lost a billion dollars in income.

The Republican administration has produced the greatest snowslide toward monopoly the Nation has ever seen. Mergers have tripled and concentration of corporate assets has gone up 10 percent. The profits of small business and small industry have declined by 66 percent. Fourteen million American families earn less than $2,000 a year—less than the amount the Republican administration itself has defined as the health and decency level.

They talk of peace—and thank God we still have peace, in spite of their blundering repeatedly to the brink of war. They have stumbled along with a policy based almost entirely on military force, carrying even that out badly, so that our friends have been frightened, those who should be our friends alienated, and the propaganda of our enemies against us promoted. They have failed utterly to develop the type of program which would appeal to the hearts and minds of men, the area in which the real battle is being fought. The need for programs like the good-neighbor policy of Roosevelt, or the point 4 program of Harry Truman has gone unfilled, long after the new Communist tactics have made a new approach on the part of the free world imperative.

They prate of integrity—and we are thankful the dome is still on the national Capitol, after 3 years of government by the "conflict of interest club." Integrity in this administration is the integrity of Dixon-Yates, of the Talbots and the Strobels, of Government officials who, when feathering their own nest with Government contracts, explain they do it during their lunch hour. There will be bad apples in every barrel, of course, and we've had a few of them, too—but under Democrats a betrayal of public trust was regarded as a reprehensible thing, not as a triumph of human frailty to be rewarded with a Presidential medal.

These are the things which it is our responsibility to bring home to the American voters—to make them realize that in this coming election they will not be voting on their degree of sympathy or good will toward any individual, but for their own welfare, the possession of their own government, and for the very future of our way of life.

In approaching this task, I am confident the Democratic Party will stand squarely on the solid ground of Democratic principle.

To us, for example, farmers are not just economic factors in the computation of gross national product. Farmers are people. Farmers are American citizens, entitled to full participation in the prosperity and well-being which our dynamic and expanding economy can produce. We Democrats can have no part of the cold materialism of Ezra Benson whose answer to the small farmer is to get off the farm and let agriculture become big business. To us farming is not only a business but a way of life, and a way of life which it is the duty of Government to foster and preserve.

In our Democratic philosophy working men and women are not just so many units in the labor force. Workers are people. Workers are citizens, entitled to life, liberty and the pursuit of happiness, and they can have these rights only if they are reasonably secure in their jobs, and free to organize to protect their jobs. We can have no part of the cold Republican philosophy that spawned the Taft-Hartley Act, and regards unemployment as the result of people not looking hard enough for work.

In our democratic philosophy, private ownership is a basic foundation of liberty. But we seek to spread ownership, not to concentrate it in the hands of a few. Therefore, we frankly stand with the embattled and harassed little-business man, because he needs the support of Government, while the giants of corporate industry and commerce have ample means for protecting themselves.

In our democratic philosophy the ringing words of the Declaration of Independence are more than pretty phrases. All men are created equal, and all men are endowed by their Creator with unalienable rights. We can have no part of the corrosive doctrine that any American, rich or poor, colored or white, native-born or naturalized, north or south, east or west—can be one whit less than a full citizen enjoying all the rights of citizenship—whether it be the right to attend the college of his choice, the right to be educated in the community school regardless of his color, or the right to vote secretly and freely.

We know that this is an ideal toward which we strive, not a condition which we enjoy. But we know, also, that this idea can never be realized unless we stand unrelentingly for the principle that the Constitution must be the law of the land, everywhere in the land; that no part of the Nation may be permitted to say it is not the law for them: that the President may not ignore its enforcement nor the Congress support its evasion.

Above all, our democratic philosophy does not conceive of a "well enough" which should be left alone. We bluntly reject the Republican psychology that so long as our aged have some security, so long as some of our indigent get some care, so long as the unemployed are not out of work too long and not absolutely penniless, that so long as conditions are somewhat better, Government can sit back and relax in dynamic conservatism.

This Nation stands upon the threshold of an age of plenty, the like of which the world has never dreamed. The energy of the atom and the powers of the sun are about to be harnessed to do the labor of tomorrow. The machines of automation are already taking over the monotonous and demanding tasks of industrial production and office work. For the first time there is prospect of plenty not only for the fortunate, but for all; of leisure, not only for the rich but for all; of full education and cultural opportunity, not only for the well-born but for the son or daughter of the factory worker, the storekeeper and the sharecropper.

To meet the mighty challenge of this future, the Democratic Party must and will offer the Nation programs of commensurate magnitude.

Ours is the party of Jefferson. Let us meet the challenges of tomorrow with Jefferson's vision, his devotion to the people.

Ours is the party of Jackson. Let us embrance our opportunities with the hickory courage, the iron determination in the grand old heart of Jackson.

Ours is the party of Woodrow Wilson. Let us approach the future with the inspiration of Wilson's new freedom, with his unswerving tenacity in the pursuit of democratic ideals.

Ours is the party of Franklin D. Roosevelt and Harry S. Truman. Let us meet tomorrow's challenges with the unforgettable courage, the confidence, the humanity of Roosevelt. Let us advance a program which will be to our time what the bold and daring programs of the New Deal were to his. And let us meet the foreign and domestic crises of tomorrow as Harry Truman met those of yesterday, with the courageous and far-sighted measures that kept us out of postwar depression, stopped the advance of communism, and saved the freedom of the world.

That is the Democratic Party of the past—confident and unafraid, ready to try new solutions to new problems, full of faith in the future and faith in the people—and that is the Democratic Party in which the people will put their trust in November.

Archbishop Josef Beran

EXTENSION OF REMARKS
OF
HON. ROMAN L. HRUSKA
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Friday, March 16, 1956

Mr. HRUSKA. Mr. President, I ask unanimous consent that a statement which I have prepared with reference to Archbishop Josef Beran, archbishop of Prague, be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

ARCHBISHOP JOSEF BERAN

(Statement by Senator HRUSKA)

Five years ago, on March 10, 1951, the Communist radio of Prague, Czechoslovakia, trumpeted victory after a 2-year battle to crush 1 valiant churchman. The broadcast said Dr. Josef Beran, archbishop of Prague, has been fined and banished from the city. There were no further details on the whereabouts of the archbishop, nor have there been any since then.

Archbishop Beran was not hailed before a people's court, tried on trumped-up treason charges, and then imprisoned as was Cardinal Mindszenty. Instead, Communist police used brute force and terrorism to break up his opposition to the new rule, imprisoned him in his residence for 18 months, and then spirited him away to an undisclosed prison.

The Communists resorted to ill-disguised violence to crush the archbishop because they knew well the valiant spirit this distinguished churchman had displayed in the face of attacks on his church and his God.

In 1942, the archbishop, then Monsignor Beran, was arrested by the Nazi gestapo. He spent the next 3 years in Nazi prisons, most of that time in the infamous concentration camp at Dachau.

The case of Archbishop Josef Beran stands as an undeniable character witness for the Communist rulers of Czechoslovakia. It leaves no doubt in the mind of any reasonable man that communism absolutely denies the foundation stones of any free people the freedoms of speech, press, and religious expression.

Communist tyranny knows it cannot coexist with a free Christian religion.

When, by infiltration and treason, Communists extended their iron rule over Czechoslovakia, the archbishop was a pillar of strength to his people. For him, there was no compromise with the godless dictates of the invaders.

When Communist agents arrived at the archbishop's residence in late 1949 to order him to end resistance to the new regime, he went to a closet, took out a bundle of rags, and said, "Here is my uniform from Dachau. Let's go." Archbishop Beran was confined to his residence until 1951 when he was banished from Prague.

Earlier, he had warned his people, "Perhaps very soon you will hear all sorts of things about me from the radio. You may hear that I have made a confession or other things. But no matter how often you hear these things I hope you believe in me."

Freedom-loving peoples everywhere believe in Archbishop Beran. Stripped of the formal symbols of church leadership, the archbishop is an eternal symbol of the power of a simple, uncompromising resistance to tyranny. The stories of the archbishop, of the hundreds of other clergymen imprisoned and killed in Czechoslovakia, and of Cardinal Mindszenty, Archbishop Joszef Groesz, and other Christian victims of this new infidel, will live forever as black testaments to the terrorist doctrine of communism.

Brotherhood

EXTENSION OF REMARKS
OF
HON. PAT McNAMARA
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Friday, March 16, 1956

Mr. McNAMARA. Mr. President, the question of brotherhood—true brotherhood without regard to race, color, religion, or creed—is becoming increasingly more important in these times of internal tension.

A very fine address on this vital subject of brotherhood recently was delivered in Saginaw, Mich., by Boris M. Joffe, director of the Jewish Community Council of Metropolitan Detroit. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

BROTHERHOOD

(A speech delivered by Boris M. Joffe, director, Jewish Community Council of Metropolitan District at the First Congressional Church, Saginaw, Mich., February 14, 1956)

Mr. Chairman, Pastor Harry G. Suttner, gentlemen, it appears to me that there are two varieties of brotherhood: One is mostly confined to oral manifestations; the other—on a concrete, actual, living-every-day basis.

The ancient sages emphasized the "doing" part of brotherhood. For instance, when Hillel was asked to answer the question "What is Torah"? while standing on one foot, his definition was as follows:

"Do not do to others you wouldn't wish done to you. This is Torah, the rest is commentary. Go and learn."

Similarly, the ancient rabbis discussed the problem of what is more important: learning per se, or doing (action)? They came to a conclusion that learning by itself, without action was not as important as learning for action.

Even on Mount Sinai—the community's answer, the whole community's answer to God was:

"We shall do and harken."

We do not reject the first one—the verbal; we merely say that it is not enough.

Particularly it is not enough in these troubled and tense times when all of us live on the brink of an atomic volcano.

These are the times when the course which, so-called uncommitted people of the world will take—will determine our future, and our children's future. Will we live as slaves of a totalitarian state where "the humanitarianism of revolutionary ideas masks the lust for power of revolutionary personalities," whose real goal is "a police state of absolute power in which everyone should spy on everyone else," or will we live as free men and women?

Who are the uncommitted people of the world? Mostly they are the nonwhites. Approximately two-thirds of the world's population, or something like one billion and a half souls.

How we, of the free world, behave with regard to our own minorities, what we do to them, with them, and for them has a tremendous impact on these uncommitted people of the world.

Are we to follow George Washington's dictum of August 1790 when, in his letter to the Hebrew congregation of Newport, R. I., he said:

"To the Hebrew Congregation in Newport, R. I.

"GENTLEMEN: While I receive, with much satisfaction, your address replete with expressions of affection and esteem, I rejoice in the opportunity of assuring you, that I shall always retain a grateful remembrance of the cordial welcome I experienced in my visit to Newport, from all classes of citizens.

"The reflection on the days of difficulty and danger which are past is rendered the more sweet from a consciousness that they are succeeded by days of uncommon prosperity and security. If we have wisdom to make the best use of the advantages with which we are now favored, we cannot fail, under the just administration of a good government, to become a great and a happy people.

"The citizens of the United States of America have a right to applaud themselves for having given to mankind examples of an enlarged and liberal policy: a policy worthy of imitation. All possess alike liberty of conscience and immunities of citizenship. It is now no more that toleration is spoken of as if it was by the indulgence of one class of people that another enjoyed the exercise of their inherent natural rights. For happily the Government of the United States, which gives to bigotry no sanction, to persecution no assistance, requires only that they who live under its protection, should demean themselves as good citizens, in giving it on all occasions their effectual suport.

"It would be inconsistent with the frankness of my character not to avow that I am pleased with your favorable opinion of my administration, and fervent wishes for my felicity. May the children of the stock of Abraham, who dwell in this land, continue to merit and enjoy the good will of the other inhabitants, while every one shall sit in safety under his own vine and fig tree, and there shall be none to make him afraid. May the Father of all mercies scatter light and not darkness in our paths, and make us all in our several vocations useful here, and in his own due time and way everlastingly happy.

"GO. WASHINGTON."

"AUGUST 1790."

Or are we, contrary to George Washington, to bar a Negro lady from the University of Alabama, when even the highest court in the land directed her admission? Are we giving "bigotry sanctions," to paraphrase George Washington?

Had I been sitting in the councils of the Kremlin, I would give the Order of Lenin to the misguided students on the Alabama campus, and would publicly offer free scholarship to this Negro lady at the University of Moscow.

And then I would make it known to all the noncommitted people of the world.

Maybe we ought to be honest with ourselves and say with Thomas Jefferson, who in his letter written in 1816 to Samuel Scrivener, said:

From Thomas Jefferson's letter of 1816 to Samuel Scrivner: "Some men * * * deem (constitutions) like the Ark of the Covenant, too sacred to be touched. They ascribe to the men of the preceding age a wisdom more than human, and suppose what they did to be beyond amendment. I know that age well * * * but I know also that laws and institutions must go hand in hand with the progress of the human mind. As that * * * becomes more enlightened, and manners and opinions change with the change of circumstances, institutions must advance also and keep pace with the times."

Why do I say these things, and who do I quote from those who shaped this Nation?

Because there is a controversy. Controversy as to who is right—the Supreme Court or our southern friends. Prof. Sidney Hook wrote in January 1956:

"The hallmark of a truly liberal civilization, as of a truly liberal mind, is willingness not merely to tolerate, but to encourage, bold and independent criticism of regnant doctrines. When criticism and controversy are vigorous, there is a better chance to develop wiser policies and to reach truer views about the matters of fact which test policies."

And Benjamin Franklin, almost 250 years ago, said thusly:

"Whoever would overthrow the liberty of a nation must begin by subduing the freeness of speech—a thing terrible to public traitors.

"They that can give up essential liberty to obtain a little temporary safety deserve neither liberty nor safety.

"Where liberty dwells, there is my country."

Do our institutions advance, as Jefferson called upon them to do? Or are we intimidated by a fear of change? By a fear of knowing too much?

Our institutions may change slowly, but human beings do undergo a change. It is no longer fashionable to be openly, overtly anti-Semitic. That is for cheap rabble rousers, like Gerald L. K. Smith, like propagandists of Arab dictators. Good folks don't talk like that any more. But in the shower-room privacy of one's club, or in the privacy of a ballot box, on the QT, well, there a mention might be made of a "gentlemen's agreement," as to the undesirable in jobs, in housing, or in resorts.

Yet, we change. Slowly, to be sure. We are beginning to realize that what happens in Alabama, or Mississippi, or in the far away near the Holy Land, where Communists entered in an unholy alliance with Arab dictators against the reborn Israel, affects your son in Saginaw or Owosso, or my son in Detroit.

Please forgive me for injecting a personal history in this otherwise, perhaps relatively, objective chat with you. But visualize an immigrant young man who already experienced on his own hide the questionable benefits of totalitarianism. Almost 34 years ago, he landed in romantic San Francisco from the faraway Siberia, with knowledge of English limited to the 4 most often used words representing a rather ugly indictment of one's ancestry. The warmhearted America, the classic land of opportunity was good to him. America which did not require uniformity but welcomed unity, America whose symphony is not played by bull fiddles only, but by a complete orchestra, with violins, cellos, violas, flutes, and with many, many other instruments; with immigrants and sons and grandsons of immigrants contributing their very best to the American dream.

This America was good to this young man. By and large he was judged on his merits. Through the various stages, from an industrial worker to a member of faculties of two outstanding American universities, to the privilege to serve the United States Government, in the end heading a Federal agency in Washington, and finally now attempting to dig and prune in the vineyard of democracy—common to all of us—this is the abbreviated saga of one immigrant.

Yet, neither he, nor many much more valuable people could come here if the Immigration Act which gives sanctions to the scientifically discredited doctrine of superiority of Nordics over south and east Europeans, were in effect then. This again contradicts George Washington. In his speech of December 2, 1783, he said:

"The bosom of America is open to receive not only the opulent and respectable stranger, but the oppressed and persecuted of all nations and religions."

I am talking, of course, about the discriminatory, racist McCarran-Walter Immigration Act, roundly condemned by all three major faiths. Neither Professor Einstein, nor Arturo Toscanini, nor the father of Dr. Salk, nor I suspect fathers or grandfathers of some of you, could come to these waiting shores if such act were on the books in their time. I am glad to see that President Eisenhower asked the Congress to revise, at least in part, this McCarran-Walter Immigration Act. We must help the President by letting our view be known to our Congressmen and Senators.

Did this young man meet prejudice, bigotry? Was there bitter with the sweet? Of course there was. Did he encounter brotherhood? Yes; not formalized, not organized, from average folks, who took the teachings of their respective creeds about brotherhood of men under the fatherhood of God, with no mental reservation.

And the main thing is that these simple people were honest with themselves. To them there was no difference between words and deeds. They answered resoundingly "Yes" to the question: "Am I my brother's keeper?"

My son, who was born here, was not born a bigot. No child is born a bigot. Sometimes bigotry is a product of the home. I can assure you that I am thankful for the fact that my children were born here and growing up here, in the environment of understanding and of appreciation of differences. Mrs. Joffe's and my home will not help to raise a bigot. In that wonderful musical South Pacific there is a song: "You got to be carefully taught to hate." I am sure that all of us here do carefully teach not to hate.

It isn't the $30 billion alone which Secretary of Labor James Mitchell estimates is the cost of discrimination to America's national income. It is how it warps our souls, how it helps the totalitarian enemies of freedom and democracy, how will it affect our and our children's future in this struggle of children of light against the children of darkness, just now known as the cold war, that worries me and you.

I am moved by the immensity of the problem. I hope that in my meek way I contributed to the rocking of our daily complacency.

It is not enough to observe 1 week out of 52 as the Brotherhood Week. What about the other 51 weeks?

The greater the difficulty, the greater the challenge. Let us hereby resolve with sober and measured determination, that we will not give up, nor diminish our effort nor lose hope, nor surrender.

In these efforts, we know we are on the side of right. We know that we are animated by high moral purpose. We know that much of the world watches what we do, and measures our country by the dedication we show in this cause. Let us not flag nor fail.

Words, too, are not enough. Honest words must be translated into daily action. Let me read to you a cry from the heart from Roger Goebel, a Catholic student at Manhattan College. It was written apropos of the murder of 14-year old Emmett Till in Mississippi, for Truth, a publication of Brooklyn's Jewish Temple Beth Emeth:

"My brother is dead. He was just a boy, but he's dead now. Perhaps you knew him—he was your brother, too.

"Why are you so startled? Have you forgotten him so soon? His name? His name doesn't matter—it might have been Abel once. I suppose you have forgotten him. He's buried now, just as all news of him has been buried in the back columns of the newspapers. He wasn't really very important, and a murder in Mississippi certainly can't compare with the latest raciest scandals in New York.

"Well, he's dead now. And he was a boy. He was only 14, just beginning to grow up. He was full of the wonderful feeling that comes when a boy becomes a man. He was on his first holiday, a thousand miles from his Chicago home. He must have been very proud of his years and of his self-reliance; he must have loved to be alive.

"And now he's dead. They killed him. They killed him because of a boastful voice and a cocky whistle; they killed because he was 'fresh'—they killed him because he was black. They took him out in the dark of the night and led him away; they beat him, and then they shot him with cold steel bullets whose chill could not match the ice of their hearts. They were fools; they murdered him because of the blackness of his skin, but what blackness could ever match the blackness of their hearts?

"And now the boy is dead and soon he'll be forgotten. You feel uncomfortable already, and wonder why I mention him. What's done is done, and who's dead is dead; it happened weeks ago, and you were not to blame. There are more important things now—wars and tensions and world crises. You can't remember a murder—even the murder of a boy—forever.

"But he was just a boy and he is dead now, and he was my brother and your brother, too. And you didn't kill him—but you let him die. You let him die, and now you're forgetting him, just as you'll forget others like him. You let him die when you didn't fight to save him, not from death but in life; when you didn't save him from his slums and when you didn't give him an education like your own, when you made him take the poorest seats in your buses and wouldn't let him live in your neighborhood, when you made him a second-class citizen and a second-class man. Now you're willing to give him justice, but you were never willing to give him love.

"He was just a boy, and he happened to be a Negro. He might as well have been a Slav, or a Jew, or a Puerto Rican, or any other whom the breath of prejudice taints. He's dead, but he might as well have lived in the shadow of your indifference for 3 score years and 10. And soon you'll forget him, as quickly as you forget me.

"My brother is dead. He was just a boy, but he's dead now. Perhaps you knew him—he was your brother, too.

"FEBRUARY 8, 1956."

Repayment by the Henry J. Kaiser Companies of Their Government Loans

EXTENSION OF REMARKS

OF

HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Friday, March 16, 1956

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed

in the Appendix of the RECORD a press release I made on yesterday.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR J. W. FULBRIGHT ON THE REPAYMENT BY THE HENRY J. KAISER COMPANIES OF THEIR GOVERNMENT LOANS

I want to commend the Henry J. Kaiser companies for paying off all their debts to the Federal Government several years before their due date.

When I was chairman of a Senate Banking and Currency Subcommittee which reviewed the activities of the Reconstruction Finance Corporation, we made a study of the loans to the Kaiser-Fraser Corp. Although the subcommittee in its report stated that it believed that the RFC should not have made the original loan, it also stated that it did not question the Kaiser-Fraser loans from the standpoint of their repayment, though repayment might ultimately be made from proceeds of operations not contemplated by either the borrower or the RFC when the first loan was made. The subcommittee also pointed out that it was impressive that the other RFC loans to Kaiser managed companies had been repaid and that these enterprises had refinanced themselves by obtaining capital from private sources.

As I understand the situation, the judgment of the subcommittee in this respect has been vindicated and the Kaiser organization is to be congratulated and commended, particularly as other companies equally or perhaps better able to repay their obligations to the Federal Government have not chosen to do so.

The Catholic Humanism of Ignatius of Loyola

EXTENSION OF REMARKS
OF

HON. JOSEPH C. O'MAHONEY

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Friday, March 16, 1956

Mr. O'MAHONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, a thoughtful address by the Reverend Gustav Weigel, S. J., professor of sacred theology at Woodstock College, at the Ignatian year communion breakfast held in the Sheraton-Park Hotel, in Washington, D. C., on Sunday, March 11, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE CATHOLIC HUMANISM OF IGNATIUS OF LOYOLA

For Rene Fuelop-Mueller the three most fascinating figures of modern history are Ignatius Loyola, Vladimir Ulyanov Lenin, and Mahatma Gandhi. Many a man will gulp at this conjunction, because the 3 men represent 3 totally different world visions. Yet Fuelop-Mueller showed uncanny insight in joining these three men. The trio worked significantly in terms of profound inner convictions which were achieved not so much by rational processes as by strong inward experiences. They were spiritual men, though their spirtualities were worlds apart.

All three are mysterious personages. Much has been written about them but none of them has yet been made transparent by a definitive biography. They intrigue us because of their great impact on history but we cannot easily find the secret of their power. In some respects they seem so simple, so candid, so straightforward in their actions, and from other points of view they appear so devious and so subtle. It is this puzzling amalgam which makes them fascinating.

In 1956 we celebrate the fourth centenary of the death of St. Ignatius of Loyola. Reflections on the holy man are in order. Every schoolboy knows the obvious facts in Loyola's history. Born in 1491 as a cadet son into a family of the petty Basque nobility he was baptized Inigo. As a youth he was sent to Old Castille to prepare for a military career, and in his twenties he rose to the rank of captain in the Spanish army. In 1521, during the Spanish war against France over Spanish Navarre, with typical romantic stubborness the young captain urged his commanders to make a last-ditch stand in the defense of the fortified town of Pamplona. Quixotically he distinguished himself for valor but fell wounded when a cannonball crushed his leg. According to the existent code of chivalry, he was freed by the French victors and he retired to his dour ancestral home for recuperation. In the long hours of ennui the convalescent looked for entertainment but found nothing better than a few medieval religious books. These, however, turned his impressionable attention to the religious aspect of life and he decided in keeping with his romantically chivalrous prejudices to become a knight of God rather than a knight of the king of Spain.

This decision was not really an inner conversion, a complete vital transformation. That came shortly after. He was a man of very limited education, with no other training than that given by the cavalier life of court and camp. Some piety he always had but it was not the central concern of his existence, and it was tangential to his characteristic behavior which was not pious at all. Now, by himself he began to meditate on God and His Christ. He had a little human guidance in his efforts and he learned by trial and error under the tutelage of grace. But the experience of his exercises, as he called his training for the religious life, brought forth a reborn man, in whom we find some of the traits of the old Quixotic Inigo but disciplined and fused with new qualities which constitute the Ignatius of Loyola as history knows him.

Three ideas seemed to be the guiding stars of his new career. First and foremost he became abidingly and serenely aware of the reality of God as the binding force of reality and man. It was God who kept a man together and it was God who permeated all that man is and does. No doubt Mahatma Gandhi came to this realization in his own way, but in Loyola it took on a properly Christian form. In human history God had become definitively manifest in Christ Jesus, and by directing his whole attention to Christ, Loyola found God as the guide and norm of his human existence. God meant Christ and Christ meant God. This is why the thought of Jesus is omnipresent in the spirituality and total activity of Ignatius. He even stubbornly resisted all attempts to persuade him to give a name other than Jesus to the company of men he formed around himself. It was Jesus, God, and man, who completely enveloped Loyola.

This exclusive concentration on Jesus as the model for imitation and guidance was not an abstract principle for the converted soldier. It was a living, burning vision which lighted up his consciousness constantly. He could indeed pass from the person of Jesus to the consideration of the Trinity which included the majesty of the Father to whom Jesus pointed with the energy of His loving Spirit. Jesus was the locus in which the triune Godhead was met.

The second idea which dynamized Ignatius is intimately connected with the first. For Loyola Jesus was not of the past. He was palpably present here and now. His Spirit was everywhere at work and man could feel the spirit. Ignatius rarely spoke of the symbol of the mystical body of Christ, but its thought content is the unexpressed implicit of his vision. The living Christ, who is God, is with us in the Roman Catholic Church, for the Holy Ghost, the Spirit of Christ, is present in the church and all its members as the moving force. The Catholic is energized by this spirit which makes him live in Christ and like Christ. This is why Ignatius, no enemy to liturgical prayer, foments the prayerful realization of the spirit active in the individual soul. He is always urging us to detect the movements of the spirit, who is the soul of the church, and He gives us rules whereby we can distinguish the promptings of the spirit of the church from the seductions of the spirit of evil, our great enemy who tries to separate us from Christ.

For Ignatius, then, God is Christ and Christ is mystically the church. These three things are one for him. Hence his devotion is equally directed to God, to Christ, and the church. This is not a triple devotion. It is for him one drive with only one objective which can be considered under three aspects. He will use the words God, Jesus, and the church as synonyms for the goal of all his thought and action.

Hence the Ignatian role in the counter-Reformation is often misrepresented. The word "counter-Reformation," unknown in the days of Loyola, would have been thoroughly meaningless to him. Loyola was not picturing himself as a champion against protestantism or as the sagacious foe of the reformers. He was a Catholic and only that. He would have been completely nonplussed with the idea of reforming the church. For him you no more reform the church than you reform Christ or God. All he was interested in was that the people of the church be the church effectively. Prophetically stimulate the people of God to a fervent awareness of the spirit moving in them, and then the church will be more visibly herself. However, these words for Loyola did not have the meaning which Brother Martin Luther was attaching to them. Luther and Loyola both urged the people to follow the guidance of the spirit, but Loyola insisted that the spirit was the animating soul of the organized, hierarchically structured church. The spirit framed the church and in its framework did he move and act, never outside of, or in conflict with it. The Lutheran notion of an opposition between the spirit and the organized visible church was completely unintelligible to Ignatius.

Hence in the campaign of the first disciples of Loyola in the German lands there was no anxious preoccupation with the theory or persons of the reformers. Under instructions from Ignatius, the missionaries directed all their attention to the Catholic Church in those parts. The Jesuits were to preach substantial, genuine Catholic doctrine; to convert the leaders of the Catholic community to a dynamic interior realization of the gospel as it was delivered by the church; to urge the priests and religious to an enthusiastic and generous fulfillment of their functions; to persuade the princes and prelates that their first obligation was to foster Catholic piety and devotion. There was in this plan no emphasis on debates with the dissident preachers and theologians, and Ignatius warned against such useless controversies. Arouse, instead, the church to live luminously the Christ she is, and in that light the ignio fatuus of non-Catholic error will disappear.

The third dominant idea latent in all that Ignatius was and did was his grasp of the relation between ends and means. This doctrine is not unrelated to his awareness of God primacy rendered dynamic in Jesus who is prolonged in the church. It is the logical corollary of this master idea. For Ignatius

it is crystal clear that God is the creator of all things. God dwells in all things. He moves all things. Likewise, according to St. Paul, all things are for Christ; the present, the past, and what is still to come. Hence Loyola was not suspicious of new things, nor was he antecedently opposed to novelty for fear it be evil. Perhaps he did not achieve the transcendental resonance of Francis of Assisi who saw the universal brotherhood of all creation, and could therefore talk to Brother Wolf, Sister Fire, and Sister Sun. However Ignatius did catch the Thomistic insight that all things are necessarily instruments of God to maintain and evolve His creation in order to achieve the ultimate divine purpose which includes man's salvation.

In consequence there was a great openness in Loyola toward the use of the realities of the world and time. He did not feel restricted to the use of one set of means to the exclusion of others but rather he was anxious to use all things tantum quantum—insofar as—they could collaborate ad majorem Dei gloriam—to the greater glory of God. He did not want his companions to be tied down to one good way of acting, e. g., in the immobility piously involved in the daily chant of the monastic choir. He wished to be free to us any good way which divine providence should constantly and graciously suggest through the nudgings of history.

This explains Ignatian humanism. The setting of the stage on which Loyola acted his role was constructed by the classical renaissance. Under the stimulus of the direct study of the works of Graeco-Roman culture, the 16th century European was becoming enthusiastically aware of the meaning of natural form and grandiose creativity. Ignatius accepted this enthusiasm and promptly used it for his own ends. His men were polished Latin stylists, Ciceronian rhetoricians, Aristotelian scholars. They so effectively engaged in the New Science developed by men like Galileo that Father Christopher Clavius (1538–1612) became the framer of the Gregorian calendar we still follow, and Father Athanasius Kircher (1602–80) became a dazzling example of a scientific polymath.

The really Ignatian mark in Loyola's acceptance of 16th century humanism was his completely pragmatic attitude toward it. It was easy for a man of his time to accept it in adoration, because the times exerted a pressure in its favor. Ignatius did not hesitate to take it but he did not absolutize it. He recognized that the values proper to the older traditions were also to be pursued. Horace and Tacitus could be studied, yes, but Thomas Aquinas must be studied, too. In fact, in an era when Aquinas and his method were attacked and reviled, Ignatius calmly insisted that the teachings of the angelic doctor were to be the backbone of the formation of his men. There is nothing paradoxical in the Ignatian stand, if we only remember that he believed that all things good, no matter where they come from, should be used for the glory of God, which is the glory of Christ, which is the glory of the church.

This Ignatian attitude explains the phenomenon the world calls Jesuit education. As a pedagogue Ignatius limited himself exclusively to the teaching of catchism to the children romping on the streets of Rome. He had no theories on education and no schemes for school reform. Almost by accident he recognized that his men, patiently trained in classical lore, attracted students anxious to receive a renaissance formation. This attraction gave the fathers an excellent opportunity to communicate something more than Ciceronian rhetoric. They could make Cicero, a good thing, give greater glory to God, and that was all Ignatius was interested in. Using the study of Latin literature as a stepping stone, the fathers could lead the adolescent to a realization that life had deeper dimensions than those admirably portrayed by pagan sages, for Christian human life in its basic depth is life in Christ. Hence in the schools the gospel was to be preached and sacramental life cultivated, so that the graduate would enter into the world with an effective conciousness of his Catholic reality. With time and under the teaching of collective experience the Ignatian company worked out a school order of programs, pedagogic devices and discipline which became characteristic. However, there was nothing sacrosanct about it at all, nor was it planned or envisioned a priori. Loyola never saw it at the high point of its evolution, but if he had, he would not have looked on it as a sacred cow. As long as it gave greater glory to God and enriched Catholic life, he would favor it but the day something else served better, he would have ruthlessly abandoned it. All things were for God and His Christ, and there was no call to stick to one good thing rather than another. Only the end of man was set; the concrete means toward it were in themselves indifferent and to be chosen only inasfar as they achieved the end better.

Such was the Ignatian vision of life. It was not complicated but it was intensely perceived and accepted with all its practical consequences. Through his little company, as he called it, the spirit and drive of Ignatius carried on after his death. The freedom of Loyola's inner life made his outer action rich and wide within the framework of unquestioning orthodoxy. The church which he so much loved expressed herself brilliantly in him at a time when such an expression was much needed. Whatever can be said for or against Ignatius' little company in our day, at least it inevitably fulfills one high function: It reminds us all of the burning faith of Loyola which realized that God is in His Christ; that Christ is in His church; that the church works in each and every Catholic more by the inner spirit than by the forces of external pressure or coercion.

U. N. Cocktail Parties Seen Bringing Crisis

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Friday, March 16, 1956

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the CONGRESSIONAL RECORD an Associated Press article, by Hal Doyle, entitled "U. N. Cocktail Parties Seen Bringing Crisis," which was published in the Washington Post and Times Herald on March 9, 1956. This is a very interesting and timely article, and one which I feel is worth reading.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

U. N. COCKTAIL PARTIES SEEN BRINGING CRISIS
(By Hal Doyle)

NEW YORK.—Cutting down the number of wars in the world has been a pesky problem to the United Nations for 10 troubled years.

Now it faces a new crisis—how to cut down on the number of its own cocktail parties.

Here really bold action is called for. Why doesn't the U. N. forget about abolishing war for one session and put down as the main task on its agenda the problem of outlawing all cocktail parties everywhere?

This could turn out to be a real positive step toward peace, universal brotherhood and the long-term improvement of human welfare.

The growing nuisance of two many cocktail parties at the U. N. was pointed out by Jose Naza of Chile. As president of the 10th General Assembly, he has to attend as many as 3 or 4 in a day. Every fresh international tension seems to produce a torrent of cocktail parties, which in diplomatic parlance are known as "receptions."

SAME DRINKS, SAME PEOPLE

"You have to drink the same Scotch or the same Manhattans and eat the same shrimps and talk to the self-same people," said President Maza. His description of this type of social function may well go down as the greatest understatement in the history of diplomacy.

The average cocktail party isn't a party at all. It is an exercise in group self-punishment. It is a social battlefield, where men and women drink from a poisoned well while they build verbal towers of babble in a wilderness fog of smoke that would strangle a clean-living Eskimo in 20 minutes.

The cocktail party isn't a feature of modern living. It is a factor in modern dying. Anyone who has ever stood upright at a cocktail party—and who ever gets to sit down at one?—can never forget the sinking feeling in his arches, the popping out of new varicose veins, the slow numbness as of death creeping over him.

The total impact of this form of torture on mankind has never been measured, but it must be appalling. "Cocktail-party stomach" and "cocktail-party fatigue" are well-known medical diseases now and claim more victims than virus "X." Although it is little more than a century old, the martini, the most dangerous instrument at any cocktail party, certainly has mowed down more people than the gatling gun.

REPORTS OF ITS ORIGIN

The origin of the cocktail party has never been authoritatively established. Legend has it that it was invented early in the 12th century by a Minsk caviar manufacturer named Ivan Petronovich in an attempt to unload an oversupply of fish eggs. The Russians, who are quick to claim every other invention, denounce this story as a capitalist canard. But it will be noted they still serve fish eggs at most elite cocktail parties.

Even the devil has friends. So it goes without saying that cocktail parties have their defenders. They claim these affairs relieve social tensions. The truth is they stir up new tensions. If you throw one cocktail party to calm a tension, you have to hurl a second one to cure the new tensions that grew out of the first. So the evil chain grows.

Actually, nothing really good can be said for cocktail parties. Nobody ever got sober at one. It is unlikely anybody ever made a lifelong friend at one. They're the world's poorest places to borrow money.

If the U. N. really does something to ban the cocktail party, it will earn a monument higher than Mount Everest.

But what would become of all those fish eggs? Well, why not give them back to their parents?

Segregation

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Friday, March 16, 1956

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD various editorials and articles from southern papers relating to the problem of segregration in the schools.

There being no objection, the editorials and articles were ordered to be printed in the RECORD, as follows:

[From the Birmingham (Ala.) Post-Herald of March 14, 1956]

EIGHTY-FIVE OTHERS ENTER THE PICTURE

(By John Temple Graves)

"A cry that rang through Shiloh's words
And Chickamauga's solitudes."

That unappealing picture of Senator EASTLAND with the cigar in the side of his mouth has been too favored by national periodicals lately to indicate will to be objective toward him or these States. But there are others in the picture now—85 of them—and some don't smoke.

The southern manifesto is signed by such as BYRD, of Virginia; GEORGE and RUSSELL, of Georgia; SPARKMAN, one-time Vice Presidential nominee; THURMOND, immortal States rights leader; LISTER HILL, of the Fair Deal.

The total of southern respectability, power, range, and long-standing has not been matched since the Confederacy.

It proposes nothing new, does not go as far as some who signed go. It represents obvious compromises, pledging the South not to disobey but to seek by all legal means a reversal of the decision and meanwhile, by legal means, to "prevent the use of force in its implementation." But it denounces without stint or dissent the violation of the Constitution, the "encroachment on rights reserved to the States and to the people," the chaos that has resulted.

Such a judgment from such a sum total makes the crisis not of segregation but of the Constitution, not one concerning the South alone but a Nation entire.

It invites the South to proceed as it is proceeding, oppose enforcement with every legal device it can invent, oppose at the same time violence, Ku Kluxery, and hatemongering that may destroy its order at home and its case before the Nation.

Southern legislatures are paged.

Southern courts, Federal and State, are paged, and Federal ones reminded again that the Supreme Court invited them to think for themselves.

Southern educators are paged to think for themselves, too, remembering that science has not revealed all its light yet to colleagues above the Potomac, nor the Goddess of Liberty hers, nor the Lord God Almighty His.

Southern men of God are paged to distinguish between necessary sometime physical separations and the awful separations of hate and injustice.

Especially are southern editors and columnists paged—to be leaders where political leaders are embarrassed with national ties and Negro votes.

Southern governors are paged as they preside over their nations in the compact called the United States.

The hosts of the citizens councils, these huge vessels into which southern emotional resistance is being poured, are paged to pour in a constant wisdom, light, and calm resolve.

And our colored people are paged for an epoch-making second thought—in appreciation of what is possible and what is not, in memory of generations of getting along, in will to hold great advances made and in danger now or actual escrow.

There is no one way, but many. The South proposes all of them that make for resistance in the light.

The decision tortured the Constitution—the South will torture the decision.

If the Court says shame the South will say the Court has taught it. But southern torture is of the letter of the law to preserve the constitutional spirit, whereas the Court's is of letter and spirit, too. This is what some of us said when the decisions were handed down in 1954 and 1955. It is still the indicated program.

Reason totters when my friend Victor Vernon, of Guntersville, takes this column's statement that our real enemies don't live here as meaning all who don't live here are our enemies. That, in sophomore logic, is the fallacy of the undistributed middle.

Is the affection of many southern white people for southern colored people condescending, as my nearly always right friend Mary McGavock, of Virginia, seems to think.

Perhaps this is true in the sense that it goes largely to colored people who are employees, domestic or business, from white people who employ them. But never in this cold world, Mary, turn affection down for its condition or attitude. The affection is the thing. Conditions and attitudes change.

Write Selma's Alston Keith with those who do not hesitate to be a divisive influence in the citizens council movement. He proposes to divide the healthy body from the cancerous growth.

[From the Columbia (S. C.) State of March 13, 1956]

WILL HAVE EFFECT

The manifesto signed by 96 Members of Congress is additional evidence of Southern resoluteness. It is sympolic of an attitude that so many people outside the South do not realize exists, or do not want to recognize.

This newspaper has argued all along that Congress should assert itself lest it become a mere subsidiary of the Supreme Court. It should put the highest tribunal in its place. It has the power to do so. We are perfectly aware, however, that the possibility of such action by a majority of the lawmakers is remote. But it is worth the try.

Let no one assume that such protest will not have effect; it most assuredly will. If nothing else is accomplished, the determination of the Southern people to fight integration in every legal way has been advertised widely and perhaps some will stop and think.

Congress, as we have pointed out often—in fact, only yesterday—has the constitutional power to limit the appellate authority of the Supreme Court, save in those rare exceptions where original jurisdiction prevails. The school case is not under that latter classification.

The sooner the rest of the country takes a realistic view of the situation that exists, the better it will be for everybody. And such pronouncements as the congressional manifesto serve to notify the people of other sections of the firm intention of the white South to use every legal means to circumvent the Supreme Court's ruling of May 17, 1954.

Here are the principles of the manifesto:

"With the gravest concern for the explosive and dangerous condition created by this decision and inflamed by outside meddlers:

"We reaffirm our reliance on the Constitution as the fundamental law of the land.

"We decry the Supreme Court's encroachments on rights reserved to the States and to the people, contrary to established law and to the Constitution.

"We commend the motives of those States which have declared the intention to resist forced integration by any lawful means.

"We appeal to the States and people who are not directly affected by these decisions to consider the constitutional principles involved against the time when they too, on issues vital to them, may be the victims of judicial encroachment.

"Even though we constitute a minority in the present Congress, we have full faith that a majority of the American people believe in the dual system of government which has enabled us to achieve our greatness and will in time demand that the reserved rights of the States and of the people be made secure against judicial usurpation.

"We pledge ourselves to use all lawful means to bring about a reversal of this decision which is contrary to the Constitution and to prevent the use of force in its implementation.

"In this trying period, as we all seek to right this wrong, we appeal to our people not to be provoked by the agitators and troublemakers invading our States, and scrupulously to refrain from disorder and lawless acts."

[From the Greenville (S. C.) News of March 13, 1956]

STATEMENT IS AN APPEAL TO REASON

Whatever it may presage or lead to in the way of political and legal action, the so-called manifesto signed by 19 southern Senators and 77 Representatives and presented to Congress yesterday is an important document in the constitutional history of the United States.

Taken with the resolutions of interposition (as adopted in Alabama) and of protest (as adopted in South Carolina and Virginia) it cannot be ignored.

It is a statement of principles that should attract the attention of thoughtful persons, especially constitutional lawyers and statesmen, all over the United States. Whether or not they agree with the position taken by these southern Members of Congress, they should attempt to recognize and understand the issues raised, for they are of grave importance to all of the States.

Although some already have tried to make the statement out to be a declaration of defiance of the United States Supreme Court and the Constitution, and others will follow suit, it is nothing of the sort. The signers, and they include acknowledged statesmen and learned judges, believe the antisegregation decision of the Court to be wrong, legally and otherwise. They pledge themselves to try to get it changed, but they do not say they will defy or attempt to nullify it. There is a vast difference between the two courses of action.

The statement is at once as forthright and as restrained as were the resolutions adopted by the Legislatures of South Carolina and Virginia, both of which stated in no uncertain terms their views of the decision, but stopped short of an attempt at nullification.

First and foremost, the statement is an appeal to the thinking people all over the United States to understand the southern point of view on the issues involved. It is further an attempt to make those people see that the judicial power used expediently to achieve ends the Court thought worthy could be used under other circumstances and with equal expediency to achieve other ends.

Therein lies the South's best, if not its only hope.

In its criticism of the action of the Court, the statement follows the lines laid down in the southern briefs and in the South Carolina resolution. The decision is legally wrong and dangerous to constitutional government because it represents an extension of judicial authority into an area it cannot constitutionally reach. It amounts to amendment of the Constitution by judicial fiat and a subversion of the Constitution itself.

To reach its decision, the Court went outside the law and into the realm of psychological and sociological opinion. And some of that opinion is of dubious validity. Therein lies the threat to the Constitution itself.

From a practical standpoint, the statement points out that the decision and subsequent decrees have created conditions bordering on chaos in some areas. Because certain groups have insisted upon a radical interpretation and violent application of the decision, it has set in motion forces that, if they get out of hand, no amount of law and law enforcement can bring under control again.

The signers of the declaration pledge themselves to "use all lawful means to bring about a reversal" of the decision.

That is no more wrong than were the efforts of the other side to bring about the reversal of the "separate but equal" doctrine in the first place.

[From the Augusta (Ga.) Chronicle of March 12, 1956]

MANIFESTO

Southern Congressmen, in taking their stand against the Supreme Court's antisegregation edict, are adopting as their chief weapon the truism that "In unity there is strength."

Reportedly, Congressmen and Senators from all 10 of the Southern States will read into the CONGRESSIONAL RECORD today a manifesto pledging to use all lawful means to oppose the Court's desegregation decree.

These are said to be the chief points of the manifesto:

1. It terms the action of the Supreme Court illegal and unconstitutional, commends those States that have pledged to resist the decision by lawful means, and urges other States to consider the Court's encroachment not only on the segregation issue but in other matters as well.

2. It argues the merits of the Court's ban on school segregation, pointing out the number of years during which the Court ruled the other way, and observing that the same Congress that adopted the 14th amendment had also provided for segregated schools in Washington, D. C.

3. It declares the Court has usurped authority it does not have when, instead of interpreting the Constitution, it undertakes to legislate.

Representatives of the Southern States are wise in putting up a united front in meeting the constitutional crisis created by the Court's decision. They show wisdom, too, in basing their opposition on the broader and more vital issue of the Court's usurpation of power reserved in the Constitution for the individual States.

The fight can best be won by persuading Americans in every section of the land that everyone of them has a stake in preserving States rights, and preventing the high Court's abuse of power in issuing edicts which are based on sociology and not on law.

[From the Augusta (Ga.) Chronicle of March 13, 1956]

SOUTHERN STAND

It is becoming plainer by the day that the South is not going to knuckle down to the Supreme Court's desegregation edict.

There is a note of open defiance in the manifesto, called a declaration of constitutional principles, which Senators and Congressmen from all of the Southern States delivered to the Congress yesterday.

The southerners accused the Supreme Court of a flagrant abuse of judicial power, and pledged to exercise every lawful means to bring about a reversal of the decision ordering an end to segregation in the public schools.

Warming up to the occasion, Southern Senators wrote a postscript to their strongly worded manifesto by seriously discussing the possibility of a third party movement. They are talking about walking out of the Democratic convention if it should commit the party firmly in favor of integration of the races in the schools.

This manifesto is a historical document. It is at once a warning that the South will not accept the intolerable position in which it finds itself, with outside meddlers brazenly tossing sticks of dynamite about, and a reasonable appeal to Americans everywhere to rescue the Constitution from the hands of those who are abusing it.

Those are strong words from the Southern Congressmen:

"We decry the Supreme Court's encroachments on rights reserved to the States and to the people, contrary to established law and to the Constitution.

"We appeal to the States and people who are not directly affected by these decisions to consider the constitutional principles involved against the time when they, too, on issues vital to them, may be the victims of judicial encroachment."

Thus the South has laid down the gauntlet to those who would attempt to enforce unconstitutional decrees, and club the people into submission by coercion and force.

There is no direct reference to interposition anywhere in the Southern manifesto, but there is a strong inference that, if necessary, it will be among a variety of weapons which will be used to combat the integration edict.

Momentous history is in the process of being written. Its locale is right here in the South, and the issue, as it so often has been in the past, is the preservation of the United States Constitution and the rights it grants the individual States—rights which are now being usurped.

[From the Charleston (S. C.) News and Courier of March 13, 1956]

NINETY-SIX CONGRESSMEN IN SOLID FRONT

A manifesto by 96 Southern Members of Congress presents a moderate but firm statement of principle to the people of the United States.

It comes rather late, but not too late, we believe, to help save good relations between the races in the South and to head off violence.

The solid front presented by these Senators and Representatives of 11 States carries deep political meaning. While we do not now recognize a third party movement, the signers of the manifesto hold great power in their home regions.

Lest anyone misunderstand, we hasten to point out these undeniable facts:

The 96 Senators and Representatives are elected by the people, not appointed to lifetime jobs. They must go periodically before the people to stand or fall on their records. They reflect public opinion.

The Congressmen represent Negro as well as white citizens. While the voting power of Negroes in the South has not attained the all but dictatorial race pressure developed in certain Northern cities, Southern officeholders by no means ignore the colored vote.

The Southern Congressmen, we submit, are representing the best interests of all the Southern people, both white and colored. They say they will exert all legal means to prevent integrating the races by force. Such a stand will protect the lives and welfare of Negroes as well as whites. The use of force—whether military or continuous pressures of other kinds—will break down the friendship and respect that have enabled these different races to live together in peace.

The Negroes would win a hollow victory if they tie themselves by legal bonds to unwilling white folk. By other means, largely economic, colored people have made great advances in recent years. They were on the threshold of even great progress when the NAACP and other radical leaders tripped them up.

Many thoughtful Negroes, we believe, would gladly get out from under the NAACP's harmful leadership, if they knew how to do it. Already we have noted a change in the attitude of the northern press toward the more violent partisans of racial integration.

The northern press will not hesitate to make the NAACP a scapegoat if it concludes that national peace and harmony are imperiled. It will naturally gloss over its own role in substituting propganda for factual handling of the race story in the South.

Public opinion in other regions cannot help but be impressed by the unified front of 96 American Congressmen. How could the Supreme Court rule unanimously that the Constitution outlaws separate schools, when 96 lawmakers unanimously rule otherwise?

Obviously, political pressure was behind the Court's ruling. Political strength is in the hands of the 96 Southern Congressmen, if they care to use it. By keeping this solid front they can command attention from both national parties in the Presidential campaign.

Once effective leadership starts mobilizing Southern votes, the leftward course of our country may change. We believe the change will protect citizens of all races in all regions of the Republic.

Outstanding Young Farmer of 1956

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, March 16, 1956

Mr. NEUBERGER. Mr. President, no matter how many amendments to the farm bill are proposed and no matter how many conflicting opinions are expressed in the debate on S. 3183, there is one thing on which we are all agreed and that is the ever-present need for the very best farm practices.

The importance of these practices in recent years has been dramatized by the selection of county and State "Grass Man of the Year," "Conservationist of the Year" and other equally impressive titles. Through such honors bestowed on farmers selected for their application of the very best farm practices, motivation has been given for a wider adherence to the patterns they establish.

The Oregonian, of February 28, 1956, carries a story by Joe Floren which delineates the good farm practice put into use by Frank Setniker, named by the Oregon Junior Chamber of Commerce as Oregon's outstanding young farmer of 1956.

Mr. President, I ask unanimous consent to have included in the Appendix of the RECORD an article from the Oregonian of February 26, 1956, entitled "Shoestring Start Built to Title of Outstanding Farmer."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SHOESTRING START BUILT TO TITLE OF OUTSTANDING FARMER

(By Joe Floren)

Back in the summer of 1942 Frank Setniker was a kid with an old truck, no land, no cash, 1 year of college, and a hankering to farm for a living.

So he went to nearby Hillsboro to talk to a banker about borrowing $1,000. The banker considered his proposition and concluded the boy was a good risk.

In 13 years, Frank has parlayed his initial investment—in a tractor, plow, and harrow—into an 859-acre 2-farm operation which includes one of Washington County's most modern dairying plants. He is, at 33, worth something in excess of $92,000.

JAYCEES SPONSOR CONTEST

Measure of this success was his selection this week as Oregon's Outstanding Young Farmer of 1956, in the annual competition sponsored by the Oregon Junior Chamber of Commerce. Entry of Hillsboro Jaycees, Frank

was chosen from among 94 individual contestants statewide.

Selection was made on the basis of contribution to agriculture, increase in farm investment, adoption of advanced farming practices, and community activities. Second and third place winners are William L. Hulse, Dufur, and Fred Luttrell, St. Helens.

Setniker will receive a bronze plaque as State winner, then represent Oregon in national finals in Pittsburgh in April.

How did the young farmer hack his notch in today's tough farming business, while many others fumbled and faltered?

He was first in the county to build a loafing shed and adopt loose housing for his dairy cattle. While others stopped to consider, he installed a refrigerated bulk milk tank and a pipeline milking parlor.

When he saw part of his grass wasted under conventional grazing system, he developed a unique strip-fencing plan for daily change of pasture and, doing so, increased his per acre carrying capacity from 1½ to 3 cows. The plan is being adopted by more dairymen each year.

Constant drive to improve is a key to Frank's character. Both as a 4–H Clubber and future farmer at Hillsboro high school, he won State honors.

He started unspectacularly enough, renting 80 acres near Hillsboro to raise oats, vetch, grain, and lima beans. Returns that first year were far from dazzling, but they paid the bank.

In a move that was business, and maybe part sentiment, Frank obtained a lease option in 1943 on a 100-acre farm south of town—the old Setniker homestead, which his parents had once owned.

"The up ground was in pretty fair shape," Frank recalls, "but bottom land was run down from too much corn and grain cropping, and it washed badly in winter."

SPRINKLERS SUPPLY WATER

Today in place of the meager flood meadow, there are 80 acres of seeded permanent pasture, all sprinkler irrigated—a grassland program which earned him the title, "Washington County Grassman of the Year" in 1954.

The first fall, grass and clover were sown to build up sod in the lowland and a tractor-powered sprinkler system was installed to water 30 acres.

The quonset-type loafing shed—his own design to get away from posts blocking free movement of cattle—went up in 1949. Some of its features have been adopted by Oregon State College extension service. The shed will accommodate 80 head of cattle.

OTHER DEVICES ARRIVE

Then, as fast as Frank could afford, came the milkhouse—a converted calf barn—refrigerated tank and pipeline milker, installation of which in 1952 gave him the first complete milker-tank-loafer setup in the County.

The Setniker dairy herd now numbers 125 cows and bred heifers, plus 85 young stock.

Strip fencing program, probably his biggest advance in management, allows a complete grazing rotation every 21 days. Portable electric fencing, moved daily, controls the amount of pasture cows may graze. It means constant work, but Frank—thinking of the land's doubled feeding capacity—says it's "absolutely worth while."

Never one to stand still when he could be moving, Frank took a lease option on a 659-acre farm near McMinnville in the fall of 1947—badly rundown land operated for 30 years largely in wheat. Soil fertility had slumped, irrigation was nonexistent, erosion gullies cut the slopes, and thistle and other weeds swarmed over the land.

VETCH REPLACES WEEDS

To whip the worn soil into shape, Frank began with vetch and field pea planting, then turned to a grassseed program with sprinkler irrigation on 360 acres. With good drainage ditches he managed to reclaim 50 acres of wasteland the first year.

Chemical spraying and crop rotation, with spring barley crowding the weeds before they could go to seed, routed the thistles and their kind. Tualatin oatgrass, seeded the first fall, curbed erosion on 50 acres. Another 50 acres of marginal land were saved the next year by putting in grass and subterranean clover.

GRAIN FURNISHES CASH

Farm buildings were few and poor. The 600-ton pit silo was rebuilt and a 300-ton grain elevator constructed, with the lessor sharing the cost.

Frank's two farms, separated by some 40 miles, keep the young farmer on the go, but he has coordinated them into a single self-sustaining farm unit, which supplies all his hay, silage, and pasture, plus grain for a cash crop.

It is no longer a one-man operation. He has three hired hands, plus his wife, Norma, who, he insists, works "harder than I do."

They met in high school, and were married in 1945. They have three children: Carol Ann, 8; Joyce, 6; and David, 3.

CIVIC DUTIES LURE

An asset in the recent State contest was Frank's tremendous energy and interest in community service. He has contributed thousands of hours as leader in well over a dozen agricultural groups.

Plaques will be awarded to each of the three winners Saturday by Gov. Elmo Smith at the State Jaycee springboard meeting in Corvallis.

Hulse began farming in 1945 on Tygh Ridge, 10 miles south of Dufur, by assuming an indebtedness of $18,000. He soon purchased an additional 140 acres of cropland. He added 250 acres in 1951 and 24 acres in 1953.

Luttrell started farming strawberries in 1939 when he was 16. He has expanded his original 5 acres to 72 acres in berries. He was a pioneer in irrigation of strawberries.

New Bricker Amendment

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Friday, March 16, 1956

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the CONGRESSIONAL RECORD an editorial entitled "New Bricker Amendment," which appeared in the Manchester Union Leader, of Manchester, N. H., on March 9, 1956.

This is a forthright editorial which deals with the new version of the so-called Bricker amendment, which is of general interest.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NEW BRICKER AMENDMENT

The game of the Eisenhower administration in picking details to promote self-interest is revealed again in its opposition to the new wording of the amendment to protect American rights against treaty violation.

In the effort to achieve this protection, Senator DIRKSEN has presented a new edition of the Bricker amendment to the Senate Judiciary Committee. This version says that "a provision of this Constitution shall not be of any force or effect."

Senator BRICKER has accepted this new revision and it has been approved by the Senate Judiciary Committee. But the Eisenhower administration raises an objection to the phrase "with any provision of this Constitution." If the amendment simply said, "with this Constitution," the administration says it would give its approval. But it will not accept "with any provision of this Constitution."

Now this Dirksen edition of the Bricker amendment is watered down enough, and it is hoped that Congress will pass it promptly and send it to the States. Of course the President has no authority to veto it even if he wants to. If both the House and the Senate pass the amendment by a two-thirds vote, and three-fourths of the States give it approval, it will become law.

The American Bar Association has approved the Dirksen phrase "with any provision of this Constitution" and its judgment ought to be worth something. The Eisenhower administration, however, says that to make a treaty conform to every provision of the Constitution would make treatymaking intolerable.

Just what difference there is between conforming to the Constitution or to its provisions is not made plain. The only assumption is that the Executive wants no restrictions on treaty power, and so it picks some vital clause on which to base its opposition.

Wyoming Natural Resources and Prospective Industrial Development

EXTENSION OF REMARKS
OF
HON. FRANK A. BARRETT
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Friday, March 16, 1956

Mr. BARRETT. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an article published in the Kenneret Gazette on March 8 last, entitled "Industrial Development of Green River Basin Based on Natural Gas Resources Is Object of Study To Start Soon."

The Green River Basin in the southwestern part of my State is blessed with an abundance of natural resources.

There is more coal in that basin than in all of Germany. In the course of the past few years, there has been discovered in the Green River Basin a tremendous gas deposit that may well be as large as the great gas fields of Texas. It is anticipated that the deposit may extend over an area of approximately 100,000 acres. Many industrial leaders in the coal industry of our country are presently endeavoring to perfect a plan whereby coal can be treated by a low temperature carbonization process that will make possible first, the extraction of the tar and char from the coal and, second, the reduction of the chemicals from the tar, and third, the generation of power by using the char while it is under 900 degree heat. It is fortunate that adequate water for industrial development is available in the Green River Basin of our State.

Natural gas could well prove to be a distinct advantage in the development of our coal resources and in the building of a chemical industry in that area. In that area also are large deposits of phosphate; and through a process of beneficiation, our large coal and gas resource

can also be used to develop a substantial phosphate industry. I may say, Mr. President, that the demand for fertilizer in the Western States is so large that there will be a ready market for our phosphates and sulfur in the manufacturing of fertilizer. As is pointed out in the article, the interstate gasline from Texas to the Pacific Northwest will open the door for great development in the western empire. Mr. Robert V. New is certainly to be congratulated for undertaking a complete study of the resources of the Green River Basin and their development.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Kemmerer (Wyo.) Gazette of March 8, 1956]

INDUSTRIAL DEVELOPMENT OF GREEN RIVER BASIN BASED ON NATURAL GAS RESOURCES IS OBJECT OF STUDY TO START SOON—HEAD OF LARGEST OWNER AND OPTIONER OF OIL AND GAS LEASES IN BASIN SAID RESULT MAY BRING A HALF BILLION DOLLARS IN INDUSTRIAL INVESTMENTS TO THE STATE

The early beginning of studies to determine the feasibility of industrial development of the Green Riven Basin, based on the natural gas resources of that area, was disclosed at Cheyenne recently by Robert V. New, president of Rocky Mountain Corp. and its affiliated company, Technical Industries, Inc.

New, who recently moved headquarters of the two firms from Los Angeles to Cheyenne, told the Wyoming State Tribune the Technical Industries is entering into negotiations with business and engineering consultants.

The western area of the basin north of Kemmerer has extensive proven natural gas areas.

These negotiations, said New, "May result in industrial investments in Wyoming over the next few years by Technical Industries Corp. approaching $500 million."

He said that after 3 years of study of the Green River Basin, including its stratography, structure, and of gas wells drilled, he "is convinced" that the vast basin—wholly within Wyoming—represents one of the greatest reserves of gas in the continental United States.

New added that "from this point on, I believe development will become much more rapid."

He explained that he not only sees rapid development of pipeline facilities now building and contemplated, to carry gas out of the basin, but advanced the opinion that "certain advantages that may be revealed in the studies to be made, will warrant industrial development within the State as well as carrying energy outside the boundaries of Wyoming in the form of natural gas."

The Rocky Mountain Corp., of which New is also president, is the largest owner and optioner of oil and gas leases in the basin.

POINTS TO PIPELINES

New pointed to the pipeline of Pacific Northwest Pipeline and Colorado Interstate, now building also the proposed line to Chicago for the Peoples Gas, Light & Coke Co.

"Rocky Mountain Corp.'s established interest in the Green River Basin is sufficient that we anticipate quantities of gas sufficient to do many things," he declared, and added it is the plan to immediately institute study of the following projects:

PROJECTS CONTEMPLATED

1. A natural-gas transmission line from Pinedale easterly over a more northerly route than the other contemplated lines to serve Minneapolis, St. Paul, Milwaukee, and Chicago.

2. An electric-generating station to be built in the Green River Basin, so located that transmission of natural gas from the wells to the plant will be nil. New said there is sufficient water in the rivers and streams of the basin for cooling purposes and the water can then be returned to the streams for uses as in the past. "The study," he said, "would be toward an electric-genterating plant utilizing local gas to generate approximately 1 million kilowatts, and to carry the power along the same route being studied for the pipeline, over 330,000-volt lines."

This, he said, would be designed along lines of the operation of American Gas & Electric Co.'s similar plant in West Virginia, built over a coal mine for supplying Indianapolis and Chicago with electricity.

3. Contemplation and study of the economic feasibility to construct in the Green River Basin at the very source of raw material and energy (natural gas) plants for the manufacture of butadiene rubber, anhydrous ammonia, carbon black, glycol and alcohol, petroleum detergents, and plastics, and other petrochemicals.

He pointed out that any action which may result from his thinking would, "of course" be dependent upon the result of study by competent engineers and industrial economists.

"Such a program would have to be extremely sound because of the necessity of a large amount of public financing," New said. "However, there are further factors inherent in the basic structure of Wyoming that tends to enhance such project. The efficient management of the State, under a succession of competent governors and legislatures, has established Wyoming as having a tax climate better than is enjoyed by business in most industrial States.

"Consider, for a moment, the thing of a large hydroelectric plant in the Green River Basin to supply electricity for midwestern industrial States. It will possibly cost no more to build a transmission line for high voltage electricity than to build a gas line. After the gas is carried to the cities in a pipeline then still the electric plant plant must be built and paid for. Considering the $200 million for such a plant, the tax benefits that would accrue in a friendly tax atmosphere of a State like Wyoming would be so great that it appears to me that the project would warrant considerable expenditures of time and money to get the right answers. The program would rest solidly upon a structure of local sources of raw energy and raw materials, a friendly and sane tax climate and the kind of people I have found it a pleasure to work with."

Heavier Penalties Needed

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 14, 1956

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks, I submit the following editorial from the Paterson (N. J.) Evening News under date of March 14, 1956:

HEAVIER PENALTIES NEEDED

Harry J. Anslinger, Federal Commissioner of Narcotics, has long sought heavier penalties for drug peddlers and compulsory hospitalization of addicts. But progress in those directions comes very slowly.

"Voluntary hospitalization," he told an audience in New York City, "is almost useless. The addict can demand his freedom any time after the first 2 weeks."

Mr. Anslinger considers present laws on peddlers unrealistic. The present mandatory minimum is 2 years, and with the usual one-third time off, the drug traffic is a good risk for any peddler. Mr. Anslinger would make the mandatory minimum 5 years for first offenders and prohibit judges from suspending sentences.

It is not clear to us why Congress and the legislatures in many States are so slow to crack down on peddlers and especially on those who traffic in drugs for youths. These men are the scum of the criminal world. Admittedly, no penalty, no matter how severe, would wipe out all the illegal drug traffic, just as the possibility of execution for murder does not prevent all murders. But Mr. Anslinger, who has had the widest possible experience with drug violators for many years, is convinced that heavier penalties do have a deterrent effect and he cites the records in other countries and in several States in this country as examples. The war on illicit drugs must be waged on several fronts, one of the important ones being a hard and continuous crackdown and stronger legal weapons.

Public Support of Debt Reduction

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Friday, March 16, 1956

Mr. MARTIN of Pennsylvania. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very interesting article, published in the Pittsburgh Sun-Telegraph of March 14, 1956, under the heading "Before Any Tax Cut, Reduce Debt, Polls Urge." The article states, in part, that—

From western Pennsylvania, Iowa, and central Michigan the voter response to scientifically conducted polls places both a balanced budget and debt reduction ahead of any cut in income taxes this year.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BEFORE ANY TAX CUT—REDUCE DEBT, POLLS URGE

(By James F. McCarthy)

WASHINGTON, March 14.—A steadily increasing number of the voters are telling their Congressmen in no uncertain terms to reduce the national debt.

From western Pennsylvania, Iowa, and central Michigan, the voter response to scientifically conducted polls places both a balanced budget and debt reduction ahead of any cut in income taxes this year.

Where voters have been given the direct choice between a tax cut and debt reduction, the majorities in favor of debt reduction have been surprisingly similar.

CORBETT POLL

On February 8 Representative ROBERT J. CORBETT, Republican, of Pennsylvania, announced results of his poll in which 68 percent of the voters favored reducing the national debt.

Then on February 23 this same answer was given by 66.95 percent of the voters replying to a poll conducted by Senator THOMAS E. MARTIN, Republican, of Iowa.

NOW comes Representative ALVIN M. BENTLEY, Republican, of Michigan, with results of a poll in which he asked the same ques-

tion and voters again registered strong approval of debt reduction. In the Bentley poll the percentage so answering was 64.1.

SMALL VARIANT

Thus, we have 3 widely diverse sections of the country coming up with the same response—a response which varies by only 3.9 percent.

In a less scientific poll today Representative JAMES E. VAN ZANDT, Altoona Republican, announced that he had sounded the opinion of his district which includes the counties of Blair, Centre, and Clearfield.

VAN ZANDT did not ask about national debt reduction versus a tax cut. But he did ask the voters whether they favored balancing the budget before a tax cut. Of the 2,565 replies, 2,140 or 83.5 percent favored the balanced budget.

VAN ZANDT's poll was less scientific because it was based upon answers to questions published in newspapers rather than using lists which would have insured a better voter cross section.

In evaluating the results obtained in the other 3 polls the following factors must be kept in mind:

All 3 of the areas polled had Republican majorities of varying degrees, but replies in each case were obtained from both Democrats and Republicans.

Replies from each area represented a wide variety of economic and occupational groups.

Taken together, the polls sounded out both agricultural and industrial segments of the economy.

A Pennsylvanian Looks at the President's Program

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Friday, March 16, 1956

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech recently made by the Honorable Joseph S. Clark, Jr., of Philadelphia, Pa., before the Women's National Democratic Club.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A PENNSYLVANIAN LOOKS AT THE PRESIDENT'S PROGRAM

(Speech by Joseph S. Clark, Jr., to Women's National Democratic Club, Washington, D. C., February 20, 1956)

I come before you today as a Democrat who seeks the high office of United States Senator from the Commonwealth of Pennsylvania. It will be my task during the next 2 months to persuade members of our party to nominate me for that office at the primary on April 24. If successful, it will be my happy task for the next 6 months to persuade the voters of the Commonwealth of Pennsylvania to substitute a Democrat for a Republican in Washington.

The Commonwealth of Pennsylvania has within its borders over 11 million people of widely divergent economic, racial, religious, and national backgrounds. It is a melting pot in which the principles of freedom and order under law laid down in the Declaration of Independence and the Constitution of the United States are being tested every day in the week.

We have a widely diversified industrial base, rich agricultural areas, mountains, lakes, and streams teaming with fish, game, and all kinds of wildlife, and hence recreational areas as fine as those found anywhere in the United States. We have hard coal and soft coal, oil and gas, timber and iron ore. Through our three major ports, Philadelphia, Pittsburgh, and Erie, flow most of the products which are made anywhere in the world. We have a transportation network by rail, air, and highway as good as any in the country.

Because of all of this, we represent, to a very real extent, the national interest in Federal policies. A commonwealth of such wealth and such diversified interests has an important stake in Washington.

Accordingly, when a Pennsylvanian looks at the President's program, he does so with a broad national outlook.

Our public business in Pennsylvania, like yours in your own home community, is unfinished business. Our local governments are only beginning to get their teeth into the serious problems of the second half of the 20th century. Our State government under the leadership of Gov. George M. Leader is only beginning to come out of the Middle Ages where our Republican friends were happy to leave it. We Pennsylvanians, like you from the other States, think we are entitled to a great many things from our Federal Government which we are not receiving today. For the next few minutes I should like to discuss with you what these things are and what our chances are of getting them from any Republican administration.

To state what we want is not hard. We want peace and prosperity at home and abroad. We want to make continued progress during our lifetime in the ageless search for the brotherhood of man. So, I suppose, do all Americans.

We are not children and we know we must pay a heavy price for what we want. It will not come by wishful thinking; it will require a sound philosophy of government, a willingness to sacrifice private interests for the public good, and an incredible amount of hard work by dedicated, intelligent, competent people both in private life and in Government.

More specifically, we want better schools for our children; better houses for our middle- and low-income families and for our older people; an end of the pillage of our natural resources; a sounder agricultural economy; better protection for consumer interests; an intelligent advance toward medical care for all; an end to the pockets of blight, depression, and unemployment which fester not only in our coal regions but also in our great metropolitan areas; a curb on the undue power of big money and big business over the Federal Government; a development in the public interest of the resources of our three major river systems, the Delaware, the Susquehanna, and the Ohio; an end to those provisions of the Taft-Hartley Act which penalize the legitimate growth of organized labor; a national program which will reverse the trend toward the destruction of small business; and the speedy building up under an intelligent financial plan of our interstate highway system.

We want men in the public service who will administer the laws with a sympathetic understanding of their social purpose, not men who sabotage the enforcement of the very statutes they are appointed to enforce. We want an aggressive enforcement of civil rights and civil liberties in accordance with the principles of the Declaration of Independence, the Civil War amendments to the Constitution of the United States, the Bill of Rights, and the decision of the Supreme Court of the United States banning racial segregation in our public schools. We want an immigration policy based on compassion and justice rather than on outmoded biological concepts about a master race.

To make such things possible in Pennsylvania, we need a national defense which must keep abreast and indeed ahead of the military, naval, air, and atomic and nuclear strength of the Soviet Russia. We need a foreign policy which will be strong without bluster, will seek peace without appeasement, and will work relentlessly and unceasingly to keep our present allies and make new ones throughout the entire free world.

To achieve these ends we must both trade with our friends and assist them to build their economies to a standard of living under which their peoples can resist the temptations held forth by the salesmen of communism.

Now, what are our chances of getting any substantial part of all this by continuing the Republican Party in power? Not very good.

Let's examine the President's program and then take a look at who can be expected to put it through.

In his state of the Union message the President speaks of peace, prosperity, high employment, the halt of inflation, the removal of controls, the stabilization of the cost of living, the cut of Federal spending by 10 billions of dollars, the reduction in taxes, and the fact that there are 300,000 fewer Federal job holders than there were when he took office. He points with pride to the balancing of the budget. He speaks of the extension of social security to 10 million more Americans, refers to what he calls an unprecedented advance in civil rights, and states that all this has been accomplished without any unwise interference with private rights. The outlook, says the President, is bright with promise.

Towards all of this, we Democrats must be fair. We are at peace; the Nation is enjoying a prosperity higher than perhaps we have known ever before in our history. Employment is high, and yet in Pennsylvania we have today neary 250,000 unemployed and in the Philadelphia area alone, including 3 New Jersey counties, we have 100,000 unemployed.

It is true that inflation has been halted for the time being and the cost of living stabilized; but this is because farm prices have hit a new low. It is also true that Federal spending has been cut by $10 billion, but this has been accomplished as we Democrats know by cuts in our national defense which we could ill afford and for which in the near future we may pay a heavy price. It's true, also, that taxes have been reduced; but who got the benefit of the reduction? Seventy-five percent of it went to men in high income brackets and to the corporations of the country—mostly to the larger corporations. It is true that there are fewer Federal jobholders, but the result shows itself again in a lower level of national defense and a lower level of social services.

It is true that the budget may be balanced for this year—that is to say unless we pass the badly-needed highway bill—which the President advocates but for which no provision is made in the current budget. And again, that balancing of the budget has been achieved at heavy cost to our national defense effort.

It is true that social security has been extended into new corners but that job, I think we can agree, is still far from done. Incidentally, it was started and, in my judgment, will be finished by Democrats.

If there have been unprecedented advances in civil rights, there are those in Mississippi and Alabama to which this will come as a striking surprise. And, if in making this comment the President was thinking of the opinion of the Supreme Court in the education case, we Democrats are well aware of the fact that 7 of the 9 members of that Court who participated in that decision were appointed by Franklin Roosevelt or Harry Truman.

We can certainly admit that there has been no unwise interference with private rights. We may be pardoned for believing that it might have been wiser if there had been some interference with the private right

of pillage which our Republican friends seem to have so much interest in.

And it is true that the outlook is bright with promise if we have the brains and the ability and the desire to seize that promise and make it come true.

So much for the present and the immediate past; what of the future? Which party can best be trusted to maintain peace and to give an ever-widening prosperity to all of the people of the United States, not merely to those who are, perhaps, already prosperous enough? The old simple past is dead. We cannot pull ourselves up by our bootstraps by slogans, threats, and boasts. Nor can we smother the crying issues of the day in pious talk of peace and prosperity. To solve successfully our domestic and foreign problems we must have men in Washington who want to solve them, not men who pay lip service to principles in which they do not believe.

With these thoughts in mind, let's see what the President has proposed in the series of messages he has sent to the Congress in the past 6 weeks. No Democrat can read those messages without the thought that the ghost of Franklin D. Roosevelt and the strong sturdy leadership of Harry S. Truman still must have their influence in the White House. The President in this election year of 1956 has suddenly become at the very least a right-wing New Dealer. Listen to these unaccustomed words from the economic message:

"We have come also to believe that progress need not proceed as irregularly as in the past and that the Federal Government has the capacity to moderate economic fluctuations without becoming a dominant factor in our economy."

And, again:

"The Government can do a great deal to help people who have been left behind in the onrush of progress by undertaking special programs for raising their productivity."

Gone are the days when, back in 1949, as president of Columbia University, Mr. Eisenhower believed that those who sought perfect security would be best suited in jail.

The words of the President are fair, and we can take little exception to them. The President's program is reasonably specific. We Democrats must welcome the President's change of mind. I, for one, have always been of the belief that someday he would come to the conclusion he was leading the wrong army; moreover, I suspect that some of the soldiers in his army are secretly a little discontented with the new philosophy of their general. I wonder what Senators KNOWLAND, MCCARTHY, and JENNER think of the President's present views on foreign policy and civil rights and liberties, not to mention his newly proclaimed liberalism on domestic issues. I wonder what Secretary of the Treasury Humphrey and Secretary of Defense Wilson think of some of the views on spending and on national defense the President has recently been expressing. And I suspect that Messrs. Hollister and Weeks have a little less than complete enthusiasm for this latest crusade in the interest of the underprivileged at home and abroad.

The fact of the matter is that we have schizophrenia in the Republican Party. Dr. Jekyll is in the White House, and Dr. Jekyll is a lovable and fine character, but wherever else we look we see a series of Mr. Hydes, be it in the Vice President's office or in the office of many of the principal administrators and Members of the Congress. These men have no interest in putting the program of the President through.

Pennsylvania is a good example of Republican schizophrenia, we have one Senator, secure in his seat for the next 2 years, who has already announced his retirement at the end of his term. He can be relied on to vote in the future as he has in the past against 90 percent of the program the President is now recommending. We have another Pennsylvania Senator on whose neck the hot winds of an election year are blowing. We will see from him, I predict, an unaccustomed liberalism in word during the next 6 months in the Senate, a liberalism as reluctant as his vote against the Harris-Fulbright gas bill. And a timid sort of liberalism which is not willing to fight for what he professes to believe in.

Entirely aside from all of this, I submit that the President's program is too little and comes too late. If this country is to find its manifest destiny we must really march ahead. It is not enough to speak pious platitudes while glancing over our shoulders from time to time with nostalgic gazes at the supposedly happy past. Adlai Stevenson put it well the other day at Portland, Oreg. He said, "the Republican approach is to assume that the centrally important thing is to promote business. What does that is good. Anything that does not is either bad, or, like education and health, not worth getting very excited about, except in campaign years. The Democratic approach is, on the other hand, to ask first what human need is to be served, and then to meet this need by whatever method will do it best. In this view of things, business is very important, but only as a servant of the people."

The fact of the matter is that the Republican Party is the party of yesterday and the Democratic Party is the party of tomorrow. Our party which now controls the Congress by slim majorities must achieve in 1956, working majorities in both House and Senate, working majorities dedicated to following the leadership of a liberal Democratic President, elected next November, a President who will speak with conviction and will fight for his program; a man who believes in the America of tomorrow, not the America of yesterday. A man who, like Jefferson, Jackson, Wilson, Roosevelt, and Truman before him really believes with Abraham Lincoln in a government of, for and by the people, and will see to it that such a government returns to Washington after 4 years of something else.

We Democrats in Pennsylvania will work hard to bring such happy days down here again. I know that in our efforts we will have the help of every member of your fine organization.

Money for the Mail

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 14, 1956

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Washington Post under date of March 16, 1956:

MONEY FOR THE MAIL

There is no valid reason why in a country as prosperous as the United States the postal service should operate at a deficit of a half billion dollars annually. Postmaster General Summerfield has again appealed to Congress for the rate increases necessary to place the Post Office on a more nearly self-sustaining basis. His presentation before the House Post Office and Civil Service Committee was exceptionally well documented to show the justification of the adjustments he seeks. We think the public will accept fair increases gracefully if Congress will bring the bill to a vote. Surely the equitable way to defray postal costs is to assess the charges against users rather than indiscriminately against the taxpayers in general.

Postal costs are up 106 percent since 1932. Yet first-class rates remain the same as they were 24 years ago, second-class rates are up only 3 percent since 1932 (and, indeed, since 1917), and third-class rates have increased only 38 percent. Even the most intensive streamlining and efficiency effort cannot correct this imbalance. First-class mail, for example, does not return its fair share of postal expenses. The cost of handling the average piece of first-class mail exceeds 3 cents. Taxes, which fall most heavily on individuals, make up the difference. The increases Mr. Summerfield asks—to 4 cents for regular mail and 7 cents for airmail—would shift more of the proportionate burden to business users.

Much the same situation pertains in second-class mail, which consists of newspapers and magazines, and third-class mail, which is mostly advertising. Fortunately, more and more publishers have recognized the propriety of an increase in second-class rates—an increase which still would not reflect the full distributed cost. Times have changed drastically since the days when low second-class rates were regarded as a necessary subsidy for the diffusion of information.

Even if all the requested increases are granted, there will still be a deficit estimated at $63 million. But that will be a tremendous improvement over a deficit now nearly eight times that amount. Legislators can save themselves further worry by approving the proposal for an independent commission to set rates in the future with broad congressional guidance. Artificially low postal rates such as now prevail merely kid the taxpayer.

Fictitious Formula Used to Raise Southwestern Power Administration Rates

EXTENSION OF REMARKS
OF
HON. J. WILLIAM FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Friday, March 16, 1956

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled, "Fictitious Formula Used To Raise SPA Rates," which was published in the Ozarks Mountaineer for March 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FICTITIOUS FORMULA USED TO RAISE SPA RATES

The proposed 40-percent increase in rates by the Southwestern Power Administration (affecting some 200 rural cooperatives and 30 municipalities in Missouri, Arkansas, Oklahoma, Louisiana, and Texas, and described in our February issue) is now the subject of critical investigation by Congress and the application of the increase is being suspended by the Department of the Interior pending that inquiry.

Four congressional subcommittees of both the House and the Senate have followed the unusual practice of holding joint hearings, and several of the important witnesses, testifying in strong opposition to the increase, have been from the Ozarks.

The Interior Department (under whom SPA operates) attempts to justify the increase by a new formula that it and the present Bureau of the Budget have adopted, whereby a much higher percentage of the total cost of individual dams now is allocated to the power facilities that are installed. For instance the original cost allocated by Army engineers to Table Rock Dam was $24,500,000, out of a total cost of $71,865,000.

The new formula (adopted arbitrarily and without congressional approval) now allocates $55,104,000—76 percent.

The principal argument now being made at the congressional hearings by the opponents of the increase is that the formula was adopted without sanction or justification.

Government dams are built primarily for flood control. In fact the law, under which they are authorized, is called the Flood Control Act. Some of the dams have and some do not have power facilities. The latter are secondary, a mere accessory, in a dam's construction. And, prior to the advent of this administration the costs had been allocated on this basis.

Flood control furnishes the only legal reason for the Government to build a dam. Power generation may or may not be added, depending on whether there would be national economic loss if the water resource, otherwise going to waste, were not utilized.

Congress in the Flood Control Act, therefore, approved a standard allocation whereby all general costs, such as the dam itself and reservoir, would be charged against flood control, and only the specific additional cost of generation equipment would be charged against power.

For instance, according to figures supplied by the Army engineers, the total cost of Norfork Dam, to date, has been $27,878,000, of which only $3,750,000 represented power installation. And, in the instance of Bull Shoals, the total cost now stands at $76,277,000, of which only $9,900,000 represents power.

The new formula of the Department of the Interior now arbitrarily and fictitiously allocates $14,092,000 to Norfork power and $57,412,000 to that of Bull Shoals.

The Ozarks and other industrially handicapped areas need cheap power for their development. Prior practice of allocation would provide it. The new formula destroys it. No group can benefit from it except the private power monopoly interests, and the conclusion is inescapable that it was drawn for that purpose. Congress, following the current hearings, probably will reintsate the original method of allocation, but if it does not the many cooperatives and municipalities of the Ozarks will be forced to pay a much higher price for their power, with the resulting serious financial adjustments that they will have to make.

Fraudulent Advertising on Television and Radio

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. ANFUSO. Mr. Speaker, I call to the attention of my colleagues a timely article which appeared on the front page of the March 14 issue of the New York Times. The article deals with fraudulent and misleading advertising which is being used on television and radio.

District Attorney Edward S. Silver of my home Borough of Brooklyn has installed in his office a monitor system, operated by city policemen on a 24-hour basis, to check the various programs on television and radio for false ads. He has discovered many abuses by smooth-talking advertisers and their pitchmen.

The benevolent prosecutor, seeking to protect the public against such abuses, is conducting a relentless campaign and thus far has already obtained six convictions for misleading advertising since January 1 of this year.

District Attorney Silver says, however, that local officials cannot do this job alone. He accuses the Federal Communications Commission for failing to do its job of protecting the public in this matter.

I have addressed a letter to Mr. George C. McConnaughey, Chairman of the Federal Communications Commission, in which I am inviting his response to the charges made by District Attorney Silver.

For the benefit of my colleagues, I am inserting into the RECORD both the New York Times article of March 14, 1956, and the text of my letter to FCC Chairman McConnaughey:

MONITOR SYSTEM CHECKS TV AND RADIO FOR FALSE ADS

Edward S. Silver, Kings County district attorney, accused the Federal Communications Commission yesterday of failing to protect the public against fraudulent and misleading advertising on television and radio. Mr. Silver made his accusation at a demonstration of a new monitoring setup at his racket squad headquarters, 186 Joralemon Street, Brooklyn. Nine television sets and 13 radios have been installed to check on airwave programs. A squad of young city policemen has been assigned on a 24-hour, 7-day-a-week schedule. Six tape recorders are used to pick up the sales talks of programs under suspicion. "During the last few months I have been getting an increasing number of complaints from Brooklyn residents indicating that they have been 'taken in' by certain 'over-the-air' advertisers," Mr. Silver said. "These victims are in the low-income group and can least afford to be taken over.

"I regret to say that the Federal Communications Commission is of little or no help in the matter. The TV and radio stations are licensed by the Government through the agency of the FCC. They have a real responsibility to the people not to permit the air waves to be used to the citizens' detriment. Their machinery is slow and cumbersome. In my opinion, they are not doing their job."

Mr. Silver urged the public to be on guard against "the smooth-talking advertisers and their 'pitch men'," The prosecutor also said that his staff had obtained six convictions for misleading and fraudulent advertising since January 1.

MARCH 15, 1956.

Mr. GEORGE C. MCCONNAUGHEY,
Chairman, Federal Communications Commission, New Post Office Building, Washington, D. C.

DEAR MR. CHAIRMAN: My attention has been called to the fraudulent and misleading advertising which is being used on television and radio.

Several convictions have already been obtained recently in my home borough of Brooklyn.

If you will read the front-page article of the New York Times of March 14 you will note that District Attorney Edward S. Silver, of Brooklyn, whose office has obtained these convictions, says that the bigger responsibility of avoiding and preventing such large-scale fraudulent practices rests in your office.

I am sure that Members of Congress will be very interested to know what steps you have taken or what steps you are contemplating in order to prevent further abuses of this sort.

Thanking you for an early reply, I am
Sincerely,

VICTOR L. ANFUSO,
Member of Congress.

Right-to-Work Laws

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1956

Mr. PELLY. Mr. Speaker, an organization called Job Research, Inc., in my State of Washington is now in the process of soliciting required signatures so that an initiative providing for a so-called right-to-work law can be included on the November ballot.

About 18 States have adopted such laws, and, of course, I am vitally interested in the success or failure of this initiative.

In order to honestly and properly consider the merits of this proposition, I have read as much material on this subject as I could find. This material has been obtained from the Library of Congress, the Department of Labor, and other sources. Recently one of my district's most objective newspapers, the Bremerton Sun, published an editorial based on this subject. The newspaper stated it had received conflicting requests relative to the proposed right-to-work legislation for which signatures to place it on the ballot now are being solicited. On the one hand it received an outright request for free advertising space to promote the initiative. On the other was the president of the Washington State Federaltion of Labor's letter urging against the newspaper's giving such aid.

After stating that space was not given to anyone or any cause, the writer of the editorial chided labor for not stating its case with more facts. Why, he asked, should not folks sign the initiative petitions? What would the measure's effects be on the State's jobholders, union and nonunion?

Since I have been in the process of seeking such facts, and because I have been studyng the pros and cons with regard to the advisability on a national scale of retaining section 14 (b) in the Taft-Hartley law, I feel prompted to offer some thoughts on this subject because, frankly, much of what I have read is emotional as against being analytically objective.

It is very easy, Mr. Speaker, for a political group or individual on the basis of wishful thinking and expediency to support or oppose such a law. Likewise a labor or business organization can be accused or actually motivated by selfish considerations, so, as pointed out by the Bremerton Sun, the people are entitled to detailed arguments based on something more than slogan support or opposition. In this case, as is generally known, the Secretary of Labor, Mr. James P. Mitchell, has been forthright and specific in pinpointing his objections. He has said that while these are called right-to-work laws, that is not what they really are. Actually, according to the Secretary, these are laws which make it impossible for an employer to bargain collectively with his employees about the security of their union. Secretary

Mitchell has called upon the States which have passed these laws to give them further consideration, because, as he said, these laws do more harm than good. His reasons were these: First, they do not create any jobs at all; second, they result in undesirable and unnecessary limitations upon the freedom of working men and women and their employers to bargain collectively and agree upon conditions of work; third, they undermine the basic strength of labor organizations.

Now, there is nothing new or startling about the fact that some people selfishly or honestly differ from the Secretary, but I am of the opinion that the vast majority of American citizens, regardless of whether they classify themselves as part of management or labor, suport the position of President Eisenhower, who has said:

Trade unionism has become a vital part of American life. The activities of the American labor movement have brought about social and economic reforms which have enriched the lives not only of union members but of millions of other Americans.

I personally, Mr. Speaker, believe certain deep South and farm States which have put these right-to-work laws on their statute books have been shortsighted from an economic standpoint. But, of course, there are more important issues than prosperity. Therefore, in reaching a decision I have sought to place spiritual values and the basic freedoms before standard of living and general welfare arguments.

A year ago one of these right-to-work bills was passed by the Kansas Legislature. This bill, house bill 30, was vetoed by a great Republican Governor, Fred Hall. I have turned to his message vetoing house bill 30 as an example, convincing to me, of the triumph of intelligence and integrity over emotionalism. On this account I now include a condensed version of Governor Hall's message to interpret his objections to the Kansas law. There are differences in wording between the Kansas and the proposed Washington laws, it is true, but, as I see it, in a general sense at least his arguments hold equally for both. As such, the following expresses my views and opposition to initiative 198 in my State of Washington:

After a thorough analysis of the bill I find it is not a solution to any labor-management problem in the State of Kansas. The name "right-to-work" is a misnomer. The bill provides no greater protection for the individuals right-to-work, or right to refrain from joining a union than is provided by the present law.

House bill 30 has only one real purpose to ultimately destroy both the right of labor to organize and the principle of collective bargaining. It will accomplish this purpose purpose by prohibiting maintenance of membership in labor unions under State law. This right is now carefully guaranteed to labor under the Taft-Hartley Act.

My opinion of the purpose of this bill is substantiated by many authorities and well informed people throughout the country.

The late Robert A. Taft said: "It is a mistake to forbid all union contracts."

Former Governor of Kansas, the Honorable Alf M. Landon, in a speech July 7, 1954, said: "There is much feeling being generated over so-called right-to-work legislation, and that is a catchy title. * * * I am going to first state what I consider to be some elemental truths.

"(1) Every employee has a right to join a union if he wants to.

"(2) Every employee has a right to refuse to join a union if he wants to.

"(3) Every employer has a right to sign a contract for a union shop if he wants to.

"Yet this so-called right-to-work legislation would deprive the employer of that right. It would also deprive the employees of the right to joint a union and negotiate for a union shop. It is not a question of whether we believe in the union shop or not. The question involved in this legislation is government interference with the independence of both management and labor to negotiate whatever kind of contract they may agree upon."

The enactment of the right-to-work bill may be remembered as a dark hour in Kansas legislative history. I doubt that there has ever been a time that the people of Kansas, the members of the legislature and the Governor have been subjected to a greater campaign of propaganda. House bill 30 is a lobbyist bill. The words "right-to-work" have become a magic phrase, and, like magic, few really understand them.

The campaign to enact this law began several years ago and was instigated by a few men who would profit by such a law. They carried their propaganda campaign through every community in the State. They have used every method at their command including many respectable organizations to influence and crystallize public opinion in favor of this bill. We can only speculate how much money has been spent and is still being spent on radio, telegrams and newspapers to influence the legislature and the Governor in their judgment.

I have been deeply disturbed by the efforts of the proponents of House bill No. 30 to turn the farmers of Kansas against labor in Kansas.

In the senate debate a senator said: "Farmers are more interested in this bill than any other group. One thing that has disturbed farmers is a statement of Walter Reuther of the CIO that labor is raising a fund of $25 million to get the guaranteed annual wage." The senator adds: "This means if you guarantee wages for the working man you must guarantee profits for the groceryman and it can only lead to a socialistic government."

This is not a sound argument. It has nothing to do with either the rights of individuals to work or not to join a union. It does betray the real purpose of House bill No. 30. It is not legislation for the problems of today but for the fears of tomorrow. This argument goes to the very foundations of America. America is essentially a classless country. Those who would put one group of people against another to make it otherwise are doing their country a great disservice. The rights of all groups in America are entitled to equal consideration and protection.

President Eisenhower expressed the rightful place of labor when he said:

"Today in America, unions have a secure place in our industrial life. Only a handful of unreconstructed reactionaries harbor the ugly thought of breaking unions. Only a fool would try to deprive workingmen and workingwoman of the right to join the union of their choice. I have no use for those, regardless of their political party, who hold some foolish dream of turning the clock back to days when unorganized labor was a huddled almost helpless mass. The right of men to leave their job is a test of freedom. Hitler suppressed strikes. The drafting of strikers into the Army would suppress strikes. But that also suppresses freedom. There are some things worse, much worse, than strikes—one of them is the loss of freedom."

I am aware of the fact that many States in the Union have enacted laws similar to House bill No. 30. In doing so I believe they have acted contrary to the great heritage and freedoms of America. Throughout the country this law has become a symbol to labor of its loss of freedom. We are not obliged to follow their lead. Many wrongs do not make a right, and the hucksters' tactics cannot make a wrong thing a right thing. It is time to face up to this issue and set an example for others to follow.

The people of Kansas believe in the right of labor to organize and in the principle of collective bargaining. I will not approve any law which destroys this right and this principle. House bill No. 30 will ultimately do both. It is not constructive, but punitive, legislation. It is clearly contrary to the best interests of all the people of Kansas.

It is with great personal regret that I must differ with you on the merits of this bill. I am hopeful that on further reflection you will agree with me. This is not an easy decision to make. I have no alternative. It would be wrong for this bill to become law in Kansas. As the Governor, it is my duty to say so and to act accordingly.

Nothing Small About Hells Canyon Dams

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 7, 1956

Mr. BUDGE. Under leave to extend my remarks in the Appendix of the RECORD, there follows an editorial from the Press Democrat published at Santa Rosa, Calif., under date of February 17, 1956:

NOTHING SMALL ABOUT HELLS CANYON DAMS

The liberal newspaper columnists have been doing a lot of yelling lately about the unanimous decision of the Federal Power Commission licensing the Idaho Power Co. to build three hydroelectric dams in Hells Canyon of the Snake River. The decision turned down the idea of the Federal Government building one larger dam instead.

According to the columnists, the approval was for 3 little dams instead of 1 big dam.

In trying to prove that the Government should get deeper into the electric-power business, these folks sometimes torture the truth and fracture the facts. So we checked up to see what size these little dams will be. You may be interested in the actual facts.

Oxbow Dam will be 205 feet high. That's 30 feet higher than Niagara Falls and twice the height of the Federal dam at Bonneville on the Columbia. Hells Canyon Dam will be 320 feet high—nearly twice the height of Niagara. Brownlee Dam will be 395 feet high, which is 107 feet higher than the Capitol dome in Washington.

Actually, height hasn't anything to do with it. The question is whether the single Federal dam, or the three privately-financed dams would do the best job of generating electricity and providing flood control. Only reason for checking the height was that the "let's tax the public and build another dam" boys are creating the impression that the privately-built structures will be puny and inefficient.

The privately-built dams will have generators producing 783,400 kilowatts of power. If the market grows, additional generators can be installed to produce another 391,700 kilowatts.

The single Federal dam which the Federal Power Commission rejected would have initially produced 800,000 kilowatts—slightly more than the privately-financed structures—and had an eventual capacity of 900,-

000 kilowatts, which is 275,000 less than the potential of the privately-built layout.

Had the Government built the single dam, its cost to taxpayers would have been $250 million more than the private company will spend, at no cost to taxpayers, for the three dams.

Presentation of Citation to Arthur Hays Sulzberger

EXTENSION OF REMARKS
OF
HON. FREDERIC R. COUDERT, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks, I include an address by the Honorable Charles H. Silver, leading citizen and president of the board of education of the city of New York. The occasion was the presentation of citation to the distinguished president and publisher of the New York Times, Arthur Hays Sulzberger, at the hall of the board of education on February 28, 1956:

Here, in the fellowship of this gathering, or in the shelter of our own homes, we are not always alert to the problems which face the world at this moment. The routine of everyday living may lull us into forgetting that all of us are involved in a struggle to defend the borders of freedom against the very real threat of physical and intellectual enslavement. We are living in a day and in an hour when we need the utmost awareness of the kind of force and the kind of thinking that threatens our security.

We are living in a moment of tremendous decision and we dare not take a step without knowing the truth. For this knowledge, we depend, for the most part, on the printed word and on the men who print those words for us to read.

It is altogether fitting that this shall be the day and the hour on which the public schools of New York officially do honor to a great instrument of public information, the New York Times, and to its notably distinguished publisher, Arthur Hays Sulzberger.

We, of the board of education, are working to develop the talents and teach the arts of living to almost a million young people who emerge from our classrooms each year. Here, in our vast, sprawling city, we have the largest public-school system in the world.

But, my friends, there is a larger and greater system of public schooling than ours and that is the newspaper. It reaches and teaches hundreds of millions of people every day of the year in almost every corner of the globe.

Someone has said that the newspaper is the textbook of democracy. It is a good definition as far as it goes, but it does not go far enough. Textbooks tell the story of all our yesterdays, the romance of man's progress, the pattern of history, the results of research, the fruits of discovery. No textbook can compete with a newspaper in bringing before our eyes and mind the facts and perils of the present, the challenge and opportunities of the future.

This is education on a grand scale, indeed, this dissemination of the news in all its electric immediacy, its wonder and thrill, its excitement and shock. Each day's headlines bear an educative impact that cannot help but stir the conscience of mankind. Out of our understanding of the news today, we must build our hopes and plans for a better tomorrow.

The press, therefore, carries an enormous responsibility as a medium of mass education. It deals in the most precious merchandise of all * * * words, and, through words, ideas. Ideas are of greater importance to our civilization, actually more potent for our life or death and the preservation of our liberties in this land that we love, than the clothes we wear, the food we eat or the homes in which we live. If men had to relinquish every material comfort and do without even the most primitive convenience, if there were still the printed word and that word told the truth, there would still be hope, there would still be ideas and soon there would be progress.

I think that is the meaning of education. Give men the word. Give men the truth. Beat them back again and again, but they will grasp at a word, they will clutch at the truth, and they will climb upward to reach the light.

That is why the newspaper is a great educative force. That is why we salute you, today, Arthur Hays Sulzberger, not alone as a great publisher and distinguished public benefactor. I speak for the entire board of education when we salute you, and through you, the New York Times, as a great educator.

You have printed the news impartially, objectively, accurately. You have promoted the cause of peace and justice. You have fought the dictators and exposed the demagogues wherever they lurked, both here and abroad.

Under your remarkable leadership. The Times has held its place as the foremost newspaper of the world. You have widened its influence and heightened its standards to make its very name a synonym for truth and its masthead a symbol of fairness, fearlessness and integrity.

We know your great heart and your sincere interest in the welfare of the men and women who work to put together each day's issues.

We know your love of New York and your crusades for civic betterment. Your interest in municipal improvement, your concern for the needy and the deprived, has shown us that a great newspaper can have a great soul if there is greatness of soul in its publisher.

Finally, we know your intense appreciation of the importance of education in the news. You have turned the spotlight of your front page to search out the dark and neglected areas in our national educaiive enterprise. You have put the spark to widespread interest in our children's schools and focused the attention of our political leaders on the vital function of education as a force for peace, for freedom of mind and spirit, and the betterment of all mankind.

In recognition of this, I have the profound honor of presenting to you this citation, in the name of the Board of Education of the City of New York:

"Whereas, as publisher of the New York Times, Arthur Hays Sulzberger has set an ever higher standard for the comprehensive and accurate reporting of the news, and by example as well as by precept, has strengthened the free and responsible press of this Nation; and as trustee of many great institutions and organizations has made significant contributions to educational, cultural, civic, and philanthropical causes; and

"Whereas Arthur Hays Sulzberger has concerned himself in particular with the field of education, opening the columns of the New York Times to major coverage of educational news, establishing bonds of cooperation between the New York Times and the New York City public-school system, and providing opportunities for students in the New York City schools to meet students from neighboring towns and cities for an exchange of views upon world problems and current events; and

"Whereas in manifold ways, Arthur Hays Sulzberger has promoted the growth, prosperity, and general welfare of New York City: Therefore be it

Resolved, That the Board of Education of the City of New York express its gratitude to Arthur Hays Sulzberger for these outstanding services; and be it further

"Resolved, That a copy of these resolutions be presented to Arthur Hays Sulzberger in recognition of these exceptional services."

Hail and Farewell

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. BOLAND. Mr. Speaker, I know I express the sentiments of the Members of the House in saying that it was a great privilege to have His Excellency, John A. Costello, the Prime Minister of Ireland, address this body yesterday.

It was an equally great privilege to meet and talk personally with the Prime Minister, whose graciousness is ever present despite his heavy and exhausting schedule.

Through me he has extended the greetings of Ireland and his personal greetings to the St. Patrick's Day Parade Committee of Holyoke, Mass., where many sons of the Emerald Isle will march on Sunday. I will extend these greetings from the Prime Minister to Attorney Michael J. Donohue, chairman of the parade committee, before the marching commences. Although invited to participate in this great western Massachusetts tribute to St. Patrick, Prime Minister Costello's schedule would not permit his joining us on this occasion.

May I include with my remarks an editorial in today's Washington Post and Times Herald:

HAIL AND FAREWELL

It seems a great pity that our distinguished guest, Mr. Costello, the Prime Minister (or, if you would like to be Gaelic about it for the occasion, the Taoiseach) of Eire, will be taking his departure early tomorrow and so leaving us to celebrate the feast of St. Patrick as best we can without him. But then Mr. Costello has urgent matters to attend to elsewhere which he could hardly afford to ignore, such as reviewing the traditional St. Patrick's Day parade in New York and addressing the Friendly Sons of St. Patrick after their traditional banquet in Philadelphia.

All in all, Mr. Costello has had a rather strenuous week of it, and in his brief visit here has been spreading himself around pretty generously, lunching with the President, attending a state dinner in his honor, picking up another honorary degree, speaking to the Congress, visiting libraries, museums and so on, talking first to journalists of one sex and then of another, listening to programs of Irish music, receiving citations, shaking innumerable hands at innumerable receptions, and enduring all the other harsh penalties of eminence. By this time he must have received a good many more than the proverbial 10,000 welcomes.

It must be very gratifying, of course, to the Taoiseach (and certainly so to his compatriots) to realize that his visitation has occasioned more popular fuss and excitement—in part because of its novelty—than the recent visit of the British Prime Minister, Sir Anthony Eden. All the same, we cannot help believing that Mr. Costello will feel a bit relieved when it's all over and he can relax comfortably again. But in the meantime, "Slainte."

Appendix

Editorial Comment on the Elections Bill

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, March 19, 1956

Mr. JOHNSON of Texas. Mr. President, one of the results of the discussion of the past weeks over the elections bill has been an excellent campaign in the Nation's press to inform the American people of the real problems involved.

Editorials all over the country have raised the basic problems—realistic spending limits; full and complete publicity on contributions; greater encouragement to individuals to participate in the electoral processes; and safeguards that will permit greater use of radio and television time without abuse of the privilege. Important provisions to cover all of these points are carried in the measure which is sponsored by 85 Senators.

I ask unanimous consent to insert in the Appendix of the RECORD editorials bearing on these points from the San Antonio Express, the San Antonio News, the El Paso Times, the Dallas News, the San Angelo Standard Times, the Des Moines Register, and the St. Paul Dispatch.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the San Antonio Express of March 7, 1956]

AN HONEST ELECTION BILL FOR RESPECTABLE POLITICS

The candidates and the voters of this Nation have a right to an honest election law. They also have a right to expect that active participation in a political campaign is an honorable exercise of a citizen's duty.

A bill to serve these purposes is being sponsored in the United States Senate by the leaders of both parties. Democratic Senator LYNDON B. JOHNSON, of Texas, and Republican Senator WILLIAM KNOWLAND, of California. Their proposal has the endorsement of 63 Senators. Key leaders in the House of Representatives have pledged their support to such a bill.

The proposed legislation would raise campaign spending to a realistic level and encourage individual citizen participation in political campaigns. This is a politically healthy trend and it builds beautifully upon the recent surge by citizens to qualify themselves to vote.

Specifically, the bill would allow candidates for congressional office to spend personally up to $75,000 (present legal limit is $15,000 in the House; $25,000 in the Senate, though both offices pay the same salary).

It would allow campaign expenditures at a rate of 30 cents per vote cast in the last previous election, with a minimum of $100,000. The only ceiling would be on a basis of the number of votes cast. It could go up to around $2 million or higher.

The bill would allow income tax exemption up to $100 for the average citizen who may wish to contribute smaller amounts to a candidate he wants to support. This would encourage wider political interest and make politicking respectable. Treasury Secretary George Humphrey has endorsed this provision to "encourage more interest in campaigns."

The proposal would make public-service discussions on radio and television workable by barring splinter parties from claiming equal free time. Frank Stanton, president of CBS, has said his network approves of free time for major party candidates but demands made by splinter parties precludes such programs. (A splinter party would be one getting less than 4 percent of the total vote in an election.)

The basic idea behind this bill is to allow candidates and issues to be fully presented to the voter so that he might vote intelligently. This should be a minimum obligation of the political parties to the Nation's voters.

[From the San Antonio News of February 28, 1956]

LOBBY-CONTROL LEGISLATION IN ELECTION-YEAR SPOTLIGHT

The Case incident in Washington and the insurance scandals in Texas have set off parallel lobby-control reform movements on the Federal and State levels. Only time can tell whether these are merely election-year gestures or all-out investimations that will lead to genuinely constructive results.

Seven previous congressional probes of lobbies over the past century produced no remedial legislation. The existing Federal Lobby-Control Act was a byproduct of congressional reorganization in 1946, and it is a weak registration and financial reporting law that has no designated enforcement agency.

The special bigartisan eight-member Senate Committee, which is expected to organize Wednesday with Tennessee's freshman Democratic Senator ALBERT GORE as chairman, must choose between these alternative courses: (1) emphasis on exposing past corrupt practices, or (2) emphasis on searching for workable solutions to the problems of lobby abuses and influence peddling. The latter choice would offer more hope for an improved political climate.

Meanwhile, in another, closely related bipartisan move, Senate Majority Leader LYNDON JOHNSON and Senate Minority Leader WILLIAM KNOWLAND are preparing bills for more realistic election laws. Absurdly low ceilings on campaign contributions and expenditures would be drastically raised, with simultaneous strengthening of requirements for public reporting on such spending.

That would shift the basic emphasis of campaign spending laws, recognizing that it is more important to know the source and size of campaign funds than to go on trying to keep the spending to impractically low levels. The suggestion of providing Federal income tax deduction for up to $100 in individual political contributions, to encourage more grass roots financial support for candidates and parties, strikes us as a particularly good idea.

At the State level, the Texas Legislative Council has properly assigned top priority to research on legislative reforms, including measures to control lobby excesses and curtail influence peddling. On its agenda is a study item long recommended by this newspaper: the desirability of annual State legislative sessions with higher pay for legislators. That type of reform should go hand in hand with lobby-regulating legislation.

Representative Dolph Briscoe, Jr., has listed measures that deserve the council's thorough study. These include prohibiting legislators from practicing before State agencies, requiring legislators to make public retainer fees received while in office, repealing the mandatory postponement of court cases in which legislators are employed as attorneys, passing a strong lobby registration and spending-reporting bill, and requiring open sessions for all legislative committees and State boards and agencies.

Representative Briscoe urges a special session to deal with those matters now while public opinion is aroused. On that we must disagree, though admittedly he has a point. In our opinion, a special session at this time would turn into a factional brawl with race-issue indiscretions that could shame Texas. Furthermore, the desired legislation appears too complex for passage of good laws in a 30-day session without advance research.

We doubt that public demand for a clean-up of legislative halls at Austin, as well as at Washington, will weaken before reform bills can be processed in orderly and thoughtful fashion. If workable laws can be devised, popular support can be mustered for their passage.

[From the San Antonio News of March 6, 1956]

CONGRESS SHOULD EASE RULES ON EQUAL POLITICAL AIR TIME

The highly respected Brookings Institution, a private research organization of unquestionable impartiality, lends welcome and powerful support to the move to limit equal-time guarantees on radio and television political broadcasts to major party candidates.

Senate Democratic Leader JOHNSON is trying for bipartisan agreement to include that change in general legislation to revise Federal election laws. The idea makes practical sense, and it is also compatible with democratic principle.

As the law now stands, a radio or TV station or network that allows an unpaid broadcast, interpreted as political, by one candidate must grant equal time for rebuttal by all other candidates for the same office. And it must do so, as the Brookings Institution report puts it, "however trivial their candidacy or slight their chances of election might be."

That often may open up equal-time privileges to a vast array of fringe-group propagandists, personal publicity-seekers and splinter-party leaders. The radio and TV people have no defense under present law but to limit severely the free time accorded major-party candidates, which unduly restricts the public service which those media can—and desire to—render our democratic processes.

The entire American governmental machinery is geared to the two-party system.

It is simply realistic to realize that in fixing media regulations. Certainly the press does not, and could not, accord equal space to hopeless candidacies of insignificant newsworthiness. Why should other media be so burdened?

[From the El Paso Times of February 26, 1956]

JUST WHAT'S NEEDED

If Congress enacts legislation to put political contributions "in a goldfish bowl," as Senate majority leader LYNDON JOHNSON put it, the American people will have reason to be grateful.

The fact that Senator JOHNSON and Senator KNOWLAND, the Republican Senate leader, see eye to eye on the proposed election laws and are working together is very encouraging.

It is somewhat puzzling, however, why Senator JOHNSON indicated the bill would apply only to elections, not primary campaigns.

In practically every Southern State, including Texas, the Democratic primary winners are "in." The general election is merely a formality. In some Northern States, the same is true of the Republican primaries.

It is understood, of course, that the new legislation will be aimed partly at both national committees. The law now limits a national political campaign to $2 million. It is no secret that each major party now spends much more than that in presidential campaigns by channeling contributions to various different committees.

That is why the "goldfish" idea advanced by Senator JOHNSON is necessary.

Make our election laws realistic and put the whole procedure, including contributions, out in the open for everyone to see.

[From the Dallas News of March 2, 1956]

ELECTION REFORM BILL

The form in which Senator LYNDON JOHNSON Tuesday introduced his election reform bill tracks his earlier discussion of the proposal. There can be no question that improvement in present permitted procedure is both desirable and necessary. The Johnson program will be helpful. In two-party States it should be highly effective, if adopted. But the fact remains that it can do little in Texas, for instances, still a one-party State, to accomplish the ends it seeks by publicizing campaign contributions. JOHNSON, representing Texas in the Senate, is likely to be asked as to that.

The News has stated and believes that legally the Johnson program can apply rightfully only to candidates for election to Federal office, not to those who seek nomination for one. But, if the theory under which the United States Supreme Court ruled that party primaries must be open to Negroes is followed, that view would not hold good.

However, in any event, so far as Federal office is concerned, it is quite probable that Congress would have the right to require complete information on all donations made for the purpose of nominating and electing. It would lack authority, the News thinks, to limit the amount spent in a party primary from the commonsense view that a party is a private, not a public, organization. But the limitation which is part of the Johnson bill on election spending is a legitimate matter of public policy.

[From the San Angelo Standard Times of March 9, 1956]

SENATE LEADERS WHO KEPT THEIR HEADS DUE HONORS

Periodic concern for the integrity of the Federal Government, especially the legislative branch, has been both frequent and consistently nonproductive. This record is both good and bad.

No legislative assembly in the world has investigated itself more other than Congress. That is good. It is good, also, that after 170 years, the number of Senators and Representatives found deserving of censure for allowing improper influences to control their actions can be counted on the fingers of both hands.. Bribery, vote selling, under-the-counter moneychanging are incompatible with representative government, and the long absence of such practices from Congress is by no means the least of our blessings.

What is bad about the record of frequent self-examination in Congress, however, is that only rarely has the leadership of either party had the initiative or the courage to press for corrective legislation to prevent future abuses.

The problem brought into focus by the celebrated attempted campaign contribution from Howard Keck, California oil magnate, to Senator CASE of South Dakota was the problem of an out-of-date, unrealistic law. The existing statute, passed decades ago, limited campaign expenditures for Senate races to $25,000 and for House races to $2,500.

No Member of either House can or has conducted a seriously contested race within those limits in modern times. All manner of circumvention has been devised to evade the spirit of the law, while abiding by the letter of the law. Every Member of Congress—including the breast-beaters who have been hysterically crying for puntive exploitation of the Case incident—has been a party to much calculated evasion.

If Senator LYNDON JOHNSON or Senator WILLIAM KNOWLAND, as Senate leaders for the two parties, had been swayed by the hysterical fringe after disclosure of the Case incident, one man or one company or one industry might have been punished for the sins of many. The public would have been led to believe that an evil had been cured, but violations of the law would have continued unabated. The only serious error would have been to get caught.

Senators JOHNSON and KNOWLAND met this situation by offering a "goldfish bowl" election spending law. Realistic and modern, it requires candidates to report all contributions received through various committees set up to finance campaign activity, requires candidates to file in Washington copies of all reports of spending which various State laws require regarding primaries, permits networks to donate free radio and television time to major parties, and encourages the general public to share in the election of candidates by authorizing tax deductions for political contributions up to $100.

Under the Johnson-Knowland approach, hypocrisy and dignified deceit no longer need characterize election spending reports.

More importantly, we think, Senators JOHNSON and KNOWLAND have imbedded in their bill a sound and tested principle of honest government: Reliance upon public disclosure of the truth. The high level of integrity in American government have been achieved not by laws alone but by the ever-present knowledge that the powers of investigation—abetted by the initiative and courage of a free press—assured no wrongdoer the secrecy indispensable to corruption.

Whenever we allow a corner of government to remain dark, we harbor a breeding-place for misconduct. Those who seek to influence the National Legislature improperly will be far more effectively thwarted by the light of publicity which the Johnson-Knowland bill turns on them than by headline-making investigations or even by threats of punishment. We expect public officials, once in office, to live in a goldfish bowl.

At last report, more than two-thirds of the Senators had joined in sponsorship of this elections spending bill. This clearly indicates early and easy passage. Certainly the House is to be expected to move as promptly and decisively. If this reform measure becomes law, as it should, the Nation will be grateful to the two Senators for keeping their heads when others about them were losing theirs, and a potential black mark on the Senate record will stand instead as a lasting credit.

[From the Des Moines Register of March 3, 1956]

PROBLEM OF FREE TIME ON TV

The campaign spending bill endorsed by Senate leaders LYNDON JOHNSON and WILLIAM KNOWLAND would make it possible for the parties to cut televison campaign costs by allowing the networks to award them valuable TV time absolutely free.

Networks have been wary of giving any candidates free time because the law binds them to give every other candidate for the office the same treatment. In 1952 that included such presidential aspirants as Krajewski of the Poor Man's Party, Hoopes of the Socialists, Hambien of the Prohibitionists, Halinan of the Progressives, as well as Eisenhower and Stevenson.

The Johnson-Knowland plan would limit the networks' responsibility to provide free time equally only to parties that polled at least 4 percent of the total vote in the previous election. A party also could qualify by collecting petitions signed by voters equal to 1 percent of the vote.

This would pretty much limit the free-time provision to the two major parties. Neither the States Righters nor the Progressives, both of which polled more than a million votes in 1948, could have qualified for free time under the 4 percent formula. The parties would have had to collect nearly half a million signatures on the basis of 1948 returns, and more than 600,000 names based on 1952 returns to qualify for the same free time given Republican and Democratic candidates.

The proposal clearly discriminates against the small parties and makes it tougher than ever for them to challenge the big established organizations. It would work out that the groups least able to afford television time could get it only by purchase.

But the alternatives are free time for some, or no free time for all. Networks simply are not going to allow any major candidate free time if it means opening their facilities willy-nilly to all minor parties.

Congress will have to recognize this and give the networks greater freedom to donate time. The formula contained in the Johnson-Knowland bill is a step in the right direction. But it does seem unduly strict. There ought to be greater safeguards to assure equal expression of the more important dissenting party views.

[From the St. Paul Dispatch of March 5, 1956]

BIPARTISAN ELECTIONS BILL OMITS PRIMARIES

The honest elections bill supported in the Senate by both party leaders, LYNDON JOHNSON and WILLIAM KNOWLAND, fails to include primaries in its regulatory provisions.

This is a serious weakness, for in the one-party States of the South the primary is the decisive election. However, JOHNSON and KNOWLAND found there are some genuine questions on Federal authority over State nominating procedures. They felt it wiser to bring in a bill limited to general elections of Senators and Representatives, but holding the door open to control of primaries if an acceptable formula can be developed.

The bill raises limits on campaign expenditures to levels nearer actual present-day practices, but gives chief emphasis to more complete reporting of cash contributors and of expenditures. Even if only general elections are covered, the measure promises a marked improvement over present weak and unrealistic regulations.

It would be better to get this much reform written into law than to jeopardize the entire bill by insisting on including primary elections, and this seems to be the position taken by the sponsors.

The Qualified Truth About Our Air Power

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1956

Mr. PRICE. Mr. Speaker, last week an editor of Time magazine asked Gen. Nathan F. Twining, Chief of Staff, USAF, the question that is of such vital concern to every Member of this Congress:

Does the United States Air Force feel confident that it is strong enough to win if Russia starts a war?

The answer that General Twining gave is an answer that should send a chill of apprehension up the spine of every American citizen. He said, "Yes. But."

The fact that General Twining felt it necessary to qualify his answer is the truth about the inadequacy of our air power to win a quick victory and avert tragic destruction. Lest I be accused of quoting out of context or misrepresenting what General Twining actually said, I wish at this point to quote his answer in full. It was:

Yes. But I must qualify this. The greater our margin of superiority, the more quickly we could win the air battle. If we could knock out the enemy's capabality to hit the United States, let us say the instant his bombers taxi out to hit us, the United States would lose no cities. If it took us a day, the United States might have X numbers of bombs dropped on it. If it took us a week, the United States might have 2X bombs dropped on it. And if it took us a month, the United States might have 3X bombs dropped on it. In this case we might defeat the enemy, but it would be a tragically hollow victory.

If the "but" of General Twining's answer is good reason for fear, the "yes" of his answer is good reason for satisfaction, even pride, though not of complacency. Time magazine, in quoting General Twining, made an excellent report on the United States Air Force as it exists today. I regret that it is impossible to reproduce in the CONGRESSIONAL RECORD the excellent and informative illustrations which accompany the article. These illustrations reveal a good deal about inflight refueling, new bombing techniques, new aircraft, and new weapons which give strength to our Air Force. The illustrations include pictures of typical airmen—commissioned and noncommissioned—men and women who are as important to the Air Force as the aircraft, the bases, and the weapons. If the pictures cannot be reproduced in the RECORD, the story itself can be, and the story of our youngest military service in the supersonic age is a story to thrill and to bring pride to the heart of every patriotic man and woman.

One of the interesting bits in the story is the remark of the World War II bomber pilot who said of the new B–52 long-range bomber:

Brother, this is the plane to end them all.

When asked if he had not once described the old B–29 of the Hiroshima raid in similarly glowing terms, he replied:

Sure, and I mean every adjective, and when they give me the next plane, I'll get even more excited.

The Air Force is always planning on the "next plane" to meet the next challenge. Range and change have brought the Air Force a whole set of new problems, but the Air Force in all its flux is nonetheless sustained by a stable strength. The tribute which Time pays is a tribute well deserved:

In its short 10 years of existence as a separate branch of the armed services, it has acquired tradition, theory, individuality, discipline, and a high sense of mission—all while being constantly at work to meet the threat that the United States has never known before, intercontinental war.

Mr. Speaker, I ask the unanimous consent of my colleagues to extend my remarks and insert in the RECORD the article on the United States Air Force from the current issue of Time magazine, as follows:

THE NATION'S YOUNGEST SERVICE HAS ENTERED THE SUPERSONIC AGE

To the United States public, which pays for it, the $16-billion-a-year United States Air Force is almost a phantom military organization. The planes fly at altitudes where they are not visible, and they fly singly or in small groups rather than in the thundering formations of World War II. Most big Air Force bases are located in desert wastelands or on backwoods plains, where remoteness helps soundproof their shrieking engines from the civilian ear. Seldom do airmen wear their uniforms in bars or rub shoulders (and tempers) with civilians in off-duty hours. Today's airman has become a solid professionalman; he stays near his base and works in or around a cockpit, described by a top air general as a "damned laboratory."

The United States Air Force is far from a phantom. It is one of the world's biggest businesses-in-being. And it is, as Air Force Secretary Donald Quarles characterized it last week, "the most powerful striking force ever assembled on earth." From its polar icecap outposts to its underground operations center in the Pentagon (where a general officer is always on duty), from the Strategic Air Command, run from Omaha by Gen. Curtis LeMay, to the Tactical Air Command, headed by Gen. Otto Weyland at Langley Air Force Base in Virginia, to the $600-million-a-year research and development plan under Gen. Tom Power, the range of Air Force activity has never been equaled by any military unit in peacetime history. And this year the Air Force has entered upon a fantastic new era of supersonic flight that dawned even before the fantastic old era of transonic flight seemed fairly begun. These are the keys to the United States Air Force today: its range and its change.

THE RANGE

On a recent typical duty day a wing of B–47's left Ohio for duty in north Africa; at almost the same moment a squadron of F–84's started from Virginia for Okinawa. Each flight stirred up a wasp's nest of Air Defense Command interceptors (practicing supersonic passes at the outbound planes in carefully planned defense exercises), air refueling tankers far-flung in Atlantic and Pacific bases, air traffic controllers, air detection and warning networks, air-sea rescue squadrons, and MATS units hauling spare parts, supplies, and technicians.

That same day an Air Force plane flew a leukemia victim from Italy to Germany for treatment. Air Force instructors trained Brazilian pilots in the use of jet fighters. Air Defense Command officers at Colorado Springs, Colo., attended a class in public speaking (explains ADC Commanding General Earle Partridge: "One of our generals went to Washington last week on a project involving $80 million. He had 15 minutes to make his pitch to the Pentagon. I want to be sure that he knows how to make a sale.") In Texas airmen struggled through an obstacle course on which the final assignment, an exercise in crash rescue, was to lift a heavy stone from a burning cockpit. In Labrador airmen fed the dog teams used for rescue work. And off West Palm Beach, Fla., an Air Force crashboat pulled a pilot from the drink. When his engine flamed out, he had radioed: "I'm going to deadstick her down." Then, after a moment of mature consideration, he changed his mind, declared, "No, I ain't," and bailed out.

THE CHANGE

Like other men with a mission, Air Forcemen dismiss such a program as "just another day's work." Actually, hardly a day goes by without new techniques or new hardware (which may come wrapped in a black box from the electronics laboratories, or wrapped around a jet engine from the aircraft factories). Airmen say that there are only two types of combat planes—the obsolescent and the experimental. Air Force Chief of Staff Nathan Twining, 58, learned to fly at 70 miles per hour in the Jenny biplane. Now he is presiding over the new era of the century series (Time, February 20), with its F–100 (now operational) and F–102 (which can maintain supersonic speed through long, steep climbs) and F–104 (which can cruise past a 16-inch naval shell in midflight).

No detachment or activity can escape the merciless requirements of change. In the area of pilot training, for example, only 2 years ago training officers strove to develop "tigers." The "hungry tiger," that is, the highly competitive cadet, was thought to make the best pilot. But the tiger was too charged up; too often he flew his plane into the ground in air-to-ground gunnery or collided with other planes through his eagerness to tighten up his formation. Says an Air Force psychologist: "Emotionalism is not good when you're flying these fast airplanes. Today's generation is growing up with a lack of discipline in the homes and schools and churches. When they get into this airplane business, they are plunged into an environment which demands discipline. They've got to be disciplined by the environment before it kills them."

THE PROFESSIONALS

The new planes impose not only a new order of discipline on today's pilots, but a kind of precision that World War II pilots can hardly comprehend. For example, closing on an enemy plane at close to 1,000 miles per hour at 50,000 feet, a Century series pilot may be required to do these things:

1. Conduct a radar search to pick up the target.
2. Decide from the returns on his radarscope what he is up against.
3. Analyze the tactical situation.
4. Keep tracking the target.
5. Identify the target as friend or foe.
6. Lock onto the target with his electronic system.
7. Judge the rate of closure.
8. Switch over to optical tracking.
9. Convert to a lead pursuit course or a collision course.
10. Fire and break off.

To do all this, the pilot may have from 15 to 17 seconds (less time than it just took to read about it). Explains one Air Force officer: "The plane is a weapons system, and the pilot is a data link in that system."

Seventeen such "data links" fly F–100's in the 3594th Fighter Squadron at Nevada's

Nellis Air Force Base (billed as the "busiest airfield in the U. S. A. F.," with a takeoff or landing every 42 seconds night and day), where Col. Bruce Hinton, 36, is the training group commander. Of the 17 pilots in the squadron, 14 have Korean-combat experience, 16 are married, the average age is 31. Says Hinton: "They're different, each of them. Away from airplanes they have their own brand of individualism. But they have no eccentricities when they climb into that cockpit. They're professionals.

"That is the thing to remember. Today's pilot is a professional. Like other professionals, he has a set of ethics. What are they? To press on to a target. He's not like a rifleman going over the top, where, if the social stimulus of the other men doesn't push him over, someone will carry him over. No, our pilots go into targets alone. It's a matter of ethics whether they press through the attack. I don't think many would poop out in what you journalists call the moment of truth."

THE WAY IT IS

At California's Castle Air Force Base a World War II bomber veteran expresses the spirit of change as he tells of his new B–52, SAC's "Long Rifle." Says he: "Brother, this is the plane to end them all. It takes four railroad tank cars of fuel, flies at altitudes in excess of 9 miles. It's as light as a feather to control, and yet it has a rudder four stories high, and it weighs 390,000 pounds at take-off. I've got the power of 30 diesel locomotives out there on the wings." But had not he once described the old B–29 in similarly glowing terms? "Sure—and I meant every adjective. And when they give me the next plane, I'll get even more excited. That's the way it is."

Range and change have brought the Air Force a whole set of new problems, e. g., the low (11 percent) reenlistment rate of desperately needed technicians (some of the F–100's, without enough trained men to maintain them, have been grounded.) But the new Air Force, in all its flux, is nonetheless sustained by a stable strength. In its short 10 years of existence as a separate branch of the armed services, it has acquired tradition, theory, individuality, discipline and a high sense of mission—all while being constantly at work to meet the threat that the United States has never known before, intercontinental war.

Big United States Question: How Far Is Out?

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1956

Mr. SIKES. Mr. Speaker, under permission to extend my own remarks and to include extraneous material, I wish to insert in the CONGRESSIONAL RECORD the following article by Robert M. Hallett, Latin American editor of the Christian Science Monitor, entitled "Big United States Question: How Far Is Out?":

BIG UNITED STATES QUESTION: HOW FAR IS OUT?

(By Robert M. Hallett, Latin American editor of the Christian Science Monitor)

WASHINGTON.—The United States will soon come face to face with a crucial question: How far is "out"? That is, how far out to sea does national sovereignty extend?

A meeting to be held at Ciudad Trujillo, in the Dominican Republic, the middle of this month, will take up this subject under the general heading of the Continental Shelf and Marine Waters."

Certain Latin American countries—led by Chile, Ecuador, Peru—have full steam up in a drive for support for their 200-mile offshore claim.

They have had some success among other Latin American Republics. Costa Rica signed a protocol to this effect. El Salvador in its constitution solemnly claims 200 miles. Mexico wants control of waters over the Continental Shelf.

Other countries, however, are not so strongly committed.

The United States is seriously concerned. For the United States, it is not merely the question of interference with fishing rights and nullification of the old tradition of freedom of the seas, it gets down to a basic consideration of defense.

In other words, if national boundaries stretch out 200 miles, control of the airspace above will go along with it. This would mean for example a crazy-quilt pattern of almost indeterminable borders in the Caribbean.

WHERE TO DRAW LINE?

And if any country should decide to ban air activity in an emergency, United States freedom of movement might be restricted, or at least a difficult diplomatic or military situation might evolve. Naval maneuvers in the Caribbean might require permits from several countries.

Many of the Latin American countries are today involved in border disputes that date back down the centuries and agitate inter-American relations.

The latest claims might open up a whole new era of border snarls over watery territory.

While emphatically opposed to the Latin American position, the United States agrees that the 3-mile limit is an anachronism. It was set a couple of centuries ago in an age when land batteries could effectively control an area of that extent from shore.

But where to draw the line without interfering with the tradition of freedom of the seas?

After a study, the International Law Commission of the United Nations reported that three was agreement that 3 miles should be the minimum and that the maximum any country might rightfully claim would be 12 miles.

Furthermore, the United States position is perhaps weakened somewhat, in Latin eyes at least, by the fact that it claims that Continental Shelf resources underwater belong to the Nation, but that the waters above are free. The Latins say they are just extending this line upward—although some claims reach much farther than the shelf itself.

GLOBAL APPLICATION

The whole controversy arises out of the fact that the world is entering upan an era of increased use of the ocean for exploitation of its resources—fisheries, minerals, oil, and possibly even foodstuffs.

One of the strongest points in the United States argument is that international water boundary rules cannot be adopted for one part of the world. Any agreement would have to apply to the waters of the whole globe.

The General Assembly of the United Nations is scheduled to take up the whole subject next fall. The United States delegates at the Ciudad Trujillo meeting will no doubt try to persuade the Latin Americans to postpone the issue to the U. N. meeting.

Latin Americans justify their position on the claim that foreign fleets are exhausting the fishery resources off their shores. If controls are not set up through extension of borders, they say, their economies will be hard hit.

To a large extent—but not exclusively—Latin American nations are attempting to control fishing by United States trawler fleets within what they consider their oceanic borders. Over the past couple of years United States fishermen have got into difficulty with Mexico over shrimp fishing in the Caribbean; and with Peru and Ecuador over tuna fishing off their coasts.

This alleged poaching has had much to do with Latin American emotionalism over the issue of water boundaries.

The United States hopes this whole issue can be compromised on the basis of conservation agreements. The Nation has long had conservation pacts with other countries on the high seas where restriction has been necessary.

It will undoubtedly indicate at Ciudad Trujillo a readiness to negotiate with the American nations similar agreements to control fishing, where necessary.

NO SOLID EVIDENCE?

United States experts say no solid evidence has been brought forth to back arguments that United States fishermen are exhausting fish supplies in waters off any of the Latin American Republics.

The United States would view with concern any railroading of the 200-mile limit proposal at the conference. Some Washington sources believe it might seriously endanger the whole Organization of American States, which was not set up as a superlegislature but as a consultative body.

What gives the United States particular concern is the fact that a few weeks ago an Inter-American Council of Jurists meeting in Mexico City came out in favor of the Peruvian - Ecuadorean - Chilean 200 - mile claim. This resolution may carry some weight at the Dominican Republic meeting, but it is hoped that more moderate counsels will be heeded.

Lithuanian Resolution

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by Americans of Lithuanian ancestry, in the city of Wilkes-Barre, Pa., in protest to the occupation and control of Lithuania by the Russians:

Resolution adopted by Americans of Lithuanian ancestry, in the city of Wilkes-Barre, this 12th day of February 1956, while commemorating the 38th anniversary of the independence of Lithuania:

"Whereas on this day, our great Nation is celebrating the birthday of one of its most illustrious sons, the great emancipator, champion of freedom and liberty with justice to all; and

"Whereas our great Nation, ever mindful of the oppressed and enslaved, wherever they may be, is today reminded of the anniversary of Lithuanian independence, which independence this tiny peace-loving nation enjoyed for only a short while, having it restored 38 years ago; and

"Whereas on the birthday of the great emancipator, America recalls the sad fate of Lithuania, which together with other Baltic nations, was invaded, overrun and enslaved by communistic Russia; and

"Whereas while America celebrates the birthday of Abraham Lincoln, it extends hope to the doughty hearts of the Lithuanians behind the Iron Curtain, and over the world everywhere, and reaffirms its position, that it, the American Government, shall enter into no treaty or agreement with Soviet

Russia that will acknowledge or ratify the Soviet annexations of Lithuania and the other Baltic States: Therefore be it

"*Resolved*, That we Americans and American citizens of Lithuanian descent, while gathered here today, raise our voices in protest, against the intolerable condition of the Lithuanian nation, which is presently enslaved by Soviet Russia;

"We further protest the Russian acts of genocide, which are calculated to destroy the Lithuanian race of people;

"*Resolved*, That we appeal to the United States Government, and vigorously demand the withdrawal of Soviet troops from Lithuania, and the recognition of outstanding treaties, in order that complete freedom be restored to the Lithuanian nation and its people; and be it finally

"*Resolved*, That we continue our pledges, of loyalty and support of the United States Government in its efforts to effect a just and lasting peace in the world and help restore Lithuania to the family of free nations of the world; and that copies of this resolution be forwarded to Dwight D. Eisenhower, President of the United States; our various Senators and Congressmen; and the Department of State."

ADAM MILIAUSKOS,
President, Lithuanian Alliance of America, Seventh District.
JOHN R. VERBALIS,
General Director, Lithuanian Radio Hour of Wyoming Valley.

Farm Problems

EXTENSION OF REMARKS
OF
HON. EDWIN E. WILLIS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1956

Mr. WILLIS. Mr. Speaker, I received a letter from my very good and personal friend, Mr. J. Dewey Singleton, of Arnaudville, La., where I was born and reared. Mr. Singleton is not only an outstanding farmer and businessman but possesses old time qualities of deep rooted honesty and Christian goodness. Although he is a man of substance, he is very thrifty, and quite conservative in his views. I know Mr. Singleton to be a Democrat; I know also that he admires the President of the United States, but I frankly do not know how he voted in 1952; so politics has nothing to do with the expression of his sincere convictions.

Dewey invites me to pass his letter on to Mr. Benson, the Secretary of Agriculture. Now, I know that Mr. Benson is a busy man and a letter of this kind might escape his personal attention. I understand, however, that Mr. Benson is an avid reader of the CONGRESSIONAL RECORD, so I have concluded to use the letter where it might do the most good.

During last summer, I had to make a speech in Breaux Bridge, La., a town near Arnaudville, La., on the occasion of the Young Men's Business Club Farmers' night where each member had one or more farmers as guests. I called on Mr. Singleton to get figures from him on the price of farm commodities produced right in his and my backyard because I happen to own a farm next to that of the Singleton's. The figures I quote below were in large measure those supplied to me by Mr. Singleton, but I had quite a talk with him about the problems of our farmers. In our discussion we bounced around the thought that the farmers throughout the Nation, and particularly those in my area, were caught in a three-way squeeze.

First. Since 1952, the last year of the Democratic administration, the price of things the farmers have to buy has gone up. The cost of tractors, tires, tools, materials, fertilizers, labor, and everything else on the farm has increased since 1952, along with the price of groceries, food, and clothing.

Second. On the other hand, since 1952, when Mr. Benson took over as Secretary of Agriculture, the price of the things the farmers sell has gone down something like 25 percent across the board and throughout the Nation. Exactly what does that mean to Mr. Singleton, to me as a farmer, and to all the farmers in the parish—county—of St. Martin? Well here are the figures I obtained from Mr. Singleton and other reliable sources:

	1952	1955
Cotton, per pound	$0.40	$0.31
Short grain green rice, per barrel of 162 pounds	7.90	5.50
Sweetpotatoes, per crate on season's average for Nos. 1 and 2	2.45	1.25
Sugarcane, per ton with benefit payments	7.90	7.40
Corn, per barrel	2.75	1.50

Third. And to add insult to injury, under the Republican regime, since 1952, the farmers throughout the Nation, and particularly those in my congressional district, sustained severe and unbearable acreage reductions. The cotton farmers sustained an acreage cut of 35 percent. The rice farmers suffered a reduction of 37.7 percent. The acreage of the sugarcane farmers was reduced by 30 percent. And still Mr. Benson preaches that he is opposed to regimentation.

And what solution do they propose? Among other ineffective measures, they talk a great deal about a soil-bank and acreage-reserve program. Exactly how much will the farmers receive for each acre of land in the soil-bank or in the acreage-reserve pool? Will the farmers derive a profit from such laid by acreage? If there is a profit, will it be calculated according to good accounting methods, or will they fix it so that the supposed profit will turn out to a break-even point? And what about the sharecropper? Suppose the landlord places in the soil-bank and acreage-reserve program a part of the land the sharecropper used to cultivate: will the sharecropper get a part of the money? I have not seen specific illustrative figures put out by the Department of Agriculture that would provide accurate answers to these questions.

But let me come back to Mr. Singleton's letter. We produce a great deal of cabbage in Mr. Singleton's neighborhood. In fact, I grow cabbage also. The farmers are starting to market the current crop. On the date of Mr. Singleton's letter, March 10, 1956, the price to the farmer was $10 per ton. Right in the country town of Arnaudville, surrounded by cabbage farmers, the housewife on that date was paying 8 cents per pound, or $160 per ton. Quite a spread, is not it?

Then Mr. Singleton bought a shirt in Arnaudville for $4.03, and he figures that there was only 11 cents worth of cotton in it.

What is farm income? In my book it is production or volume, multiplied by price, less cost. Now if you reduce acreage and thus reduce the volume and then lower the price and at the same time increase the cost, I think even Mr. Benson can figure that the farm income is bound to drop to depression level. The only provision in the farm bill, which was debated for so long on the Senate side, that would provide an effective and immediate improvement to farm income or a price increase was the 90 percent of parity provision and that was the one provision that Mr. Benson is bent on throwing out the window.

At this point I should like to insert Mr. Singleton's letter in full, together with my reply thereto:

ARNAUDVILLE, LA., *March 10, 1956.*
Congressman EDWIN E. WILLIS,
Washington, D. C.

DEAR ED: I do not want to burden you too much with the farmer's problems but since writing you about sweetpotatoes something else has come up.

About 2 weeks back Mrs. Singleton bought a cabbage in one of the retail stores in Arnaudville. Being interested in cabbage and prospects of what we might get for them I asked her what it cost and she said 8 cents per pound. This sounded like it might be high so I asked another store what they were selling for and they told me the same price. Now the farmers have just started to ship from the Breaux Bridge and Cecilia sections and yesterday morning we called one of the buyers and asked what the farmers were getting and we were told $10 per ton. From $160 to $10 is quite a spread.

I am the owner of a light cotton shirt and recently I weighed it, with the buttons, and the weight is 5½ ounces. Our cotton averaged about 32 cents per pound last year or 2 cents per ounce. You will note the cotton cost 11 cents for this shirt. It was priced to me at $3.95 plus 8 cents State sales tax or a total of $4.03.

When this has served its purpose if you like you might send it to Mr. Benson, Secretary of Agriculture, and ask him what he thinks about it.

Regards and best wishes.

J. D. SINGLETON.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., March 16, 1956.
Mr. J. D. SINGLETON,
Arnaudville, La.

DEAR DEWEY: My reply to your letter will be found in Monday's CONGRESSIONAL RECORD. If Mr. Benson gets mad, don't blame me.

Very sincerely,
EDWIN E. WILLIS,
Member of Congress.

Some Southerners Speak

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1956

Mr. SIKES. Mr. Speaker, under permission to extend my own remarks and to include extraneous material, I submit for publication in the CONGRESSIONAL

RECORD the following comments by Senator Willis Robertson, of Virginia; Congressman Brooks Hays, of Arkansas; Hon. Colgate W. Darden, Jr., president of the University of Virginia; Hon. Boyd Campbell, president of the Chamber of Commerce of the United States and board chairman of the Mississippi School Supply Co.; and Mr. C. A. McKnight, editor of the Charlotte Observer, Charlotte, N. C., on their region's state of mind and any specific American attitudes they feel are necessary in order to avoid violence and bring healing in a deteriorating situation following the Supreme Court desegregation order, which appeared in the Saturday, March 10, 1956, edition of the Christian Science Monitor:

SOME SOUTHERNERS SPEAK

To clarify national thinking this newspaper asked some southern leaders to comment on their region's state of mind and any specific American attitudes they feel are necessary in order to avoid violence and bring healing in a deteriorating situation following the Supreme Court desegregation order. Replies appear below:

From WILLIS ROBERTSON, United States Senator from Virginia:

"Virginia recognizes the correctness of the 1850 decision of the Massachusetts Supreme Court and in the 155 subsequent decisions of State and Federal courts holding that the equal rights provision of a constitution could properly be satisfied by public schools for the white and colored races which are separate but equal.

"During the last 10 years notable progress has been made in the southern States in meeting that equality requirement. But that progress will be nullified by a program of rapid, enforced desegregation. In fact, public education for both races in some southern States would be destroyed.

"The worst feature of the current desegregation effort, however, is the resulting bitterness and racial animosities in areas where harmony heretofore prevailed. Southerners believe that the cherished constitutional right of every citizen to select his personal associates is being violated.

"The South is grateful for the leadership through the years of the Christian Science Monitor in urging that racial problems be approached from the standpoint of voluntary cooperation rather than mandatory laws.

"This was particularly illustrated by your editorial of January 26, 1950, which stated that the FEPC [Fair Employment Practices Commission] bill, then under discussion, would infringe the right of employers and union members to choose their associates and added:

" 'It may be argued that they should be willing to choose their associates without regard to race or religion. But there is a vital difference between should and must. When the State tells the individual how he must choose his associates, it is interfering with a peculiarly intimate freedom. To correct one injustice, it is committing another.'

"What is most needed to avoid violence and heal the situation today in the South is national recognition of the soundness of the viewpoint presented in that editorial."

From BROOKS HAYS, Member of Congress, Arkansas:

"The situation in parts of the South is extremely serious, but strains on interracial harmony can be relieved by exertions of both races. I commend you for your previous efforts to interpret southern viewpoints to the Nation, and for your current effort to prevent further deterioration.

"Most of the aims of the minority group were being steadily realized prior to the Supreme Court decisions. Good faith and efforts to live by a rule-of-law tradition have been interrupted by extremists on both sides. The South properly resents every form of threat to enforce immediate and complete integration by Federal power, and the difficulties are compounded by such threats.

"Protests and reasonable criticism must not be construed as defiance and nullification.

"We need an intelligent and understanding attitude by those outside the South who are concerned with our problem. More depends, however, on work at the local level. Participation by outsiders at the present moment, even by those from adjoining counties, is causing some trouble.

"Appointment of official State and local committees, which include both races, would be a great help.

"The problem is not too great for a solution if consultation is encouraged, and strengthened faith in the South's intellectual and moral resources is displayed at this crucial stage.

"The Supreme Court decisions should be studied widely, and clarifying interpretations should be sought by responsible officials. Above all, common sense should prevail. And in my judgment any effort to fan the fires of hatred will be sharply rebuked.

"We have enough trouble in the world already. Church leaders of both races are in an admirable position to use their influence for minmium demands of justice while stressing the necessity for preserving a bridge of understanding between the groups."

From Colgate W. Darden, Jr., president, University of Virginia:

"It appears to me that much of the difficulty which confronts us arises out of the failure to comprehend the revolutionary nature of the 1954 decision of the Supreme Court and its far-reaching effect. It reverses the whole pattern of life in those States maintaining separate schools. It touches the intimate family life of some 40 million people.

"To assume, as is being assumed in some quarters, that it is possible to change overnight, or for that matter within a few years, the habits, the customs, and prejudices, either good or bad, of generations is to fall victim to wishful thinking.

"And to substitute emotions for reason—such an assumption fails utterly to take into account the magnitude and the delicate nature of the problem.

"The situation, so far as I am able to judge it, has grown worse in recent months. I think the reason for this lies in what appears to be a demand that integration of the schools be carried out forthwith. This step the southern people are unwilling to take and insistence on it will bring, in my opinion, violence—and in the end disestablishment of the public-school system in many areas.

"Time and great patience are going to be required to work out a plan which the leaders of both races in the locality concerned consider both equitable and workable. It can be done, but not as we are presently moving."

From Boyd Campbell, president, Chamber of Commerce of the United States; board chairman, Mississippi School Supply Co.:

"The vast improvement in race relationship and the progress of southern Negroes in education, health, and economic opportunity were brought about by the enlightened leadership of men of good will in both races. This progress came to a jarring halt when the NAACP usurped local Negro leadership and by aggressive and intolerable methods undertook to speedily compel a condition that is contrary to the Anglo-Saxon tradition.

"The problem is one that will not be solved by name calling and weight throwing. The deteriorating relationship between the races in the South will continue as long as outside groups attempt to force integration upon us. History does not record a single instance of compulsory integration. It will not do so in this instance.

"Meantime, there are heartaches aplenty on both sides, as we witness the result of years of patient effort being swept away ruthlessly by methods that engender hatred rather than good will. We can only hope that those who would condemn us would first try to understand us and to understand the vastly complex problem which is ours and which lends itself to no superimposed solution. If and when methods of pressure and compulsion are abandoned, the voices of the moderates of both races will be heard and heeded."

From C. A. McKnight, editor, the Charlotte Observer, Charlotte, N. C.:

"I would be less than candid if I did not say I am gravely apprehensive over the state of affairs in the South today.

"Resistance to the Supreme Court school ruling in parts of the region is firm, determined and, in most cases, sincere. Relations between the races have deteriorated seriously. The situation has all the ingredients to produce violence and mass disobedience of court orders.

"What is desperately needed is a breathing spell during which some of the issues, now so confused, can be clarified. I see only two ways to gain such a respite:

"1. The NAACP, having established a significant legal principle, could well afford now to delay further test cases in highly sensitive areas and turn its talents to the broader field of human relations in areas where transition is feasible.

"2. In lieu of that, Federal district judges may be forced to adopt a less literal interpretation of the Supreme Court ruling and withhold desegregation orders where they patently cannot be enforced without endangering public order, or public education, or both.

"In the final analysis, compulsion, legal or otherwise, will never be the answer. A better understanding of that fact outside the South would be helpful."

The Independence Day of Byelorussia

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement on the occasion of the 38th anniversary of the Byelorussian National Republic.

Mr. Speaker, the month of March is a memorable month for many peoples in Central Europe, who today are enslaved by international communism.

March 14, for example, is the day when the Slovak people commemorate, with piety, the foundation of their Republic in 1939, for which even today the underground of Slovakia fights.

Also in March, the Hungarian patriots celebrate the heroism of their valiant generals and leaders who laid down their lives for freedom in 1849 in their fight against Austria's supremacy.

And on March 25, our friends from Byelorussia celebrate their 38th anni-

versary of independence and the establishment of their National Republic.

Byelorussia is situated in Eastern Europe, bordering Russia in the north and east, Ukraine in the south, Poland in the west, and Baltic States in the northwest. It is about the size of California—some 150,000 square miles, with about 18 million people. Both figures are taken with reference to the ethnic boundaries. The officially existing so-called Byelorussian Soviet Socialist Republic, with the Moscow-stamped puppet government, is much smalier in both respects. The Republic is a charter member of the United Nations.

In its historic past the nation was a dominant factor in the Grand Duchy of Lithuania, which in the 15th century established a union—later transformed into the commonwealth—with the Polish Crown in order to strengthen her defenses against Russian pressure. About 1795 both nations lost their independence on account of their imperialist neighbors. Lithuania—the name later was changed to Byelorussia—became a part of the Czarist Empire; Poland was divided between Prussia and Austria.

There were continuous efforts on the part of Byelorussians to regain freedom. In 1812, with the help of Napoleon; in 1863 by armed uprising, but no decisive success could be claimed until the October revolution in Russia offered another opportunity to shake off the chains of slavery. This time by the means of democratic self-determination, by the way, just before the famous principle was announced by President Woodrow Wilson at the Versailles Peace Conference. Through the coordinated effort of all Byelorussian organizations a national representation, consisting of 1,872 delegates from all corners of the country, convened in Miensk on December 18, 1917. That First All-Byelorussian Congress became in fact the constituent assembly of Byelorussia.

Though dispersed later by the armed Bolshevik intervention, nevertheless it adapted, just in time, a resolution calling for the creation of a free and independent Byelorussian State, and elected an executive body—Byelorussian National Rada Council—and its presidium to lead the nation to that great goal. In the execution of that resolution, Rada solemnly proclaimed the independent Byelorussian National Republic by the Third Constituent Act of March 25, 1918. The new republic was quickly recognized "de jure" by all her neighbors, except Russia, also by Austria, Czechoslovakia, Georgia, Turkey and "de facto" by many other countries.

In fact, the general situation of the country was a desperate one at that time. The war raged at its worst, foreign troops crossed the country back and forth, one occupation succeeded the other. Under such conditions the organization of administration and of the defense of the new state was rendered extremely difficult to the government; no wonder, then, that, after a short period of desperate armed resistance, deprived of any assistance or even understanding on the part of the western powers—the young republic fell the victim of the newly organized Red Army and by the treaty of Riga her territory was divided between Russia and Poland in 1921.

To counteract the claims of the democratic Government of Byelorussian Nation Republic which migrated abroad, Russian Communists sponsored the creation of the already mentioned B. S. S. R. in Smolensk on January 1, 1919.

That union republic is still in existence, but never did the people of Byelorussia accept the government forced upon them. They resisted it in any possible way; they knew that Byelorussian National Rada—Council—and Government in exile are continuing the struggle against the Communist aggression for final liberation and restoration of the Byelorussian democratic and independent statehood. Also they hope that their perennial craving for freedom and justice will eventually awake more understanding and sympathy in the free West.

Of Vital Interest

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1956

Mr. SIKES. Mr. Speaker, under permission to extend my own remarks and to include extraneous material, I submit herewith for publication in the CONGRESSIONAL RECORD an editorial from the Panama City Herald entitled "Of Vital Interest" which appeared in the February 23, 1956, issue and deals with the indeed very important matter of civil defense which generally has not been taken seriously enough by most of our citizens. It is hoped that the general apathy of Americans in regard to civil defense will be somewhat combated by articles of this nature.

The editorial follows:

OF VITAL INTEREST

"Why get excited about civil defense?" is a comment frequently heard in Panama City and the rest of the United States, and this apathy of Americans toward preparing for survival in case of enemy attack is an attitude that could prove fatal to thousands.

Despite almost frenzied efforts by a few who realize the true dangers, civil defense has lagged in Bay County. Renewed efforts are being undertaken by the local CD organization to get the program rolling in high gear. Volunteers are needed in every phase of civil defense, and response is negligible thus far.

Approximately 3,000 pieces of literature pertaining to civil defense were distributed last week by CD workers at a display on Harrison Avenue, and it is hoped that the lesson taught in these folders will be taken to heart. Once the potential danger is realized by the general public, there should be little trouble in obtaining volunteers for this vital work. If one is not interested in saving his own life, who is?

Not since the War of 1812 has an enemy invaded the shores of our country, and therein lies the probable cause of American complacency. In the last 140 years, no enemy has even thought of such a thing. Adolf Hitler with his dream of world conquest never contemplated an invasion of the United States, so far as anyone knows. He planned to isolate and bring this Nation to its knees.

But the situation is vastly different today, even though invasion still might not be attempted were war to break out between Russia and the western allies. Russia has a large submarine fleet and the atomic bomb. And undoubtedly the hydrogen bomb also. She also has a large bomber fleet capable of delivering deadly missiles to any part of our country.

So far as we on the gulf coast are concerned, it is the Soviet submarine we have to fear most. One need only remember a few short years ago during World War II when German submarines were sinking American ships in sight of this same gulf coast. Now the Russians, with larger and improved submarines and guided missiles that can carry atomic warheads, present a formidable threat to our very existence.

Because of its long coastline and impressive military bases close to the shore, Florida would be a tempting target for an aggressor nation. Logic tells us the guided missile center at Banana River, Tyndall Air Force Base, and the Navy Mine Defense Laboratory here, Eglin Air Force Base at Fort Walton Beach, and the Pensacola Naval Air Station could be prime targets for enemy attack.

And the enemy wouldn't have to send his bombers winging over the North Pole and all the way down here to accomplish his purpose. A fleet of submarines, armed with guided missiles and their atomic warheads, could wreak havoc on any or all of these Florida bases. To say he could not is the height of folly.

These facts cannot be denied and should present a convincing answer to "Why get excited about civil defense?" Of course, all our hopes and prayers are for continued peace, but certainy we have no assurance such will be the case. In present precarious conditions, we have no assurance world holocaust will not flare in the next minute, for that matter.

With modern aggressors, declaration of war is a thing of the past. Lethal blasts on our own gulf shores could signal the next outbreak. And we won't have any time to prepare, we'll be in the frontlines from the opening minutes.

"Why get excited about civil defense?" We all want to live, and civil-defense training offers us the best means of survival. Far better to train for a disaster that may never happen than be unprepared for the disaster that could happen at any moment.

The Nixon Question

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 19, 1956

Mr. YOUNGER. Mr. Speaker, recently Congressman EARL WILSON, of Indiana, sent to his constituents a letter on Vice President NIXON which I think is both accurate and logical, and I am sure will be of interest to those who use the CONGRESSIONAL RECORD for research or for current congressional action:

THE NIXON QUESTION

While Congress has been driving away at important business such as farm legislation, still the big news and topic of most conversation the past week has been about Vice President NIXON. Is he suitable and acceptable to the people as Mr. Eisenhower's running mate again in 1956?

As a Congressman representing for 16 years one of the most wholesome and down-to-earth districts in the country, I have some definite ideas about NIXON—ideas I am sure represent the convictions of most of the people who have kept me in this job.

I've known DICK NIXON a long time, in and out of Congress. A young war veteran from California, he was elected to the House, then the Senate, then to the Vice Presidency. He has performed most credibly all along the line.

NIXON won the confidence and admiration of millions when he unmasked Alger Hiss. He made America aware of the diabolical intent and ruthless methods of the Kremlin, and of the extent to which communism had bored into vital circles of our Government.

In doing this, he made powerful enemies who singled him out as the major target of a vicious smear campaign. This has gone on for 3 years and it has been so successful as to aline some otherwise well-meaning columnists, editors, and commentators against NIXON. They tried to make him a "whipping boy." This smear campaign recently reached its climax with the "dump NIXON" drive intended to split Republican ranks and bring about defeat of the 1956 Eisenhower ticket. Masterminds of this ambitious effort have outsmarted themselves, however. They've gone too far.

Today, people are asking themselves: "Is there really anything wrong with NIXON? If so, what is it? What has he done, or what has he failed to do which means so much to the well-being and security of America?"

They have found the truth, which simply is this:

NIXON has been a conscientious, hard-working Vice President, affable, helpful, and sympathetic to all who have contacted him. He has never shirked a job. His background is good, his record in war, in Congress and in the Vice Presidency is above reproach. He is of solid American Quaker stock, his mother a native of Jennings County, Ind. He likes his work, his boss, and his people.

Next November the Eisenhower-Nixon ticket will win by a landslide greater than in 1952.

Clifford F. Hood at Gary, Ind., Golden Jubilee

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 19, 1956

Mr. MADDEN. Mr. Speaker, on Monday, the 12th of March 1956, Roger M. Blough, chairman of the board of the United States Steel Corp., and Clifford F. Hood, president of the United States Steel Corp., and the board of directors, came to Gary, Ind., from New York to commemorate the golden jubilee anniversary festivities which will be held in Gary this year.

The following speech was made by Clifford F. Hood at the Founders Day banquet inaugurating the 50th anniversary of the start of the Carnegie Illinois Steel Plant in Gary. This plant and its subsidiaries formed the nucleus for Gary, Ind., which is today a city of 160,000 people.

The speech follows:

INDUSTRIAL PROGRESS

It is an honor to join with our Gary friends at this Founders Day dinner and I can assure you that to have a part in these ceremonials will remain with me always as an unforgettable experience.

It is only natural that United States Steel should feel a great deal of pride in being responsible for Gary's beginning. But you, the people of this community, who had visions and dreams, also, deserve a substantial share of the accolades. When I reflect upon what you have done in the short span of half a century, I am reminded of a little quotation I use on occasion—

"Here's to the man who plans things, builds things, makes things.
Who prates not of wonders of old,
Nor gloats upon ancestral gold,
But takes off his coat and takes ahold and does things."

It is obvious to all who want to see that the progress realized by Gary in the past half century is due in good measure to the people of this community who have planned, built and made things, who removed their coats, took hold, and did things.

In testimony of this, just 50 years ago 5 men stood not too distant from where we are now gathered. Around them stretched miles of snowcovered sand dunes and swamplands. For all practical purposes, this desolate area seemed cut off from the rest of the world. One of the men, a young engineer by the name of Ralph Rowley—many of you will recall him—wrote of this experience and gave us a vivid intimation of what passed through the minds of the small party that moved down from Chicago to preview the site of Gary. I quote him:

"After waiting for some time, we saw an old lumber wagon, drawn by two horses, wending its way over the sandhills. When the driver finally arrived, he told us he had been sent to convey us to our new 'home and office.' We loaded our equipment and then climbed into the wagon, and after jolting and bumping through the sand for nearly two hours, finally reached our objective, the Calumet Gun Club."

Four days later, 50 years ago today to be exact, the surveying crews began to sight across the dunes, staking off the area with orderly precision. The future city of Gary existed then only in the minds of a few determined and farsighted men. Within our lifetime, however, it has become a leader in education, in city planning, in recreation and industrial might. It has overcome the many obstacles of rapid growth to stand today in its rightful place among the communities of the Nation. In short, we can say that Gary has outdistanced many cities three times its age.

As a matter of fact, Gary and United States Steel grew up together. In 1906, United States Steel had an annual steel capacity of only a little more than 15 million tons. Today our steel capacity exceeds 39 million tons. When United States Steel first came here to establish this great steel-producing center, the entire area on which our mills and the city of Gary are located was regarded as a barren waste. Today we like to feel that we have around 157,000 friends and neighbors here in this community.

You will understand, therefore, why I look upon it as an honor to convey the congratulations and warmest wishes of everyone associated with United States Steel Corp. to each of you representing the people, the government, the businesses the civic spirit and pride of Gary. The eyes of America are upon you this evening, and no one is more conscious of your potential and the role you will continue to play in the constantly rising standards of our Nation than those of us in the corporation who know your history and the great strides you have made.

In the measurement of years, you are young, and youth is a priceless ingredient of progress. In the measure of accomplishments, you are ageless and this, too, is a prerequisite for continued success. Combine these attributes with the willing efforts of your people—people who can plan and build and do the things which need to be done—and one can see that the future of Gary can be a period of tremendous accomplishment—a period in keeping with your great achievements of the past.

Adlai Odds-On Choice in Florida Primary

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 1, 1956

Mr. SIKES. Mr. Speaker, under permission to extend my own remarks and to include extraneous material, I submit herewith for publication in the CONGRESSIONAL RECORD an article by Rowland Evans, Jr., of the New York Herald Tribune News Service entitled "Adlai Odds-On Choice in Florida Primary" which appeared in the March 13, 1956, issue of the Washington Post and Times Herald.

The article follows:

ADLAI ODDS-ON CHOICE IN FLORIDA PRIMARY

(By Rowland Evans, Jr.)

MIAMI, March 12.—Adlai E. Stevenson is the odds-on choice to take this State's presidential primary in a campaign against Senator ESTES KEFAUVER, Democrat, of Tennessee, marked thus far by an extraordinary voter apathy.

Supported by a slate of 40 delegates including many of the State's best-known political figures, Stevenson tangles with the Tennessee Senator on May 29 in the second official direct contest between the two presidential candidates for delegates to the Democratic Convention next August. The first encounter is March 20 in Minnesota. Stevenson, although the ballot carries a slate favorable to him, is not an active participant in Tuesday's New Hampshire primary.

An effort by some Florida Democratic leaders to offer a third slate of delegates pledged to a favorite-son candidate in this State's primary, flopped last week when the filing deadline came and went with no agreement on the favorite son. Senator SPESSARD HOLLAND was exhorted to enter his name but refused.

The result is that the presidential primary promises to be a lethargic affair ranking far behind an exciting gubernatorial primary in voter interest. The State supreme court has just ruled that incumbent Gov. Leroy Collins can run for a full 4-year term to succeed himself despite a constitutional prohibition on 2 successive terms by the same man. Governor Collins was elected in 1954 to fill out the 2-year unexpired term of the late Gov. Dan McCarthy.

In addition to the gubernatorial race, Florida Democrats will also nominate scores of lesser candidates from justices of the peace to a United States Senator.

Florida is a peculiar mixture of the tradition of the Deep South, and the new attitudes and ideas moving here in astonishing volume from the North. Although President Eisenhower took the State by 100,000 in 1952 the Democratic primaries are still the essential political testing ground. Nomination usually assures election. The Republican Party is still in incubation.

Stevenson and KEFAUVER both made brief exploratory vists to Florida in the past few months. Stevenson will return April 6 for a major speech at Jacksonville and short stops elsewhere in his bid for Florida's 28

convention votes. His campaign managers were well pleased with the Florida reaction to Stevenson's civil rights position. They say his policy of moderation on the question of school desegregation and other major issues exactly suits the temperament of most indigenous Florida Democrats as well as the horde of rich or pensioned northerners including some Democrats who came here for a visit and never went home.

Two months ago some of Stevenson's Florida friends were frankly worried about his prospect in the May 29 primary. That pessimism has now passed. The present outlook, they say, is that the 1952 Democratic presidential nominee will beat KEFAUVER as handily as did Senator RICHARD B. RUSSELL, Democrat, of Georgia, in the 1952 primary. RUSSELL, an orthodox southern conservative dealt KEFAUVER one of his two primary defeats in 1952.

Political neutrals also predict a handy Stevenson triumph. They tell you that in his 1952 campaign here KEFAUVER was riding a crest of popularity which blew out of his 1950 crime and gambling exposé. That's ancient history today they say.

The KEFAUVER managers, however, are counting heavily on the Senator's handshaking technique to bring him out on top next May. They say he will win this one. They conceded that his slate of delegates lacks the big political names—including two former Governors—to be found on Stevenson's. But Florida's new primary law, drafted by political scientists, may de-emphasize the importance of individual names on the opposing slates of delegates.

There has been no effort by either side to capitalize on the civil rights issue. The two candidates do not in fact appear to be very far apart on the question of school integration, despite KEFAUVER's apparent capture of Negro sentiment in California last month.

Tribute to the Late James Capparell, of Hazleton, Pa.

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 19, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Hazleton (Pa.) Plain Speaker of March 13, 1956, which pays tribute to the outstanding life of the late James Capparell, who passed away in Hazleton last week. Mr. Speaker, I, too, would like to take this opportunity to pay my sincerest respect to this fine gentleman who came to America from Italy at an early age and through hard work and devotion to his family established a wonderful record for which all his many friends and associates are extremely proud.

The article follows:

JAMES CAPPARELL AN OPPORTUNIST

That America is truly the land of opportunity, was brought out forcefully yesterday in the obituary of James Capparell who had built a stripping and construction empire in Hazelton.

Leaving the sunny shores of Italy at the age of 10, the founder and the head of the Capparell Construction Co. must have had the hand of destiny as his guide. He came to Hazelton to begin a career as a water boy in a coal stripping. Then, with a determination to get ahead, this man advanced step by step until he was able to establish his own company. Of course he had ample help from a large family of sons, all of whom were imbued with the same spirit—hard work and a progressive spirit.

The saga of Jim Capparell's life to too long and varied to bear repetition. Yet it should serve as an inspiration to others—for here was a poor immigrant who came to a strange land to acquire fame and fortune.

As he approached the fourscore mark, and it was time for him to slow down, Mr. Capparell had trained his sons to carry on. It was his honor to be the only president that the Capparell Stripping and Construction Co. ever had. And he lived to see the day that his eldest son would be the mayor of the city of his adoption.

Hospitals, churches, schools, grottos, firehouses and other public buildings have risen in our midst because of the generosity of this man who gained his knowledge the hard way. His philanthropic acts were so numerous, that many of them will go with him to his grave, unknown.

Today the firm that bears his name employs more than 600 men and owns extensive properties and machinery. Headed by His Honor, Mayor S. Thomas Capparell as general manager, the sons of Jim Capparell will carry through—for they know better than anyone the struggles that their father had to make, to see his dream come true.

James Capparell was active until the hour of his death. He had realized his every ambition—and it was Hazelton's good fortune that he had chosen this mountain city as his home when he landed on the shores of America. Here he reared a large and resourceful family that will carry on where he has left off.

Cotton Comment

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include the following article from the Memphis Commercial Appeal:

COTTON COMMENT—FARMERS WHO STUDY LOAN LIMITATION PROPOSAL LIKE IT LESS AND LESS AS IMPLICATIONS OF MOVE DAWNS ON THEM—SMALL GROWER ALSO IS HURT

(By Gerald L. Dearing)

The more the implications of the crop-loan limitations are studied the less farmers, both large and small, like the idea.

The fixing of a $100,000 ceiling on price supports, as adopted by the Senate, is seen as a shot aimed at the larger farms, but missing its marks and hitting the smaller growers.

A quick check of the alluvial area about Memphis indicates that about half the cotton produced in the area would have no price supports, even if the farmers did not use the CCC loans for oats, soybeans, wheat and barley or rice. Any loans on these commodities would limit the loan on cotton and increase the amount unsupported.

In addition to the crops in the alluvial areas, there is the cotton grown in Texas, Oklahoma, New Mexico, and California. It is not inconceivable that a third of the crop could be produced outside price supports. The impact of this amount of unsupported cotton on the markets would be tremendous.

CHEAP PRICES INDICATED

It can only result in buyers holding off purchases in an effort to obtain cotton as cheaply as possible. And this will not be difficult, since there will be no market for the current crop beyond the demands of the domestic mills. The export business will go to the cotton held in the CCC stocks under the competitive price export sales program.

So far we have indicated a price to the larger grower somewhat under the loan level. But this loss to the larger grower is nothing to the hardship brought upon the smaller farmer. He will be faced with the simple choice of placing his cotton in the loan or selling in competition with the unsupported cotton on the open market. He will have no market until the unsupported cotton has moved, and probably not then, since it then will be difficult for the buyer to assemble and ship the small lots.

CAN BE WORSE

The plight of the small farmers, like those in north Alabama, will be even worse. These are the farmers who have seen their acreage cut back and cut back beyond the point of endurance. They have overplanted their small allotments by an acre or so, paid their penalty and increased their income by the extra cotton they have grown at half price.

In some areas this practice has been general with about 40 percent of the small farmers. Their cotton, because of the overplantings, is ineligible for the loan. They have, in the past, been forced to sell slightly under the loan, but they have had little competition at that level. Under the loan limitations they will be competing with the other unsupported cotton. Lacking the financial strength of the others, they must sell at whatever price they can get. They will get the lowest price paid.

Conference Report on H. R. 8320

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 19, 1956

Mr. BYRNES of Wisconsin. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following statement:

BACKGROUND INFORMATION ON CONFERENCE REPORT ON H. R. 8320

The issue involved in the conference report on H. R. 8320 is simple. The question is should the following programs be extended:

1. School milk program (expires June 30, 1956).
2. Brucellosis eradiction program (expires June 30, 1956).
3. Veterans' hospitals and Armed Forces milk program (expires December 31, 1956).

SUMMARY OF PROBLEM

House passed H. R. 8320 unanimously February 1, 1956. The bill provided for additional fund to carry school milk and brucellosis programs to this June 30.

The Senate passed H. R. 8320 unanimously on February 8, 1956. As passed by Senate, the bill included the additional funds plus Senate amendment to extend the school milk and brucellosis eradication program and also the veterans' hospital and Armed Forces milk programs for 2 more years (to 1958).

The conference committee at the insistence of the Domocrat House managers has reported the bill back to the House with the Senate amendment stricken from the bill.

This course was insisted upon by Democrat House members of the conference committee in spite of the fact that the House last year in H. R. 12 (the general farm bill that is still pending in Senate) approved a 1-year extension of the school milk program and a 2-year extension of the brucellosis eradication program.

There can be but one reason for the position taken by the Democrat managers of the House, a desire to keep these programs in suspense as part of the general farm bill for bargaining purposes. It will thus remain as a club over the heads of those who believe in the desirability of these programs but who may oppose other provisions of the general farm bill.

THE PARLIAMENTARY SITUATION

Adoption of the conference report by the House will send the bill (H. R. 8320) to the President without the extensions.

Rejection of the conference report by the House will pave the way for a motion in the House to concur in the Senate amendments and thus send the bill to the President with the extensions.

Neither rejection nor adoption of conference report will affect the emergency funds needed by the school milk or brucellosis programs to carry them through the remainder of the fiscal year.

A vote for the adoption of the conference report will be a vote against the extension of the school milk, the veterans' hospital and Armed Forces milk programs, and the brucellosis eradication program.

A vote against the adoption of the conference report will be a vote for the extension of the school milk, the veterans' hospital, and Armed Forces milk programs, and the brucellosis eradication program.

The Rule of Government in Housing and Real Estate Finance

EXTENSION OF REMARKS
OF

HON. ROBERT E. JONES, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1956

Mr. JONES of Alabama. Mr. Speaker, I wish to insert in the RECORD a speech delivered by Hon. ALBERT RAINS before the American Bankers Association at their annual convention in New York on March 7. I am sure the Members will be interested in this splendid discussion of the Government's role in housing. Congressman RAINS is a recognized authority on this subject and I am very pleased to bring it to the attention of the House.

THE ROLE OF GOVERNMENT IN HOUSING AND REAL ESTATE FINANCING

Mr. Chairman, the banking system plays a vital, indeed an indispensable, role in our private-enterprise economy. Through your institutions flows the stream of commercial, industrial, and agricultural credit which is the lifeblood and invigorating force of our economy. The layman like myself often finds the banking process somewhat mysterious in its complicated and technical workings, but he is nonetheless aware that our economy would die without the flow of credit necessary to sustain it.

While the extension of commercial, industrial, and agricultural credit is widely recognized as the prime function of commercial bankers, we must not overlook the tremendous contribution made by commercial banks in the field of housing construction and home-mortgage financing.

Available statistics bear eloquent testimony on this point. According to the latest Federal Reserve Board statistics commercial banks hold nearly $16 billion in residential mortgage loans. Although some of this total includes loans on apartment structures—the $16 billion total looms large against the approximately $88 billions national total of mortgage debt estimated to be outstanding on 1- to 4-family homes.

Looking at the Government-aided sector of mortgage finance, I find that commercial banks hold nearly $4.6 billion in FHA-insured loans and about $3.7 billion in GI loans. This represents nearly one-third of the national total of FHA loans outstanding, and about 15 percent of the GI loan total.

In terms of more recent activity commercial banks account for about 15 percent of GI loans. Most recent FHA figures show that commercial banks made about 1 FHA loan in 3. In the case of project mortgages—e. g., 213 cooperative loans and section 207 apartment loans—the share of commercial banks is even greater. In 1954, commercial banks accounted for about 57 percent of total FHA project mortgages.

I would like also to compliment the mutual-savings banks for their great contribution in the housing finance field. Funds from these institutions give a strong underpinning to home construction and home finance in many areas of the country.

Mutual-savings banks hold over $15 billions in residential mortgages, very close to the portfolio total of commercial banks. Their holdings of FHA and GI loans are even larger, totaling nearly $10 billion or approximately one-fourth of the national total of Government-supported housing loans.

These statistics do not tell the whole story by any means, of course. They do not give proper weight to the prominent, possibly the dominant, role played by bankers in supplying the construction financing which builders must have to proceed. Nor do they give weight to the mortgage warehousing activities of commercial banks which are so beneficial in smoothing out the flow of credit in the home-financing process.

And now I would like to turn to the Washington scene and discuss some of the things which our subcommittee on housing has been doing, and also to give you some of my views on the general subject of the proper role of Government in the housing and real-estate finance field.

Recognizing that the housing industry is a kingpin in our economy and that the Government conducts a variety of programs in the housing field, the House of Representatives last June passed a resolution authorizing the Banking and Currency Committee to study and investigate virtually all phases of the Government-assisted housing programs. Acting under this resolution the Banking and Currency Committee set up a Subcommittee on Housing. I was greatly honored to be named chairman of the Subcommittee.

Gentlemen, I want to say that our subcommittee has really been at work. Over the past few months, we have held five field hearings in New York, Philaladphia, Los Angeles, Chicago, and Cleveland. In most cases, the hearings extended for several days and we heard expert testimony of every shade an variety of opinion from Government officials and industry representatives with a first-hand knowledge of local problems.

We carefully selected subject areas in which real problems were apparent—areas in which we hoped that the subcommittee's labors would produce tangible results. The subjects initially selected for study included the slum clearance and urban renewal programs, the multi-family housing programs under FHA, and the problems of mortgage credit.

I think that our efforts in these hearings have borne fruit. After careful study of all the testimony presented, we have issued reports on these subjects which recommend legislative changes and also contain suggestions for changes in administrative policy on the part of the executive agencies concerned.

We have attempted to be objective and fair in our reports but at the same time have pulled no punches. For example, we were greatly distressed to find that the slum clearance and urban renewal programs were bogged down in a morass of administrative red tape. We found a timid and negative attitude on the part of many Government officials—and a lack of drive and the bold imagination which must be present if the grave problems of slum elimination and prevention are ever to be solved. Our criticisms on these matters were expressed in strong language.

We have tried, however, to make our criticism constructive. If you will examine our report on slum clearance and urban renewal, you will find that we made a long series of recommendations on things which can and should be done to make the slum clearance and urban renewal program more workable and effective.

I by no means wish to imply any lack of interest on your part in the challenge of slum clearance and prevention, but as bankers you will probably be more interested in the subcommittee's report on mortgage credit. Our mortagage credit report discusses the question of discounts, of credit controls, of mortgage warehousing—all timely subjects, indeed.

In this field too we had concrete recommendations to make, both of a lagislative and an administrative policy nature. You may not agree with some of the views we champion, but I think you will agree we went into the subject deeply and conscientiously.

I hope you will read our reports and I can assure you we will be glad to have the benefit of your comments. Our subcommittee will undoubtedly play a role in the evolution of the general housing bill, which will emerge before the gavel sounds a close to the 2d session of the 84th Congress.

Last month in Washington we held a hearing on the general subject of the operations of the Federal National Mortgage Association. Because of the excessive discounts on GI and FHA loans which the subcommittee learned about in some areas, and because FNMA has a support role for such mortgages, we thought it would be timely to restudy FNMA's organization and operation to see what changes, if any, should be made to make it a more effective support.

We heard views which varied considerably. On the one hand, the home builders proposed some rather sweeping changes which would greatly liberalize FNMA's secondary market operation. In addition to the present mortgage purchase authority, the home builders proposed that FNMA be authorized to rediscount GI and FHA mortgages and also to issue standby commitments with certain limitations.

At the other end of the spectrum, we heard considerable testimony against any further liberalization in FNMA's program. Generally, all of the institutional lender groups—including the spokesmen for the American Bankers Association and the National Association of Mutual Savings Banks—took this view.

Frankly, I do not know yet what our subcommittee will recommend in the way of FNMA legislation. Our report should be out before long and you may be sure we will have recommendations, but at the moment, we are still studying various alternatives.

The subject of FNMA presents a convenient point of departure from which to launch into a more general discussion of the nature of our problems in the housing field and more specifically, what the role of the Federal Government should be in relation to these problems.

Now certainly no thinking person believes in Government for Government's sake. Only the anarchist on the other hand believes that a country can exist without some governmental powers and control. The real issues is the degree to which the Government should intervene.

Whether we like it or not, the Government is deeply involved in the housing field. With the onset of the great depression, the Government was forced to intervene in the housing economy, for example, to rescue homeowners from foreclosure with loans from the Home Owners Loan Corporation and to stabilize the mortgage market; stimulate home construction through the establishment of the FHA insurance program. Creation of the home-loan bank system was necessary to provide a credit backstop to our Nation's savings and loan associations. Construction of low rent subsidized public housing units was undertaken with a twofold purpose—(1) to provide decent housing for the low-income families which could not afford private housing; and (2) to help clear our Nation's slums.

Again, whether we like it or not, there has been since World War II a continuing expansion of government activities in the housing field. As major examples, we have seen a tremendous increase of the GI home loan program for veterans. We have seen enacted a large scale program for loans and grants for slum clearance and urban renewal.

Now all of these programs are not just devices of the devil fashioned by some evil planner who are interested in expanding government power with no valid purpose in mind. All of these programs were conceived and put into operation by the American people through their representatives because they were necessary to meet a real and valid national need.

And most significantly, none of these programs has really been competitive with private enterprise. These programs have either furnished supplemental assistance so that private capital and private enterprise could do a more effective job or as in the case of the low rent housing program, they have met a pressing social need which just could not be achieved without direct public subsidy.

I am convinced that these governmental housing programs have greatly assisted our economy and the national welfare, and they have done so with a minimum of Government interference with private enterprise, and I believe that many enlightened businessmen share my view.

Now let me make it clear that I am an advocate of the middle ground. I think that each proposal must be carefully considered on its merits. And the adoption of any new Government program—should be done only when it is clearly in the public interest and because it is necessary to meet an unfilled need.

But by the same token, I cannot go along with those who blindly oppose any change in the status quo. We must face the fact that in this great growing economy of ours, some degree of balanced change in our policies and programs is inevitable.

I would like if I may to discuss several specific examples in an attempt to make my position clear:

Take public housing, which is a scare word in many quarters. I frankly cannot understand how enlightened men with a comprehension of our social and economic problems can oppose a reasonable public housing program.

Our home building industry has done a monumental job in providing excellent housing at a moderate price for a large majority of our families. Likewise, for many other middle- and lower middle-income families decent accommodations are available at a reasonable price or rent from our huge stock of existing housing.

But the blunt fact remains that private industry cannot supplye adequate and decent housing for many of our low income families. Many of these families are forced to pay disproportionately high rents for the privilege of living in slums. I for one cannot be complacent as long as this social and economic fact exists. In the words of a great and eloquent American, "Are we really prosperous when our national income is going up but our schools are becoming more crowded, our slums more contagious. Sure, the figures on the paycheck are important, but is a family really prosperous if it lives in an urban jungle where juvenile delinquency takes growing children for its prey?

"We are for a country where no man's home is blighted by smoke, dirt, and noise and cut off from sunlight, trees, and air."

Until I can see some workable alternative proposed—and I have yet to see one that makes real sense—I am going to continue to fight strongly for a low rent public housing and for an effective slum clearance and urban renewal program. Admittedly these programs involve Government intervention and they involve Government subsidy. But likewise the FHA and GI programs involve Government intervention and Government subsidy. I am for all of these programs—because they meet desirable social needs, keep competition with private enterprise to a minimum, and help us to maintain a prosperous and expanding economy.

I think we can take the Federal National Mortgage Association as another example.

The main thesis developed by representatives of banking groups at our recent FNMA hearing seemed to be that the private morgage market is capable of meeting all legitimate mortgage needs.

Now that may be true in some parts of the country. But, gentlemen, I can tell you that it is not true in the South and West, including my own home State of Alabama. In many parts of the country it is extremely difficult to obtain FHA and GI financing except at a prohibitive cost. Many of us in Congress are deeply concerned about the high and unreasonable discounts on Government-assisted mortgage loans which prevail in many areas. The unsatisfied mortgage financing needs of minority groups is another example of a deficiency in our existing financing machinery.

So I cannot in good conscience take the negative stand that all is well in the mortgage world. I am certain we will recommend some amendments to improve FNMA so it can do a better job in supporting the private market, in remote and high-discount areas.

There is another area of need—which is not now being met—I refer to the problem of decent housing at a reasonable cost for our elderly citizens.

A ground swell of sentiment seems to be growing in Congress in response to this unmet need. Many bills to provide housing aid for the elderly have been introduced. I shall shortly introduce a bill which would provide low-cost, long-term financing for non-profit corporations such as charitable groups to build low-cost housing for older people. It is my hope that the bill will receive favorable action in this session.

As a matter of fact, I hope there will be action taken in all of these sectors in the 1956 Housing Act; a provision for a sizable number of low-rent public-housing units, some amendments to make FNMA a more effective support facility, and a program for housing for the elderly.

The 1956 act will undoubtedly contain other provisions. It will provide for the necessary extensions of the various FHA programs. It will probably extend and liberalize the title VIII military-housing program. It will probably contain some liberalizing features in the FHA title I home-improvement loan program. I hope also it will contain liberalizing amendments to make the FHA section 207 rental-housing program more effective, and also changes to liberalize the section 221 program designed to supply housing for persons displaced by urban-renewal operations.

Whether it will contain anything relating to the GI loan program I cannot say. The present law expires in July 1957. While veterans' housing legislation falls under the jurisdiction of the Committee for Veterans' Affairs, I would like to emphasize my personal support of the GI loan program and state my hope and belief that provision will be made for some form of reasonable extension of this act.

Of course, any prediction as to what will finally emerge in the way of housing legislation is hazardous. The great democratic process of lawmaking in our country is a complicated one and no one can ever be certain about the final outcome. But we can be sure that all sides will have their innings in shaping the end result. And I am also confident that the end product will provide housing legislation to help build a stronger and sounder housing economy and in so doing to promote the national welfare.

Your Money's Worth

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 1, 1956

Mr. SIKES. Mr. Speaker, under permission to extend my own remarks and to include extraneous material, I submit herewith for publication in the CONGRESSIONAL RECORD an article from the Tallahassee Democrat entitled "Your Money's Worth," appearing in the February 13, 1956, issue, written by Miss Sylvia Porter.

The article follows:

YOUR MONEY'S WORTH—FLORIDA IS POISED FOR GREAT FUTURE

(By Sylvia Porter)

MIAMI.—"Today, people think of Florida as the extreme southeastern corner of the United States. Ten years from today, Florida will be recognized as the State in the center of the Western Hemisphere.

"Geography alone will be an immense factor in our great rate of growth as the industrial, cultural, and political ties between our country and the Latin American nations are strengthened."

Thus LeRoy Collins, Florida's handsome, industry-wooing Democratic Governor began his answer to my question: "What do you foresee for Florida 10 years from now?"—and his enthusiasm went up from there.

What's more, the certainty he expressed in our exclusive talk about Florida's long-term expansion and prosperity was echoed by every industrialist and banker I interviewed here. As a sample:

"Everything will be bigger and better but the weather, which already is ideal. We're entering a solid growth phrase"; Leonard Abess, president of the Industrial National Bank of Miami and a major investor in land and financial institutions throughout the State. Abess isn't just talking optimism; Abess' bank is now building new five-story building according to blueprints that anticipate the addition of five more floors within 10 years.

"Florida is growing faster than even we expected—and we have been accused of being overoptimistic": McGregor Smith, board chairman of Florida Power & Light Co. Smith's company is projecting its building program on the basis that population in the

Miami area will have risen a minimum of 100 percent in the next 10 years.

"By 1966, we'll just be starting our real expansion. Florida will flourish at a rate that will be geometric, not arithmetic": Baron de Hirsh Meyer, president of Miami Beach Federal Savings & Loan Association. Miami Beach Federal also is putting up a new building—the tallest office building so far constructed in Miami Beach.

The surprise will be if it doesn't happen. Florida seems spectacularly poised for a period of major long-term development.

Her climate needs no comment. There is no doubt that the number of annual tourists to this State will continue to zoom. And in addition:

She'll be helped by the vast progress in transportation in this jet age. As Governor Collins put it, "Florida soon will be only a couple of hours away from the front porch of every home in the land."

She'll be helped by the increase in leisure time. In Baron de Hirsh Meyer's words: "As automation takes over and people get longer and more vacations, more and more will come here to visit and to settle."

She'll be helped by the steady and strong movement of industry to the State. "Here, industry is in its infancy," emphasized Abess again and again during our interview. "Chemicals should be a top growth industry in this State in the next 10 years. Electronics, aircraft equipment, food packaging, insurance, atomic energy—these are sure bets."

ECONOMIC INDIGESTION

The probability is Florida's population will at least have doubled and passed the 7 million mark within 10 years. From 33d in State population rank in 1900, she will have moved into the first 10.

The odds are the total of manufacturing plants will have soared to over 10,000 against only 3,000 in 1950. The chances are the number of jobs in industry will have quadrupled.

It's not all joyous, though. Right now, some areas of Florida are showings signs of economic "indigestion." Competition is getting rougher and making money is by no means the cinch it was.

And a growth of the heroic size projected must produce problems of equal magnitude. In our talk, the governor didn't even attempt to deny the enormous problems—the insatiable demand for schools and roads; the nightmare pressures which develop when whole regions develop virtually overnight.

But these are problems that face many other sections of our land—sections that don't have Florida's glittering advantages.

In Florida, forecasting is a lot easier than in my hometown. Within 10 years, this State is sure to be a great force—in agriculture, in industry, in commerce, in tourism. And in politics.

Cotton and OTC

EXTENSION OF REMARKS

OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1956

Mr. SMITH of Mississippi. Mr. Speaker, a great deal of talk has been going on about American participation in the Organization for Trade Cooperation, but very little specific information has been available. As one concerned with the effect of OTC membership on all branches of the American cotton industry, I asked President Eisenhower for a specific statement about OTC and American cotton and cotton products.

I think the information contained in the reply from the White House, which I insert as a part of my remarks, makes it clear that it is in the best interest of the American cotton farmer and the American textile worker and manufacturer for the United States to accept the agreement on the Organization for Trade Cooperation:

THE WHITE HOUSE,
Washington, March 12, 1956.

The Honorable FRANK E. SMITH,
House of Representatives,
Washington, D. C.

DEAR MR. SMITH: Certainly we appreciate your repeatedly expressed deep personal interest in the relationship of the proposed organization for trade cooperation to the problems of the cotton-textile industry of the United States. In order that there be no possibility of misunderstanding about this important matter, I am pleased to furnish the following information.

United States acceptance of the agreement on the Organization for Trade Cooperation (OTC) will not cause injury to the United States cotton textile industry. It would, on the contrary, be of material benefit to the industry by getting foreign restrictions removed so that export markets could be opened to American textiles.

United States membership in the OTC will in no way alter United States tariffs or the trade policies of the United States. It will change neither the tariff concessions granted under the general agreement nor the safeguards which are available to domestic industry and contained in the general agreement and in domestic legislation. For example, the domestic industry will continue to have the same right of recourse as in the past to the trade agreements escape clause, which provides for increases in duties or the imposition of quotas if increased imports resulting from a concession cause or threaten serious injury.

President Eisenhower, in his letter to Representative JOSEPH W. MARTIN, JR., last year stated the policy of the administration. He said, "no American industry will be placed in jeopardy" by the administration of the Trade Agreements Act.

The American cotton textile industry has an appreciable export business. Toward the end of last year, for example, United States exports of cotton textiles were running at an annual rate of some 550 million square yards, and imports, at about 120 million square yards. In view of its export interest, this industry actually has much to gain from the OTC. By making the administration of the general agreement more effective, the OTC will help the United States get the full benefits of that agreement. The benefits include tariff concessions granted by other countries, a general prohibition against protective quotas, and the requirement that quotas imposed by many other countries for balance-of-payments purposes must be relaxed and eliminated as the financial positions of those countries improve.

While the general agreement has given American interests substantial protection from restrictive and discriminatory practices abroad, there have been times when trade disputes have arisen among its contracting parties. Whereas these disputes might ordinarily have caused serious damage to the traders and possibly the countries involved, the general agreement has provided a meeting place and a generally accepted body of principles which have led to a settlement of these disputes. United States textile interests have already benefited from the agreement in this way. A few years ago the Cuban Government imposed a virtual embargo on United States textiles which led to thousands of dollars worth of goods piling up on the docks and in custom warehouses in Cuba. The United States charged that the Cuban restrictions violated the general agreement and nullified or impaired tariff concessions. When Cuba refused to relax the restrictions, the United States brought the matter before the contracting parties to the GATT, which fortunately were meeting in Geneva. The dispute was discussed, and Cuba promptly took steps to relieve the situation.

In some other cases the general agreement has not been able to work as swiftly and effectively in helping to settle disputes. Countries have at times had to wait for infrequently scheduled sessions and the establishment of special committees. This has happened because of the absence of formal arrangements and the reliance on cumbersome, makeshift substitutes.

The OTC by providing permanent and formal, although simple, administrative arrangements can insure that benefits such as these will be more readily available to the textile and other industries in the United States which derive some of their earnings from sales abroad.

If any further information on this subject of either a specific or general nature will be helpful to you, please do not hesitate to let me know.

With kind regard,
Sincerely,

BRYCE N. HARLOW,
Administrative Assistant to the President.

Veterinarians in the Military Service

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 1, 1956

Mr. SIKES. Mr. Speaker, the plight of the veterinarians in the service very frequently has been overlooked in considerations for incentive legislation to encourage doctors and dentists to remain in the military service. I believe it will be helpful if our colleagues may have a more accurate picture of the situation as it pertains to the veterinarians. Therefore, I am submitting a brief which portrays their situation today in the military service:

FACTS PERTAINING TO THE NEED FOR INCLUDING VETERINARIANS IN THE CURRENTLY PROPOSED INCENTIVE LEGISLATION TO OBTAIN CAREER DOCTORS AND DENTISTS IN THE MILITARY SERVICES

The situation with respect to career veterinary officers in the Air Force is as follows:

1. The Veterinary Service in the Air Force is confronted with the same recruitment problems to obtain regular officers as the Medical and Dental Services.

(a) Over a period of 2 years only 14 veterinarians have applied for regular commissions.

(b) It has been necessary to rely upon draft laws to obtain veterinarians the same as for physicians and dentists. This source will become less practical and prolific.

(c) The recruitment problem has been compounded by the exclusion of the veterinarian from the publicized proposed incentive legislation.

(d) Aside from the opportunity for a special type professional service, a military veterinary career today offers little in competition with a civilian career.

(e) The veterinary problem is greater in magnitude when it is realized that in pro-

portionate ratio the loss of 1 veterinary officer numberswise is comparable to the loss of 7 dental officers or 10 medical officers.

2. Approximately one-third of the total veterinary strength must be replaced each year. The individual cost of replacing a veterinary officer is equal to that of replacing a medical or dental officer. Usually only one veterinary officer is assigned per base. The replacement of this officer results in,

(a) Loss of continuity in the veterinary service,

(b) Lower efficiency of the food-inspection system,

(c) Weakened and lax environmental-health program,

(d) Poor vendor relations, and

(e) Increased workload on the base surgeon in covering the veterinary responsibilities until the new veterinary officer is in place.

One-half of all short-term officers go overseas and return every 1½ to 2 years, whereas a Regular officer stays 3 to 4 years. Short-term (2 years) officers are lost from the service at the very time they become proficient in their duties and are of most value to the service.

3. Only 26 percent of the total Air Force requirement is currently manned by Regular officers as against 53 percent 5 years ago.

4. Sixty percent of the total officers have less than 2 years' experience and 80 percent have less than 6 years experience.

5. Only 14 officers have applied for regular commissions during the past 2 years. Twelve of these were acceptable. During the same period five regulars were lost from the service. Therefore, only a resultant gain of 7 Regular officers was realized in a 2-year period. With this gain the current Regular officer strength is only 40 percent of the recommended minimum Regular officer requirement.

6. All veterinarians in recent years who have sought the Regular service as a career have done so because they were interested in research or other specialized assignments. None are interested in the routine job of a base veterinarian which is the backbone of the service. All junior officers are now engaged in specialized assignments, are in training for such assignments, or are on mandatory foreign-duty tours. All senior career officers are on key administrative or other special assignments of interest to them. Both groups are needed as now assigned which leaves practically no career officers available for routine base duties. Were officers of either group to be reassigned to routine base veterinary duties, the rate of resignation would be high. Many senior Regular officers now on duty decided on a Regular career as a result of the large number of years invested in the service during the war periods.

7. The rate of voluntary retirement among veterinary officers has been nil because only one has reached the required years for retirement eligibility. It is anticipated that losses of senior officers by retirement will reach a critical point in the near future. Many of the senior officers who form the backbone of the Regular Veterinary Service will reach retirement eligibility over a span of less than 3 years.

8. The rate of resignation among veterinary officers has been low: only one, because graduate training has not been used as an inducement to obtain applicants for the Regular service. Only Regular officers who have proven their intentions and capabilities during 2 or more years' service have been allowed to take graduate training. Consequently, there has been no opportunity for veterinary officers to join the Regular corps, obtain residency or graduate training, serve committed tours, and then resign from the service. For this reason, in comparison with the Medical and Dental Corps the rate of resignation from the Regular service by veterinary officers has been nil. This situation, unless correctly understood, now mitigates against the Veterinary Service because it gives the erroneous impression that career officers are more readily attracted to the Veterinary Service than to the Medical or Dental Services.

9. Over 5 percent of the total veterinarians in the United States are now in uniform. This has never before been true except in time of war. Decided incentives must be added if a major portion of this number is to be retained on a voluntary basis. Were it not for the draft law, two-thirds of the total Air Force requirements would now be unfilled.

10. Arguments and justifications which have been advanced for providing incentives for the recruitment of physicians and dentists are equally applicable to veterinarians. Some of them are:

(a) The present regular Veterinary Corps is not a true career group interested in a routine regular Air Force veterinary career as evidenced in paragraph 6 above.

(b) Income from civilian practice is more lucrative and attractive than income received in the military service and is attracting practically all young veterinarians away from the service.

(c) The veterinarian is an integral part of the Air Force medical service team dedicated to keeping Air Force personnel healthy.

(d) Many specialties peculiar to military medicine require the support of military veterinarians. Examples of such specialties are worldwide food inspection and food security system, areo-medical research, radio biological research, and biological and radiological warfare defense.

(e) Current opinion of the services is that career military personnel should comprise two-thirds of the total requirements. Current strength of career veterinary officers has decreased to 25 percent.

(f) Two out of three military veterinarians are impatient to return to civilian practice.

(g) Replacement is currently possible only by resorting to draft laws.

(h) Without better incentives requirements for military veterinarians can be met only by compulsion.

(i) Each career military veterinarian will eliminate the need for drafting 4 civilian veterinarian every 6 years. Career veterinarians also reduce the need for medical officers. More than one-half of the professional workload of a base veterinarian is paramedical in nature (environmental health, food inspection, animal-disease control) and in the absence of the veterinarian requires the services of a physician. Veterinarians and physicians are both trained in such specialties as pathology, virology, epidemiology, radiobiology, teaching, and research. The utilization of veterinary personnel in these specialties plus the normal workload of the base veterinarians make available an estimated 175 physicians for medical treatment of Air Force personnel.

(j) The problem will not go away and it is getting worse.

(k) The proposed incentive legislation will narrow the spread between the military and civilian veterinarian.

(l) The professional training for a degree in veterinary medicine is the same (4 years) as is required for a degree in medicine or dentistry. Total training is the same as the dentist (6 years) and 1 less than the physician (7 years). A high percentage of veterinarians have 7 and 8 years' college training exclusive of graduate or training in specialties.

11. The exclusion of veterinarians from the proposed legislation which provides added incentives for physicians and dentists will have a serious adverse morale effect upon the officer on duty and the veterinarian considering the military service.

12. All previous incentive and draft legislation has included the physician, dentist, and veterinarian on an equal basis. Reference the following:

(a) Career Compensation Act of 1949, as amended.

(b) Public Law 779, act of September 9, 1950—doctor draft law, as amended.

(c) Officer Personnel Act of 1947, as amended.

The exclusion of the veterinarian from proposed legislation is not in conformity with the feelings of Congress as evidenced by past legislation. The addition of a few hundred officers to a plan already considering thousands of officers will not significantly affect the proposed legislation budgetwise.

Financing of Political Campaigns

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, March 19, 1956

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a most illuminating article about political campaign spending by Mr. George H. Hall, from the St. Louis Post-Dispatch of March 11, 1956.

It is significant to note that Mr. Hall estimates an expenditure of nearly $100 million in the presidential campaign of 1952, although only $23 million was reported as being spent, according to him.

This indicates that, in the long run, Congress may have to adopt some other means than so-called full reporting to control the vast sums now spent to decide elections in this country.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOW TO FINANCE POLITICAL CAMPAIGNS AGAIN A PROBLEM

(By George H. Hall)

WASHINGTON, March 10.—The imminence of the New Hampshire primary election Tuesday is a reminder that the 1956 presidential campaign is well underway with the two major parties, despite much talk about improved methods of political financing, facing the same money problems that have beset them for generations.

Plans have been offered and legislation has been introduced in Congress and the whole subject has been spotlighted by the current Senate lobbying inquiring, but the hour is growing late. Some persons have already begun talking hopefully of perfecting a program by 1958 or 1960.

Financially speaking, the Republicans are entering the campaign with a flying head start. The party benefited by about $5 million from the nationwide "Salute to Eisenhower" dinners held the end of January. Many of these were $100-a-plate affairs, with half of the proceeds going for national and the remainder for local purposes.

The Democrats, who are on the outside looking in at a presidential campaign for the first time in 24 years, seem povertystricken by comparison. A year-end statement showed $125,000 in the treasury of the national committee, although there may be more by now.

The Democrats are making plans for drives to collect a large number of small donations.

possibly by some variation of the Ruml plan they tried in 1952 too late to do much good. They have scheduled a number of modest fund-raising dinners for this month and are planning a Woodrow Wilson centennial dinner in Washington, April 21. A similar gathering last year attracted 4,500 persons.

Both parties are soliciting the fat cats, or major donors, who have always furnished the hard core of campaign finances. The Democratic national chairman, Paul M. Butler, already has spoken out against Republican fat cats, but there are Democratic fat cats also.

Statistics of the 1952 campaign show the national, senatorial, and congressional committees of both parties obtained 55 percent of their total receipts from 2,407 contributions of $1,000 or more. An individual is prohibited by law from donating more than $5,000 to any one national group, but there is no limit to the number of separate groups to which an individual may give, nor is there a prohibition against several members of a family each handing out $5,000.

The traditional criticism has been that large donations often come from persons who have a special interest in the outcome of the election, from wealthy men or women who want to be appointed to ambassadorships or other posts, from persons like oil lobbyists who want specific laws passed, or from the underworld.

Pressure to appeal to persons of large means often builds up during a campaign. As a candidate or a committee becomes desperate for ways to meet attacks by the opposition, the candidate, or committee, is tempted to seek money from questionable sources and to make promises, perhaps later to be regretted, in order to get it.

In 1952, when the Democrats were trying to raise funds to buy additional television time, it was commonly said by managers for Gov. Adlai E. Stevenson, of Illinois, the Democratic Presidential candidate, that various underworld characters in Chicago were waiting by their telephones for Stevenson to call them. Stevenson refused to seek funds from these cources.

The Democracts made an intensive effort in 1952 to collect a large number of small contributions by means of a plan worked out by Beardsley Ruml, the economic and fiscal planner, and by other devices. Under the Ruml plan, books of $5 certificates were distributed for sale throughout the country. The proceeds were allocated by varying formulas to State organizations and to the national committee.

Although, because of the different proportional arrangements, a final audit never was completed, the results were disappointing. The idea seemed to take hold but was put into effect too late—about 2 months before the election. The national committee netted something like $120,000 from the plan.

An earlier start will be made on grassroots plans this year. The Democrats have a plan labeled "Teas for TV" which is aimed at persuading housewives to contribute small sums for television broadcasts. The Republicans are ready to announce a "Thank You, Mr. President" drive, in which volunteers are to solicit small amounts from a million persons.

Both these campaigns are aimed at women. Republicans say 58 percent of the votes cast for President Eisenhower in 1952 were cast by women. The President's appeal for women voters was demonstrated anew when Mr. Eisenhower appeared Tuesday before 1,500 delegates to the Republican Women's National Conference in Washington. The President received a sensational welcome.

A Gallup poll published 2 months ago showed that 15 million families would be willing to give $5 each, or a total of $75 million, to the party of their choice if they were asked to do so. It has been estimated that the present campaign may cost as much as $100 million, partly because of the high cost of television time.

An idea that seemed to strike the popular fancy last summer was that broadcast by Philips L. Graham, publisher of the Washington Post and Times Herald. Graham suggested a saturation advertising campaign to popularize the notion of political gifts of modest sums by millions of citizens.

Graham proposed that the Advertising Council of America donate time and space in all media and that a bipartisan board of trustees be set up to assure a fair deal for Republicans and Democrats. There were estimates that such a campaign would cost $10 million.

Republican and Democratic leaders discussed the proposal in favorable terms, but various difficulties arose and the Republicans withdrew from consideration of the plan after Butler confirmed at a press conference December 9 that two-party talks were under way. Republican National Chairman Leonard W. Hall called this a breach of faith and took offense at other remarks made by Butler at the conference.

Democrats subsequently charged Republicans wanted to sabotage the Graham plan because of the immense success of the salute to Eisenhower dinners, which gave them a long lead over the Democrats. Butler has asked for a revival of the plan and it is likely he will bring it up from time to time, if for no other purpose than to embarrass the Republicans.

Sponsors of the Graham plan do not concede that it is dead, even for 1956, although they acknowledge it is rather late to do anything about it this year.

There have been perennial efforts to shift some of the burden of campaign expenses directly to the taxpayers. In 1907, President Theodore Roosevelt proposed in a message to Congress that the Government assume part of the cost of campaigns.

In 1920, William Gibbs McAdoo, President Wilson's son-in-law and a former Secretary of the Treasury, said the Treasury should finance elections and that it should be a crime for anyone to contribute a dollar to influence an election.

Three weeks ago Senator RICHARD L. NEUBERGER, Democrat, of Oregon, introduced a bill along the lines suggested by Theodore Roosevelt. NEUBERGER, a man of modest financial means, had difficulty in obtaining funds in 1954 to conduct a hard campaign to unseat Senator Guy Cordon. He proposed a formula which would provide adequate Federal campaign funds to each major party on condition the party and its candidates adhered to restrictions on private donations.

Despite these and other proposals, there is no record that Congress ever seriously considered any legislation directed at Federal financing of campaigns.

Last year Senator THOMAS C. HENNINGS, JR., Democrat, of Missouri, was cosponsor of legislation to permit an income-tax deduction of up to $100 for contributions made by individuals to candidates for Federal office. HENNINGS also sponsored a measure to raise legal limits on campaign spending. Senator ALEXANDER WILEY, Republican, of Wisconsin, introduced a bill to set the amount of income-tax deductions for campaign contributions at $50.

In reports required by Federal law, the national committees of both parties and various other supporting political groups reported spending $23,100,000 in 1952. Some persons who have studied that campaign, which was unusually arduous, estimated the total at closer to $100 million.

It is thought likely the 1956 campaign will be the most costly in history. The money will have to come from somewhere.

Ernest R. Downing, Chief of Police at Ayer, Mass., a Remarkable Man

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1956

Mrs. ROGERS of Massachusetts. Mr. Speaker, I am so proud to count Chief Downing, of Ayer, as a fine friend. I wish that every city and town in the country could have the fine record of elimination of juvenile delinquency that Chief Downing has brought about in Ayer, Mass. I know the affection and admiration that the children and older people have for this splendid man. I have seen the happiness of the children at Christmas because Chief Downing asked me to help him several times to give out presents from the top of a truck. It was a sight I shall always remember. Hundreds of others will always remember him for his outstanding work. The following is an article respecting him, which appeared in yesterday's Boston paper:

AYER'S SANTA DOFFS BADGE FOR CHILDREN—ERNEST R. DOWNING, CHIEF FOR 12 YEARS, ERASED DELINQUENCY

(By William Wells)

AYER, March 17.—Ayer's Santa Claus, who doubles as chief of police, is taking off his badge to give full time to the youngsters.

Since Ernest L. Downing was named police chief here 12 years ago this town has had a revolution among its smaller fry, many of whom are now adults.

HAPPY IF BUSY

Thirty complaints a month of juvenile misbehavior were routine in this railroad junction near the huge Fort Devens Army base when Chief Downing took over.

Now, as he announces his retirement, a half dozen complaints a year are unusual, and for 10 years no Ayer youth has been sent to a penal institution. There has not even been a juvenile court case in 6 years.

How did he do it? "If you keep youngsters busy they'll be happy and not in mischief," he explains.

And keep them busy he does.

During the winter the high school students patrol the ponds and rivers to see that skaters stay off dangerous ice.

On Halloween the high-school football team patrols the town. Result: no marred windows and no destruction.

Every year the town's youngsters take a bus trip to Whalom Park and the rugged ones are deputized as special police to keep law and order.

In the spring the annual fishing derby draws younsters from neighboring towns as Downing stocks a fishing stream with big trout and hands out prizes to the best fishermen among the hundreds on hand.

TRIPS TO CAMP

In the summer there are trips to camps in New Hampshire for some of the boys who like fishing and other outdoor sports as well as Chief Downing does.

"Get a boy outdoors, he's better off holding a fishing rod than a pool cue," is Downing's motto.

And through the year there are hobby clubs, he's formed a dozen or more; a fife and drum corps he organized; fishing instruction in the public schools by the chief himself;

lectures and lessons from prominent sportsmen, and dances for the older youths.

The chief has kept himself busy, too, with visits once a week to every classroom; issuing pamphlets for the youngsters containing advice on how to help police and keep out of danger; keeping the police supplied with funds to help needed youngsters; providing food baskets for the poor on Thanksgiving, and raising the funds for all these activities.

His big time, and the youngsters', is Christmas, when he dons his Santa Claus suit and arrives from the skies via helicopter ready to dole out truckloads of presents for the more than 10,000 children on hand for the occasion.

NO ONE FORGOTTEN

And, when the party is over, he sets out across the countryside to visit the homes of those who couldn't come, the sick, the hungry, the poorly clad, and the timid.

You see, for Ayer's children, its citizens of tomorrow, sandy-haired, 6-foot, 60-year-old Ernest Downing is not only their friend, the chief of police. He's their Santa Claus; their symbol of generosity.

Perhaps a prisoner in a Kentucky penitentiary explained it best when he wrote:

"If we had a cop like you in my town when I was a kid I wouldn't be here now."

Fire at Shadowbrook

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 19, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following beautiful tribute which was paid by Archbishop Richard J. Cushing, of Boston, at the conclusion ofthe proburial Mass for the three Jesuit priests and a lay brother who died in the fire at Shadowbrook, a seminary located at Lenox, Mass., on March 9, 1956. Celebrant of the low requiem Mass was Very Rev. William E. Fitzgerald, S. J., New England provincial of the Society of Jesus. Rev. Francis O. Corcoran, S. J., rector of Shadowbrook, officiated at the 9:30 a. m. chanting of the Office of the Dead before the Mass in St. Ignatius' Church, Chestnut Hill, on March 15, 1956.

These remarks appeared in the Pilot, a Catholic newspaper in the Archdiocese of Boston, on Saturday, March 17, 1956.

ARCHBISHOP CUSHING'S TRIBUTE TO FIRE VICTIMS

"Visi sunt oculis insipientium mori * * * illi autem sunt in pace.

"To the eyes of the unthinking they seemed to die; and their departure was taken for misery and their going away from us, for utter destruction; but they are in peace." Wisdom, 3, 1–4.

The traditionally austere simplicity of the burial of members of the Society of Jesus precludes any personal eulogy and the touch of solemnity which a formal eulogy might add to the simple mass.

I shall not violate the spirit of this tradition by words of tribute to the individual Jesuits who died at Shadowbrook last Saturday under circumstances so tragic. Such words of eulogy would offend every religious sentiment and devout preference of the very men we would be seeking to praise.

On the other hand, what happened at Shadowbrook in the small hours of Saturday morning has so moved the entire New England community, already made aware of the appalling need for modern and safer facilities at Shadowbrook, that silence on our part might easily appear ungracious.

Accordingly, I venture a word of reflection on this sad occasion and a word of affectionate sympathy to the bereaved Society of Jesus and the relatives and friends of the beloved dead.

The coincidence between the devastating fire, with the sudden deaths of four of the Jesuit community, and the jubilee observances which were held this same weekend all over the United States, nowhere more joyfully than here in New England, gives us dramatic reason to reflect on the providence of God as revealed in sudden tragedy at the height of justified rejoicing.

That providence seems unmistakably spelled out in the text I have quoted to you. "To the eyes of the unthinking, they seemed to die; and their departure was taken for misery and their going away from us, for utter destruction; but they are in peace * * *" It is a text which might have been written by the sacred author after receiving the unhappy details of just such sad news as that which shocked us on the very eve of the celebration commemorating the memory of St. Ignatius.

The festive spirit abroad in the New England province last week was changed to a melancholy which, in the hearts of the relatives, brethren, and friends of the dead, was sheer misery. The joyful anticipation of a jubilee weekend in the history of the Society suddenly gave place to dismay at the thought of the torments of four beloved members of the Province, torments which ended, please God, with merciful speed, in the seeming defeat that is death. Surely the circumstances of that death justified our thinking of "their going from us (as) utter destruction.' '

But the melancholy, the torment, and the momentary defeat become supernaturally transitory and superficial, no matter how great their natural toll, when we reflect on how aptly the words of Scripture apply to this tragedy and to the deaths of the good men for whom we pray this morning.

The consoling phrases of the Book of Wisdom give perspective to the discouraging circumstances of the recent fire and the deaths caused by it. In this Christian perspective we see aright something of the point and the purpose of the Cross which God has permitted to fall on the backs of the Jesuit community in New England.

In proximate terms, losses of life and property so staggering seem inconsistent with a weekend originally set apart for the joyful celebration of a sacred anniversary. In ultimate terms, however, there is indubitably a close connection between the physical evil God has permitted and the spiritual good of which He wills His Jesuits to be the authors and the instruments. It is only to the unwise, and to us in our unthinking moments, that tragedies like that at Shadowbrook last Saturday seem pointless and unrelated to the merciful purposes of a loving God. We think of the sudden deaths of four dedicated men, dying literally at their posts of duty, and we say: "What a pity! What a loss!"

Then we open the sacred Scripture and we read again the words with which I began: "In the sight of the unthinking they seemed to die; and their departure was taken for misery and their going away from us, for utter destruction; but they are in peace."

Part of the peace of these blessed dead may well come from the realization that the cross placed on their community by the fire in which they died is one which we shall all help to carry. When first the needs of Shadowbrook were brought to our attention, we all resolved to be generous. Now, aroused, if not, indeed, rebuked by the fire, we shall be doubly, triply so. The men who died are martyrs to the truth that we must provide human facilities if God's work is to be done, and the point of their deaths will not be lost on the thousands throughout New England who are indebted to them and to the Society of Jesus for this latest of many lessons they have taught us.

The martyred dead at Shadowbrook may well prove to have become the new founders of the work there. Their ashes will be mingled with the other physical elements of the foundations of the new Shadowbrook, in the soul of which they shall live and to the work of which they have made so total a contribution.

Even though dead, the Shadowbrook dead still speak. Theirs is the most eloquent commentary on the 400th anniversary of St. Ignatious. In response to it, we pledge our sympathy, our prayers, and our determination to match as best we can their generosity to the cause of Christ as served by Shadowbrook.

Courage of Citizens in Testifying Against Criminals

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, March 19, 1956

Mr. WILEY. Mr. President, I have in my hand two clippings pertaining to the fight against crime in our country. The first is from the Thursday, March 15, issue of the Milwaukee Journal. It is an editorial praising an outstanding public service performed by sitizens in a recent Milwaukee case. There, conviction in a first degree murder depended upon the willingness of witnesses to stand up and identify the alleged perpetrators of the deed. So splendid was the cooperation of these witnesses that Circuit Judge Clarence Rinehard, of Chippewa Falls—my hometown—wisely praised these witnesses.

The second is a clipping from the New York World-Telegram and Sun of the following day, March 16. It tells how, unfortunately, fear of gangster reprisal has apparently sealed the lips of several key witnesses who have been called in a new Federal grand jury investigation with regard to racketeering.

These two clippings stand in marked contrast.

I am hoping that the same type of courage demonstrated in the Milwaukee case will be shown in connection with the current Federal grand jury probe in New York. According to reports, the latter investigation of racketeering, of widespread muscling into industries and unions, may prove one of the most important investigations of recent times. It is expected to cover a tremendous number of leads on interstate crime, stemming out of the New York area—which has been described in some places as crime headquarters of the country.

The millions of decent, honest citizens of the greatest city in the Empire State

are hoping that witnesses will have the courage to come forth and speak the truth. Only in that way can the stranglehold of organized crime there and elsewhere be broken. I wish the best of success to United States Attorney Paul Williams and his staff.

I hope that the example of courageous witnesses in my own State, where, fortunately, the crime problem is of an infinitely smaller magnitude, will be followed elsewhere in our Nation.

I ask unanimous consent that the texts of these two clippings be printed in the Appendix of the RECORD.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal of March 15, 1956]

COURAGE OF THE CITIZEN

The conscientious and unflinching attitude of Milwaukee citizens in aid of law enforcement made a strong impression on Circuit Judge Clarence Rinehard of Chippewa Falls during his recent tour of duty here.

He had been called in to preside over the trial of the two Chicago thugs, O'Connor and Johns, for the first degree murder of a Milwaukee tavern keeper during a holdup. The jury convicted, and the pair are now serving life sentences in Waupun State prison.

In an unusual gesture, Judge Rinehard invited the jury into chambers after the trial and praised their performance of their civic duty. Then he took public note of the fact that State's witnesses in some jurisdictions have been known to turn forgetful at the thought that hoodlums on trial might have vengeful hoodlum friends.

Conviction in this case hinged on identification of O'Connor and Johns as the holdup men. Said Judge Rinehard:

"When I see men get up on the witness stand and identify defendants as the State witnesses did, I am impressed with the courage of the average American citizen. There was no convenient lapse of memory on the part of any of the witnesses."

While he took in the whole country, actually Milwaukeeans are especially known for this characteristic—this readiness of individual citizens, unafraid, to do their essential part in putting down crime. It is well to have the word go out again that this is not a healthy place for criminals to come and try their hand.

[From the New York World-Telegram and Sun of March 16, 1956]

FEAR SILENCES SOME RACKET WITNESSES—KEYMEN SAID TO HAVE GONE INTO HIDING

(By Joseph Alvarez)

Fear of mob reprisal has sealed the lips of several key witnesses called in a Federal grand jury investigation into union and industrial racketeering, it was learned today.

The reluctance of such witnesses, as well as the disappearance of several would-be witnesses, has hampered probers.

SOME IN HIDING

United States Attorney Paul W. Williams revealed yesterday that witnesses sought for questioning in the many-pronged racket inquiry have gone into hiding. Mr. Williams' staff, working with the FBI and two special grand juries, is hunting alleged racketeering in the garment and trucking industry, the perishable food trade, and probing into small businesses caught in the tentacles of mobsters.

No suspicion exists that witnesses who disappeared were actually driven into hiding by the underworld. "It looks as if they chose this as a convenient time to take a vacation," Mr. Williams declared.

Acting on information from the FBI, Mr. Williams invited representatives of both trucking firms and garment shops in for talks on shakedowns and extortions. These exploratory sessions were to be a prelude to appearances before the grand jury.

SAPERSTEIN SHOOTING

"But despite all our blandishments, and promise of a 24-hour police guard, we could not get these persons to give us their stories," a probe source reported.

"The shooting of Louis Saperstein in Newark," he continued, "came at the worst possible time for us." Mr. Saperstein is an insurance broker who testified about insurance and welfare funds in an investigation conducted by District Attorney Frank S. Hogan.

Mr. Williams has made repeated appeals to racket victims to come forth with information, and has promised full protection. Some of the witnesses who are now silent earlier had provided the FBI with written complaints about illegal pressures.

NEW JURY AWAITED

Originally, the regular March grand jury was instructed to delve into the garment rackets, but now this work has been shifted to a new jury still to be impaneled.

It will be set in motion March 26. The reason for the switch in juries, said Mr. Williams, "is that the workload became too big." However, it is believed that the hesitancy on the part of witnesses to talk played a part in the decision.

Secretary McKay's Defense of Interior Department Policies

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, March 19, 1956

Mr. NEUBERGER. Mr. President, the first report of remarks by Secretary of the Interior McKay since becoming a candidate for the United States Senate has come to my attention. The remarks, which apparently reflect the statements which Mr. McKay will carry into the Oregon campaign were reported in the March 15 issue of the Columbia University student newspaper, the Columbia Daily Spectator.

Actually, the remarks of Mr. McKay are so transparently contrary to the facts involved in each issue, that no comment on their validity is necessary. I ask consent to insert in the RECORD the story from the Columbia Daily Spectator.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Columbia Daily Spectator of March 15, 1956]

MCKAY DEFENDS POLICIES OF INTERIOR DEPARTMENT—ATTACKS MONOPOLIES IN THE GOVERNMENT AS "MARX THEORY"

(By Steven Wolfson)

If the practice of Government monopoly continues, declared Secretary of the Interior Douglas McKay yesterday, soon "we'll be giving each peon an acre of land—and that's the Karl Marx theory."

Questioned by a four-man panel before the Young Republicans Club, Secretary McKay attacked the Tennessee Valley Authority as "a monopoly," and expressed his opposition to "selling out our birthright to the bureaucrats in Washington."

OUTLINES POLICY

Secretary McKay outlined the policy of the Eisenhower administration on power development as allowing people "on the local level" to develop their own power sources, whether private or public, whenever they can. "The Federal Government is not in a position to take responsibility for all electric development in the United States," he stated, "and in addition, just because power is publicly run, that doesn't mean that it is well run."

The panel, composed of Joseph Rosenblatt and Mischa Schwartz of the Young Democratic Club of New York, and Woodward Kingman and C. Robert Ogden of the New York Young Republican Club, in questioning Secretary McKay about some of the more controversial issues of the Eisenhower natural resources program, evoked a strong defense of the policy from the Secretary.

When asked about the exposure of extensive timbering activities on the part of the Al Sarena Mining Co. in national forestries, Secretary McKay replied that the existing laws give a company that develops mining facilities surface as well as subsurface rights to the land. "Why don't the people who holler change the laws?" he asked.

Secretary McKay was then questioned about the controversial nomination of Wesley D'Ewart to the post of Assistant Secretary of the Interior. Mr. D'Ewart had formerly introduced a bill into Congress calling for giving away the national grazing lands. Describing Mr. D'Ewart as "the most qualified man for the job," Secretary McKay testified to the nominee's "unquestionable honesty," and charged that "this man is being persecuted for political reasons."

In reference to the power development in Hells Canyon, Oreg., where a private power plan is being promoted over a public development, Secretary McKay complained that "the issue is being settled politically, and it shouldn't be." He called the public plan "a fantastic scheme," and cited figures to prove that the private plan, which calls for three small dams, instead of the one large dam advocated by public power experts, is adequate for the conditions of the Snake River.

Alleged Democratic Slowdown on Farm Bill

EXTENSION OF REMARKS

OF

HON. JOHN J. WILLIAMS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Monday, March 19, 1956

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an article appearing in the Washington Daily News of Saturday, March 17, 1956, entitled "Democrats Plan Slowdown on Farm Bill."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DEMOS PLAN SLOWDOWN ON FARM BILL

House Democrats plan to slow down the farm bill—already stuck for more than 3 weeks in Senate.

If they succeed, soil bank and other features of the bill won't do farmers much good this year.

And that will mean a red-hot political fight next fall over who is to blame for the farmers' woes—the Democratic-controlled Congress or the Eisenhower administration.

Senate is expected to pass the omnibus farm bill next week. It will then be sent to conference with House, which last year passed a bill to restore rigid 90 percent of parity supports.

But Representative HAROLD COOLEY, Democrat, of North Carolina, chairman of House Agriculture Committee, says he sees no chance of House action before Easter recess which starts March 29. He talks of meetings by his committee for instruction of House conferees.

And Representative COOLEY plans to leave for Europe April 2, to attend interparliamentary union meeting. He'll not return before mid-April. Senate-House conferences can't be held while he's away.

Before mid-April most farmers in the South will have done their planting. They'll be in no position to take advantage of the soil-bank plan, even if it's finally passed.

After mid-April it will be too late for Corn Belt farmers to benefit.

Idea of Democrats is that if farmers keep on hurting through next summer and fall, they'll take it out on the administration in November.

GOP House leaders may try desperate move to pry farm bill loose. They'd wait till House names conferees. Then they'd move to instruct conferees to accept the Senate's flexible price-support bill. They run the risk of losing.

Meanwhile, GOP is trying to build up a case against Democrats for blocking action. They're taking ads in Farm Belt papers and magazines, pointing out that if Congress will hurry, there's still time to start flood of soil bank checks to farmers this year. President Eisenhower sounded same note at this week's press conference.

Despite some ups and downs, Senate voting on the farm bill has been going pretty much the administration way. Exceptions were votes in favor of dual parity for wheat, corn, cotton, and peanut growers, and two-price plan for wheat—under which consumers would pay a subsidy to farmers through higher bread prices, so that excess production could be sold more cheaply for feed or export.

Rebellion Against Conformity and Regimentation

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, March 19, 1956

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Rebellion Against Conformity and Regimentation," which was printed in the March 14, 1956, issue of the Edgefield Advertiser, of Edgefield, S. C. The Advertiser is ably edited by Mr. W. W. Mims, and it is one of the South's oldest and most distinguished weekly newspapers.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

REBELLION AGAINST CONFORMITY AND REGIMENTATION

The declaration of constitutional principles adopted by southern Representatives in both Houses of Congress this week is important for two reasons. One is the unanimity revealed in the get-together of so many political leaders. The other is the spirit of rebelliousness against conformity in matters of big government.

Without any connection whatever with the issue of segregation, McCall's magazine has an article, Raise Your Child To Be a Rebel, in the current issue, which presents these thoughts:

"In every area of our life today individuals are forced to conform. They are commanded to distort their personalities, sacrifice freedoms, and fit themselves into a prevailing pattern. * * * Our schools demand uniformity in thought * * * the destruction of thought and individuality and the surrender of personal uniqueness in favor of a flat group image before they declare us educated. Industry and commerce reduce each of us to a stratistic unit and insist upon our acting like robots, both as producer and consumer. Politics, fashion, popular art, and literature now proclaim not only the necessity but the virtues of behaving, looking, and feeling like everybody else.

"The effort to reduce the human animal to the undistinguished mass, the effort to rob him of his birthright of rebellion must, in the long run, prove to be in vain. There is no conceivable force or combination of forces powerful enough to root out—or even submerge—the instinct of rebellion.

"If man is forced into conformity—a condition alien to his very biology—his instinct of rebellion will nevertheless continue to seek an outlet since it cannot express itself in the way for which it is designed—positive ways that result in the continuing progress of the species toward evolutionary goals."

The Southern people have shown the spirit to rebel against the forces of regimentation and mongrelization.

The declaration cannot, however, take place of a definite plan of action.

What the Kestnbaum Commission Really Said About Federal Aid for School Building Construction

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. HAYS of Arkansas. Mr. Speaker, the statements with reference to Federal aid for school building construction erroneously attributed to the Commission on Intergovernmental Relations, generally known as the Kestnbaum Commission, have heretofore appeared in the RECORD, and in the interest of reflecting accurately the conclusions of the Commission I am setting forth the exact language of the final report. The misunderstanding probably grew out of the fact that a study committee concluded that:

Federal aid is not necessary either for current operating expenses for public schools or for capital expenditures for new school facilities.

But such recommendations were overruled. Mr. Steve Stahl has been quoted as saying this recommendation in the Commission's report "adverse to Federal aid, has been ignored." An examination of the language of the report, page 194, will show that on the contrary the Commission recognized the desirability of the Federal Government rendering some assistance in the construction of school facilities. The language is as follows:

The Commission does not recommend a general program of Federal financial assistance to elementary and secondary education, believing that the States have the capacity to meet their educational requirements. However, where, upon a clear factual finding of need and lack of resources, it is demonstrated that one or more States do not have sufficient tax resources to support an adequate school system, the National Government, through come appropriate means, would be justified in assisting such States temporarily in financing the construction of school facilities—exercising particular caution to avoid interference by the National Government in educational processes or programs.

High-School Scientists

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. LAIRD. Mr. Speaker, during the first week of March, 40 of the most promising young scientists in America's high schools were invited to come to Washington to participate in the 15th annual Science Talent Institute. One of the forty participants was Miss Ida Louise Riendl, from my hometown of Marshfield, Wis. Much credit is due Miss Riendl, who so ably represented our great State of Wisconsin in her science project, Biochemistry of Cheesemaking. During the past 2 years, Columbus High School in Marshfield, Wis., has produced two winners and I wish at this time to insert in the RECORD an editorial from the Antigo Daily Journal, Antigo, Wis., which pays tribute to the teacher, Sister M. Lauretta, of Columbus High School, who played such an important part in the success of the science students from that school.

[From the Antigo (Wis.) Daily Journal of March 13, 1956]

HIGH-SCHOOL STUDENTS

Interesting high school students in scientific research is considered highly important in this age of rapid technological progress, when industry is calling insistently for men and women equipped for complex processes of production. International rivalries in trade and the necessities of national defense also call for more persons with scientific training.

A teacher who has had notable success in stimulating the interest of students in scientific research is Sister M. Lauretta of Columbus High School, Marshfield. In the past 2 years she has produced two students of national rank and several of State rank in the Junior Academy of Science. Her students have taken part in 10 of the 15 national talent contests.

In a few instances the research project has originated with the student, but more often the teacher assumed the task.

Extracting caffeine out of some of the more popular brands of coffee and tea kept one boy busy for over 4 months, working after school and on Saturdays.

Another boy, by using lipase, tested the digestibility of four commonly used fats. He found that they all digested in about the same amount of time. However, because of its vitamin content, butter will always have a slight advantage over the others.

One girl's project last year dealt with a study of hereditary characteristics in animals. She observed how coat colors are

handed down in mice. The same girl placed second in a national talent search for her studies on the mutations of fruit flies. Another girl did exhaustive research on cheese-making as her project.

Adding incentive to research by high school students is the science talent search, a national project sponsored by Westinghouse for the purpose of discovering the young scientists among boys and girls of the public and private schools of the Nation.

City Not To Purchase Any Japanese Textiles

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 19, 1956

Mr. DORN of South Carolina. Mr. Speaker, the people in textile areas all over America are opposed to an influx of cheap Japanese cotton goods. This aspect of reciprocal trade is unfair to the textile workers of our country. America is the largest manufacturer of textile goods in the world. Our people should not be asked to import textiles purely to help some foreign nation. My people are bitterly opposed to Japanese goods being permitted to enter America in such volume.

The following resolution adopted by the City Council of the City of Greenwood outlines a course of action that might be taken all over America. I commend this article to the attention of Congress, the State Department, and the Tariff Commission:

CITY NOT TO PURCHASE ANY JAPANESE TEXTILES

"No Japanese-made textiles will be considered for purchase by the city of Greenwood," a resolution adopted by city council last night states.

The resolution also recommends to the merchants of this area that they consider refusing to purchase any Japanese-made textiles, and recommends to citizens of the city and county that they refuse to buy such goods.

"Ninety-nine percent of the merchants have refused to handle such goods," Mayor R. E. McCaslan commented. "The average textile pay in this area is about $1.35 an hour, which is about the same as the daily wage in Japan. If we buy this stuff we will wake up some day and find textiles in a deplorable condition."

The resolution was passed unanimously, and other members of council expressed views similar to those of the mayor.

Following is the resolution:

"Whereas the city and county of Greenwood have long prospered through a happy combination of splendid and efficient employees, industrious and farsighted management and local capital applied to the textile industry; and

"Whereas the entire economy of our city, county, and State is geared to the textile industry; and

"Whereas the present method of handling the importation into the United States of textile products seriously jeopardizes textile employment in Greenwood County and the future of the textile industry of our section due to the comparatively negligible wages paid to Japanese textile employees; and

"Whereas efforts to secure reasonable protection from the United States Government regarding such importation have met with no success; and

"Whereas the city council of the city of Greenwood feels a responsibility to its citizens to forcefully call to their attention this deplorable fact and suggest to them ways in which their attitude and wishes may be made known; and

"Whereas the buying public can discourage such importation by refusing to purchase them: Now, therefore, be it

"Resolved by the City Council of the City of Greenwood in meeting duly asesmbled this 16th day of March 1956, That—

"1. It deplores the adverse effect upon the United States textile industry of the importation of Japanese textiles into the United States for the reason that the American textile worker should not be forced to compete with Japanese textile labor on the basis of price for such labor. To the extent of such importation, a Japanese textile employee is substituting for and taking the place of an American textile employee. We urgently request the United States Congress that it provide suitable legislation to prevent this substantial and unreasonable threat to the American textile business.

"2. That we recommend to the citizens of the city and county of Greenwood, S. C., that they make known their resentment and opposition to the sale of such Japanese-made textiles, by first inquiring whether textile goods to be purchased are domestic textiles, and if they are found to be Japanese-made textiles, that they refuse to buy such goods.

"3. That we recommend to the merchants of this area that they consider refusing to purchase any Japanese-made textiles, by first making known the reason for such refusal to the seller, for the reason that every merchants' business and future in this area is, in a large measure, related to the welfare of the textile worker and industry.

"4. That we state it to be the policy of the city of Greenwood, in its purchases of textile products, that no Japanese-made textiles will be considered for purchase by the city of Greenwood."

What the Kestnbaum Commission Really Said About Federal Aid for Highways

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. HAYS of Arkansas. Mr. Speaker, there seems to be some confusion about the recommendations of the Commission on Intergovernmental Relations, unofficially known as the Kestnbaum Commission, on the subject of highway legislation. This misinformation resulted, I am sure, from the fact that a study committee submitted some proposals that were not approved by the full Commission, and quotations from the study committee's report have been regarded as approved recommendations of the Kestnbaum Commission. The Commission gave considerable study to this problem, and detailed recommendations are found in the report. Here is a short summary in the language of the report itself of some of the principal recommendations:

The Commission recommends that the present Federal aid highway program be continued and that funds appropriated thereunder be increased; that the actual construction and maintenance of highways be performed by the States; that the extent and degree of Federal supervision accompanying highway grants-in-aid be reduced; and that the expanded highway program be financed substantially on a pay-as-you-go basis and that Congress provide additional revenues for this purpose, primarily from increased motor fuel taxes.

Roger M. Blough at Gary, Ind., Golden Jubilee

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 19, 1956

Mr. MADDEN. Mr. Speaker, Roger M. Blough, chairman of the board, United States Steel Corp., delivered the following address at the Founders Day banquet held in Gary, Ind., Monday, March 12, 1956.

On March 12, 1906, the United States Steel Corp. started construction of what is today the world's largest steel mill. This industry was the basis of the start and growth of Gary, Ind., which 50 years later, with the population of 160,000, is the youngest metropolitan city in the Nation:

INVESTMENT IN EMPLOYMENT

This day of March in 1906, which Mr. Hood described in his talk, was indeed a historic one. From that day forward, Judge Gary's far-visioned dream of the first fully integrated steel works began to materialize. On that day, only a cold wind sweeping across the dunes greeted the representatives of United States Steel who had arrived as pioneers in the construction of what was to become the largest steel mill in the world.

This 12th day of March 1956 offers a striking contrast with that earlier day. The Gary Steel Works now stands as the plant that has poured more steel than any other—170 million tons almost on the nose. And United States Steel has developed plans for increasing the productive capacity of the Gary Steel Works, in ways I shall tell you more about.

But the nicest thing of all is that the representatives of United States Steel who have come here today have been greeted by the warm hospitality and friendship of a city for which—as I told our supervisory people this noon—we feel a special sort of affection.

The cordiality of the reception you have given us will make March 12, 1956, indeed a memorable date to all of the directors and officers of United States Steel who have visited Gary today. I want you to know how grateful we are for the welcome you have given us; and I want to add my own personal good wishes for the success of the jubilee beginning on June 10 that will celebrate the 50th anniversary of the founding of the city of Gary.

This country should look upon the golden anniversary of Gary as something more than a milestone of local growth and progress. The people of the United States should regard Gary's golden jubilee as an occasion to reflect on the magnificent contribution

this city has made to our national growth and progress. The unmatchable production of steel in this one city during the last half century has done more than contribute to the material advancement of the American people, who now enjoy the highest standard of living in all history. Gary's steel production has also been a vital factor in the protection of American spiritual and political freedom, when that freedom was twice imperiled by world wars. Yes, this great city of steel production deserves a national salute for its role in increasing the safety and comfort of living in America, and for its part in safeguarding our constitutional liberty.

In Gary's fulfillment of that role, United States Steel has been happy to work shoulder-to-shoulder with the people of this city. In fact, the growth of United States Steel in Gary has been in almost exact step with the growth of the city of Gary.

The year 1909 was the first year in which steel was produced at the Gary works. Since that year, the annual output of the Gary works has increased almost twelvefold—from only 573,000 tons of ingots back in 1909, to a high of more than 6½ million tons. In that same period, the population of Gary has also increased twelvefold. It has risen from a mere 13,000 toward the close of 1909 to the present estimated 157,000. And that latter figure, I am told, makes Gary this State's second city in size.

It might interest you to know that in the first couple of years the Gary works was in operation, United States Steel's employment here reached only about 6,800. It has not been below 30,000 in the last decade, and today is more than 32,000.

During this same period of mutually beneficial progress by the city of Gary and United States Steel in Gary, the corporation's payroll has grown not 12 times over, but 33½ times over. In the first year that Gary works was pouring steel, the corporation's payroll here was less than $5½ million. Last year, United States Steel's payroll totaled approximately $180 million for its four facilities in Gary and the plant of the subsidiary Universal Atlas Cement Co. at nearby Buffington.

To me, those figures are a fresh reminder of Gary's importance to United States Steel. And they are a fresh reminder of United States Steel's usefulness in Gary. Because of the special way in which the city of Gary and United States Steel have grown together, I realize that the well-being and security of your business community depends in very substantial part on the well-being of the corporation.

Is it not true, though, that none of us—and none of our various levels of government—has any real security apart from the security of our private enterprise system? Every bit of the wealth on which we rely for our economic security comes from individual and corporate enterprise. No matter how affluent and generous government may seem at times, the truth remains that government possesses no wealth that is not the fruit of the people's enterprise.

The greatest security a private enterprise can offer its employees is the security possessed by the enterprise itself. A business such as United States Steel cannot obtain an absolute guaranty of security, by law, or any other means. But it can—and does—work ceaselessly to bring about the highest possible degree of security for its employees and their families, and for those who have invested their savings in the concern.

The security of any business depends primarily on its ability to remain profitable. It cannot continue profitable without remaining competitive. And in order to remain competitive, an enterprise must make continuing capital investments in technological improvements and in the replacement of worn-out plant and machinery. And to me, the most wonderful aspect of our system of work is that an enterprise can and does remain competitive and profitable without abridging the personal freedom of the individual, without impairing his political liberty, without subordinating the individual to the enterprise or to the State.

Now, profitability cannot be achieved by any magic formula; but there are certain indispensable factors in attaining—and maintaining—that condition. One is devotion to their everyday task by all who work in the enterprise. A second is sound planning for the future, productionwise and financially. And a third is the maintenance of public policies that healthily stimulate—not hobble—industrial progress.

Only an enterprise that is nurtured by adequate profit can be beneficial to society. Fruit is produced by nurturing a tree; not by shaking it until it is broken or uprooted. Only an enterprise nurtured by an adequate profit can gather together the money necessary to carry out projects such as the one which began here in Gary 50 years ago today. In the years while the Gary Steel Works was being planned and built—1905 through 1908—United States Steel reinvested almost 54 percent of its profit in the business, in order to keep on being profitable, in order to keep on providing jobs, in order to help foster America's industrial growth.

It was capital investment, made possible by profit, that permitted the building of the Gary Steel Works. And think of the employment that investment has provided over the last half-century. The building of the steel plant that has outstripped all others was, truly, an investment in employment. Only a thousand or so men at any one time were engaged in the construction of that mill; but they erected the physical means of providing jobs by the tens of thousands.

Of the people now working in United States Steel facilities here in the Gary area, more than one-sixth of them—some 5700—have been continuously employed in the corporation for 25 years or longer. And about 40 of those employees have been with United States Steel continuously for 45 years or more—some of them longer than the Gary Steel Works is old. I want to salute all of our Gary veterans.

I told you earlier that the directors and officers of United States Steel feel that a special bond exists between United States Steel and the people of this city. We could not feel otherwise about a community which bears the name of the man who was so influential in bringing the corporation into being—Judge Elbert H. Gary. United States Steel strives to reflect the humane and ethical principles of Judge Gary, the first board chairman of the corporation. It has been fittingly said of Judge Gary that he possessed "an inborn sense of justice, honesty, and considerate regard for his fellow man."

In 1909, on the occasion of the third anniversary of the founding of the city of Gary, Judge Gary wrote a message that I would like to read to you who represent the present-day civic and business life of this fine community. Here are his words:

"The disposition of the citizens of Gary, Ind., to cooperate with the officials of the steel corporation in building up and extending the interests of the city on a solid and lasting foundation entitles them to our grateful acknowledgment. The city is destined to be one of the most important in the State of Indiana, and will no doubt be known as one of the greatest industrial centers of the country. If all who are interested, including public officials, the private citizens of Gary, and the proprietors of the manufacturing plants, will continue to work together, uninfluenced by selfish or improper motives, the growth and success of the city will be uninterrupted. I have only words of praise and commendation for the attitude of those in control. It gives me pleasure to extend my cordial greetings on this anniversary day."

Those are words of remarkably accurate prophecy. Gary has, indeed, fulfilled the destiny Judge Gary saw for it.

Those words, written almost 50 years ago, are still living words—words for today, for those words reflect the spirit of United States Steel's relationship with Gary. Let me repeat one passage in Judge Gary's message of 1909: "If all who are interested, including the public officials, the private citizens, and the proprietors of the manufacturing plants, will continue to work together, uninfluenced by selfish or improper motives, the growth and success of the city will be uninterrupted."

Those are words not only for today, but also for tomorrow—for the second 50 years of the city of Gary. Judge Gary's statement of the conditions to insure uninterrupted growth and progress is honored by United States Steel today and will be honored tomorrow, to the end that a prophecy now fulfilled shall be but a point of attainment from which to lift our sights toward a second half century of Gary's continuing development as a good community in which to live, to work, and to invest.

Today, United States Steel is proud to be a corporate citizen of this community—to be able to say here in Gary what Paul did of his native Tarsus: We are "a citizen of no mean city." We are happy that so many of our people, in production and management, are taking part in the civic activities of Gary which have so much to do with the quality of everyday living in this city. It is particularly pleasing to observe the high degree of cooperation between the representatives of organized labor and the representatives of United States Steel's management team here in working for the civic betterment of this community. I expect that nowhere is this cooperation more clearly evident, or more helpful, than in your Community Chest campaigns, and in the creation of your new United Fund of Gary. I am confident that, through this cooperation, your plan for united giving will be off to a flying start this year.

In this context of community cooperation and growth, United States Steel—as you are all aware—has continuing plans for a major program of capital improvements providing for replacements, modernization, and expansion of its facilities.

Here in Gary, this program calls for improvements in the existing open-hearth furnaces at Gary steel works that will add more than 700,000 tons to the annual ingot capacity of the plant and raise its total capacity to almost 8 million tons.

The corporation also has plans to increase the Gary steel works' capacity for rolling ingots into semifinished form, by carrying out improvements of the 44-inch slabbing mill now in use.

The program also contemplates the installation of new production facilities at the Gary sheet and tin mill. These include: a new hot strip mill, for rolling slabs into hot-rolled strip; a new cold mill, which reduces the thickness and improves the quality of steel sheet; a new pickle line, for removing surface oxides from the hot-rolled strip; new batch annealing furnaces, for removal of stresses created in cold rolling; new temper mills, which impart a controlled stiffness to sheet; a new line for recoiling sheet after it has emerged from the temper mill; and a new flying shear line, for cutting sheets of specified sizes.

In addition, our program includes plans for improving the existing open-hearth furnaces at the corporation's south works, at South Chicago. Under these plans, the ingot capacity of that plant would be increased by more than 500,000 tons, bringing its total capacity to almost 6 million tons per year. It is also planned to effectuate some increase in the slabbing capacity of the south works by improving the present slabbing mill.

The program as I have outlined it to you here is pointed toward increased production of flat-rolled products, notably sheets—products which will be outstanding for quality.

Besides the improvement and expansion you have just heard about, it is planned to build a new mill at South Works for the rolling of structural sections, such as the light-weight, wide-flanged beams much needed in the construction industry. It is further planned to construct additional sintering facilities at both Gary Steel Works and the plant at South Chicago, for the agglomeration of blast furnace materials.

Another project enhancing the industrial importance of this area is well underway. That is the building of the new 3-million-barrel cement plant of Universal Atlas Cement Co. at Buffington. Completion of that project now depends on deliveries of equipment; but Universal Atlas hopes that the new plant will be in operation before the end of the year.

Earlier, I spoke of how the building of Gary's steel-making facilities proved to be an investment in employment. The extensive plans which I have just reported should be regarded as the same kind of investment. When those plans have fully materialized, you can readily appreciate that a number of new and interesting jobs will be created. And the kind of jobs I am speaking of are among the best paid in American industry. Last year, the people employed in our mills here averaged $5,500 in wages. So will you again please credit reinvested earnings with a direct assist in giving a man one of the things he most needs and wants—a good job.

Tonight, then, we not only look back upon 50 years of progress here in Gary, but also look forward—and look forward confidently to the years ahead. For the new program of modernization and expansion reflects United States Steel's abiding faith in the future of this great industrial area and in the future of the entire Chicago district as a steel-making and steel-using center second to none.

Israel

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, March 19, 1956

Mr. LEHMAN. Mr. President, Life magazine, with whose editorial views I am not always in accord, published in its most recent issue an editorial on the subject of Israel. In the editorial there are some references to which I do not subscribe at all, but the basic thoughts expressed are sound and constructive. The editorial says things which need to be said. Because Life commands such wide reading among the American people and also abroad, I think it a most constructive circumstance that Life should have published this strongly worded editorial, which is addressed to the Arab peoples and leaders of government. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ISRAEL IS HERE TO STAY—UNLESS THE ARABS ACCEPT THIS, THERE CAN BE NO PEACE

The time has come for friends of the Arabs to tell them, with the bluntness of genuine friendship, something they seem unable to understand. That something is this: "Israel is here to stay. It is going to stay. The American people, who helped create Israel, who were the first to recognize her, and who hold warm feelings of friendship for her, are going to see to it that she stays. Until you, the Arabs, accept, deep in your hearts, the fact that Israel is here to stay, there can be no real peace in the lands of either."

Something else also needs to be said: "It is you, the Arabs, who insist there is no peace. (Israel does not say she intends to destroy the Arab world, but it is you who proclaim your intention to destroy Israel. It is your holy men who cry out for holy wars against her. It is your spokesmen who talk of driving the last Israeli into the sea. It is you who refuse to accept Israel's right to existence. Until you do accept it, you will have no moral case before the world."

A sad and dangerous thing is happening to the Arab nations. They have let their fanatical hatred of the Israelis cause them to open their gates to a piecemeal invasion by the Communists, the new colonial imperialists. Half-priced Communist arms are pouring into Egypt, and Soviet technicians with them. Syria, already deeply penetrated by Communist agents, is in the process of eagerly rising to the same bait to get a "bargain" whose real price is the eventual destruction of Syria as a sovereign nation.

When the "northern tier" of nations—Turkey, Iraq, Iran, and Pakistan—soberly aline themselves to resist Soviet expansion, it is the oil-rich Saudi Arabians who pass out the bribes to set Jordanians rioting in the streets against the Baghdad Pact. It is the same gold, accompanied by proddings from agents of Egypt's Premier Nasser, which has led Jordan to dismiss the British professional soldier who made and kept the Arab Legion the most efficient military unit in the Arab world.

What is even sadder is that the man most responsible for this chaos in the Middle East, Premier Nasser, is a man who knows better, who had every capacity to become (and showed every indication of becoming) a statesman. He desired to raise his countrymen out of the mire of poverty, but instead he has allowed the anti-Israel clamor to divert him into the course so many other leaders have followed, of subordinating internal problems to external adventuring.

Nasser, the moderate who suppressed the fanatic Moslem brotherhood, now sacrifices Egypt's welfare to Pan-Arabic political expediency and the avowed nation builder has become a saber rattler. He permits the Cairo radio to shrill incendiary falsehoods throughout the Middle East. This man who now caters to the wave of racial hatred is the same man, who, after being wounded in the disastrous 1948 war against Israel, repeated to his soldiers, "Comrades, our holy war is not here, but at home." Nasser knows, as he once eloquently said, that his true war should be against the ignorance and wretchedness of his people. While he stands mute before the insane cries for jihad, the children of his land go on wasting, as they have done since the days of Joseph, from rickets and trachoma, bilharziasis and starvation. By his rash or cynical expediency he now endangers the very measures—such as American aid—which would do most to help them.

Certainly it is an immensely difficult task for any Arab leader—even if, like Nasser, he is not a fanatical Israeli hater—to stand against this murderous wave and still retain power. Yet this very difficulty should present a challenge for the Arabs to produce the kind of leadership the world would welcome. We say to Gamal Nasser, "Lead your people up, into the light. Do not let the fanatics lead you into the abyss. You have never been known to lose your temper. Do not, then, let your people lose their reason. Instead of following the exploiters of hatred, teach your own patience to your people. Destiny has given you a chance for greatness; do not meanly forfeit or betray it."

We of Life have not hesitated to criticize the Israelis when we thought they were wrong—as they frequently are. We have espoused the Arab cause when we thought it right. We have condemned, repeatedly, Israel's failure to repatriate or compensate the 1 million Arab refugees driven from their homes. We have disapproved the tendency of Harry Truman to let domestic political considerations make him a rubber stamp for Israel, right or wrong. We have welcomed the wisdom of President Eisenhower in redressing the balance by his policy of strict impartiality between Israeli and Arab.

But when Americans recognized Israel it was not merely because, de facto, it had made itself a state. It was because of our debt to their religious traditions, as well as a moral sentiment of their right to a homeland as compensation, if any there could be, for the unspeakable horrors inflicted upon them in other lands. Americans will support their right to live in peace in this homeland. Until the Arabs do the same, giving up their unjust desire to obliterate the Israelis as a state and as a people, there can be no genuine settlement of the just claims the Arabs do possess. They are playing dice with the peace of the whole world by refusing to accept the fact of Israel in their hearts.

The Role of Statistics in Shaping Economic Policy

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Monday, March 19, 1956

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "The Role of Statistics in Shaping Economic Policy," delivered by Representative RICHARD BOLLING, of Missouri, chairman of the Subcommittee on Economic Statistics of the Joint Committee on the Economic Report, before the annual dinner meeting of the Washington Statistical Society, in Washington, D. C., on January 23, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE ROLE OF STATISTICS IN SHAPING ECONOMIC POLICY

Mr. Chairman, President Parmalee, members of the Washington Statistical Society, and guests, I am most grateful for this invitation to bring to you my views on a subject which some of my colleagues in the Congress may think is fast becoming an obsession with me—the importance of the role of statistics in shaping economic policy. And I am grateful, too, for the opportunity to express once again my thanks to the many members of your craft who have so often taken time from busy lives to come

before the Joint Economic Committee or one of its subcommittees.

Basically the role of statistics in shaping economic policy can be little different than the role of statistics in any other kind of decision making. We are dealing essentially with a branch of scientific method. This particular branch is concerned with problems capable of being answered to some degree by numerical information—that is, information obtained by counting or measuring. It makes little difference whether we are making fish counts for a biological study or surveying hours of work in an industrial plant. The role of statistics and statisticians, it seems to me, is to first select the kind of information which will be needed for policymaking, then to direct the proper and efficient collection and processing of that information and, finally, to interpret the results. In interpreting these results, especially where they are based on partial data, the statistician is expected to apply principles and techniques which let the layman use the findings with comforting assurance, and perhaps even abandon. This process is described sometimes as providing a method for making wise decisions in the face of uncertainty.

I doubt if, barring declarations of war, there is any place where a method for making wise decisions in the face of uncertainty is needed more than in economic policymaking. Especially is this true of Government economic policymaking, which is probably the first area where statistics were used as a tool or guide. That the word "statistics" is related to the word "state" is, as all of you know, not a coincidence. Our earliest statistics were collected for the one purpose of providing legislators and Government administrators with data for managing the affairs of the state. These were series dealing with such subjects as population, taxes, taxable property, and foreign trade.

In this connection I like to recall the delight with which Senator O'MAHONEY used to point out to his colleagues that the interest of national governments in adequate programs of social and economic statistics was not as new as it might seem. On Washington's Birthday the Senator would quote from a wonderful letter from our first President to Sir John Sinclair commending him for the statistical studies he had under way in Scotland. John Sinclair, as you will recall, was the man who in 1791 set up a very comprehensive system of statistical accounts in that country, statistics which were based on a 200-question schedule sent to each of the nation's 850 parish ministers. In a letter dated March 15, 1793, George Washington wrote:

"I cannot but express myself highly pleased with the undertaking in which you are engaged, and give my best wishes for its success. I am full persuaded that when enlightened men will take the trouble to examine so minutely into the state of society, as your inquiries seem to go, it must result in greatly ameliorating the condition of the people, promoting the interests of civil society, and the happiness of mankind at large. These are objects truly worthy the attention of a great mind and every friend to the human race, must readily lend his aid toward their accomplishment."

By the 20th century persons concerned with making public and private policy in economics had available scattered continuous series which generally were used to provide a basis for each person's or industry's own kind of business barometer. But it always comes as somewhat of a surprise to me to realize that out of the statistical series which are used so widely today—and we publish over a hundred in our monthly Economic Indicators—most of them were not collected at all only two decades ago and those that were available were collected at wide intervals. Before 1929, for example, neither the Federal Government nor businessmen had anything like our present series on national income, gross national product, and their components. Even the consumers price index, upon which we rely for much of our understanding of what is going on in the economy, was, in 1929, computed just twice a year and then with a very substantial lag between the collections and the publication of the data. Such basic statistics as the total money supply, for which we now have preliminary data weekly and substantially complete data within the month, were not available until after a 3 months' lag. The statistics on consumer credit were not established until 1942. Reports on developments in the labor force, employment and unemployment statistics, which we all watch closely today and which subcommittees of the Joint Economic Committee have been making strenuous efforts to improve, were, for all practical purposes, not available before the great depression.

The improvements in statistics for economic policy in the last 20 years have done much to make realistic the national goals of maximum employment, production, and purchasing power which are set in the Employment Act of 1946. The Joint Economic Committee which was one of the two major new agencies established by the act, recognized almost as soon as it was established that it could not make the economic decisions it would need to under the act without having increasingly adequate economic information. The committee was quick to recognize also that the responsibility for decision making in a sound free-enterprise economy is broadly based on and more often rests with the individual consumer, businessman, labor leader, or farmer than with government. Decision making in the area of economic policy in peacetime is, and should be, largely decentralized in an economy such as ours.

It is this very decentralization which placed on government an obligation for insuring that the statistics it collects are not only accurate and properly presented but are of the widest usefulness. As the distinguished head of your national organization emphasized in his presidential address, much of our success in handling the two recessions since the end of World War II could not have been achieved without good statistical records and good analysis.

In interesting contrast is the experience of the British Government which was reported to me when I was in England last fall. I talked with a man who was concerned, long before the Government indicated an awareness of it, that they were going to have the inflation which they have been experiencing in the last months. He felt very strongly that if they had had a reasonably good series on business investment, they could have caught the trend at a time which would have been both objectively and politically more convenient for the Government to take action. And I understand that the Government in the United Kingdom has now undertaken to fill that gap with a series on business investment.

This reminds me to make the point that when we are talking about statistics which help shape economic policy in this country, we are talking not only about our own series but must include the statistics of other countries as well. Many of our judgments as to the success or failure of our programs in the cold war have to be based on our analysis of statistics collected and processed in other countries. The Subcommittee on Foreign Economic Policy devoted an entire hearing to this subject, including our own foreign trade figures. Our feeling about the significance of statistics in this area is expressed in our first finding which reads:

"Adequate statistics for international comparisons and intergovernment use are the key to scientific appraisal of needs for business and government decision making."

I think this may be the place to point out, too, that there is an obligation not only on government but also on private groups and individuals to improve the basis for their decisionmaking. Members of the Subcommittee on Economic Statistics were particularly impressed with this point during the recent hearings on the Federal Reserve Board Consultant Committee on Statistics of General Business Expectations. One of the recommendations of the consultant committee called for the immediate organization of a continuing private group interested in all branches of expectational economics. The subcommittee endorsed this thought in its own recommendations in a report which was later approved by the full committee for transmission to the Congress.

It may be of interest to know that work has already started on such a project. George Stigler, chairman of the Universities-National Committee for Economic Research, reported to the subcommittee on January 3 that their 30 operating universities were sponsoring a conference to examine the quality of the data on anticipations of businessmen and consumers.

The Subcommittee on Economic Statistics also recommended that "during 1956 a survey be made by the subcommittee of procedures and methods used by Government agencies in projecting Government revenues by the Treasury Department and the Bureau of the Budget, in preparing and disseminating outlook materials by the Department of Agriculture, in estimating the following year's construction activity by the Departments of Commerce and Labor, and in coordinating such work by the Council of Economic Advisers."

It is in this whole area of the preparation of quantitative economic projections that the role of economic statistics has one of the greatest contributions to make to policymaking. The development and use of tools which will enable us to quantify our assumptions in regard to the economic outlook in some rational way seems to me essential to any scientific policy review.

Having said this, however, I must recognize immediately as a legislator that there will be times when decisions affecting economic policy will be made on entirely different grounds—political, social, diplomatic. Nor can we be sure that the assumptions we have made are all valid. The most complete and consistent statistical complex can never relieve us of thinking.

Regardless of these difficulties, if Government and the private economy is to take seriously the objectives of the Employment Act, we are going to have to have reliable and prompt economic statistics, capable of the widest use and with the greatest possibilities for integration into a comprehensive system.

So far I have attempted to make clear that the role of statistics in shaping economic policy is no different than the role of statistics in shaping any other policy, that this role is historic and basic, that it is equally important in public and private economic policymaking, that it includes international as well as national considerations, and that it is essential in carrying out any program aimed at the continued stability and growth of the Nation's economy.

We might look now at the significance attached to the role of economic statistics in shaping economic policy, as measured by current Federal appropriations and next year's budget. If a little smugness is permissible, I might say it is easier to take such a look at the status of appropriations for economic statistics since the inclusion of special analysis I in the budget document. This is an innovation recommended by the Subcommittee on Economic Statistics in 1954 during Congressman TALLE's chairman-

ship, and we were all gratified at its ready acceptance. It shows in a separate compilation the appropriations for major economic statistical programs, by broad subject areas and by agency.

According to analysis I, final appropriations for fiscal year 1956 allowed increases totaling $2,616,000 for current economic statistical programs, as compared with requested increases totaling $4,722,000. Areas in which improvements are being made this year as a result of the increases allowed are statistics on employment and unemployment, agricultural marketing research, estimates of farmers' expenditures, crop and livestock estimates, and the economics of farm production. Funds were added by the Congress for additional work in agricultural economics and statistics for projects which had not been included in the budget request—a study of acreage diversion, a study of the price spread between the farmer and the consumer, and establishment of a crop-reporting program in Hawaii.

The subcommittee found it most unfortunate that no funds were provided for better construction statistics but we were gratified by the extent of the Congress interest in the many programs where improvements were allowed. We are looking forward, both as a committee and as individual Members of Congress, to supporting the improvements for fiscal 1957 which have just been proposed in the President's budget, and are set forth in the budget document this year in special analysis J. According to that analysis, direct obligations for current statistical programs totaled $27.8 million in the fiscal year 1955. The estimate of expenditures for fiscal 1956 is $31.9 million and $35.1 million has been requested for fiscal 1957. Again, for a bit of pointing with pride, many of the improvements requested for 1957 have come from recommendations made inthe testimony of governmental, business, and labor economists and analysts before the Joint Committee on the Economic Report, and in reports made by the joint committee. They include also specific suggestions made in the reports of the five committees of expert consultants established by the Federal Reserve Board, at the request of the Joint Economic Committee, to appraise certain statistical fields. We have asked the Bureau of the Budget to report particularly as to the progress of the actions taken during the year on the recommendations of these committees.

We shall do our best also to see that the Members of Congress understand the need for these statistics but many of our colleagues will be looking to other sources for additional advice on these programs. I hope those of you who are from outside the Government will feel an equal obligation to see that your managements are aware of the necessity for making clear to members of the appropriations committees concerned the use of and need for economic statistics—and I am sure you will.

As individual statisticians it will be up to many of you to see that the increasingly important role of economic statistics in shaping economic policy is justified. It will be up to you to come up with answers to the technical problems such as how we can be sure in our concept of the labor force that we are adequately taking account of shifts in the patterns of employment—a question, incidentally, which we raised in the subcommittee report. Upon you rests an obligation to see that the maximum efficient use is made of funds expended for statistical resources; that collection methods are sound and limits properly assessed and stated; that analysis is adequate and warning raised where warning is needed; and that the spirit which seeks and accepts new methods and improvement to existing methods is kept ever alive.

Here Are the Facts, Secretary Benson

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 19, 1956

Mr. WIER. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to insert an article appearing in the Butcher Workman, official publication of the Amalgamated Meat Cutters and Butcher Workmen of North America, AFL-CIO, entitled "Here are the Facts, Secretary Benson."

The article follows:

HERE ARE THE FACTS, SECRETARY BENSON

(By Earl W. Jimerson, president, and Patrick E. Gorman, secretary-treasurer)

Nineteen hundred and fifty-six is a political year and one expects dogmatic pronouncements from those who occupy and those who seek political office. Such is certainly the case with Secretary of Agriculture, Ezra Taft Benson, who seems to labor under the impression that everyone but he and his Department is responsible for the economic plight of the farmer. In a speech delivered in San Francisco on February 16, 1956, before the Western States Meat Packers Association, he fixed the blame for the farmers' situation upon the processors and the wage earners. The basis for his erroneous conclusions can be attributed only to the fact that Mr. Benson is thoroughly confused and is attempting to cover up the mistakes of the administration and his own unrealistic farm policy by attempting to set up one group against another. The wage earners, in general, and those employed in the food industry, in particular, are in complete sympathy with the farm population. It is not their desire that the incomes of such a vital and large segment of our population be substantially depressed. It is, rather, their aim and hope that those who provide the food so necessary for the welfare of our people should share equally with all economic groups in the great abundance which is available in our dynamic economy.

NO "SOFT WAGE SETTLEMENT"

It is proper to analyze Mr. Benson's approach in some detail. Mr. Benson says, "The farmers have become allergic to round after round of soft wage settlements." We suspect that the Secretary has had little, if any, experience in collective bargaining, and we are certain that he is unfamiliar with labor-management relations in the meatpacking industry. Never in the history of collective bargaining have the employers and the unions deliberately agreed upon a wage settlement aimed to specifically injure other economic groups. Every settlement reached came about as a result of hard and factual discussion of all of the economic problems which concern both the meat processor and his wage earners. Would the Secretary rather have the employers refuse to bargain honestly with the unions, and would he rather have the industry subjected to strikes and work stoppages? Would not that kind of a condition more seriously hurt the welfare of the farmer? It is significant, indeed, that our international union has had no strikes in the industry since 1946, and no serious work stoppages of any kind. It is significant, further, that this international union has had no labor dispute submitted to arbitration with any of the major meatpacking companies in more than 5 years. And it is further significant that every misunderstanding has been resolved across the bargaining table. Peace in the industry has lent to the well-being of the farmer.

IMPROPER BASE YEAR

Benson further states that wage rates in food processing and distribution have increased 43 percent between 1947–49 and 1955, and that less than half of this increase was because of gains in labor productivity. In these years, he states further, more "than half became an increase in labor cost per unit of food handled." This is a deliberate distortion of facts. While the statistical conclusions arrived at by Secretary may be correct, it is thoroughly improper, for this purpose, to use the 1947–49 average as a base and to use all food processing as a criterion. The fact is that the parity ratio for 1947–49 average was 108. The year 1952 is more appropriate. Then, farm prices averaged 100 percent of parity. It is, further, more proper to use information relative to meatpacking rather than all food processing.

SHARPLY INCREASED PRODUCTIVITY

Using 1952 as a base, we come up with some very interesting conclusions which Mr. Benson apparently failed to consider. Average hourly earnings between 1952 and 1955 increased 15.3 percent, while output per man-hour in the same period increased 17.7 percent. Increased mechanization in the meatpacking industry became more active since 1952, and this has resulted in tremendous productivity increases which have offset all of the wage increases received during that period. In 1952, 191,500 production workers in meat packing, wholesale, produced more than 21 million pounds of red meat. In 1955, 193,400 workers produced more than 25½ million pounds of red meat. The wage cost per pound of meat in 1952 was 3.42 cents, while in 1955 it was 3.41 cents. In spite of all of the wage increases received by the wage earners in the meat industry, the wage cost per pound since 1952 has actually decreased slightly.

DECREASED WAGE COST

The Secretary said further: "Last August the packing industry granted wage increases equal to roughly a $50 million annual boost. The $50 million was more than the total net earnings of the meatpacking industry in the previous year." Again he implies that because of the wage boost the packers were obliged to pay less for their livestock. Again this is not the fact. The 14 cents an hour general wage increase negotiated in the industry became effective August 1, 1955. For the 3 months prior to August 1, 1955 (May, June, and July), the wage cost per pound of meat, wholesale, was 3.542 cents. For the 3 succeeding months (September, October, and November), the wage cost per pound of meat remained constant with 3.536 cents. The farmer and cattle raiser did not pay for the wage increase. The wage earners, themselves, paid for it in terms of increased productivity.

INDUSTRY PROFITS

It is interesting, too, to note that the net profits for the fiscal year of 1955 for 9 of the Nation's largest meatpacking companies were $24 million more than in the fiscal year of 1954, and $2 million more than the peak year of 1953. Mr. Benson and the administration should examine the conditions of the industry and ascertain when this more favorable profit situation came about. It is reported that up to the last quarter of the fiscal year, the industry was showing little, if any, profit. The favorable profit was accomplished during the last quarter of the fiscal year. Earnings for the first quarter of 1956 are far ahead of the earnings for the first quarter of last year, and, at this writing, the profit situation in the industry is good.

FARM PROBLEM: OVERSUPPLY OF LIVESTOCK

We recognize, of course, that the sharp decline in livestock prices helps no one and

particularly depresses farm conditions. Mr. John Holmes, chairman of the board of directors of Swift & Co., in an address recently delivered at the Founders Day Convocation observing the 105th anniversary of Northwestern University, Evanston, Ill., said: "The simple answer is that livestock marketings far outstrip the level of consumer demand for meat which would have sustained livestock prices." Perhaps the Secretary should consult with Mr. John J. O'Neill of his Department who is reported by the New York Times of February 11, 1956, to have said that the reason for the decline in meat prices was due to the fact that meat exports to Europe and the Far East have been falling off, while imports of fresh and frozen meats from Canada, Australia, and New Zealand have remained fairly stable. In fact, Mr. Benson answers his own dilemma. In the San Francisco speech, he said: "In recent years our farm production has been distorted and thrown out of balance with what our domestic and overseas markets will take." Whatever may have been the inducement for increased production of animals, the fact remains that that factor alone is one which is most responsible for the economic plight of the farmer, and it is Mr. Benson's stubborn adherence to his own fallacious farm policy which compels this condition to exist.

RETAIL POLICY

It has been suggested, too, that perhaps one of the reasons for the decline in retail meat prices and resulting livestock prices is the keen competition among the large national food chains. It was recently announced that the Great Atlantic & Pacific Tea Co., operating in New York, reduced retail meat prices so substantially that other food chains were obliged to follow suit. In doing so, a representative of the chain is reported to have stated that the company was not doing this because the consumer was unable to purchase an equivalent amount of meat based upon his present income. Perhaps these large national food chains lower their cost of meat first, and then attempt to dictate wholesale prices to the packers who, in turn, must buy livestock more cheaply.

USE OF SCAPEGOAT

We can only conclude that as a high-ranking member of the national administration, Mr. Benson is imbued with the economic philosophy of that administration, and finds it more expedient to place the blame upon the wage earner rather than upon the weakness of his own farm policy.

Goodhue Says Demos Will Not Boost Hogs

EXTENSION OF REMARKS
OF
HON. PAUL CUNNINGHAM
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 19, 1956

Mr. CUNNINGHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a news item from the Indianola Tribune, Indianola, Iowa. It is from the edition of Tuesday, March 13, 1956.

GOODHUE SAYS DEMOS WILL NOT BOOST HOGS—NO MONEY FOR GOP TO PASS OUT IN ELECTION YEAR

The soil-bank idea, as it is under debate in Congress at this time, is not going to work; there will be no sizable boost to the hog market from the Government.

Those two conclusions were reached by John Goodhue, president of the NFO (Uncle Danners) of Warren County, after 8 days spent in Washington.

Mr. Goodhue said a long-time employee of the Department of Agriculture, who got his job originally under the new deal, told him there is not enough money available to support the hog market to an extent to make any appreciable boost to the price the farmer is receiving for hogs. Mr. Goodhue said Congress could not appropriate enough money to do some good if the Members could be made to understand the serious situation amongst a good many farmers.

"Listen," replied the DA man, "Let's be realistic. Do you think a Democratic Congress is going to make a lot of money available for a Republican administration to pass around amongst farmers in an election year? Don't be silly."

As to the soil bank, Goodhue says the money to pay rentals amounts to only about $200 a section. "How much land," he asks, "will be voluntarily removed from production and put into the soil bank at that rate?"

Goodhue thinks the whole soil-bank idea, as now promulgated in Congress, will collapse about like the Hoover Farm Board. Asked what he thought of his brother's (Wilbur Goodhue, who appeared on KRNT-TV last Wednesday night) idea for choosing land for the soil bank by a bidding plan, he replied that he did not think enough money could be appropriated to make it effective. However, he said, if a soil bank is to be used, "Wilbur's plan is the most practical."

"If not a soil bank, what then?" Goodhue was asked.

"I think," he replied, "We have got to have compulsory allotments with cross compliance. I don't believe anything else will work. We have got to reduce our production and the only way to do it is to make everybody reduce and take some land completely out of production."

"In other words, a compulsory soil bank? Is that your idea?" he was asked.

"You might call it that."

"How about the small farmer who can hardly go on doing business if his acreage is cut?"

"Well," countered John, "He would be better off with even a smaller acreage and a decent price than with his present acreage and doing business at a loss. But, understand, the limitation should not be on the man, but on the acreage. And the cut should not be on historic base, but on the potential productive capacity of the land."

Faith To Win

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 19, 1956

Mr. SMITH of Kansas. Mr. Speaker, it is rather commonplace to hear over the radio and TV and to read comments extolling the virtues of Wilson, Roosevelt, and Truman. These adherents of a planned society, based upon blueprints of the social engineers, never seem to mention some of the more conservative men who have been President. Recently a minister had something to say about a man who, in my opinion, was a great President. Grover Cleveland was not one who history will record as one of the auctioneers of America's basic concepts of constitutional government. Political expediency was not a fundamental concept in his life.

I commend a statement in regard to Grover Cleveland, made by a very prominent Kansas minister. Dr. Frank is pastor of the First Methodist Church of Topeka, Kans.

FAITH TO WIN

(By Dr. Eugene M. Frank)

March 18, 1937, was the 100th anniversary of the birth of Grover Cleveland. He had ceased to be President of the United States 40 years before that.

When he left the office, I suppose he was one of the most unpopular ex-Presidents who ever left the office.

For 4 years, during a serious depression, he had stood as a rock defying the groups of well-meaning but inexperienced men who would have destroyed the integrity of the United States.

With the passage of time, however, as is usually the case, history caught up with Cleveland.

On the 100th anniversary of his birth, 40 years after he had left the Presidency, Grover Cleveland's bust was placed in the hall of fame in New York University.

He was only the ninth President of the United States to receive such an honor.

The biographer said of him that his greatest gift to his country was a heritage of character.

His greatest lesson was a lesson of moral courage. He stands almost alone in our history, and certainly alone in his own time, as a national leader who never once made a compromise with his own conscience, with his sense of principle.

The biographer concludes, "From the beginning to the end of his political career he never yielded an inch. He decided where truth lay, he took his stand there, and when the smoke of battle cleared, he was still there unmoved and unafraid."

Unmoved and unafraid. How much more can you say about anyone? What a great difference these words would make in your life.

They are the results of religious faith. Great character does not assert itself. The challenge before all of us is to search diligently for God's truth, as God reveals it to every humble and sincere seeker, and to stand upon that truth regardless of battle and smoke.

This is what makes men of faith fearless, too. Moral right knows no fear.

Hoover Commission Recommendations Are Not Gathering Dust

EXTENSION OF REMARKS
OF
HON. CLARENCE J. BROWN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 19, 1956

Mr. BROWN of Ohio. Mr. Speaker, on last Monday evening my colleague from Michigan [Mr. JOHANSEN] delivered an address at a public meeting in Kalamazoo, Mich., in his district, sponsored by the Kalamazoo Junior Chamber of Commerce as a part of its month-long campaign to recruit public and congressional support for the recommendations of the Second Hoover Commission.

Under permission to extend my remarks, I include the address by Mr.

JOHANSEN and extend my compliments to the Kalamazoo Jaycees on their activity in behalf of the Commission's work:

ADDRESS OF CONGRESSMAN AUGUST E. JOHANSEN, AT MEETING OF THE JUNIOR CHAMBER OF COMMERCE, KALAMAZOO, MICH., MONDAY, MARCH 12, 1956

Mr. Chairman, officers and members of the Kalamazoo Junior Chamber of Commerce, and my fellow citizens, I am greatly honored to be invited to participate in this evening's program. This public meeting is a part of a 30-day community campaign sponsored by the Junior Chamber of Commerce of Kalamazoo.

The twofold purpose of this campaign is to generate greater public knowledge of, interest in, and support for the findings and recommendations of the Second Hoover Commission, and to convey the fact of that public interest and support to your elected Representatives in Congress.

I commend the Kalamazoo Jaycees on this major public service. I commend also those of you here tonight who are not members of the junior chamber of commerce. Your presence testifies to your belief that the business of the Federal Government is also very much your own business. I hope that sound American conviction will continue and grow.

Before I go any further, I want to read a telegram which I received before leaving Washington:

"I would be glad indeed if you would convey my greetings to the Kalamazoo Junior Chamber of Commerce. The Jaycees all over the country have given more study and greater support to the Commission's work than any other organization. I deeply appreciate the support you yourself have given to our recommendations and in my belief that is a great national service. I am indebted to the Junior Chamber of Commerce of Kalamazoo."

This telegram is signed: "Herbert Hoover."

And, having quoted that distinguished former President of the United States, I want to quote one more statement. It was made in a public address last October by another able American who served on both Hoover Commissions. Commenting on the fact that nearly 75 percent of the recommendations of the first Hoover Commission have been accepted, with savings totaling nearly $7 billion, this gentleman said:

"This was a phenomenal record of achievement, against great odds, and I for one attribute it primarily to the stature, the statesmanship, and the tireless and unselfish labors of the Commission's Chairman, the Honorable Herbert Hoover. No one else could have done what he did."

That tribute to Mr. Hoover was paid by the Honorable James A. Farley.

I begin my discussion with a question:

Have the people of the United States, and those who represent them in Congress, completely lost the traditional American concern, distrust, and fear with respect to increasingly larger, more costly, more complex, and more powerful centralized Federal Government?

I did not originally write that question for use in this particular speech. It was written to express my very grave concern over a specific legislative proposal still pending before Congress—a proposal which involves more taxes, more Federal spending in the guise of so-called Federal aid, larger bureaucracy in Washington, a new and major centralization in Federal Government of a function and responsibility historically retained by State and local governmental units, and new potentialities of Federal power and of political pressure activities on a national scale.

Although I first wrote that question in connection with the issue of Federal assistance to the States for school construction, it is entirely appropriate to the subject before us tonight. It is a question which haunts many of us in Congress with respect to numerous legislative proposals and procedures. It recurs many times in the course of a single session of Congress. Sometimes we ask ourselves this question in deep discouragement, bordering on despair.

Tonight I do not raise this question in the sipirit of discouragement. On the contrary, I believe the work of the second Hoover Commission on the national level, and this Jaycee-sponsored campaign of public education and citizen recruitment at the community level, provide the most reassuring and hopeful answer that could be given to this question.

The creation and the labors of the two Hoover Commissions are the clearest evidence possible that both the Congress and the American people are acutely aware of the fact and threat of too big, too complex, too costly, and too powerful Federal Government.

As a Member of Congress I am jealous of its good standing in the eyes of the American people. Therefore I want to emphasize the fact that the second Hoover Commission was created in 1953 by unanimous vote—let me repeat that, by unanimous vote—of the Congress. Moreover the mandate which the Congress unanimously gave to the second Commission on Organization of the Executive Branch of the Government went far beyond the scope of tht assignment given to the first Hoover Commission.

This mandate called upon the Commission to study and recommend possible elimination of wasteful expenditures, inefficiency, faulty organization, duplication and overlapping, all similar to the assignment given the first Hoover Commission. But it also directed attention of the Commission to the problem and possibilities of "abolishing services, activities, and functions not necessary to the efficient conduct of Government;" and "eliminating nonessential services, functions, and activities which are competitive with private enterprise."

The difference between the mandates given the first and second Hoover Commissions by the Congress is the difference between a license to perform a minor operation and a license to engage in major surgery.

Certainly that is a resounding answer to the question of whether your Representatives in Congress have completely lost the traditional American concern, distrust, and fear of increasingly larger, more costly, more complex, and more powerful centralized Federal Government.

At the same time, optimism ought to be restrained by a realistic awareness that the very scope of the authority given the second Hoover Commission, the extent to which the Commission executed its mandate in the 314 recommendations it submitted, and the unavoidable controversial character of many of these recommendations, make the followup task far more complicated, difficult, and arduous than was the case with the first Hoover Commission report.

It will be a far more complicated, difficult, and arduous task for Congress, for the executive department, and for the people themselves to accomplish the beneficial results of the present Commission reports.

I want to warn you, with all possible frankness, that the outcome, in terms of specific accomplishments, will in this instance be far more uncertain and precarious.

For this reason, I counsel both patience and understanding on your part, and at the same time I urge persistence of interest, and tenaciousness and firmness of purpose.

Particularly I hope you will give close attention to specific legislative proposals for implementing the Commission's recommendations, as these specific proposals are considered in Congress, that you will carefully weigh the pros and cons of these specific proposals, and that you will give your Representatives in Congress the benefit of your judgment and of your support, as individuals and as an organization.

This is no quick or easy task, and it will be a source of great assistance and encouragement to us to have evidence of this continued and active interest and support. This job of combating big government down in Congress can sometimes be a somewhat lonely business.

In that connection, I hope you will not regard it as improper for me, as your representative, to invite your attention to some of the instances in the last and present sessions of the 84th Congress in which I have voted for measures designed to implement specific recommendations of the Hoover Commission or to further the objectives defined by the Commission.

I believe you are entitled to this information, and that I am entitled to offer this evidence of my own good-faith performance on this score:

1. I voted—both in the House Committee on Post Office and Civil Service, and on the floor of the House—for pay increases for heads and assistant heads of executive departments and independent agencies, recommended by the Hoover Commission to aid in securing and holding competent public officials. This bill passed the House last year but awaits Senate action.

2. Similarly, both in committee and in the House, I voted for a genuine classification of all postal employees—a measure enacted into law last session.

3. I voted, both last session and this, for the program of disposal to private enterprise, under adequate safeguards of the national security and of the competitive system, of the synthetic-rubber plants, in line with Hoover Commission recommendations to eliminate unnecessary and undesirable Government competition with private enterprise.

4. I voted against the foreign-aid authorization and appropriation bills for the very reasons which prompted both the second Hoover Commission task force, and the Commission itself, to sharply question and criticize the philosophy and operation of this program and the lax methods by which billions of tax dollars are being appropriated and spent. I may add, I was in the minority on this one.

5. I voted for the Phillips amendment to the 1956 Public Works appropriation bill, deleting a $6½ million item for a steam powerplant at TVA—in line with the subsequent Hoover Commission recommendation: "That the Government or its agencies cease building steam plants." I was on the winning side on this one.

6. I voted for the Vinson amendment to the defense appropriation bill designed to delete section 639 which bars the disposal of work traditionally performed by civilian personnel of the Defense Department to private enterprise unless that action has been justified by the appropriate committee of Congress. This amendment was defeated and section 639 was retained in the bill, and you will recall that President Eisenhower severely criticized this provision—which threatens to hamstring the Hoover Commission recommendations on this matter.

7. As a member of the House Post Office and Civil Service Subcommittee on Manpower Utilization, I am working to secure further reductions in the 2,300,000 civilian payroll of the Federal Government. One legislative proposal of this subcommittee is a requirement that every appropriation request from the executive branch be accompanied by a detailed estimate of the effect of such proposed appropriation in terms of additional personnel.

8. Finally, I am flying back to Washington after midnight tonight to attend tomorrow forenoon the first public hearings by the Post Office and Civil Service Committee on proposed postal rate increases designed to reduce

the unconscionable half-billion-dollar-a-year Post Office Department deficit.

So much for this personal allusion, which I hope you will accept in the spirit in which it is made. I hope it will establish in your mind my devotion to the spirit and goals of the Hoover Commission recommendations.

Now let us turn to this broad subject.

May I say that I can think of only one other assignment which might be as impossible as the one I have tonight. That would be to try to give you, in 30 minutes, a comprehensive outline and analysis of the contents of Webster's Unabridged Dictionary. The Hoover Commission reports cover 19 areas of governmental operation. The reports cover 1,632 pages, plus many million additional words contained in the task force reports. As I have said, the reports include 314 specific recommendations. As the man remarked who was reading the dictionary through, cover to cover, "It's interesting reading all right, but the book sure does change the subject frequently."

With such a vast and varied subject matter, the best that I can do is call attention to a few main categories or types of findings and recommendations. These illustrations, I hope, will serve to emphasize the potential value of the Commission's work and recommendations—value not alone in terms of potential savings estimated conservatively at $5 billion a year, but in terms of increased efficiency of Government and, most important of all, in terms of restraining and reversing the trend toward too big, too costly, too complex, and too powerful centralized Federal Government.

Before I go further, let me be a little more specific about this mushrooming of Federal Government. I know that any reference to things-as-they-were prior to—say 1933, invites the devastating crack about "wanting to turn the clock back." Well, let me say, simply, in answer to that supposedly unanswerable argument, that I'm not interested in turning the clock back—I merely want to keep the clock of human progress (and that means progress in freedom from the bondage of too big Government), I merely want to keep the clock running.

In 1910 the annual budget was $694 million. Today it is $62 billion. In 1910 Federal costs were about $38 per average American family. Today they are 42 times as much, or $1,600 per family. As Jim Farley pointed out in the same speech I quoted earlier, when he became Postmaster General in 1933 the executive branch had 572,000 employees, with some 450 different departments and agencies, and a $4 billion budget. Today there are 2,300,000 civilian employees plus nearly 3 million more in uniform; more than 2,100 departments and agencies in the Federal Government, and—again—a $62 billion budget. Twenty-five years ago the Federal budget called for taxes of $113 per family, as against $1,600 per family today, and the national debt amounted to $1,076 per family as against $7,000 per family now. And that, of course, is only a statistical appraisal of the mushrooming of big government. An appraisal in terms of abdicated or usurped initiative, responsibility, and power of the citizen, of nongovernmental agencies, and of local and State units of government is even more appalling. An appraisal in terms of the dangerous concentrations of power and capacity for interference and dictation within the Federal Government is still worse. That's what I am talking about, and what the Hoover Commission is talking about, in referring to too big government.

Now as to some of the broad categories of Hoover Commission findings and recommendations:

1. Let me refer, first, to what for want of a better designation I shall describe as the headlinemaking, just-how-silly-can-we-get type of disclosure, and the recommendations offered for correcting that kind of a situation.

No doubt your own Jaycee publicity has exploited this kind of thing—

The Army shipping 807,000 pounds of canned tomatoes from California and the Navy simultaneously shipping 775,000 pounds of tomatoes from the East to California;

The Army Signal Corps authorizing an 8½-year supply of the relatively short lived small dry-cell flashlight batteries;

The Government borrowing money at 3 percent and then loaning it through such agencies as the Rural Electrification Administration at 2 percent;

The 25 billion pieces of paper created and handled annually in Government operations—forms, letters, and other papers which laid end to end would stretch from the earth to the moon 13 times.

And so, on and on.

No one, I am sure, opposes, or wants to get caught opposing the correction of these kinds of abuses. That fact, I suspect, explains the statement by my able and distinguished friend, Mr. Clarence Francis, national chairman of the Citizens Committee for the Hoover Report, that "there is very general support for, and no known opposition to, 194.5 of the 314 Hoover Commission recommendations [and] general support for, and mild opposition to, another 71.5" with the remaining 48 recommendations drawing both strong opposition from some quarters and warm support from others.

It is impossible to detail the various recommendations offered by the Hoover Commission to correct such abuses. Very many of them doubtless are among the 145 administrative recommendations of the Hoover Commission which are within the authority of the various departments and agencies to adopt. The Government Operations Committees of the House and Senate, as well as other key investigating committees and subcommittees of both Houses, are, I know, riding herd on such abuses and their administrative correction, as well as considering and acting on recommendations of the commission requiring legislative action.

Let me add, by way of further progress report, that the final report to Congress of the Hoover Commission, issued in June 1955, completing its 2-year life and activity, states that even at that early date "a total of 50 identifiable actions have been taken by various agencies," by way of implementing administrative recommendations.

Furthermore, a report made at my request by Harold W. Metz, director of research for the Citizens Committee for the Hoover Report and former research director for the Hoover Commission, in a letter dated February 29, states:

"In the first session of the 84th Congress, legislation was enacted to implement in whole or in part 14 recommendations of the Commission."

Let me inject that this was even prior to the completion of the Commission's work. Mr. Metz continues:

"About 142 of the 314 recommendations of the Commission require legislation. Bills have been introduced in either or both Houses to carry out most of these recommendations that require it."

Referring to the administrative recommendations, Mr. Metz further writes:

"As for the executive branch, defense has done much to implement the reports of the Commission on research and development, depot utilization, food and clothing, and surplus property. Additional action by this most important Department probably will be forthcoming shortly. The General Services Administration is taking steps to carry out significant portions of the reports on transportation, surplus property, food and clothing, depot utilization, and paperwork management, part 1. On January 26, 1956, the President directed the Chairman of the Civil Service Commission to give careful study to implementing the Commission's proposals of personnel and civil service. Also in January, the President appointed a special commission to watch and report on intelligence activities of the Government pursuant to a Commission recommendation."

I think this is evidence, from a most trustworthy source, that the Hoover Commission reports and recommendations are not being permitted merely to gather dust in either bureaucratic or congressional pigeonholes.

2. Let me cite a second major category of Hoover Commisison recommendations—those which involve either broad or specific governmental policy. I offer three examples of such recommendations, and I should like to point out that these types of recommendations are the direct result of the much broader mandate given the second Hoover Commission by Congress, to which I referred earlier in this talk. I should also like to point out, most emphatically, that implementing this type of recommendation is quite a different undertaking than merely trying to eliminate some of the simpler brands of governmental foolishness.

Example 1: The curtailment or elimination of governmental competition with private enterprise. You will notice that the Commission itself rejected its own task force's recommendation that Federal power projects, such as TVA, be sold to private industry. There is an area here for honest differences of judgment and opinion, for opposing views as to how far or how fast we should go in disposing of Government business activities—particularly where national security is genuinely involved. Certainly here is an area which will require careful congressional scrutiny and considered judgment. This does not argue that nothing should be done or that a hard and fast position can be taken. It does argue that you, as well as we in Congress, will want to weigh the matters as carefully and wisely as we can.

Example 2: The Hoover Commission recommendations with reference to Federal medical services, particularly as they relate to the care of veterans. Here is an instance in which emotionalized reaction and pressure group activity could make a shambles of sound economy measures, particularly since these health services now involve some 30 million Americans; here, also, is a field in which cold statistics alone cannot provide the only criterion for wise judgment and, let me add, I do not believe for one moment that the Hoover Commission placed the dollar mark above humanitarian considerations in this area. Certainly this is an aspect of the Commission recommendations which calls for united support of all recommendations on which there is agreement, and full, frank, face-to-face study and debate of those recommendations which will inevitably be in controversy.

Example 3: The broad and highly controversial field of foreign aid involves the dual problem of administrative reforms, recommended by the Hoover Commission, and the question of the wisdom of all or parts of this program. Obviously this is an area in which Executive recommendations and congressional decisions will necessarily be the determining factor. I believe the many searching questions raised in the Hoover Commission and its task force reports are of tremendous value in helping the Nation, the Congress, and the Executive grapple with this problem. My votes in the past indicate my own thinking to date on the subject. This is neither the time nor place for a full-dress discussion of this crucial issue. I will only make this observation that the recommendation of congressional approval for a 10-year program of foreign aid is not—I repeat, not—consonant, in my judgment, with either the spirit of the specific recommendations of the Hoover Commission. I shall oppose it.

3. A final area of Hoover Commission recommendations has to do, actually, with basic legislative procedure, as it relates to appropriations and to the recovery by the Congress of its seriously weakened control of the pursestrings. Stated briefly, and in simplest terms, it would require, as the Hoover Commission recommends, "that the executive budget and congressional appropriations be made on an annual accrued basis," even while authorization of a long-term project would still be possible by a single congressional action. This would reduce, if not eliminate, vast carryovers of unexpended funds; it would permit annual review of progress, of costs, and of Executive performance, and would obviate the grave situation reported by the Budget Director in October, 1953, that as of July 1 of that year "$81 billion of unfinanced appropriations existed as a claim against current and future income or borrowing."

This subject is too vast for detailed discussion here—but I believe it is a key to very substantial economies, to the effective congressional control of spending required by the Constitution, and to sound fiscal policy which, in importance, overshadows many of the more dramatic and spectacular findings and recommendations of the Hoover Commission. It is one more assurance that even in big government, government as the agent of the people and of the national welfare, will have a fighting chance to govern justly, wisely, and well.

I know of no more appropriate words with which to close these already too-lengthy remarks than this concluding statement of the Hoover Commission's final report:

"The problems before the Commission have by no means been purely financial. In our recommendations we have sought six objectives:

"First. To preserve the full security of the Nation in a disturbed world.

"Second. To maintain the functioning of all necessary agencies which make for the common welfare.

"Third. To stimulate the fundamental research upon which national security and progress are based.

"Fourth. To improve the efficiency and eliminate waste in the executive agencies.

"Fifth. To eliminate or reduce Government competition with private enterprise.

"Sixth, and perhaps the most important of all. To strengthen the economic, social, and governmental structure which has brought us, now for 166 years, constant blessings and progress."

On the Auction Block

EXTENSION OF REMARKS
OF
HON. PETER FRELINGHUYSEN, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, March 19, 1956

Mr. FRELINGHUYSEN. Mr. Speaker, a recent editorial from the New York Times points out the true nature of our farm problem, and the lack of wisdom in playing politics with this question.

The editorial follows:

ON THE AUCTION BLOCK

Secretary of Agriculture Benson, a successful farmer and a high-minded public servant, but comparatively inexperienced in the ways of politicians, is shocked by what he sees as an attempt to place agriculture on the auction block. Mr. Benson, for his part, refuses to be panicked by talk of an agricultural depression into accepting policies devised not to solve the long-run problem of agriculture but to do something that will produce visible and tangible results in this election year. Mr. Benson has the good sense to see that it is precisely because we have been treating the farm situation in this way ever since the end of the war that we have a farm problem, and he has the courage to say so.

To say that we have a farm problem is one thing; to talk of that problem as a depression is another. We pointed out here a day or two ago that farm real estate values increased by more than $5½ billions in 1955, and reached an all-time high. We did not point this out by way of indicating that all was as well as it should be in agriculture. We did so, rather, with the idea of bringing the problem into perspective. Too many of the statistics that are being so loosely tossed around these days are completely out of perspective. A decline of $1 billion in farm net income is certainly nothing to jest about. But people who discuss it as if it reflected general bankruptcy for agriculture are contributing little to our perspective on or understanding of the farm situation. Last year, for example, the rate of foreclosure on American farms was 1.9 per thousand. Needless to say, we would all like to see this figure reduced to zero, but many of us still recall that after World War I the rate rose steadily until it reached a high in 1927 of 18.2, and many of us also recall that it was above 20 in most years of the thirties, reaching 38.8 in 1933.

As Secretary Benson says, we didn't get into our present situation in a year, and we are not going to get out of it in a year. But if we let it panic us we could wind up by having it with us chronically.

Address of Hon. Herbert H. Lehman, of New York, to the New York Young Democratic Club

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, March 19, 1956

Mr. LEHMAN. Mr. President, on February 24, I spoke to a very fine organization of eager-minded young men and women of New York City, called the New York Young Democratic Club, Inc. It was a speech in which I expressed myself on some of the thorny issues with which we are confronted today. I ask unanimous consent that the text of my remarks be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Fellow Democrats, I am a little late in arriving here—just about a year late. It is almost exactly a year and a month since I was scheduled to address this organization. Indeed, I prepared some remarks for that occasion and those remarks were delivered to you, but it was not I who delivered them. It was my administrative assistant, Julius Edelstein.

I was kept in Washington that day and night—it was January 28, 1955—voting on, or rather against, the President's proposal for a congressional resolution giving the President authority to defend, with American arms, not only Formosa, but the offshore islands of Quemoy and Matsu. Those were new names in the news at that time, but they are quite familiar to us now.

Yes, that was 13 months ago. It seems much more. It seems almost like an age. So much has happened since then. It was, in fact, just before the time of the last brink, according to the chronology of John Foster Dulles.

Had my view, and that of Senator WAYNE MORSE prevailed at the time, Secretary Dulles would have been able to report only 2 brinks instead of 3 to those impartial biographers, the editors of Life magazine.

But it is really no laughing matter. That was a deadly serious time. The debate that kept me from coming here on January 28, 1955 was a deadly serious vote, and I am well satisfied with the way I voted on that occasion.

We were dealing with your lives, the lives of all the young men and women of America. We were dealing with the world's peace. We were dealing with the life of civilization as we know it.

Had not the new masters of the Kremlin, seeking perhaps a breathing space within which to consolidate their own power and for other devious purposes still unknown to us, decided at that time to launch a great new peace offensive, some of us might not be here tonight. That peace offensive culminated in the summit conference at Geneva last summer.

Since then, there have been several anticlimaxes and there has been a general disillusionment, but the world atmosphere is still, thank God, free of the deadly effects of hydrogen bombs.

I'm not quite sure whom we need to thank for this, but I am sure that it isn't Secretary Dulles, and it wasn't the Formosa Resolution.

Yes, it is a year and a month later, and I am pleased as can be that I am able, at long last, to make a personal appearance before the Young Democrats. I don't know why, but I always feel particularly comfortable when I am talking to or visiting with young Democrats. I know I am somewhat past the age of eligibility for active membership, but still I feel at home here.

I think it is probably because I have always felt—and have acted on that feeling—that the Democratic Party is peculiarly the party of youth, young in spirit and ideology, and determined to grapple with the problems of the future as well as to meet the pressing needs of the moment.

And therein lies one of the critical differences between the Democratic Party and the Republican Party.

It is really no accident that the overwhelming majority of the young men and women in our country—the overwhelming majority of first voters—join the Democratic Party. Our party has had this attraction since the time of Al Smith. And woe betide us if it ever stops having that attraction.

Indeed I am more than a little worried at reports I hear that some of the enthusiasm for the Democratic Party among the youth of our land has become somewhat dampened in recent months. I hope these reports are not true. I hope and believe that our party is going to light the usual fires among the youth of the land, both by reason of its policies and its candidates, in the months immediately ahead.

I want to tell you, and to recall for the sake of the older Young Democrats among us, that we have had an attraction for youth not by accident, nor by mere reputation. It has been because the Democratic Party has reflected in its programs and principles the spirit of boldness and imagination which is so appealing to youth.

The Democratic Party has consistently reflected that spirit of liberalism which is a particular attribute of youth as contrasted with that crochety and fearsome conserva-

tism which is supposed to be a particular attribute of old age.

The Democratic Party has been willing to confront and attack problems, however great, with solutions, however novel. In the past, we have not tried to solve problems by ignoring their existence. We have not tried to gloss over our difficulties by pretending that they do not exist. Indeed our tradition is one of exposing problems—those of the future as well as the present—by looking ahead to see problems, and by looking under the surface to find them.

Moreover our tradition has been to sponsor programs to meet the special needs of youth in training, education, and rehabilitation.

I would not expect many of you here tonight to remember by personal experience, but I recall how the early years of the New Deal were highlighted by the special youth programs—the Civilian Conservation Corps and the National Youth Administration, and the writers' and artists' project of the WPA.

It was an exciting time. The country throbbed. Youth groups went in and out of the White House, conferring with the President and with Mrs. Roosevelt—making headlines and news.

It was a young man's Government, and there was a premium on youth. The ideas that were generated at that time weren't all sound, and there were some that were tried and failed rather dismally.

But they were ideas for action—and the sum total of the action was recovery from depression and the restoration of a dynamic momentum to both the economic and political life of the United States. And in the long run, the mistakes didn't matter too much.

And even after that phase, when we had to turn to the youth of the land to build an Army and a Navy and an Air Force to fight a war—two wars, in fact—youth was not forgotten in our social welfare measures.

There was the GI bill of rights. Millions of young men and women got high-school and college educations and training in specialized vocations.

There was also the scholarship program of the National Science Foundation, and the grants-in-aid to hundreds of universities amounting to millions of dollars for scientific research and training.

And, finally, there were and still are: The vocational rehabilitation program, to restore thousands of physically handicapped young men and women to active and useful life; and the program of Federal aid to dependent children to keep families together which might otherwise be broken up.

All these programs, when they were first proposed, were bitterly opposed by the reactionary forces in Congress and elsewhere. We had to fight every foot of the way to get them approved. They weren't called creeping socialism. They were called out-and-out socialism. The "creeping" has crept in in recent years. But now all these programs, those that are still in operation, are considered sound and respectable, and some of them are even being claimed as the accomplishments of the Republican Party and the Eisenhower administration.

Now let's think for just a moment, what new programs have been launched since the Republicans have been in power, not only for youth, but for any sector of the population.

What new ideas have been brought forth?

There is, of course, the go-to-the-brink concept of foreign policy, but most of its sponsors have been inclined to disown even that.

There is the what-is-good-for-General Motors concept—also known as the trickle-down theory—and the parnership plan for public power—also known as the giveaway—and some others of the same sort and variety.

But I don't remember anything positive or constructive or dynamic which has been proposed or urged by this administration in its 3 years in office.

Faced with the critical distress of the Nation's farmers, the administration has come up with a soil-bank plan, submitted and recommended with all the noise and flashbulbs of a Hollywood premiere. That plan has its merits.

It turns out, however, that the plan isn't new. It was originally proposed, it seems, quite a few years ago, by a Democratic Secretary of Agriculture by the name of Henry A. Wallace, who has since gone through some rather startling political transitions, ending up most recently as an avowed supporter of President Eisenhower.

But if I were to name the most characteristic policy of this administration, it would be the giveaway, and its most characteristic act, the Dixon-Yates contract.

Yet, let's face it, the political picture has been considerably confused in recent days by the vote on the veto of the natural gas bill. I don't know how much political credit we can gather out of that most unfortunate legislative struggle.

It ended all right because President Eisenhower vetoed the bill—and I was one of the first to praise him for doing so. The consumers have been temporarily saved. But we cannot deny that Democrats led the fight for this legislation, just as Democrats led the fight against it. There were Republicans, too, on both sides of this issue. The big oil and gas interests—the producers—had their friends in both parties. And the consumers had their friends in both parties. But unhappily the consumers didn't have as many friends as the producers.

But when the tablecloth was lifted by Senator CASE of South Dakota, and the public got a glimpse of what seemed to have been going on under the table, the President vetoed the bill.

Now we are going to have an investigation of what may have been going on under the table. I hope that investigation is going to be thorough, with no holds barred.

But I am not happy over all the intensive maneuvers which resulted in the decision to appoint a special committee, in place of the Privileges and Elections Subcommittee, to conduct this investigation.

This decision has been thoroughly rationalized. It is hard to rebut the rationalizations. But I have a feeling of disquiet. Why was it necessary to take this investigation away from the standing committees which had jurisdiction? I hope with all my heart that my suspicions will be allayed by events.

Now I have been studying the field of insurance lately in connection with the flood insurance legislation I have been working on. And I have come across the technical insurance term called "spreading the risk." By including as many risks as possible in one insurance policy, and by spreading these policies over as vast a geographic area as possible, the insurance companies avoid the danger of excess loss as a result of any disaster in any particular area.

I am afraid that there will be a strong pressure, in this special committee, to spread the risk as widely as possible, and by accepting the obligation to investigate everything, they will end up by investigating nothing very thoroughly. I hope this will not be so.

One final thought. I can scarcely make a speech these days without referring to the subject of civil rights. It is a subject very close to my heart.

We have been hearing a great deal about the civil rights issue in recent weeks. Well, I have been speaking about it for many months. I made a speech here in New York City on November 11 last year and predicted that the civil rights issue was going to be a live one in 1956. I said that party principle could not be and must not be, sacrificed to party unity.

I made a similar speech on December 15 here in this city. I used the same theme—I devoted my whole speech to it—in a speech at the State Democratic dinner on February 2.

I understand that because of the noise in the hall, not very many people heard me. And the newspapers paid only scant attention.

But it wasn't long before that issue made news. And it is going to continue to make news.

It isn't an easy issue, believe me. It isn't a simple problem, and I say this as one of those who has been in the forefront of this fight for many years. There are some phases of the problem on which honest men may honestly differ.

But as far as I am concerned, this issue is going to be pressed. I want to see the Constitution of the United States enforced * * * and I mean all the provisions of the Constitution which deal with civil rights * * * and all the laws of the United States which deal with civil rights.

And they must be enforced in a way designed to secure their maximum effectiveness in the minimum amount of time. The action I seek is action now—a prompt and reasonable start with what the Supreme Court called "deliberate speed."

I shall press on all the fronts on which I operate, in the Senate of the United States. I join in urging and advocating that the executive branch discharge its full responsibility, and that the courts continue to discharge their full responsibility. But Congress must also accept its responsibility.

And the Democratic Party must accept its responsibility.

I do not have a crystal ball in which to see the outcome of our efforts, either on this front or on any other.

Never has the crystal ball of even the immediate future been more clouded.

But I appeal to you, not just as young Democrats, but as young Americans, to accept the responsibilities of these tense and difficult hours, and to brace yourselves to them. We need all the best thought, all the best will, all the courage, and dedication which can be mustered in this entire country of ours, to meet the problems which confront us all.

Of course, I hope with all my heart that the Democrats win the coming election, but I hope even more deeply and more fervently that America will win the next election. I hope that however that election comes out, the cause of freedom, justice, peace and security for all Americans and for all mankind will be advanced, under God.

Unfair Practices of Automobile Manufacturers

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, March 7, 1956

Mr. MULTER. Mr. Speaker, on March 7, 1956, I testified before the Subcommittee on Automobile Marketing Practices of the Senate Committee on Interstate and Foreign Commerce.

I addressed myself to the unfair practices of automobile manufacturers, among other things. My testimony appears in the Appendix of the CONGRESSIONAL RECORD of March 13, 1956, at page 2280, and those that follow. As a result thereof, I have been receiving considerable mail, all of it substantiating the

facts as stated by me. My attention has just been directed to a large advertisement, almost half a page, which appeared in the New York Daily Mirror of March 9, 1956, which reads as follows:

No cash down! Up to 36 months to pay when you trade during Chrysler Manhattan's sensational sale of 1956 Chryslers and Plymouths.

One thousand dollars, sometimes more, in over-allowances if you trade now!

You can deal and buy with confidence from Chrysler Manhattan Co., a direct factory retail branch.

Three hundred and fifty cars, all body types, all colors, to chose from. Largest, most complete inventory, warehoused indoors in greater New York.

Terrific deals also available if you have no car to trade!

Factory guarantee and service.

Lowest down payments. Lowest monthly payments.

CHRYSLER MANHATTAN CO., INC.,
1757 Broadway (between 56th and 57th)
CI 6-4362.

As indicated by the ad, this is not a franchised dealer but is a factory retail outlet of the automobile manufacturer. This is a sample of what we can expect from the automobile manufacturers if we follow their suggestion of letting them correct the practices so bitterly complained about by dealers and consumers. On the one hand, they tell us that they do not countenance improper advertising by their dealers, and on the other hand, we find them engaging in the very activities they pretend to condemn.

When We See We Will Believe

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 19, 1956

Mr. DINGELL. Mr. Speaker, I read in the papers over the weekend that Nikita S. Khrushchev, Secretary General of the Communist Party, has been announcing to the world the thousands of massacres, tortures, and murders which the dictator Stalin perpetrated not only on Russian citizens, but upon citizens of other countries. Mr. Khrushchev makes these speeches in tones which would indicate that he is horrified at the ferocious, repressive measures which the late, unlamented Stalin perpetrated upon millions of helpless citizenry.

I feel that these pious pronouncements come a little late to benefit the thousands of dead who are now beyond the reach of this Communist horror.

I say that this is more propaganda, merely aimed at deceiving and trapping the unwary. I view this with the same suspicion that I would view crocodile tears. Over 30 years history of oppression and terror cannot be upset by one speech expressing sorrow.

There are grounds available to the present masters of the Kremlin by which they may show the world that their latest pronouncements are not just cant and hypocrisy. I say let them prove it by concrete action on which we may place some reliance.

It is well known that the Soviets have vast slave-labor camps scattered across the face of the U. S. S. R. Thousands are kept in these places of horror and repression, citizens of Russia and citizens of other countries. Let the masters of this communistic dictatorship show their disapproval of the methods of their late master by freeing these victims of theirs, and indemnifying them as best they may for the privation and suffering which they have so wrongfully suffered.

Let them prove their good intentions by recognizing the rights of Poland, Hungary, Lithuania, Bulgaria, Czechoslovakia, Rumania, and the other once free sovereign nations now held behind a Curtain of Iron, to free and unfettered self-determination. Let them call for free elections supervised by the United Nations as provided for by the Yalta Agreement in all the countries behind the Iron Curtain. Better yet, let them have free unfettered elections within the borders of Russia herself.

I say that if these protestations are genuine they must include behind their oral pronouncements some desire to amend the untold evil done by the monster Stalin.

I call upon them to cease furnishing arms to Egypt and to stop attempting to start in the Middle East a war which may be world war III.

Unless and until they show that these statements are more than propaganda, we will not believe them; we dare not believe them. Men in the Kremlin who take from the hand of a dying dictator a scepter of power, stained by the blood of millions find their own hands fouled with the same gore. They receive the guilt with the power; they must prove their innocence by something more than words.

I heartily endorse the views of Mr. Stanislaw Mikolajczyk, former Prime Minister of Poland, in his telegram to Mr. Nikita Khrushchev, which I insert here:

In the last few days the Western press reported shocking facts—generally known before but now acknowledged by you at the secret session of the last Congress of the Communist Party in Moscow—how Stalin had humiliated, terrorized and liquidated his opponents. The same methods of terror and liquidation—only on a much larger scale were and are used in Poland and in other countries behind the Iron Curtain. Moreover, these countries have been deprived by the Soviet Union of their independence and no mercy is shown for entire nations and their non-Communist leaders who are being humiliated, deported, terrorized, imprisoned and murdered.

When you condemn the wrongdoing to the Communist Party in the U. S. S. R. by Stalin I ask you if you are ready to condemn also the wrongdoing by communism to Poland and other nations behind the Iron Curtain and to agree to the demands made by President Eisenhower and supported by the British and French Governments at the first Geneva Conference for the liberation of the captive nations behind the Iron Curtain.

In particular, I ask you to release all the people of these nations deported and imprisoned in the U. S. S. R., to order the withdrawal of the Red army and other Soviet functionaries from these countries, and not to oppose the right of these nations to hold free and truly democratic elections under the United Nations supervision.

I urge that our President seize upon this to demand positive proofs of good intentions I suggested from the present leadership in the Kremlin. I urge that he adopt and use as a tool of working diplomacy the program of Mr. Mikolajczyk.

I urge him to tell the Russians that when we see we will believe.

The Eisenhower Farm Bill Victory

EXTENSION OF REMARKS
OF
HON. PETER FRELINGHUYSEN, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, March 19, 1956

Mr. FRELINGHUYSEN. Mr. Speaker, the following editorial from the San Francisco Chronicle of March 12, 1956, made some interesting comments on the present status of farm legislation:

THE EISENHOWER FARM BILL VICTORY

No action taken by Congress in a long time is more significant for the future of the American economy than last week's Senate defeat of high, rigid price supports. This was a real blow for economic liberty—for the eventual freedom of the farmer from Government controls and of the Federal taxpayer from the burden of paying the farmer to overproduce.

Rejection of the Democratic proposal to reimpose rigid supports on corn, cotton, and peanuts at 90 percent of parity was called a victory for President Eisenhower and Secretary of Agriculture Benson. It was certainly that, yet it was more than a transient political gain. If the 54–41 margin of victory holds up during the remainder of the farm bill battle in the Senate, and if it presages a reversal of the 206–201 vote in the House last May to restore high supports, this country will have finally registered its belief in the sovereignty of the free market. That issue of principle underlay all the election-year scheming, logrolling, and amendment-tacking-on. It is encouraging to see so basic a principle vindicated, and we congratulate the Senators who resisted political pressures to abandon the principle.

We have felt throughout the farm bill fight that the Democratic sponsors of a return to high price supports were out to try to buy the farm vote with public money. Certainly they weren't out to solve the agricultural problem, because the higher supports are kept over the long run, the worse that problem becomes. Admittedly, flexible supports, ranging from 75 to 90 percent of parity, haven't solved the farm problem in the first year of trial. But they are costing the Treasury less than the higher payments did, and with surpluses worth almost $8 billion piled up in Government warehouses, that helps.

Lower supports will in time discourage overproduction; the soil bank plan will work to the same end; ultimately, we shall work our way nearer to a balance between supply and demand. Then the farmer—and the farm politicians—will find that what's good for General Motors, namely, a free market, is good for them, too, as it is for all of us.

Secretary Benson is the object of some loud yelps for his politicking in the farm bill fight. Impeachment is said to be none

too good for him. As to that, we doubt that many are so innocent as to expect a farm bill to go through without a few promises being made.

Benson promised the cotton Senators he would look with favor on an 83 to 87 percent level of support for cotton. Under the law he has dicretion to fix the support at that level. His plan would bring about a reduction of about 3 cents a pound under the 90 percent support price now in effect; on the other hand, he could fix cotton support prices as low as 8 cents under the existing level. It seems to us that if he'd done the latter, the screams for impreachment would have been even louder. The plain fact is that Ezra Benson, the amateur from Utah, outmaneuvered the Farm Belt pros, and they're sore about it.

Railroad Retirement Annuities

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 19, 1956

Mr. AVERY. Mr. Speaker, under leave to extend and revise my remarks, I want to call attention of the Congress to correspondence I have received on the subject of proposed increases in railroad retirement annuities.

Last week I received letters from two gentlemen who live at Topeka in my home district of Kansas. They are Mr. R. H. Weeks and Mr. Kenneth Clark, president and secretary, respectively, of the Topeka Santa Fe Retired Employees Club.

I have formally referred the contents of their letters to my colleague, Hon. J. PERCY PRIEST, chairman of the House Committee on Interstate and Foreign Commerce, and to the Honorable LISTER HILL, chairman of the Senate Committee on Labor and Public Welfare.

I have no doubt that members of the aforementioned committees will give their considered attention to these letters, which read as follows:

DEAR SIR: The members of the Topeka Santa Fe Retired Employees Club, representing approximately 500 retired employees, residing in Topeka, Kans., at our last meeting instructed we write you requesting your support of pending bills seeking increases in railroad retirement annuities.

Our retired employees are finding it increasingly difficulty to meet living expenses on a pegged income because of almost daily increases in cost of living. The annuity income has not been increased since 1951.

Each member of our club will sincerely appreciate and thank you for the earnest support of your committee in working for the passage in Congress of bills H. R. 757, H. R. 3087, and H. R. 5702.

Yours truly,

R. H. WEEKS,
President.
KENNETH CLARK,
Secretary.

As I stated previously, I have no doubt that the respective committees will give their considered attention to the contents of these letters. However, I felt this matter is of such general importance to the Nation that I wanted to take this means of calling the attention of all Members of Congress to it.

It is my sincere belief that legislation must keep abreast of the times, whether it be for vital defense appropriations or for sorely needed annuity increases. We must view such measures from a realistic standpoint.

Delaying the Farm Bill

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 19, 1956

Mr. BEAMER. Mr. Speaker, under unanimous consent, I include in the Appendix of the CONGRESSIONAL RECORD an editorial from the Kokomo (Ind.) Tribune, dated March 15, 1956.

These many public-spirited newspapers are beginning to tell the farmer who is delaying the farm bill.

The editorial follows:

DELAYING THE FARM BILL

Some people in Congress seem bent on crippling the Eisenhower farm bill or delaying its enactment so long that it cannot bring relief to the farmers very soon.

A majority in the Senate has voted to reject a return to high, rigid price supports. But Congressmen who lost that battle appear now to be waging a form of attrition and reprisal which could keep new farm legislation from being effective this year.

Debate in the Senate has been cluttered now with arguments over amendments to the bill. If this debate continues to be prolonged, it will be difficult to avoid the conclusion that it is being staged for political purposes—to embarrass the President's program.

Recognizing that the farmers' need for price relief is urgent, President Eisenhower gave the farm bill first priority in his legislative program. He asked Congress to approve the program speedily so farmers could benefit from it this year, and so they could plan their spring planting on a basis of the proposed soil bank.

If the President's opponents now succeed in stalling his plan long enough, so that it cannot become operative this year, they can say that the Eisenhower administration failed to produce relief for the farm situation. Obviously that could become potent political ammunition in the election campaign next fall.

The strategy of the President's opposition may be to hamper the farm bill in the Senate as much as possible and then follow a similar procedure in the House. Long wrangling over a flock of amendments in the Senate could be followed by long wrangling over amendments in the House.

The question is, Will the farmers be fooled by such tactics? If the administration's theory is right, and farm price declines can be halted by getting rid of or reducing the Nation's big crop surpluses, the Eisenhower plan of cutting acreage and paying a fair return to the farmers for curtailing planting is an opportunity for getting out of the squeeze in which farmers are today.

Any action by the President's opponents preventing this plan from having a chance to work may boomerang. The farmers may stand by Mr. Eisenhower next November if they are convinced that his effort to relieve the farm situation was unnecessarily torpedoed.

A Positive Approach to the Farm Problem—There Is a Bright Side

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, millions of words have been spoken and written for and against the Eisenhower farm program. A few days ago I received a copy of a letter from a constituent addressed to the Secretary of Agriculture, in which he pointed out the favorable side to the agricultural situation at this time. This letter was so interesting to me that I want to share it with the other Members of the House, and under leave to extend my remarks I am including it at this point. I shall not indicate the name of the writer, but if there are Members interested I will be pleased to furnish it upon request.

The letter follows:

FEBRUARY 24, 1956.

The Honorable EZRA T. BENSON,
Secretary of Agriculture,
Washington, D. C.

DEAR SIR: Last night I switched from Lux Video Theater to watch you and listen to your "rebuttal" on the Edward R. Murrow show. I had watched that show with great interest and naturally did not want to miss last night's program.

I wish I hadn't watched.

For the life of me, I cannot understand why you constantly used the negative approach in sympathizing with political writings about how bad the farm situation is. You almost had me crying; and even a well farmer last night would certainly have started to worry about his own personal situation.

Why didn't you tell them, for example, that there are approximately 190,000 farms in Iowa and of them there were over 30,000 farms last year with a net income of over $30,000?

Why didn't you tell them, for example, that even in the lowest county in Iowa the average farm income last year was between $6,000 and $7,000? (I don't have those exact figures in front of me, and therefore they are approximate. But I am sure you know them very well.)

Why didn't you tell them that farm machinery wasn't as high as some people would try to make them believe, that in reality it has risen less than practically anything else they buy, that farm machinery manufacturers are not making big money off of farm equipment sales and that they have bent over backwards in an attempt to keep farm machinery prices as low as economically possible, that farmers are actually scrapping or selling off comparatively new machinery and buying brandnew machinery because they know that some of the latest machinery developed will help them improve their production efficiency, cut costs and maintain or even increase net profits, etc.?

You could have even told them what your own Don Paarlberg said on August 12, 1955, in West Millbury, Mass., about the comparisons of per capita farm and nonfarm income. And in this connection you could have told them what Mr. MORSE said late last year, that "Income per farmer is 11 percent more than in 1950."

And most important of all, you could have explained to the millions listening to you

that they should think in terms of net farm income on a per-capita basis rather than as an economy. For example, you know that the total income of farm people in 1954 was a little better than $30 billion and that was 3 percent less than the figure for 1953, but that didn't mean that the income of the average farmer was down 3 percent. It wasn't. It actually was greater for the reason that there were 3½ percent fewer farm people to share the total. I'm not sure of the figures for 1955 as opposed to 1954, but I'm sure you have those and I think they would have shown that the total net farm income on a per capita basis would have been better. Agricultural Publishers Association says that "The proposition holds that 3 men dividing 80 cents come out better than 4 who split up a dollar."

You could have also told them that despite the 8-percent decline in the total income of farmers between 1950 and 1955, the number of farms with annual income in excess of $10,000 from the sale of farm produce actually increased by 14 percent for the same period.

I should be telling you all these things when I know that you are already familiar with them. As a matter of fact, the majority of the statistics come from your office. I merely used these few examples to show the type of thinking which can be used to present the positive approach. You know if I set about to have 10 different men tell you all in the same day that you looked pale and sick, you probably would go home that night and have to go straight to bed for some unknown malady. I don't mean that you should be unrealistic but on the other hand I don't see how you possibly could sell anything with such a negative approach.

Personally, I am for you and for your program, but I must admit I am a rank amateur and know very little about agriculture. However, I am sending a copy of this letter to our good Senator WILEY and Representative SMITH in the hopes that they, too, may derive some positive thinking thoughts from it—if they need any.

I should like also for you to completely understand that this letter is strictly my personal view and does not necessarily represent the thoughts of any other member of this company; nor is it intended to have any political implications whatsoever.

Respectfully.

Right of Unions in Government Upheld in Bill

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 19, 1956

Mr. DINGELL. Mr. Speaker, I rise to support the bill, H. R. 697, introduced by my distinguished colleague, Mr. RHODES of Pennsylvania, and to urge my fellow Members of this Congress to do likewise.

I feel that Government employees do have the same right to organize as do employees of private industry, and I am satisfied that the amendment to the Civil Service Act of 1912 proposed by my friend, Mr. RHODES, is in the best interests of not only the Federal employees generally but in the best interests of the country as a whole.

I insert into the RECORD at this point an excerpt from the St. Louis (Mo.) Register, the official newspaper of the Archdiocese of St. Louis, showing clearly why such a bill is not only morally right but is also for the good of the country:

RIGHT OF UNIONS IN GOVERNMENT UPHELD IN BILL—MEASURE IS IN HARMONY WITH CATHOLIC PRINCIPLES

Government employees have the same basic right to be organized as do other workers, and should not be denied the means of settling grievances.

This is the essence of a bill pending in Congress, and there is ample authority in the social pronouncements of the Catholic Church to support postal workers and others who are vitally interested in the passage of this legislation.

Moreover, the teaching of the Church would agree with a special committee of the American Bar Association which has stated in this regard:

"A government which imposes upon other employers certain obligations in dealing with their employees may not in good faith refuse to deal with its own public servants on a reasonably similar favorable basis, modified of course, to meet the exigencies of the public service. It should set the example for industry by being perhaps more considerate than the law requires of private enterprise."

The bill before Congress is H. R. 697, introduced by Congressman RHODES, of Pennsylvania. It proposes to amend the Civil Service Act of 1912.

The amendment begins:

"The right of officers or representatives of employee organizations representing employees of a department or agency or subdivision of such department or agency, to present grievances in behalf of their members without restraint, coercion, interference, intimidation, or reprisal is recognized."

MATTER OF POLICY

The bill proposes that within 6 months after the effective date of the amendment, the heads of Government agencies shall give representatives of government workers the opportunity to confer on matters of policy affecting working conditions, safety, in-service training, labor management, cooperation, methods of adjusting grievance appeals, granting of leave, promotions, demotions, rates of pay, and reduction in force.

Under terms of the bill charges involving a violation would be referred to an impartial board of arbitration, to be composed of three members. One would be selected by the organization making the charge, one by the head of the department or agency involved, and the third, who would act as chairman, to be designated by the Civil Service Commission.

The findings of the board of arbitration would be final and conclusive as to the fact of violation and the head of the department or agency involved would take such action as might be necessary to cause the suspension, demotion, or removal of any administrative official found by the board of arbitration to have been guilty of a violation.

CIA, FBI EXCLUDED

The bill does not apply to the Central Intelligence Agency or the Federal Bureau of Investigation.

The St. Louis Post Office Clerks' Union seeks the support of Catholics in obtaining passage of the bill.

There can be no doubt that Catholics would be acting in accordance with sound principles by supporting the postal employees in this effort.

The changeless truths contained in the social encyclicals of the Popes may be interpreted authoritatively to lend assistance to Government workers, as well as to others, in the pursuit of their natural rights.

"It would be quite absurd to look out for one portion of the citizens and to neglect another," said Pope Leo XIII in Rerum Novarum.

PROTECTION WITHOUT INTERFERENCE

The Government has the obligation to protect lawful unions and cannot in justice stifle them.

"Let the state protect these lawfully associated bodies," said Pope Leo. "Let it not, however, interfere with their private concerns and order of life."

Catholics in conscience can agree with the American Bar Association report, which states:

"It is a fallacy to assume that the usual 'merit system' laws governing the civil service are so comprehensive that employees have no proper basis for complaint as to their working conditions, or that their grievances are all superficial."

The bill before Congress contains no strike provision and the postal employees are not seeking the right to strike.

On this subject the report of the bar association comments:

"Government which denies to its employes the right to strike against the people, no matter how just might be the grievances, owes to its public servants an obligation to provide working conditions and standards of management-employee relationships which would make unnecessary and unwarranted any need for such employees to resort to stoppage of public business.

PROMISES NOT ENOUGH

"It is too idealistic to depend solely on a hoped-for beneficent attitude of public administrators. Promises of well-meaning public officials imbued with a sense of high authority who resort to the pretense of alleged limitations on their powers to avoid dealing forthrightly with representatives of their subordinate employees only aggravate grievances."

The Proposed Airport at Burke, Va.

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Monday, March 19, 1956

Mr. MONRONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Provincial Politics," published in the Evening Star of Thursday, March 15, 1956. It deals with the need for a second airport in the Washington, D. C., area.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

Senator BUTLER, of Maryland, seems to have a short memory with respect to the proposed auxiliary national airport at Burke, Va. In an amazing press release, Mr. BUTLER has declared that the Commerce Department "should not permit the attempted intimidation by a small Senate subcommittee to force hasty, ill-advised, and indefensible action" in furtherance of the Burke project. He had reference to the recommendation of a Senate Commerce subcommittee that the Burke airport plan be revived on a "crash" construction basis.

It is absurd to refer to the long-planned and long-dormant Burke airport as hasty, ill-advised, or indefensible. The site at Burke was selected some years ago after a careful survey of the whole Washington Metropolitan Area by the Civil Aeronautics Administration, the National Capital Planning Com-

mission, and other agencies. After extensive hearings, Congress approved the site and appropriated nearly $1 million for purchase of land. The Federal Government now has title to about 1,000 acres near Burke. All of this was done deliberately, on the advice of experts who repeatedly have defended the Burke location with persuasive logic.

But there have been hasty, ill-advised, and indefensible efforts in the past to kill the Burke plan—with Maryland legislators strangely in the forefront of the opposition. The Marylanders want their Friendship Airport, near Baltimore, to be officially designated as an alternate "Washington" airport. This is understandable politics on the provincial level, but the mounting congestion at the present National Airport is so dangerous that a higher order of statesmanship is called for. Where public safety is at stake—as it is in the local airport crisis—provincial politics is wholly out of place.

President Eisenhower's Candidacy

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 19, 1956

Mr. LIPSCOMB. Mr. Speaker, under leave to exend my remarks in the Appendix of the RECORD, I would like to call to the attention of my colleagues in the Congress an editorial printed in the Eagle Rock Sentinel on Thursday, March 8, 1956.

The Eagle Rock Sentinel is a weekly newspaper established in 1909 and produced, printed, and owned by citizens of Eagle Rock, a community in Los Angeles and a part of California's 24th Congressional District which I represent. Mr. H. A. Lawson, editor and copublisher of the Eagle Rock Sentinel, has for many years served prominently and well as a civic leader and as a capable and respected journalist in his community.

I am pleased to include in the RECORD Mr. Lawson's recent editorial hailing President Eisenhower's announcement of his availability again as a candidate for the office of the President:

OUR DUTY IS TO SERVE

The courage shown by President Dwight Eisenhower in facing up to his physical disability and in spite of that fact his willingness to succeed himself in office for another 4 years, if nominated by his party and elected by the people, is, we feel the most gratifying effect of his momentous decision. Coupled with it is the realization he has recovered from his recent heart attack and is well on the road to good health. Irrespective of the political implications involved, our people, regardless of party affiliation, will rejoice that he has improved, for that is more important than anything else, and will have praise for his determination to carry on as the Nation's Chief Executive. Reviewing the unusual situation in which the President found himself in after suddenly discovering he had a heart ailment, and setting aside the effect it might have on him as a public official, the conclusion he finally reached, not only to continue in office but to seek reelection, there can only be the greatest admiration in his bravery to carry on. Only a person confronted with such a difficult problem can full appreciate how he must have battled with himself and his conscience to arrive at the decision that he did. It all adds up that in President Eisenhower we have a leader of unequaled determination to say nothing of statesmanship.

Considering his decision politically it does not take much of an imagination to visualize how jubilant the Republicans are, nor how disappointed the Democrats must be. To the former there is and will continue to be the somewhat dangerous conclusion that "it's in the bag." Their ticket will be Eisenhower and Nixon, for it is very reasonable to assume the President will show a preference for the Vice President who, during his first term, has been his right-hand man. If he wants NIXON, the next Republican National Convention will nominate him. While there is an undercover fight on NIXON, seeming to come from mysterious and undefined sources, insofar as the rank and file of the Republicans are concerned, it will be stamped out. Quite a different situation confronts the Democratic Party. Now that President Eisenhower has decided to run again, it will have to change its political strategy and possibly its attitude toward avowed candidates already in the race for the party nomination for President. To make the claim any Democratic candidate can be elected is like whistling when passing the graveyard. Their Presidential nominee now must be an outstanding statesman and leader. He is not in the running at the present time.

While there are some policies advocated and practiced by President Eisenhower we have not always been in agreement with, his determination to prevent wars and to bring permanent peace to this country and the world, outweigh all other matters. That is the prayer of the people everywhere and it is possible of accomplishment in their belief and in the belief of the President. Its advocacy has developed President Eisenhower from a great military leader into a great statesman.

While the Sentinel does not believe "it is in the bag" by any means, it is ready now to predict the President, providing his good health continues, will not only be the Republican Party nominee for President together with Vice President NIXON, but will be reelected, and that his election will carry with him a Republican Congress. But to make this prediction come true his party will have to make a grassroots campaign with "whistle stops."

Ireland's Struggle for Freedom

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 8, 1956

Mr. McDONOUGH. Mr. Speaker, the history of Ireland has been a long struggle for freedom for many centuries. The courage and determination of the Irish people to not only bring freedom to their native land, but to help other nations obtain their freedom, is recorded in many places in the annals of history.

Together with my remarks, I am including herewith an editorial from the Los Angeles Tidings which is apropos of St. Patrick's Day:

THE TEAR AND THE SMILE

Father Cloonan's doctoral dissertation "The Irish Catholic Confederacy and the Puritan Revolution" tells the story of the sad middle years of Ireland's turbulent 17th century. The book untangles in scholarly sweep the several threads of heavy hopes that webbed the tragic nation at a time when fortune favored. There is a subdued eloquence in the writing heightened as the narrative moves on to inevitable disaster.

Strange to write, but this was a rebellion not only for the faith but for the king, and the king was England's Charles I. The enemy now was the Puritan parliament that hounded the king to the knife and presumed to legislate as well for Ireland. The intolerance of the Roundheads eyed the complacency of the Stuarts in the religious affairs of Ireland, and moved to extirpate with fire and sword the popish nonsense across the Irish Sea. The threat found the Anglo-Irish, the lords of the pale planted by the Plantagenets and now "more Irish than the Irish themselves," linked with the Old Irish, dispossessed by the Ulster plantations, in a common effort for cross and crown.

The Catholic confederacy set up at Kilkenny drafted a constitution for the island which acknowledged the sovereignty of the crown and decreed the independence of a separate parliament. The king was petitioned for redress of religious wrongs. This work of Patrick Darcy anticipated by almost 300 years the English evolution of empire. Idle are the "if's" of history. Yet is is fascinating to speculate the complexion of the political aftermath had Darcy's concept of independence under the protection of the Crown prevailed. The American Revolution more than a century later was largely a protest against the exactions of a parliament in which no colonial voice was heard. It is one of the ironies of history that the thread of empire in today's concept of commonwealth was spun in the 17th century by the facile mind of a Galway man.

What characters emerge on this strife-torn page of Ireland's glorious saga! The king's continuing tragedy ended in tragedy all around. His dire extremity balked his vacillating will for the amelioration of Irish religious grievances. There is Ormond, the king's lieutenant in Ireland, resourceful and unscrupulous, whose Protestant upbringing so obliterated his Catholic birth as to peril both faith and freedom for Protestant pretensions. Ormond divided the Irish by playing the fears of the Lords of the Pale against the suspicions of the displaced Old Irish.

The days were rife with plots and subplots. Agents and emissaries roused the continent to the cause, and always too little help arrived too late. A plan was even afoot to have a Barbarini Pope name a nephew, Giacomo Compagna, the High King of Ireland! It is perhaps just as well that the plan died aborning. Irish honor and chivalry and heroism had new glory in the exploits of Owen Roe O'Neill, but his death sealed the doom that disunion and despair prepared. The righteous thundering of Rinnucini, the Papal Legate, but hastened the day of wrath in the scourge of Cromwell.

Now followed Ireland's finest hour. It is difficult to understand how a people could ever rise again from such depths of degradation. They were despoiled of their heritage. Measures were devised to strip them even of the show of humanity. The flame of freedom burned quietly on in bog and backland. It could not fail when people would not falter. It is a long story and one well known, the men of Wexford in '98, the Emancipator, the Fenians, Parnell and Redmond, the Sinn Fein, the Easter martyrs, the time of the Trouble, the Free State, and the dream of a united Ireland shaping again as the green, white, and gold banner greets the breeze over the East River signalizing an honored place once more among the councils of the nations.

A new St. Patrick's Day reminds us that tyranny trembles before an unconquerable will to freedom. Its inspiration gives quiet assurance that peace with justice and honor will, as a prince, yet walk our ways.

Irish Partition: The Bitter Fruit of Expediency

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 8, 1956

Mr. FEIGHAN. Mr. Speaker, under leave previously granted, I insert in the CONGRESSIONAL RECORD the address I delivered at the 89th annual St. Patrick's Day banquet of the Ancient Order of Hibernians and Ladies Auxiliary of Cuyahoga County, held in Cleveland, Saturday, March 17, titled "Irish Partition: The Bitter Fruit of Expediency":

On this happy feast of our patron St. Patrick our thoughts necessarily turn to those great ideals and spiritual values which he gave to all humanity.

All of us surely realize the importance of those ideals and spiritual values in these troubled days when all the world seems so upset and civilization is almost on the brink of allowing itself to be destroyed.

As we reflect upon these wonderful gifts of St. Patrick, we cannot turn our eyes away from those many injustices and inequities which beset other nations of the world.

Among those great injustices is the false partition of Ireland. This state of inequity has unfortunately existed since the days when the Irish patriots won freedom and independence for a large part of the emerald isle.

In recent years we have witnessed the cruel division of nations by the Russian Communists. I speak especially about the Communist partition of Germany, Korea, and Vietnam.

The leading statesmen of the West do not hesitate to state that the continued false partition of these three nations constitutes a threat to the survival of our entire civilization.

But it is sad to note that these same statesmen, who are charged with charting the course to victory for all free men, are blind to the false partition of Ireland.

It seems to me there has grown up in the world of our times an acceptance of the dangerous notions that a little bit of tyranny is all right, that a little bit of imperialism will do no great harm, and that so long as human injustices do not threaten to cause an outbreak of general war it can be tolerated.

It is in this confused state of affairs that the cause of an united Ireland must seek to win the final victory envisioned by every Irish patriot from the beginning of time.

In my considered judgment the greatest barrier to winning a free and united Ireland is the philosophy of expediency which has spread almost like wildfire throughout our civilization during the last thirty-five-odd years. If we look about us it is easy to see the terrible penalties we are now paying for following a course of expediency in the conduct of our international affairs.

Expediency allowed Russian communism to get a foothold on the ruins of the Russian czarist empire;

Expediency prevented the western powers following World War I from establishing a just social order among nations which could have forbidden World War II;

Expediency led us to enter into diplomatic and trade relations with Communist Russia just as expediency led us into fighting side by side with the pagan philosophy of communism in what the common people were led to believe was a war to restore the basic freedoms to all nations and all men.

That same expediency has led us into our present precarious position wherein we seem to know not our allies and where there is an ever-present inclination to sacrifice someone else's territory and other people's future to the insatiable appetite of the Russian Communist aggressors.

The danger exists that unless we immediately and completely reject expediency as a consideration in the conduct of our affairs with other nations and in meeting the present Christian crisis we will soon find that our own Nation has fallen upon the pagan altar of expediency from which escape is impossible and through which civilization as we know it may be blotted from the memory of mankind forever.

I therefore commend to your consideration the need for each and every one of us to fight against the trend of expediency in our national and international affairs as a practical way of striking a telling blow for the cause of a free and united Ireland.

Address Delivered by the President of the Oklahoma Statewide Electric Cooperative

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Monday, March 19, 1956

Mr. MONRONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Mr. Roscoe F. Keiffer, president of the Oklahoma Statewide Electric Cooperative, at the annual meeting of the National Rural Electric Cooperative Association, at St. Louis, Mo., January 25, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

UNITY OR ELSE

(Address of Roscoe F. Keiffer, president, Oklahoma Statewide Electric Cooperative, at the annual meeting of the National Rural Electric Cooperative Association, St. Louis, Mo., January 25, 1956)

Mr. Chairman, ladies, and gentlemen, for me to address this great audience of the National Rural Electric Cooperative Association gathered from all parts of these United States is most certainly a high honor. To be placed on the annual meeting program of our great association is the highest honor that has ever come to this Oklahoma wheat farmer; and I assure you that what I have to say to you today will not be anything new to you people who are carrying the load of rural electrification all over the land.

I wish if I may this afternoon discuss with you as one farmer to another some of the most important problems that are facing the cooperative movement among farmers, especially as it pertains to our rural electric cooperatives.

The problem of getting all of our cooperatives working together and pulling together for the overall good of all is the subject of my discussion this afternoon. It can readily be seen that our problems are different. No two cooperatives have the same problems and possibly the solution to the same problem in a different section of the country would be different; but regardless of these differences the overall objective is the same in that we are all working at the task of bringing electricity to the farmer at a price he can afford to pay. I suppose that electricity has always been available to farmers at a price; but that price prior to 1935 was so high that less than 10 percent of our farm homes were served by central-station current. Recently, I heard the Governor of our State, Governor Raymond Gary, say that prior to the advent of the REA in 1935 he tried to get the power company in his area to bring electricity to his farm and they asked him more money than he had paid for the farm just 2 years before. There is no surer way to turn off the power serving our farms than to price it beyond our ability to pay.

Most certainly the farmer's ability to pay is at an all time low in this country, with everything we have to buy going up and everything that we have to sell sliding downward. The most recent figures I have seen show that we farmers are receiving about 80 percent of parity while many other industries are as high as 130 percent. We cannot expect to sell at 80 percent and buy at 130 percent and stay solvent very long. Recently I went into a repair shop to purchase a new set of cutter bars for my ensilage cutter. The price was $56 for the very same bars I had purchased 2 years previous for $35. When he had figured up the bill, he added 10 percent. I asked him what that was for and he replied that on the first of the month all repairs had gone up 10 percent to take care of the increase that labor had secured. Increases granted labor are being reflected by industry in the costs to the farmer on the things we buy. I do not presume to know if this is a justifiable increase.

Not long ago I walked into a hardware store to purchase an ensilage fork and I was told that the price was $8.45—$8.45 for a pitchfork—my father would have dropped dead in his day if they had asked him more than $1.25 for a pitchfork.

I purchased a tractor in 1954 for $3,480; in 1942 I had purchased one just like it for $1,465. The same make and size tractor, of course 1954 tractor had all the new improvements but essentially they did the same work.

I point these tremendously increased costs out to you just to emphasize that the farmer is in a price squeeze the like of which I have not seen in my time. Bearing this in mind it becomes doubly important that we hold the line on electric costs.

The power companies of this country are afraid of the yardstick of public power and as long as we can maintain the competitive yardstick of public and cooperative power we can hold the line on power costs. Power produced and delivered to the farm home without profit by the cooperatives of this country has most certainly held power costs fairly steady in the face of increased costs of about everything else we have to buy. Without the public power program there is no measuring stick in the power business.

My own cooperative is located on the northern border of Oklahoma and we serve most of two counties in Kansas. At first we served our Kansas customers over our distribution lines; but soon the load became too heavy and it became necessary for us to build a substation in Kansas. We went to our power supplier and asked permission to build a transmission line from down in Oklahoma up to our Kansas substation. Do you think that they would sell us power to transmit to our Kansas station? Of course, they would not. They said, in effect, we do not compete with the power companies in Kansas. What was the result? We had to buy power from a Kansas company for our Kansas substation; and as a result, we have paid six mills and fuel costs in Oklahoma and about 11 mills and fuel costs in Kansas all these years. You say, why the difference? In Oklahoma, we had a cooperative generating plant and Southwestern Power Administration power, while Western Kansas has no

competition in the power field. We cooperatives must stay in business to furnish competition and hold power costs down.

Many farms in the sparsely settled areas of our country would be without power if our cooperatives were sold out, for these farms could never pay enough for electricity to make a profit to the private power company. Their interest is profit; ours is service.

The farmer today could not do without electricity. This last summer it was my privilege to travel around over my State attending many of the annual meetings of our cooperatives. I had the opportunity of talking to many farmers. I always asked them, "What would you do if the electricity was suddenly turned off at your farm?" The invariable answer always was, "I guess I would have to move to town," and I believe that is true. We could not go back. One farmer to whom I talked said he had once done his milking by hand, had done his chores by lantern light and had read his daily newspaper by an oil lamp; and he guessed he could do it again. About 2 weeks later he wrote me a letter in which he said, "I have been thinking about what you said and I guess I was wrong; I just couldn't go back."

I am trying to say that the farmer today must have electric power and at a price he can afford to pay; and it is our job as cooperatives to see that he gets it.

The power companies of this country are doing everything in their power to destroy us. To date they have not succeded and I am satisfied that they have decided that as long as the cooperatives all stick together, they cannot lick us; so they are changing their tactics and attempting to get us to fighting among ourselves. All over the country today we are hearing stories about cooperatives pulling out of the State organization, because of dissatisfaction with employees, managers, and the way things are being run by the board. It seems that we are suddenly distrusting our neighbor cooperative instead of helping and cooperating. Investigating a number of these rumors of dissension, I have found that most of these misleading accusations have been started by people who are not friendly to our cause. That is their tactics. Are we going to fall for this sort of propaganda?

I do not expect my cooperative to see things exactly as your cooperative does, for the boards of directors are just people. People think differently and act differently and it is right and natural that they should; and because a person thinks and acts different than I do, does not make it impossible for us to get together on the common cause.

I hope that we in the cooperative movement are big enough to give other people credit for being sincere in their thinking and possibly they are right and we are wrong.

As I grow older I am more and more convinced as I look back that I have been wrong on many occasions when at the time I was so sure I was right. So as cooperatives today maybe we cannot always agree but who knows for sure who is right. Let's forget our differences and give our wholehearted support to the success of this great cooperative effort of ours.

We have come a long ways since 1935; we have brought the greatest advancement to the farm home that has come in my time and yours. Are we going to let our enemies divide us now and take away these great farm benefits or are we going to bury our differences and stick together? The more than 900 electric cooperatives in this country would be an almost unbeatable group if we can all join forces and move foirward as one.

We farmers who make up the boards of directors of our rural electric cooperatives all over this country of ours think differently; we act differently; we believe differently; but we are all working at the same task and that is to bring electricity to the farmers of America at a price he can afford to pay.

If all the electric cooperatives of this country will pull together, all the money, all the political power, all the misleading advertising and all the pressure the power companies can bring to bear cannot lick us. We must pull together or we wil be picked off one at a time.

Let us go home from this annual meeting determined that we will support our State organizations and our national at all costs. I do not want my cooperative to be the one that breaks the solid front, do you?

The program at which we are working is right, it is nothing to be ashamed of. I have enough faith in our country to believe that right will prevail but down through history right has only prevailed when men honest and true fought for that right.

"United we stand, divided we fall," are the wise words of yesteryear and I believe they apply to us today just as surely as the day they were uttered. We must pull together or else.

Segregation in the Public Schools

EXTENSION OF REMARKS
OF
HON. J. WILLIAM FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Monday, March 19, 1956

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in the New York Times on Sunday, March 18. It is entitled "Law Professor Backs Manifesto."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LAW PROFESSOR BACKS MANIFESTO—PRINCETON AUTHORITY ON THE CONSTITUTION ASSERTS THERE IS ROOM FOR DISCUSSION

PRINCETON, N. J., March 17.—Dr. Alpheus T. Mason, professor of Jurisprudence at Princeton University and an authority on constitutional interpretation, has praised the southern manifesto presented in both Houses of Congress Monday.

The statement signed by 19 Senators and 81 Representatives pledged support for moves to counteract by all lawful means the integration decisions made by the Supreme Court. Professor Mason called the manifesto a good thing. He added:

"At the very least it is calculated to give the court and the country pause."

Professor Mason expressed the opinion that "the people are entitled to know that the issue isn't black and white—there is much room for argument and discussion here. This statement is something that needed to be made, and it has been made in a dignified and effective way, I feel."

The author of a number of books on law and the Constitution, Dr. Mason has since 1947 held the McCormick Professorship of Jurisprudence at Princeton. The McCormick professorship was first held by Woodrow Wilson from 1898 to 1910.

Dr. Mason was graduated from Dickinson College, in Carlisle, Pa., and did his graduate work at Princeton. He was born in Snow Hill, Md., 18 miles below Salisbury, in the southeastern part of the State, on September 18, 1899.

MASON CITES TWO POINTS

Professor Mason pointed out that the manifesto "attacks the Supreme Court at the point where it is most vulnerable." He cited two points wherein the Court's recent decisions concerning segregation in public schools might be considered unwarranted:

"First, rather than rely on available judicial precedents, the Court invoked two of the flimsiest of all our disciplines—sociology and psychology—as the basis of its decision.

"Secondly, the Court in connection with the matter of implementing the decision, suggested the formula of 'deliberate speed.' Hindsight indicates that the Court itself might better have followed that very formula and thus avoided the precipitation of a very explosive issue."

Because of these two points, Professor Mason said he felt the integration decisions could have been much more firmly founded.

Two Hundred Thousand Kids You Can Be Proud of

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 19, 1956

Mr. JOHNSON of California. Mr. Speaker under leave to extend my remarks in the Appendix of the RECORD I include an article from the magazine This Week, published by the Sunday Washington Star newspaper.

This article was written by Gen. Anthony C. McAuliffe, the commanding general, United States Army, Europe.

It is one of the most thought provoking articles I have read in a long time. It discusses the problem of juvenile delinquency. But the real purport of the article discloses how this great leader of men and soldiers has built up the morale of the soldiers under him to such a high pitch that their "delinquency" is nil.

His capacity to develop loyalty in the face of supreme danger in the officers and men under his command was first exhibited in the Battle of the Bulge at Bastogne. The German commanders thought they had him and his men in a pocket and sent a note to him by messenger suggesting that he surrender. His answer became known throughout the entire world where our fighting men were, when he sent word to the German Command and used the word "nuts" a well known expression that we all understood. His men were pitched so high that they turned back the German armies with terific losses and it was really the beginning of the capitulation of the German forces.

With all his popularity and his great capacity to develop loyalty in his men he is really a friendly man. It is because of his great love for those who work with and under his direction that he is so proud of his men and they instinctively are proud of him.

No matter what great mission must be performed, whether in a war or in peace, leaders are the essential for success. Without leaders nothing great can be accomplished.

It was my privilege to spend a few days in Heidelberg this last fall. I met and talked to General McAuliffe and his

staff. He accorded me wonderful treatment. It was evident that all the staff officers who worked with him regarded their chief very highly. It was also my privilege to meet with a number of enlisted men and one could easily see that the morale of the enlisted men was extremely high. He has made every man in his command feel proud of his job and proud of his commanding general.

Unfortunately this man is leaving the service and taking a very important job in civil life. It is hard to lose a great leader. But his record will be a challenge for the man that replaces him. He was Chief of Personnel of the Army during a tour in the Pentagon. Congressmen frequently would consult him about problems. Always he was friendly and helpful in his contacts with Congressmen.

May I say that in my limited contact with General McAuliffe and his wife I sensed that they have had a happy home life, the secret of true happiness and success in one's chosen occupation.

I wish that every Member of Congress and every citizen of our country could read General McAuliffe's article. Also, I wish they could see the pictures that accompany the article, which tell better than words why he is such a great leader and why his men love and admire him.

The article follows:

WORRIED ABOUT THE YOUNGER GENERATION?—HERE A FAMOUS GENERAL REPORTS ON 200,000 KIDS YOU CAN BE PROUD OF

(By Gen. Anthony C. McAuliffe)

Question: Many readers have sent us questions about juvenile delinquency. Since a large section of our youth is serving with the United States Army in Europe, we decided to ask their commanding general, General McAuliffe, what he thought of the youngsters in his command.

HEIDELBERG, GERMANY.

Answer: I wish that every American who thinks that we are raising a nation of juvenile delinquents could stand guard with a patrol of our "ex-teen-agers" on the frontier border between us and the Russians here in Germany. One night in the cold and snow, looking out across the barbed wire and plowed ground of the border, where one mistake could cause us international trouble, would convince the most doubtful that our younger generation isn't "going to hell in a handbasket."

These youngsters perform this mission—and many other important jobs—night and day, in all kinds of weather, 365 days and nights a year. There are more than 200,000 young men and women in the United States Army in Europe between 18 and 21 years of age, serving the overseas portion of their selective service obligation or Regular Army enlistments.

They are accepting responsibility, developing the kind of leadership which has always made Americans proud, and doing both with a modesty and confidence that proves their fundamental soundness. Despite publicity on our juvenile-delinquency problem, I can't believe that American youngsters are becoming "a lost generation."

I do not contend that these young men and women are a complete cross-section of American youth. The Selective Service System and our own enlistment requirements eliminate misfits. But these young Americans do repreesnt all elements of American life—every race, creed, and color.

IT'S A SERIOUS ARMY

My confidence in them is not blind faith. I realize that there is a juvenile problem in America today which calls for our best attention and thought. Some of those same problems of behavior also exist here, where we face and solve them just as each American community in the United States must. Nor do I offer a hitch in the Army as a cure for juvenile delinquency. After all, we can only develop the talents and abilities and good-citizenship characteristics which their families, pastors, and teachers have already instilled in them. But our efforts to continue the good work produce reassuring results.

A peacetime Army has always been harder to handle than one in war. The authority of the battlefield is easier to take than the discipline of garrison and training life. Because this is a serious Army in Europe, with a serious cold-war mission, these American youngsters accept the rigors and discipline and authority in good part—and without loss of initiative or spirit.

Veterans of World War II and of Korea would find it hard to compare their duty in those combat situations with the tasks that confront our soldiers here. Young Americans are living in France and Germany—countries with strange languages, customs and laws—and must serve as uniformed ambassadors as well as good soldiers. Fortunately, in both countries, good soldiers are universally respected. But often the added disciplinary strain of always being on best behavior gives the younger brother of the World War II veteran little rear area relaxation.

STILL A TOUGH LIFE

This is also a new Army. It's an atomic army with cannons and rockets that could destroy a division or a small city, manned by young men who were in kindergarten when the Japs struck at Pearl Harbor. The new weapons and new tactics demand additional training. At the same time, the mud, rain and snow are with them in the field on maneuvers, making the maintenance of trucks and tanks, the building of bridges and the firing of atomic cannons and smaller weapons just as irksome as always.

I can honestly say that the youngsters in the Army in Europe today are doing a magnificent job.

Their performance in training and maintaining a combat-ready Army isn't the only criterion. In two countries where wine and beer are almost staples of the diet, and where every village has its tavern, one would expect even more trouble than at home. Such is not the case. Here's an example.

In every command, there is a noncommissioned officer's council which advises the commanding officer on discipline and the off-duty activities of the soldier. At one council it was suggested that if beer were allowed in the mess halls it might keep men at home. The division commander asked the noncoms to take a poll of the soldiers. Inquiries revealed that an overwhelming majority preferred additional ice-cream-soda and milk-shake facilities in the area.

GET YOUR OWN SUNDAY BREAKFAST

When one mentions overseas duty in Europe a picture quickly comes to mind of the gay life of Paris, London, Rome, Frankfurt, Heidelberg, and other cities. But most of our garrisons are in the smaller towns and villages.

One such isolated outpost is at Baumholder, Germany, a rather remote training area on a high plateau where the German army formerly trained its armored units. The service club at Baumholder, the Big Wheel Lodge, is patronized by as many as 10,000 soldiers a month. I was surprised—and gratified—to learn that among the most popular features at Big Wheel, as at many other service clubs are the cook-your-own-dinner nights and get-your-own-Sunday-breakfast sessions, which tax the capacity of the club. I don't know if these interests will hold over into civilian life, but they certainly don't sound like juvenile delinquent activities to me.

Greatest off-duty activity of the youngsters in this Army is travel. Young Americans are seeing more of Europe than all the tourist agencies have imagined. The soldiers carefully save their money, then armed with cameras, take to every available corner of the Continent. By and large, the behavior of our Americans is exemplary, and the adverse reports are few and far between.

THE GI TRAFFIC-SAFETY PROBLEM

Another proof of the serious and responsible attitude of these kids is the tremendous amount of off-duty time and effort they devote to improving their educations in the various branches of our "GI school system." Space prevents a full discussion here, but the figures on enrollment, courses completed and diplomas are impressive.

In standing up for our teen-agers, I don't want to paint a too-rosy picture. Many of the problems that occur at home also occur here. One of my greatest worries stems from traffic accidents. When I have to write a letter to parents telling them of the death of their son, or reporting that he has been seriously injured, I have my most difficult moments. We are raising a truly "motorized" and mechanically minded generation, and the hot-rod habits developed at home continue to exist after a youngster puts on a uniform. Driving conditions on the narrow roads and slippery cobblestone surfaces in Europe are more treacherous than on our highways in the United States.

We have driver-training schools, and we have strict examinations for driver licenses. In spite of these measures, the accident toll is too high. Obviously, some of our military accidents stem from the increasingly difficult task of driving heavy military equipment. But the accidents of privately owned automobiles make up the great majority of our cases. I don't want to pin these mishaps on juvenile delinquency, even though many of the younger soldier-drivers are involved.

No single illustration can prove my contention that we are raising a fine, responsible generation of young Americans. But the case of ex-Cpl. Robert L. Jones, of Milwaukee, is worth mentioning. He is a youngster who came to Europe as a selective-service soldier, just out of high school, and has now returned to civilian life to continue his education. As Jones put it when he left Europe, he has retired—before he was 20 years old. ("He was born the year I graduated from West Point," his colonel said, "and he is already retired.")

RETIRED TO COLLEGE

But Jones came to Europe from his basic training, served in the division artillery headquarters battery, graduated to radio operator and jeep driver, assisted in the firing battery as fire-direction operator; became a private first-class and driver of the executive's reconnaissance jeep, and finally graduated to corporal. He visited France and Switzerland, toured a good part of Germany, and saw the sights of Italy. He participated in two full-scale maneuvers, several command-post exercises, winter and summer, and qualified in all the weapons assigned to his unit. All this he accomplished in 17 months in Europe, before he retired to continue his education under the GI bill.

Like every father, I worry about the coming generation. But the many thousand ex-Corporal Joneses make me sure that young Americans are made of good stuff, which will carry us through in time of future need. They also make me very proud to be the Commander in Chief of our young Army in Europe.

Welker: Fighting Man From Idaho

EXTENSION OF REMARKS
OF
HON. WILLIAM F. KNOWLAND
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Monday, March 19, 1956

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appears in the current issue of the well known national magazine, the American Mercury. It deals with the junior Senator from Idaho [Mr. WELKER].

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WELKER: FIGHTING MAN FROM IDAHO

(By Politicus)

When HERMAN WELKER was elevated to the United States Senate by the Idaho voters in 1950, national news commentators knew only two newsworthy things about him. He had been the close personal friend of the late Wallace Beery and had enjoyed a top flight Hollywood law practice. And he had taken the Senate seat of the worst demagog whom Idaho, in a misguided moment, had ever sent to Washington—Glen Taylor.

Technically speaking, WELKER did not defeat Taylor. The Idaho Democrats, in their primary, took care of that. Henry Wallace's 1948 running mate, with his clownish left-wing record, was repudiated so thoroughly in 1950 that he is hardly likely ever again to be a serious factor in Idaho politics. The man whom WELKER faced was a much more redoubtable figure—former Senator D. Warth Clark. WELKER's triumph over both Taylor and Clark sent him to Washington with a momentum which is still felt.

Idaho has a tradition of independent, colorful Senators. It was the bailiwick of Fred T. Dubois, a notable figure of the Populist-Free Silver upsurge of the nineties. It sent the impressive Weldon B. Heyburn to the Senate in the early 1900's. And for over 30 years, one of its seats was firmly occupied by the great William E. Borah. WELKER has been a lifelong idolator of Borah, who gave him helpful encouragement when he was a struggling beginner at the Idaho bar. Today he takes pride in the fact that he sits at the famous Borah desk in the Senate Chamber.

WELKER is still in his first term but he gives convincing indication that he is destined to be a Senator in the Idaho tradition. His outspoken independence, as a freshman Senator, gives shivers to his careful, fence-sitting, trend-fearful colleagues in the Senate Chamber. What is inducing respect on the part of the Nervous Nellies is that WELKER is piling up a high score of being right on the controversial issues.

A new Senator, arriving in Washington, is immediately faced by a harrowing decision. How shall he aline himself in the sharp left-right division which has now driven a deep rift into American national politics?

Most newcomers play safe, and retire to the storm celler of the middle position. The middle is a comfortable spot to be in, when the political going gets rough. The centrist escapes the corrosive enmities which pursue the Senator who becomes labeled as either a rightist or a leftist.

He can slip easily and inperceptibly to the momentarily popular side, with a minimum of political wear and tear. He can always end up enthusiastically in the retinue of the winner, with cynical disregard of his neutrality while the winner was on the way up.

HERMAN WELKER, in entering the Senate, scorned all of these painless pathways to advancement. He made it plain, from the outset, that he intended to call the turns as he saw them, regardless of political consequences to himself. He has not deviated from that rule.

One of his first decisions, in the Senate, was a hard one. With the Korean war raging at its most ugly moment, the Nation was swept by the contagion of allyitis. The big names in the committee for the present danger were telling us pontifically that we must forge closer ties to Downing Street or we would be lost in the worsening world situation. It was the heyday of NATO, and the EDC, and of Mr. Harriman's Mutual Security Administration. It took a bold man to stand up in the Senate against this new internationalism, backed as it was by all the best names.

HERMAN WELKER has spent his life too far from the Atlantic seaboard to be taken in by the One Worlders. One of his first acts in the Senate was to vote against EDC (who remembers it now?), then regarded as the keystone of the internationalist arch. He also voted against the sending of American divisions to Europe to shore up the NATO armed forces. Senator WELKER was old-fashioned enough to believe that Europeans should show a willingness to defend themselves before American blood was offered to defend them.

WELKER wasn't long in the Senate before he ran head on into the so-called McCarthy issue. He was appointed a member of the Subcommittee on Privileges and Elections, which consumed several months in 1952 listening to the vindictive charges of alleged misconduct on the part of Senator MCCARTHY, cooked up by New Deal Senator Bill Benton, of Connecticut. Benton, in his eagerness to knock off MCCARTHY, had swallowed some of the most weird and farfetched rumor-mill concoctions against MCCARTHY which have ever been seriously exhibited in Washington. He wanted the Wisconsin Senator expelled from the Senate on the basis of this twaddle.

The Idahoan quickly saw through the anti-anti-Communist motivation of Benton's smear attempt, and he denounced it from his place as a committeeman. Finally, he gave the subcommittee its deathblow by resigning at a strategic moment. The charges never reached the Senate floor.

WELKER took an even more forceful anti-Communist position when he became a member of the Subcommitte on Internal Security of the Senate Judiciary Committee in the Republican Senate which convened in 1953. With WILLIAM E. JENNER, as chairman, and with the late Senator Patrick McCarran contributing Democratic support, the committee gave a performance in sure-footed investigation of communism and fellow-traveler intrigue in 1953 which set a high mark for inquisitorial brilliance. Under the merciless questioning by JENNER, WELKER, BUTLER, and the skillful committee counsel, Robert Morris, the big ones of the wartime pro-Communist apparatus were reduced to gibberish or to the fifth amendment.

To recall some of the pro-Communist and left-leaning witnesses who passed before the committee during those months is to indicate the Jenner-Welker-Morris effectiveness. They included John J. Abt, C. J. Coe, Gregory Silvermaster, H. Glasser, Dr. Balanuth, Mary Markward, Craig S. Vincent, Edwin S. Smith, Nathan Witt, R. S. Byfield, Carl Aldo Marzani, E. J. Fitzgerald, Abraham Flaxer, Mrs. Mary Knowles, M. U. Cohen, H. B. Tenney, Henry H. Collins, Saul Carson, J. J. Joseph, A. Svenchensky, Harry Gold, Dr. Phillip Morrison, Angus Cameron, F. P. Weber, Mrs. M. B. B. Porter, H. Magdoff, L. E. Mims, Dr. D. Hawkins, and others. It was an imposing procession of men and women who had been linked to the Communist conspiracy in this Nation. When JENNER, WELKER, and their colleagues were through with their witnesses, the Communist undercover organization in Washington had received a shattering blow.

Other boldhearted men have hacked away at the various key arches of the Communist conspiracy in the successive postwar inquiries of the Truman-Eisenhower years. But it generally is recognized that no job has been done more brilliantly or more finally than the job done by the Senate Internal Security Committee during the big year, 1953.

From this constructive work, WELKER found himself dragged away to participate in the McCarthy censure attempt of 1954. In the face of the terrific pressures of the administration, WELKER stood unshaken. He believed that JOE MCCARTHY had done an outstanding patriotic job and that his persecutors were doing a mean and dishonorable thing in smearing him, and he said so in no uncertain language. At one point in the Senate debate on censure, only eight Senators were in the Senate Chamber to listen to WELKER's great speech in defense of MCCARTHY. The Idaho Senator gloried in this manifestation that the censurers couldn't take it. He found himself in a minority on the final censure vote, but he was proud of the stand which he had taken.

On the record of his first term, it is apparent that Idaho has a Senator in HERMAN WELKER who is bringing back to his State some of the luster of the Borah days. He can go far. In 1956 he must face a gruelling campaign for reelection in a State which always is unpredictable. But the form sheets point to another Welker victory. Certainly he has earned it.

The Kress Art Treasures

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, March 19, 1956

Mr. THURMOND. Mr. President, on Friday, I called the attention of the Senate to the 15th anniversary of the National Gallery of Art, which was observed on Saturday by showing the collections of the Samuel H. Kress Foundation of paintings, ranging from the 13th to the 19th centuries. The Kress family is remembered with appreciation and gratitude by the people of South Carolina for its many gifts to South Carolina institutions. Two years ago, the Kress family donated a large art collection to the Columbia Museum of Art. At that time, the State magazine carried two articles entitled, "The Kress Art Treasures Come to Columbia" and "The Fabulous Kress Story." I ask unanimous consent that these articles from the April 18, 1954, issue of the State Magazine be printed in the RECORD.

I also ask unanimous consent to have printed in the RECORD an article from the March 18 issue of the Washington Post and Times Herald. It was written by Joseph and Stewart Alsop and is entitled "Kindness of David Edward Finley." Mr. Finley, the retiring director of the National Gallery of Art, is a South Carolinian. We in South Carolina are very proud of the fine work he has done in

this capacity and in the honor he has brought to his native State.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the State magazine of April 18, 1954]

KRESS ART TREASURES COME TO COLUMBIA

From the encyclopedic assemblage of the world's greatest art in the resources of the Samuel H. Kress Foundation 27 paintings this week will come to Columbia and South Carolina. A beautifully illustrated catalog (with two of the paintings reproduced in full color) has been prepared by the museum to give the history of each artist and painting represented.

The introduction to that catalog gives the background of the Kress collection in part as: "The most comprehensive visual record possible of the culture of the Italian Renaissance would seem to have been the motive underlying the formation of the great collection of the Samuel H. Kress Foundation. Obviously, more celebrated paintings than are included in its roster exist in the major museums of the world. Yet, in no land outside of Italy can there be found a more consecutive picture of the development of western ideals, philosophy, and customs than through the medium of the collection initiated by Samuel H. Kress. Through a gift of unparalleled proportions, regional museums, their communities and their States, and, indeed, the entire Nation, are becoming the custodians of this legendary treasure of man's intellectual progress."

From the great cities of Italy came these treasures of past history of the human soul and life. Now they tell their story of 400 years of man's creative activity from the walls of Columbia's own museum. Their religious passion, their human experience, their pageantry, and their descriptive content are a reflection of the moment when our western thought of today was being formed on the model of Greece classicism.

Artists whose names are legendary to the schoolchild are present in this collection, along with other names of equally precious value to the scholar and educator. Each painting has been individually selected as a step in the broadest possible panorama of renaissance thought and ideals. They should be a tremendously valuable source of education and inspiration.

The ground swell of humanism, or man's respect for man, which developed from the art dominated by the dogmatic religion of Byzantium (Constantinople), is present in the gold embossed panels of rather primitive interpretation. These the visitor will see develop rapidly (though in Italy the process took 100 years to landscape backgrounds familiar to us in our own painting.

The early portion of the collection is naturally dominated by religious painting. A delicate Madonna kneels before the angel in the annunciation scene. There is the dignity of the saints in stern procession. St. John preaches to a landscape inhabited by Herod and youthful Salome. There is the most wonderful scene of the Nativity in the most impressive fresco painting by Botticelli. Amazingly enough this painting has been removed from its plaster wall and transferred to canvas. The original story of the giving of Christmas presents is depicted; and a colleague of Leonardo makes us aware of the rather mystic grace and smile of the celebrated Mona Lisa.

As the Renaissance neared its end, the painting skill continued to be imposing, but its content or soul became meager. The classical was always a dominant strain, and the bacchanal of Euripides is invoked as one theme. In another the artist arbitrarily readjusts the imposing ruins of Rome to include about a dozen of its most notable monuments in one canvas. The portrait of the city, as well as that of important personages, became the vogue. When that city was Venice, their beauty is understandable.

Our State, county, and city are immeasurably enriched by this gift of the Samuel H. Kress Foundation. It confers an aristocratic distinction to our cultural resources which will influence generations to come. It will be, also, the appealing attraction for students and tourists from all over the world.

During the week ahead South Carolina and Columbia will pay tribute to those authorities who have worked with the Museum in securing this eloquent record of man's creative past. With Rush H. Kress, who serves as the dynamic vice president of the Samuel H. Kress Foundation, will be its director and vice director, Dr. Herbert L. Spencer and Guy Emerson, and Mario Modestini and Pro. William E. Suida, respectively conservator and curator of research of the Foundation. The notes of Dr. Suida have formed the catalogued background for Columbia's paintings. With them, too, will be David E. Finley, director of Washington's celebrated National Gallery of Art. A native of York and a graduate of the University of South Carolina, Mr. Finley returns this week to the fourth annual banquet of the Columbia Art Association to relate the significance of Columbia's acquisition of the Kress collection of Italian Renaissance painting for its museum.

[From the State magazine of April 18, 1956]

THE SOUTH CAROLINA PART TO THE FABULOUS KRESS STORY

(By Henry Lesesne)

The 5-10-25-cent store is a familiar part of the facade of America. As much as the automobile, it is a symbol of the abundant, mass production United States economy. The founder of one of these great dime-store chains, 90-year-old Samuel H. Kress, late in life also began collecting Italian art treasures on a mass scale. A hardheaded businessman, he was likewise a hardheaded art collector, insisting on 100 cents worth for every dollar. He shrewdly appraised whatever he bought, and frequently he bought sizable portions of famous collections at a time.

In all he shelled out for art more hard cash than any other man in American history—about $75 million. Most of the world's famous collectors have liked to see their great treasures set in a single, favored museum. Possessed of a deeply ingrained sense of public duty, Samuel H. Kress has been hardheaded in his benefactions, too, and he wanted them spread around so that all of America might see some of the world's masterpieces.

And all because of this Columbia's Museum of Art is being formally presented next Friday, April 23, with a fortune in Italian Renaissance paintings from the Kress collection, and they will repose in the new fireproof, air-conditioned Kress wing, built at a cost of $42,000—$20,000 appropriated by the city and $22,000 raised by donations.

In the last 15 years 20 museums over the Nation have shared in the dispersal of this great collection. Other museums are earmarked for future gifts. It will probably be 1960 before the Samuel H. Kress Foundation finishes the job. It is a stipulation, however, that the museums receiving these masterpieces must be situated in States where there are Kress stores. Hence the Columbia Museum of Art, although a scant 4 years old, is an eligible museum.

Yet there is a far greater connection between South Carolina and the Kress story than that. The story of the Kress dime store enterprise is the story of three Kress brothers, and one of them, the late Claude Washington Kress, lived much of the time in South Carolina, and left an indelible mark on the agriculture of the State. One of his many private philanthropies was an endowment to Clemson College to promote scholarly and scientific research among the faculty members, and to date, 13 years after his death, more than 75 such projects have been approved.

He was on the scholarly side and shied from public notice. One of the country's foremost authorities on merchandising and business management, his views were often sought by Government fact-finding bodies. He held a deep conviction that the study of economic and business history is desirable as a basis for formulating present and future business policies. In fact, he created the Kress Library of Business and Economics at the Harvard Business School, built around the nucleus of the famous Foxwell collection of early economic and business literature assembled in Cambridge, England, that Mr. Kress bought.

If he hadn't also been an inveterate quail hunter, there probably would be no South Carolina part to the Kress story. Along about the turn of the century he was doing his quail hunting largely in northern Florida. He kept hearing about the good quail hunting country in South Carolina. At the result, some months later, in 1901, he acquired a large plantation between Charleston and Savannah, and in time he became a world authority on the propagation and maintaining of quail. In so doing, however, he also created an agricultural showplace of his day and did some trail-blazing that caused Clemson College to award him in 1926 a certificate of merit for distinguished service to South Carolina agriculture.

The third brother who has had a major role in guiding the destiny of the dime-store chain that has long since become a household word in America is Rush H. Kress, the youngest of the three, though now 76 years old. He succeeded Claude W. as the head of the company. As vice chairman of the Samuel H. Kress Foundation, he shoulders the tremendous job of administering its affairs since the eldest brother, Samuel H. Kress, at the age of 82, became ill.

Biggest responsibility of the foundation, of course, is the carrying out of what amounts to a public trust in spreading the vast Kress art collection among numerous museums of the Nation. Aside from its interest in art, the foundation is concerned with other projects in various fields, including medicine and education. The foundation was created in 1929 for the furtherance of educational cultural and humanitarian projects. Claude W. Kress' will bequeathed a third of his estate to carry on the work of the foundation.

The eldest Kress brother, Samuel H., did not start his tremendous art collection until his late fifties. In fact, he was in his fifties when he visited his first art gallery. He began the dispersal of the collection personally, however, in 1939 when he gave the National Gallery of Art in Washington 375 paintings and sculptures by Italian masters. It was 5 years later that he suffered an illness at so advanced an age.

Samuel H. was the first brother to launch upon a merchandising career that made one of the business epics of America. As a youngster in his home town in Pennsylvania, he peddled newspapers and worked in the stone quarries and then at 17 got a job teaching school. The monthly salary was a bare $25, but in 7 years he managed to acquire a novelty store in nearby Nanticoke. Claude W. became associated with him in this business in 1893 and 2 years later, under the name of S. H. Kress & Co., a partnership, they opened in Memphis, Tenn., the first unit of what was to become the present dime store chain.

The Memphis store was a huge success from the moment it opened its doors and a scant decade later there were 51 S. H. Kress & Co. stores in operation. In 1916, upon the incorporation of S. H. Kress & Co., the elder brother was made president of the rapidly

expanding organization and Claude W. was vice president. A decade later Claude W. succeeded his brother as president, and continued to head the vast enterprise until his retirement, which came about 2 years before his death in November 1940.

Rush Kress succeeded him as president of the dime store chain which by then was operating 239 stores in 221 cities and in 29 States and the Territory of Hawaii, and doing a gross annual business of over $80 million. There was still another Kress brother, Palmer J. Kress, a prominent ear, eye, nose, and throat specialist in Allentown, Pa., who was never actively connected with the Kress mercantile enterprise.

Those who are familiar with all that it involves say that Samuel H. Kress could have amassed his astounding art collection only by dedicating himself to the same sort of singleness of purpose that enabled him and his brothers to extend their dime stores from one end of the Nation to the other, and beyond.

The Kress collection contains not only an extraordinary number of pieces by important painters, but also examples of the work of virtually all artists responsible for changes in direction, style, and taste in Italian painting from the 13th to the 18th century. When he started collecting, most of the great private collections had already been ensconced in museums or dispersed, and exportation of works of art was by them restricted in most parts of the world.

Somewhat by way of contrast, Claude W. Kress never held more than a relatively passive interest in art, but his interests covered a broad range beyond the field of merchandizing in which he was such a recognized authority. Besides being instrumental in the development of countless research projects, he was perhaps the world's greatest devotee of wing shooting. He designed innumerable guns and held patents on many of them.

In the course of several decades of hunting and shooting on his vast South Carolina plantation he developed an almost uncanny marksmanship and knowledge of upland game shooting, shotguns, and clay pigeons. At Moonachie, N. J., he built a private shooting field that cost a small fortune and was considered the most elaborate and complete in the world. In 1937 he published, privately, a two-volume work for the experts, The Point System for Wing Shooting.

Buckfield, the plantation he converted into a hunter's paradise, lies in three South Carolina counties—Beaufort, Hampton and Jasper. And largely as the result of his pioneering in agricultural methods, today it is one of the few notable old plantations still in full operation in the lowlands of the South—a forerunner perhaps of the large-scale, scientific pattern of farming that may lie ahead in this part of the world. Under scientific and large-scale irrigation, the huge farming operation is confined largely to cattle raising and dairying.

The agricultural economy of the South Carolina low country has been founded, successively, on indigo, rice and fabulous Sea Island cotton—all of them gone now. As noted, Claude W. Kress was forever poking into the past to find the key to present problems. For instance, he studied the irrigation systems of Holland, and applied the principle, with some practical modification, to the drainage of the abandoned rice fields on his plantation, and developed such reclaimed lands into one of the largest bulb-growing operations in the world.

These reclaimed lands he made produce white narcissus bulbs, formerly imported from Holland. At one time a thousand acres of narcissus were under cultivation and they produced one-half of the quantity used in this country. The bulbs found a ready consumer outlet in the Kress stores.

But he also made Buckfield plantation, which is approximately halfway between Charleston and Savannah, noted for two other things—cattle and quail. He pioneered in this part of the world in the large-scale raising of Aberdeen-Angus cattle, and to do so he imported some cowboys from Texas. And as a world-recognized authority on the propagation and maintaining of quail, he made the old plantation probably unsurpassed for quail shooting in all the country.

Mr. Kress planted 17 miles of feed strips on the plantation. These strips were 64 feet wide, about as wide as a good modern highway, and they cut straight through fields and woods alike. To attract the quail they were planted in brown-top millet, cafiecorn, sorghum, soybeans, milo maize and shallow. The quail-hunting area covered some 5,500 acres and dotting it here and there were bird gardens, an acre square each, seeded in rye and wheat. Water dispensers for the quail were spaced every 130 yards and the pinelands were cleared of heavy underbrush.

Duck hunting was available in a pond of 50 acres, built for that purpose, as well as in a natural backwater 2½ miles long. Deer, turkey, and doves are of course, abundant at Buckfield. A mechanical quail walk, not unlike a skeet field, occupying 10 acres, was built by Mr. Kress along the lines of an English quail walk. The trap yard is an elaborate arrangement of mechanical devices by which all angles of flying birds are duplicated through the flight of a clay pigeon—but hardly as elaborate a setup from a mechanical standpoint as the Moonachie, N. J., private hunting field that was unequalled before or since.

Not long after he acquired the 10,000-acre property, Mr. Kress built Buckfield Lodge, a few miles from Yemassee, and completely remodeled it in 1929. The immediate grounds of the lodge consists of 3½ acres heavily landscaped. Eight small buildings, including an emergency powerhouse, are on the grounds.

Mr. Kress did wonders to the old plantation where the Yemassee Indian tribe once roamed and where many a battle was fought, as related in William Gilmore Simms' classic, The Yemassee. Indian mounds and burial grounds are still to be seen on the plantation, and today mechanical farm equipment or machines used in the everexpanding irrigation projects often turn up tomahawks or arrowheads. The plantation became a notable sportsman's retreat but it also became an agricultural frontier, a blueprint of the future farm economy.

While living in New York and managing the affairs of the vast dimestore chain, Claude Kress came down to Buckfield 4 or 5 times a year. The world-renowned marksman was a lifelong devotee of hunting, but not long after he became familiar with the abundant wildlife at Buckfield, he was hunting one day and came upon a young deer grazing. The deer was a docile creature, and stood gazing at Mr. Kress. He turned to his companion, and said: "I'll never shoot another deer as long as I live." And he never did.

Tame or pet does that wander all over the grounds of the Kress home and the lodge are vivid childhood memories of Mr. Kress' two daughters, Mrs. C. Wesley Frame, who lives today on Buckfield, and Mrs. Raymond Harvey Jack, of Greenwich, Conn., who also has a home at Buckfield and comes down for a part of each year. Even today on the vast mechanized and irrigated cattle plantation it is not uncommon for a child of the farm manager or other farm personnel to have a pet doe which roams all over the premises.

Claude Kress possessed a faith that the examination of the printed record of the past would aid mankind to avoid a repetition of proven error. The utilitarian value of historical materials interested him. He was a member of a family which had lived in this country for more than four generations and could trace a notable history back to medieval times, and he naturally had a pride of family.

In middle life this interest resulted in his publishing a comprehensive and monumental history of the Kress family. The Kresses of Kressenstein gave many conspicuous figures to the national life of Germany in the centuries over which it is possible to follow their history. The Kress brothers' first paternal American ancestor was Carl (Charles) Kress who came from Steinau-on-the-Road, Hesse-Nassau, in 1752 and settled in Lehigh township, Northampton County, Pa.

A Pennsylvanian, Claude W. Kress had many ties with the South, other than the vast plantation he developed in South Carolina. The first store in the Kress chain, as has been noted, was established in Memphis. In 1902 he married an Atlanta girl, Agatha Sheehan, daughter of Cornelius Sheehan. They had three daughters—Elizabeth Margaret (Mrs. Jack), Rosalind Elaine (Mrs. Frame), and Beatrice Agatha, who died in childhood.

The greater part of Buckfield Plantation, exclusive of the Kress home and grounds on which the two daughters of Mr. Kress have their residences was sold a few years ago to W. B. Camp and his associates of Bakersfield, Calif. Mr. Camp, native South Carolinian and alumnus of Clemson, went to California years ago and has become known as the world's largest cottongrower, and he also has extensive cattle interests in the West. A great believer in supplemental irrigation for the Southeast, he is enlarging upon the irrigation at Buckfield and raising white-faced Herefords.

Thus, the tradition of agricultural pioneering started on one of the South's famous plantations by a versatile man who helped build a dime-store fortune responsible for the dispersion over America of a fabulous $75 million treasure-trove of Italian art, continues on today—a big-scale, scientifically managed, irrigated cattle farm, perhaps prophetic of a new horizon for the agriculture of the Southeast.

[The article entitled "Kindness of David Edward Finley," written by Joseph and Stewart Alsop and printed in the Washington Times Herald of March 18, 1956, appears in the proceeding of the Senate of today on p. 4433.]

Thirty-Eighth Anniversary of Byelorussian Independence

EXTENSION OF REMARKS

OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1956

Mr. ZABLOCKI. Mr. Speaker, March 25 marks the 38th anniversary of that memorable day when, freed from the oppression of the Bolsheviks, the Byelorussian National Republic was established as a free and independent nation on March 25, 1918.

The new nation quickly established consular and diplomatic relations with her neighbors. Although the period of independence was brief, definite advances were made in the social, economic and cultural fields. The Republic eagerly demonstrated its desire to take its place amongst the free nations

of the world. Unfortunately, the infant Republic was not able to resist for long the advance of the new Russian imperialism; and its independence, for which it had struggled so valiantly, was lost.

On January 1, 1919, the Communists established the Byelorussian Soviet Socialist Republic. After a period of consolidation, the Communists initiated a policy of persecution and annihilation with the intent of eliminating all vestiges of Byelorussian nationalism. This policy went into full effect in 1928.

The extent of the terror, arrests, mass deportations, carnage, and deliberate genocide was incredible. It has been estimated that over 4½ million Byelorussians have been annihilated since the Soviets occupied the country. Anything having semblance to a Byelorussian national feeling was eradicated; for it was only through the propagation of Soviet communism and the imposition of Soviet culture that Byelorussia could be completely subjugated.

For 38 years the Byelorussian people have suffered under the totalitarian grip of ruthless Kremlin Communists. However, they have never voluntarily accepted communism, and their desire for freedom has not been extinguished. As long as there is the hope of eventual independence, the spirit of liberty lives on.

It is appropriate on the 38th anniversary of Byelorussian independence that the American people bolster this hope by reiterating our concern for the enslaved Byelorussian people and expressing our confidence that tyranny will not permanently prevent this courageous nation from obtaining that freedom for which it has struggled so valiantly.

St. Patrick and the Christian Crisis

EXTENSION OF REMARKS
OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 8, 1956

Mr. FEIGHAN. Mr. Speaker, under leave previously obtained, I wish to insert in the CONGRESSIONAL RECORD an address I delivered on March 17, over radio stations WJW and WERE, and television station WXEL, Cleveland, on St. Patrick and the Christian Crisis:

On this St. Patrick's day I vividly recall the exquisite charm of the Emerald Isle—a garden of green midst seas, lakes, rivers, and valleys. Its beauty is indelibly impressed in my mind and memory—the natural beauty of God's creation.

One's fascination for its beautiful countryside is excelled only by the warmth and friendliness of its people. My subject truly befits the life and times of St. Patrick, which has to do with the world in which we live, and what the future may hold for all of us.

Fifteen hundred years ago the great empire of Rome stood as a symbol of power and might. That was the external appearance of the Roman empire, but its heart was gone and a civilization that had spread over most of the world was dying.

From all sides, the barbarian tribes from the east and the north were storming the ramparts of the Roman empire, and those ramparts were decayed at their foundations.

At the same time, a young slave escaped from Ireland to France. That young slave became known to the world at St. Patrick.

After completing his studies in France, he returned to pagan Ireland and made it Christian.

He made Ireland the isle of saints and scholars. When the Roman empire collapsed and all of Europe became engulfed in spiritual darkness, it was from Ireland that the light of knowledge came to illumine it again.

Today the civilization of which we are a part is being threatened by a new and even crueler barbarianism which springs from militant materialism.

All of us seeking the way to preserve our civilization dread the darkness which shall surely come should the forces of materialism capture the world.

I believe the answer to our problem is, in very large measure, found in the life and teachings of St. Patrick and through a better understanding of the great spiritual treasure he bequeathed to all mankind.

Before the coming of St. Patrick, the clan wars of Ireland were a tradition that stirred the hearts and the muscles of every Gaelic son. There were constant and bitter wars between the clans.

Each of the clans engaged in the evil practice of slavery, since it was their custom to take from a defeated enemy as many of the able-bodied men as they decided necessary to do the menial tasks of the victorious clan.

The family as the basic unit of society, was in a most precarious condition because the clan wars could easily disrupt it through the death of the father or by his being carried away in slavery by the victorious clan.

Physical might was the dominating element in all life in and among the Gaelic clans.

As you know, the Irish before the coming of St. Patrick, were pagans and sun worshipers. But these pagan Gaels had great courage, were avid adventurers, and were possessed of a confidence that made would-be foreign invaders hesitate to touch their boats upon the shores of Ireland.

But with the coming of St. Patrick and his winning of the Irish, an almost complete change took place in the basic character of the people.

St. Patrick taught the Irish the true dignity of man. He traveled the highways and byways of Ireland teaching everyone who would listen to his voice that all men were creatures of God, and as such, possessed an individual value which must be respected by all his fellowmen. The old clan wars which made life cheap indeed soon disappeared because they ran counter to the basic teachings of St. Patrick.

Through St. Patrick the Irish learned about the sanctity of the family and the integrity of the home.

The family became the primary unit of a new Irish civilization and the hearth of each home took on a blessedness which forbade the invasion of any but friends.

The Irish learned the lessons of charity, tolerance and brotherhood from the good St. Patrick. They learned that it is Christian to overlook the shortcomings of our neighbors and to forgive those trespasses which in the past had been an occasion for strife and warfare.

The true lessons of brotherhood became an indelible character of the Irish because St. Patrick insisted that his followers should never forget the essential dignity possessed by each and every human being.

St. Patrick brought to the Irish people a spirit of charity which he intended should dominate their characters for all time. This was a charity not only extended to those in need of material assistance or a friendly hand, but also a charity of thought toward our fellowman.

It goes without saying that slavery as a once accepted practice of the Gaelic clans passed into limbo with the advent of St. Patrick. It will be recalled that St. Patrick himself was a slave who had been captured by a warring Gaelic tribe and therefore knew from his own sad experience the cruel indignities that grow out of a society which permits any of its members to be regarded as less worthy than other members of that society.

The Irish always possessed courage, but St. Patrick gave to the Irish a new type of courage which goes well beyond the usual physical courage. That is the moral courage to stand up for what is right, even though the temporary cost for doing what is right may be very heavy.

The courage that springs from high principle and a desire to preserve an unquestioned integrity is the special gift of courage from St. Patrick.

The faith of the Irish which is legendary throughout the length and breadth of the world also came from the teachings of good St. Patrick. He taught the Irish to have faith in themselves, faith in the righteous cause, faith in our nation and faith in the ultimate triumph of goodness over evil in a world in which the devil's helpers are never quiet. This noble faith, of course, has its source in faith in God.

It has often been said that hope springs eternal in the hearts of the Irish, and that is true, because St. Patrick planted the seed so deep that all the Irish have learned the lesson of rejecting despair as the desperate lot of those who know not God.

The inspired hopes of the Irish have been the beacon hopes of the world because the Irish people have wished nothing but the best for all the people of the world.

And so all these attributes are the result of the works of St. Patrick and his blessings upon the Irish people.

I cannot help but wonder what St. Patrick would do if he were among us today, being confronted, as we are, with an all-out attack against the very pillars of the civilization he did so much to nurture and expand.

I speak of the ruthless onslaught against all the people of the world being made by the pagan Communists, as they seek to turn back the pages of history and to restore the barbaric rule of the pre-Christian era.

Everywhere the great moral and human values taught by good St. Patrick are being challenged, desecrated, and ridiculed by those who have been foolishly led to believe that man is nothing but an animal, and the only things of value in this world are those which can be measured according to some material worth.

The brotherhood of man, long cherished by all loyal sons of St. Patrick, is torn asunder by the cruelties and inhumanities of Iron Curtains, bigotry, intolerance, and, indeed, hatred.

Communism would bring to mankind a human slavery far worse than that experienced by St. Patrick in his boyhood, just as it has established a super-race which grants itself the privilege to exploit all other men and to hold blithely in their hands even the question of life or death over their enslaved fellow man.

The virtues of faith, hope, and charity are degraded as the earmarks of a decaying society by those who would replace these great qualities with the rule of the jungle.

The sanctity of the family and the home is under attack by the new order which claims that the state is all-knowing and therefore has the right to invasion of the home, the right to force separation of husband from wife, and children from parents, and even the right to cruel deportation of people to barren and lifeless parts of the Russian empire.

The new order being advanced by the Russian Communists seeks to destroy all hope in mankind, to create a general attitude of

despair, and to so weaken the will of civilized mankind as to make easy the way of world conquest which is, of course, the goal of the Comunist tyrants.

To be sure, St. Patrick would recognize that all civilization is being put to an acid test, the outcome of which may very well determine the destiny of all mankind for a thousand years.

One can only speculate as to what St. Patrick would do under these circumstances if he were here with us today, but I am certain, if I understand the many gifts of St. Patrick to all the human race, that he would make a great effort to restore the integrity of nations as well as individuals.

He surely would point out to us that integrity of both nation and individual is soon lost if any nation or individual fails to stand up for what is right, to stand by their friends in time of need, to have no fear of the enemy, to be courageous in the face of overwhelming odds, and above all, to understand that there is a state of life far worse than the cruelties of war.

St. Patrick, were he among us today, would, I believe, insist that our national integrity be removed from the altar of expediency.

He would, no doubt, point out that we are running short of allies to be sacrificed on that pagan altar of expediency, and that unless we amend our ways, we, as a nation, will soon find ourselves on the sacrificial altar of militant materialism.

He would insist that the tortured cries for help which come forth from the many nations enslaved by the ruthless Russian Communists, be answered in a true and unyielding Christian spirit.

Above all, he would urge that we restore the hopes of the enslaved people for early liberation from their martyrdom, those hopes which have been so shattered and worn by continued adherence to the amoral policy of containment.

I have no doubt he would reprimand those in public life who advocate a do nothing policy by holding that the evils of our day must be overcome by evolution rather than by righteous action.

It also seems certain to me that St. Patrick would take steps to restore that great virtue of faith without which no civilization, or nation, or individual can long endure. He would stir up in all civilized mankind such faith in the future as to make the threats of war and reprisal by the Communists sound like empty echoes from the dampness of the grave.

Through this great faith, false fears would disappear and true values would predominate every choice we must necessarily make if we are to preserve the civilization of which we are a part.

I am, above all else, certain that St. Patrick would admonish each and every one of us to do good works, for, by our good works, we shall be known as the true sons of St. Patrick.

It will do us little good on this glorious feast day of St. Patrick to sit idly by awaiting the return of St. Patrick to save us from the forces of evil which seek to destroy our civilization.

So sit idly by when there is so much to be done, is to invite the very disaster which all thinking men now seek desperately to avoid.

The barbarians of our day, who lead the cause of militant materialism, can be turned back to the primitive jungle from whence they have come. All mankind can be returned to a sanity, a peace of heart and mind that the great teachings of St. Patrick intended to be the birthright of every man.

We can accomplish all of this if each and every one of us, in the exercise of our daily lives, apply the wonderful teachings of St. Patrick.

This, then, is my plea to you today—let us each and every one pledge ourselves to a renewal of our great faith in the teachings of our patron saint—Patrick.

St. Patrick and the United States

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 19, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following radio address I delivered over station WMEX, Boston, on Saturday, March 17, 1956:

It may seem a bit late as the hours go to remind you good people that this is St. Patrick's Day.

The signs are all about us, for this is the proud day for "the wearing of the green" by 20 million of Irish descent, as well as by their friends, the Joneses, the Carusos, the Goldbergs, the Ouellettes, the Witkowskis.

For this is a happy day, and everyone wants to be a part of it.

At first thought, there might seem to be little connection between the belived patron saint of Ireland and the United States.

It was far back in A. D. 432 that St. Patrick brought Christianity to the Emerald Isle. That was more than a thousand years before the discovery of America.

Ah, but 'tis the spirit that counts, and not the far-away dates of history, or the spaces in between them.

The Irish, with their fierce love of independence, and trapped by the twin miseries of famine and the hard hand of persecuting tyrants, were among the first to settle in our free land.

By working with a will, and by putting a few dollars aside, they were able to pay the way for relatives and friends who crowded the holds of small ships—generation after generation—on the one-way trip to the paradise of America.

The rich and colorful oratory that fills the air with its own music on this St. Patrick's Day, pays tribute to their faith and their courage.

From the Revolution on through every emergency in which the United States called upon the best in its manhood and its womanhood, to fight and die if need be, the Irish were always up front, and in numbers greater than they were called upon to give in service to their adopted country.

Adopted, did I say?

'Twas a slip of the tongue.

No people have every embraced this land with greater warmth or devotion, making it their own, in company with other immigrants of good will, and giving richly to the family life and the neighborliness that make the United States a home for humanity.

Like other races, we have had a few among us with thin hearts.

The criminals. known or unknown, the draft-dodgers, the grafters, and the slippery ones who have stained their rich heritage—may God forgive them.

But not many of them, I can assure you, as the record proves.

These few shadows are almost invisible in the sunlight of Irish cheerfulness, and good character, and loyalty to God and country.

The lovely green, which forever recalls the scenery of their native land, is symbolic of the vitality and creative powers of the Irish. Of the hopefulness, and the joy of spring, that make the Irish eternally young. As immortal as their faith, which wins the respect and admiration of their fellowmen.

Remember the Boston policeman, who was recently singled out for honor by a nationwide television program? Quietly, and through the years, his kindness and his help had encouraged a young girl not of his own family, to overcome her disfigurement and her despair. And then—soon after—his own wife died after a long illness during which he had attended to her needs with a loving gentleness that inspired her to ask, almost with her last breath, whether she had married a man or a saint. His humble goodness, in helping others as well as his own, won the heart of the Nation.

He did not seek this tribute. Far from it. Others arranged it without his knowledge, for they believed that his pure and unselfish love for others should be recognized for its true worth. Above and beyond the evil that makes up so much of the news.

The Boston police officer whose great heart was revealed to us in spite of his wish to remain unknown bears a proud Irish name.

It is this abundant human quality of his race that we honor on St. Patrick's Day.

The unsung glory of those with Irish blood in their veins; industrious, reverent, but with the saving grace of humor that brightens the way, no matter how difficult it may be.

Saints and poets, athletes and labor leaders, scientists and statesmen, it is easy enough to mention the famous ones who are known to all. But where would they be without the pious example of their mothers or the strength for truth and honesty that they admired in their fathers.

The world of today places great store in the cleverness of a man, and of the skill he acquires through education and experience, but how often have we been disappointed to find that those we once looked up to, are lacking in character when put to the test.

That is why, on this St. Patrick's Day we should think first of the average American of Irish descent, and of the virtues of his race that make him a good man, a good worker, and a good citizen.

That he is courageous, no one dares deny.

His love for independence is so strong that he willingly gives himself to help other nations win their freedom.

There is no doubt that his faith in God, and in the life of the spirit that is eternal, inspires in him a longing for justice tempered with charity.

Thanks to the supreme teachings that St. Patrick brought to Ireland over 1,500 years ago; that have been handed on from parents to children through the generations; so that every true Irishman tries to live his life in honor of his Divine Creator.

Perhaps no other people have dedicated themselves to the sacred vocation of religion, in such numbers and with such devotion, as the Irish.

Church and home are their altars.

The fellowship of men of good will is their faith.

This then is the foundation from which their sons and daughters rise to eminence in our national life.

There were joyous parades in New York and other large cities today, but did you know that as far back as 1737, there were that many Irish in Boston that they were able to have a St. Patrick's Day celebration, to the delight of the early colonists?

Or that they were a potent force in the revolutionary army that won independence for us? George Washington's forces never had more than 25,000 men under arms at their peak, but of these, more than 4,000 had names that were as Irish as Sullivan or O'Brien?

More than 170,000 served in the Union armies during the Civil War. Under their own green battle flags, the Irish Zouaves, the Emmett Guards, the St. Patrick's Brigade, and other noted regiments, wrote brilliant chapters of heroism into American history.

During World War I there was hardly a unit in the United States Army and Navy that did not have Irish names to add luster to its morale and its valor. Three hundred and seventy-nine were awarded the Distinguished Service Cross for exceptional courage under fire.

When World War II threatened our survival as a nation they volunteered for national service by the hundreds of thousands. Whoever can forget Capt. Colin Kelly, one of the first heroes, or Audie Murphy who won more decorations than any other American fighting man, or the last full measure of devotion given by the Sullivan family, whose five sons died to keep us free?

As long as men shall live they will remember the time when General McAuliffe and his troops were surrounded by superior forces at Bastogne. His position seemed hopeless, and the enemy called upon him to surrender. To their demand, General McAuliffe replied, "Nuts." It took some time for the enemy to understand the positive meaning of this American slang, but as the Americans fough on against great odds until a relief column broke through, the enemy learned that the word surrender was never part of the Irish vocabulary.

Since World War II, they have risen to top posts of command in the Army and Navy in the persons of General Collins, and Admirals Carney and Burke.

One of our greatest sculptors was Augustus Saint-Gaudens. One of the most popular composers was Victor Herbert. You are right. Both were born in Ireland.

There are many who do not bear Irish names but who have Irish in them, nonetheless, including Presidents of the United States. It would take years to trace the whole story, and give full credit to all we owe to the charm, the stout hearts, and the integrity of the Irish.

So we must cull the few—the unmistakable ones.

Among our oustanding writers we mention the names of Kathleen Norris, F. Scott Fitzgerald, and Margaret Culkin Banning. And the most famous of all dramatists, Eugene O'Neill.

John L. Sullivan, Jim Corbett, Jim Jeffries, Jack Dempsey, Gene Tunney * * * who has not thrilled to their courage and their sportsmanship?

In political life, the Irish have found a fertile field for their talents. As governors, mayors, Senators, Ambassadors they have contributed so much that one wonders if American Government could function without them.

In the wonderful world of entertainment, they have captivated us with song and story. Whose heart has not been warmed this day upon hearing Kathleen Mavourneen, The Rose of Tralee, and When Irish Eyes Are Smiling? Ah, but that last one is indeed a beautiful sight to see.

From the Barrymores to Helen Hayes. Bing Crosby, Spencer Tracy, Pat O'Brien, Margaret Sullavan, and the Kelly girl who lives up to the name of Grace—what sweet and wholesome pleasure they have given us. Not to mention the bright youngsters coming along in their friendly way, through radio and TV, to gladden us in our homes.

If all the world were Irish, there would never be such a devil of a thing as communism. Of that you can be sure, for the God-fearing Irish will have no part of anything that would degrade the soul of man and turn him into an animal. Lucky it is that we have holy men like Bishop Sheen to show the Communists up for the scoundrels that they are.

Look about you to all the churches and colleges, and hospitals, and orphanages, and homes for the aged, that the Irish are building, not only for themselves, but for the benefit of their fellow Americans who seek inspiration, education, or sanctuary.

If more of this kind spirit could enter and humanize our business, and industry, and science, the United States would have nothing to fear, for all the world would be heartened by our example.

'Tis a proud day for the Irish, and a generous one.

Our happiness is complete as Yankees and southerners, Hebrews, French, Italians, and Polish people, in fact, all our brothers and sisters in this blessed land smile with us.

A toast to St. Patrick and the United States.

To a glorious past, and to the miracle of the future when all men will share in a better life.

Believing in God and in freedom.

A New Look at the New Soviet Tactics

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 19, 1956

Mr. HESELTON. Mr. Speaker, I am glad to call my colleagues' attention to a very interesting and significant speech by Gov. Christian A. Herter, of Massachusetts, to the Chicago Council on Foreign Relations last Thursday.

All of us are concerned deeply as to the recent change in Russian policy and tactics. There is an immense challenge to each of us to do our utmost in making any contribution within our power toward meeting this problem.

Governor Herter's suggestion deserves the most serious consideration we can give it. His speech is as follows:

A NEW LOOK AT THE NEW SOVIET TACTICS

Here at this crossroads of our country, before a group whose purpose it is to take counsel together on problems concerning the conduct of our foreign relations, it is appropriate that I share with you some reflections on the most acute problem in this field which has confronted us since the outbreak of hostilities in Korea. This is a problem of strikingly different character from the Korean crisis, so different that it might appropriately be called an outbreak of amicability. I refer, of course, to the recent shift in Soviet tactics.

That there has been a shift in Soviet tactics, and a drastic one, is a fact which no observer disputes. Smiles, handshakes, and hearty joviality are the order of the day. Promises have supplanted threats, and offers of economic aid and technical assistance are held out as rewards for neutrality in the cold war. The assertion that Soviet policies are dedicated to peace is evrywhere insistently proclaimed. Concurrently with the stepping up of these techniques, the methods of intolerance, violence and subversion which characterized Soviet foreign policy for nearly 30 years have been at least temporarily shelved. The teaching of Stalin that communism can be established only by revolution has been officially branded false, and the eclipse of his memory is symbolized by the taking down of his picture in the offices of party functionaries throughout the Soviet orbit.

That this is a shift only of tactics, and not of ultimate strategy or aims, is also agreed by every observer. There remains, however, wide disagreement as to its significance and therefore as to the countermeasures which it indicates. Testifying before the Senate Committee on Foreign Relations 2 weeks ago, Secretary Dulles expressed the view that the Soviet shift represents a victory for the administration's foreign policies. What a storm of protest this testimony provoked. If for a moment you had happened to forget that this is an election year, you might have found it truly startling. Secretary Dulles has been attacked as over optimistic, as unjustifiably self-congratulatory, even as misrepresenting the facts. Beneath all this sound and fury, what are the real merits of his position?

At bottom, Secretary Dulles' statements rest on three premises: first, that the traditional Soviet policies no longer produce results; second, that they have ceased to produce results because of the unity, firmness, and resolution of the free nations; and, third, that our foreign policies have contributed to bringing about this unity, firmness, and resolution.

As to the first of these premises there seems to me no room for legitimate doubt. A plotter in the Kremlin is no more likely than a general in the field to abandon a winning tactic. The employment of military power, violent revolution, and subversive infiltration brought under Communist domination hundreds of millions of people in theretofore independent countries. These techniques, singly or in combination, won for the Soviet system docile instruments of its aggressive purposes. So long as such results could be achieved, these were techniques worth exploiting to the hilt. Their abandonment or subordination can be accounted for only on the basis that the Communist tacticians have concluded that they simply cannot be relied upon to produce comparable results in the future.

Why, then, have the techniques of violence and subversion ceased to offer a substantial prospect of continued success? The answer, I think, can be found in a comparison between the conditions in which such methods are most likely to work and the conditions in which they are least likely to work. Infiltration, subversion and violent revolution are most likely to succeed where there are (1) economic weakness, (2) military weakness, (3) political disorder, (4) social disunity, (5) poorly developed democratic institutions and libertarian traditions, and (6) lack of awareness that the Communist Party everywhere is the tool of Soviet imperialism. Conversely, these methods are least likely to succeed in a country which enjoys the opposite situation—a country which is properous, well-governed, united, devoted to liberty, democratic, and alert to the true aims of the international Communist conspiracy. If this be true—and I think its truth is demonstrated by the history of the last decade—a country becomes better able to resist the traditional tactics of communism as that country progresses toward prosperity and freedom; such progress tends, almost automatically and subconsciously, to bring about an immunity to such tactics.

If I am right that progress toward economic strength, political unity, and civil liberty builds immunity to the historic Communist techniques, the reason why those techniques are no longer useful is easy to see. In the 10 years since World War II, just such progress has made steady gains in all the countries of the free world. They have built a wall of firmness, unity, and resolution against violence and subversion. This, to me, demonstrates the validity of the second premise underlying Secretary Dulles' testimony.

The third premise—that our foreign policies have contributed to this progress—seems to me equally clear. I do not for one moment question that our economic and military assistance have fostered the free world's economic and military strength; I do not doubt that our consistent support of the United Nations has blunted the force of aggressive designs; and I am no less convinced that our warnings have helped to expose the underlying goals of the Communist conspiracy. The system of alliances whose construction we have stimulated has united the free world in the determination

to contain the outward thrust of Soviet imperialism. Our history and example have contributed to the love of freedom and the establishment of democratic institutions wherever freedom flourishes and democracy is practiced. These achievements represent solid victories in the cold war.

But allow me in the deliberative atmosphere of this bipartisan Council to leave to the politicians the contest for credit. The important thing, after all, is to assess wisely the implications of the new Soviet tactics and to seize the opportunity to recapture the initiative.

Broadly speaking, the Kremlin's present foreign policies appear to be aimed at two goals—one immediate, the other more remote. The immediate goal is to prevent countries now belonging to the uncommitted group from alining themselves with the free world; a corollary aim is the enlargement of the uncommitted group by so magnifying the attractions of neutralism as to bring about the defection of countries now belonging to a free-world alliance. The more remote goal, of course, is the enticement of uncommitted countries to join the Soviet bloc.

The most concrete method of approaching these goals now being employed by the Soviet Union is one they copied from us: economic and technical assistance. To my mind there is little reason to believe that this method will actually accomplish much toward fulfilling the Soviet purposes. The uncommitted countries have shown by their reaction to the economic and technical assistance furnished by us in the past that their political allegiance is not for sale to the highest bidder. The considerations which have induced them to remain uncommitted are in no sense weakened by the acceptance of such assistance. If we have been unable by the grant of economic aid to bind the uncommitted countries to ourselves, what reason is there to think that the Soviet Union by the same means can bind them to itself? Such assistance scarcely breeds gratitude, and it certainly does not produce military alliances. What it does do is help to build economic strength and thereby contribute to political stability, strengthen insistence upon national independence, and create the conditions out of which a love for freedom can grow.

In the long run, these things all work for us. The free-world alliances to which we belong owe their strength not to a system of feudal allegiance directed toward the United States, but to recognition by each ally that it shares common interests and common risks with all the others. Such awareness is the only secure foundation of NATO, SEATO, or the OAS. Bribery, cajolery, and threats are a poor substitute. Allegiance procured by any of these cannot be depended upon in a crisis. As far and as fast, however, as economic assistance—from whatever source—contributes to building independent, self-reliant states, thus far will it create that stake in the interests and that concern for the risks which have united other countries in opposition to the spread of the Kremlin's totalitarian and imperialistic rule.

If it be true that economic assistance to the uncommitted countries, even though rendered by the Soviet Union itself, is likely in the long run to strengthen rather than to weaken their ties with the free world, what of other less tangible aspects of the new Soviet tactics? What, for example, should be our attitude to the Kremlin's attempts to encourage neutralism? The neutrality of any country, to be sure, is less advantageous to us than the adherence of that country to the system of alliances to which we belong. The longer a country remains neutral, however, the stronger is likely to grow its national pride and devotion to independence. If its preservation of neutrality can be accompanied by economic progress and the growth of political maturity, it becomes an increasingly poor prospect for conversion to communism. Again we come back to the basic proposition that progress toward economic strength, political unity, and personal freedom goes hand in hand with the development of immunity to the blandishments of communism.

There is reason, I submit, to believe that from the standpoint of Soviet aims, the historic techniques of violence, infiltration, subversion and propaganda, even though largely checked and stalemated in recent years, still offer greater prospects of success than do the new techniques. Whatever approach leaves the people to whom it is directed free to develop along lines of their true self-interest is bound in the long run to be self-defeating from the Soviet point of view. The Soviet tacticians are attempting to direct nationalistic and democratic drives into imperialistic and totalitarian channels. We can be confident, I beleve, that any such attempt will ultimately fail. We must act on the conviction that national self-determination breeds devotion to independence, that economic progress gives birth to the love of freedom, and that from freedom springs the determination to preserve it. Is reliance on this conviction a gamble? If so, it is a gamble with dice proven by history to be loaded in our favor.

If I am right in believing this, what are its implications for the conduct of our foreign policy? It means, in the first place, that we should focus our economic aid and technical assistance programs on the sole object of building economic strength. We should not encumber these programs with restrictions dictated by the wish to advance other and extraneous aims. From this it follows that we should not demand any quid pro quo for our assistance; we should not threaten to terminate it on slight provocation; and we should not limit our aid to countries which do not receive it from the Soviet. We should abandon, moreover, the attitude that any nation not with us is against us. That attitude may have been justified—and it was certainly excusable—in the early years of our effort to build strong military barriers to Soviet aggression. Although we still seek to strengthen such barriers, at least they now exist. Their strengthening is not an objective so urgent as to justify the alienation of countries which for reasons of their own are presently reluctant to commit themselves to our side. Our attitude today should be: If they aren't part of the Soviet bloc, they are part of the free world.

On the positive side, we should, first, develop long-range plans of economic aid and technical assistance bolstered by the maximum practicable assurance that they will be fulfilled. In carrying out such plans, we should have in mind that flexibility is a requirement no less vital than continuity, and we should never forget that the spirit in which we act is as important as the aid itself. We should, secondly, encourage aspirations toward national self-determination and the establishment in dependent areas of autonomous local governments. We should, thirdly, display sympathy and respect for the wish to remain neutral, remembering not only our own early history but the fact that no neutral nation has been incorporated within the Soviet system except by force.

The conviction that the true justification for economic assistance is the building of economic strength and that such strength is the foundation of freedom and national independence compels, I believe, another conclusion. It is that we should offer to coordinate our aid with whatever assistance the Soviet Union is willing to provide. If the Soviet Union proposes to build a steel mill, we should not feel bound to offer to build the same mill on more favorable conditions. We should, on the contrary, be willing to work out both with the Soviet and with the recipient country a program to which both the Soviet and ourselves can each contribute. We should approach the question of assistance solely in terms of the needs of the country to be assisted, and we should welcome contributions toward meeting those needs from whatever source.

Such an approach would, to be sure, involve the sacrifice of whatever advantage might be reaped from special gratitude to us. But that this would be a negligible sacrifice—if a sacrifice at all—is indicated not only by the history of our assistance programs during a period when we were the sole source of assistance, but by the probable resentment to be expected from our attempting to monopolize such assistance notwithstanding that we are no longer its sole source.

Willingness on our part to coordinate our assistance programs with assistance by the Soviet Union toward improving the economies of underdeveloped countries would have enormous propaganda value to us. It would, in the first place, do more than anything else could possibly do to demonstrate that our only selfish interest in granting economic aid rests on the confidence that strong and independent nations are bound in the long run to recognize the community of interest between themselves and the other nations of the free world. Secondly, it would force the Soviet Union either to expose its ulterior motives or to go along with us in programs from which it could reap no direct advantage. Finally, it would reinforce unmistakably our fundamentally peaceful and benevolent intentions. In so doing, it would at the same time go far toward neutralizing the intended effects of the techniques other than economic assistance which characterize the Soviet Union's new tactics: The encouragement of neutralism, friendliness toward the uncommitted nations, and the assertion of peaceful aims.

This is not to say, of course, that such a course on our part would automatically solve all our problems. The Communist tacticians may have adopted new devices, but we must not assume that they have forgotten how to use the old ones. On the contrary, they show every indication in the Middle East, especially, of continuing to employ their old technique of creating disorder and sowing the seeds of dissension. We must continue to be alert to their exploitation of every possible opening by every available means. The problem I have been discussing, however, is that of devising methods for combating or neutralizing the new Soviet techniques without impairing our ability to counter the old ones. From this point of view, the approach I have outlined has, I am convinced, the advantages of (1) simplicity, (2) consistency with our national traditions and standards, (3) immediate and universal appeal and (4) strengthening the free world over the long run.

If these views deserve public acceptance, as I believe they do, a group like the Chicago Council on Foreign Relations can play a vital role in winning it for them. Your concern is solely with the merits of the issues before you, and your views thus carry the added weight of disinterestedness. The need for such disinterestedness, like the need for balance and objectivity, is one of the basic reasons why issues of foreign policy should be removed so far as possible from the arena of partisanship. Another is the need for continuity, and to that a bipartisan group such as yours can also make a valuable contribution. We simply cannot afford in the conduct of our international affairs to veer back and forth with every change in party control of Congress or the White House. It is essential that other countries should know as clearly as possible the long-

term direction of our policies. Only with such continuity, moreover, can we recruit foreign service personnel of the very highest type; they cannot be recruited without assurance that their expert jugdments will be respectively considered by whatever party may be in power.

If, then, I have offered any suggestions or advanced any ideas which appeal to you as having merit, I hope you will subject them to searching scrutiny. Should you, having done that, still think well of them, let them be given the momentum of your disinterested and bipartisan support. Only through the efforts of thoughtful people like yourselves can we develop a unified response to the enormously difficult and challenging problems confronting us today. Only with such unity can we continue to discharge the responsibilities of world leadership.

The Family Farm

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 5, 1956

Mr. JOHNSON of Wisconsin. Mr. Speaker, nearly all of the farmers in the Ninth District of Wisconsin are family farmers. In fact, there are few so-called corporation farms in Wisconsin.

The Galesville (Wis.) Republican, edited by Mr. Hugh Ellison, carried an interesting editorial in its March 15 issue commenting on the economic importance of family farmers. I recommend the editorial for the attention of my colleagues. The full text of the editorial follows:

THE FAMILY FARM

Some months ago an article appeared in this column under the heading, "Mr. Big," which had to do with what is termed big business and its inroads on small business, gradually putting an end to the latter.

You read much today of the elimination of the family farm. In a recent issue, this column commented on an editorial by John Fischer, editor-in-chief of Harper's magazine, in which he described farmers as "country slickers" and our "pampered tyrants." His plaint was farm legislation that provided for parities. Further, he proposed that some millions, particularly small farmers, should be nudged off the land and helped to find some useful occupation.

By the family farm is meant those of up to 100 or to 200 acres, or the average farm in Trempealeau and neighboring counties. To where such farm families would be moved to find useful occupations Mr. Fischer didn't state; but it would seem the only place would be to industrial areas to add to wage earners turning out products for others to buy. That these should have to be customers outside cities apparently did not enter the mind of Harper's editor, whose tirade suggests his knowledge of farming in general and the equipment required to operate a farm is limited to a canopener for opening a can of condensed milk, and that milk is some synthetic factory product consisting largely of tap water.

But the idea of eliminating the family farm is spreading from the eastern part of the United States, and not all the advocates are of the caliber of Harper's editor. Regretable as it is, these minds point out that such elimination is necessary to our national economy and is in line with the changing times. In the last analysis it is the old theory of the survival of the fittest. It applies to small business as well, and mass dispensing and mass production taking over.

What is not mentioned in this assumption is the home life of the family farm, something that could not continue under mass farming. The family farm and the community life that goes with it is one of the foundation stones of the Nation. Eliminate it and also would be wiped out the small business concerns which now exist from rural patronage of the many.

The family farm should not be permitted to vanish. Its worth to the Nation far exceeds any benefits it may receive at the hands of Congress.

St. Patrick

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 19, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following from the Lynn Telegram-News, Saturday, March 17, 1956:

STORY OF ST. PATRICK IS TOLD BY WILLIAM CONLON

(By William J. Conlon)

It is just over 1,500 years since St. Patrick set foot on Irish soil. I doubt if there is in the church or in any other religious group, an event so remote that it has been continually celebrated annually for over 1,500 years as has been St. Patrick Day.

When St. Patrick came to Ireland, he did not find a savage people living in caves. No, he found a people well dressed, well fed, and well educated in their form of Druid worship, but all of them universally pagan. He had a message for them and after some little persuasion, they willingly listened to him. They did listen to him, so that island he found universally pagan, he left universally Christian. Like a river of peace, his progress was slow and steady. Going from place to place, with his tents, his horses and his cattle, like a large "Barnum and Bailey Circus" as it were, he preached the gospel of Jesus and Mary as only St. Patrick could do. After a few years, churches, schools and convents were erected, priests were ordained and bishops were consecrated. When our St. Patrick laid himself down to rest, he could see on every side, men who were to be the pillars of that young church, and when his dying eyes lighted up by the Light of Vision looked on through the centuries to come, his heart must have beat with joy to think that the church which he had established should be the light of nations and the fruitful mother of a host of saints.

For more than 1,000 years, the work of Saint Patrick was the glory of Christiandom. The Virgin Church of Ireland not yet stained by a single drop of martyr's blood, grew up and expanded itself.

Thousands of students from every land flocked to Ireland for an education. So much so, that 300 years after St. Patrick died, two colleges in Ireland, one in County Kildare, the other one in Limerick, had more Catholic students than there are in Harvard and Yale at the present day. Missionaries from Ireland were sent into every land. St. Patrick proved eternal truths by simplicity—the mystery of the Holy Trinity in the shamrock's three leaves in one stem, a lesson for all national leaders who today don't seem able to prove they have a right to exist. The spiritual shepherd of Ireland has shed a light o'er the earth which is one of the most vivid tokens of peace and justice. The green isle of Erin makes its presence felt among the nations of the world from pole to pole on St. Patrick's Day, March 17. Not with politicians but with saints has Ireland gained fame, and as the poet says:

"When the battle of life
Is all over and ended,
And our spirit will fly
To the great God always,
St. Patrick will plead
At the great Bar of Justice,
For the children of Erin,
The land of his love.
The beautiful legend
Handed down through the ages,
An eternal hope
That will never decay,
That St. Patrick will judge
His own beloved Irish
That were true to the faith

The Herter Policy

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 19, 1956

Mr. HESELTON. Mr. Speaker, I have placed in the Appendix today a speech by a former colleague of many of us, Gov. Christian A. Herter, of Massachusetts.

I want to include in this extension an editorial comment on that speech which was published in the Boston (Mass.) Herald on Sunday, March 18. It is as follows:

THE HERTER POLICY

The new Russian policy has presented us with a formidable challenge. But, as we explained in an editorial yesterday, there are complications for Russia in her new approach that can be exploited by us if we are quick, imaginative, and bold.

Governor Herter has offered a striking suggestion in this field. In his address to the Council on Foreign Relations in Chicago, Mr. Herter proposed that this country offer to coordinate its foreign aid with whatever assistance the Soviet Union is willing to provide.

In other words, instead of competing with Russia in foreign aid in a way which would diminish the benefit for the recipient country, we would offer a cooperative effort designed to produce the best result. If the Soviet proposes to supply technical assistance for the construction of a dam, we might offer to supply power-generating or irrigation equipment, instead of fighting over who puts up the dam.

This policy would have a tremendous propaganda value, making our peaceful purposes crystal clear. But it would also prevent the assisted country from falling into the Soviet economic sphere, and would diminish the appeal of communism that comes from a lowered standard of living.

Mr. Herter displays a grasp of foreign affairs that many may have forgotten he had during these years in the governorship. But not only does he have the grasp, but also the imagination and boldness to find constructive policies.

To suggest any cooperation with Russia takes a good degree of courage. Yet in this case cooperation may be exactly the way in which we can best blunt the new Russian policy.

Cotton Plan

EXTENSION OF REMARKS
OF
HON. HARLAN HAGEN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. HAGEN. Mr. Speaker, under leave to extend my remarks, I include herewith for the benefit of the Members of this House a plan for cotton which has been presented to me by Mr. H. E. Campbell, of Porterville, Calif.:

Hon. HARLAN HAGEN,
House of Representatives,
Washington, D. C.

DEAR SIR: Establish for each farm an allotment in pounds, based on the acreage allotments now in effect by using the past 3 years average per acre yield. Then each year adjust this poundage allotment to get the desired number of bales produced to take care of domestic consumption. This allotment to be supported at 100 percent of parity.

Example: A grower has 10,000 lint pounds or 20 bales marketing quota; he may plant any acreage he desires, however, he will only get 100 percent support price on 10,000 pounds. On any overproduction he shall pay 50 percent tax or the United States Government shall buy the excess pounds at 50 percent of parity. In either case, the surplus could be put on the world market without any difficulty and place this country in a good competive bargaining position.

Under this plan there would be no acreage controls; which does not and never has controlled production properly. This plan will help the economy in general, as to production, harvesting, processing, and handling of the products. It would be practically self-supporting and would eliminate a large amount of United States Department of Agriculture expense as there would be no need for acreage measurements that we now have.

If a grower wishes to try to stay within his quota, he may do so, however, a small grower could, in all probability, produce more than the necessary acreage with very little more cost, as he could farm more acreage without hiring any more help and with the same pumping plant and equipment. A large grower could also produce additional acreage with very little extra expense due to the efficiency in labor and equipment and still make some profit by selling the excess at 50 percent of parity.

Some years we may have any of a number of hazards. Example: Droughts, insect damage, water shortage, etc., that may bring our total yield down to our domestic consumption. For instance, a grower in the rain belt section may have drought whereby he would not produce above his quota on 1½ or 2 times his present acreage allotment. On the other hand, another section might have good growing conditions and the growers in this section would produce well over their poundage quota if they only plant their present acreage allotment and sell the excess to the Government at 50 percent of parity at no additional production cost.

Yours very truly,

H. E. CAMPBELL.

P. S.—I think this will prevent a large amount of cotton acreage going into other crops, which has in the past been done and caused a surplus in these other crops, this has been one of the faults of the acreage-control program.—H. E. C.

Down a Billion

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 5, 1956

Mr. JOHNSON of Wisconsin. Mr. Speaker, there are some people who believe that there are too many farmers in the United States, and that the solution to our farm problem is to bulldoze about a million small, family farmers off from the land. I do not subscribe to this belief. There are others who also do not share this theory.

The Rice Lake (Wis.) Chronotype is one of many weekly newspapers in the Nation which is close to our rural economy. In its March 14 editorial on the decline in farm income the paper comments on the theory that there are too many farmers in the country.

I draw the editorial—the full text of which follows—to my colleagues' attention:

DOWN A BILLION

The news that farm income declined nearly $1 billion in 1955, which was announced by the Agriculture Department last week, is certainly bad news for the Nation. What makes it toughest to take—from the farmer viewpoint—is the fact that simultaneously the income for the nonfarm segment of the Nation's economy outstripped the 1954 level.

It must have been more than a trifle galling for Secretary of Agriculture Ezra Taft Benson to have his own Department release the data, since Benson has been asserting that most of the blame for falling farm prices should rest with the preceding Democratic administration. The Democratic administration was long gone from the Washington scene in 1955.

Since this is 1956, and a presidential election year, the billion-dollar decline in farm prices the past year isn't likely to stir up any warm sentiment for Benson in the bosom of farm voters—or for a number of other Republicans.

The Department, in making its announcement, revealed also that the individual average income of farmers in 1955 was only $860, compared to $913 the year previous—certainly a slim return for the hours that the average farmer has to put in compared to many of his city cousins, particularly those of the metropolitan communities.

It may be easy for the big city folks—and the armchair economists—to argue on the basis of those figures that there obviously are too many farmers dividing up the melon, and that it would help considerably if a lot of them got off the soil.

That view appears to be shared by a good many of the top-dog GOP officials who overlook the fact that when the Nation's farm economy is in troubled straits, the economy of the entire Nation can be threatened, too.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided,* That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

The Catching of King Crabs

EXTENSION OF REMARKS
OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, March 20, 1956

Mr. NEUBERGER. Mr. President, I ask unanimous consent to include in the Appendix of the RECORD a most thorough and interesting article from the Oregonian Sunday magazine of March 18, 1956, describing the harvesting and catching of king crabs in the waters off Alaska. This article is by Mr. Joe Miller, of Seattle, one of the best-known free-lance writers and authors in the Pacific Northwest.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GIANT CRITTERS FROM THE ARCTIC WATERS

(By Joe Miller)

Man, in his quest for food, has ventured into the farthest reaches of the earth's waters. He has hunted the great sperm whale from Arctic to Antarctic. He has invaded uncharted Pacific waters after the meaty tuna and has battled Greenland's icy seas in search of cod and mackerel. There is practically no area where man hasn't risked his life in the hunt for edible creatures from the deep sea.

The newest venture into remote waters for seafood originates out of the Pacific Northwest. Every year a small band of venturesome fishermen from Seattle invades the ice-laden, remote waters of Alaska's Bering Sea in search of the giant Alaskan king crab. Their hunt keeps them at sea from March through November, almost as long as the Antarctic whaling fishery.

In recent years the quest has become big business. Starting from nothing in 1947, the northwest king-crab industry has developed into more than a million-dollar-a-year business. Today the king crab, almost unknown in Alaska a decade ago, is sold in frozen form, in markets across America and has become a delicacy that rivals Maine lobster in many of the East's smarter restaurants.

Portland is unique in the Nation as a market for fresh Alaska king crab, flown weekly from Kodiak to a supermarket chain in quantities of from 500 to 5,000 pounds at once.

Caught every Tuesday and cooked early the next morning, the crabs, packed in cardboard cartons, arrive in Portland by plane Wednesday night and are on display Thursday for housewives planning a weekend gourmet spread. During the 11-hour flight, no refrigeration is necessary because the temperature is so low in the cargo compartment of the plane.

The Portland grocery chain, besides offering the crabs in its own outlets, has shipped the delicacy on special order all over the Northwest and to customers in southern and eastern States craving fresh samples of the subtle meat.

So pronounced has been the king crab boom that the Japanese, who had been catching these huge red crustaceans of the north Pacific for years before World War II, have begun canning king crabs for United States consumption. Recently the Japanese opened a United States advertising campaign to push their product.

"When those smart Japanese fish people get into the act," said one Northwest fish packer, "you can be sure it's a good thing."

That the United States king crab industry exists today is due to the vision and doggedness of one man, an ex-herring fisherman from Seattle named Lowell Wakefield.

In the process of creating the industry, Wakefield, a mild-looking man of 45, went broke twice, found himself about $250,000 in debt, and suffered other discouragements that might have made a lesser man leap off the boat. But he stuck with it.

"You get into a darned thing like this and then you don't know how to quit," Wakefield said recently. "I was in so deep I had to stick."

His perseverance has finally paid out. The company of which he is president, Deep Sea Trawlers, Inc., annually sells more than $1 million of king crab throughout the United States. The company's three boats, the *Deep Sea*, an Atlantic-style trawler, and the *Shelikof* and *Foremost*, converted herring seiners, catch upward of 500,000 "kings" a year.

Since the crabs sometimes average as much as 6 feet in length and 25 pounds in weight, this haul puts plenty of crabmeat on United States dinner tables.

Recently another Seattle fishing man, J. E. Shields, has moved into the king crab field with a converted wartime freighter, the *Nordic Maid*. Shields has been canning the crabs at sea and consequently isn't in direct competition with Wakefield. Another concern sells the fresh "kings" marketed in Portland.

The Japanese crabbers, who fish the Bering Sea with tangle nets, catch twice as many "kings" as the United States fishermen—about 1,200,000 a year. Operating the tangle nets, which are just big Columbia River gill nets, takes a large supply of labor, of which Japan has a large supply.

Hence the Japanese 2-to-1 edge in catch. Their crabs are processed aboard their floating cannery, the 5,000-ton *Tokei Maru*, a converted World War I Hog Islander built in the United States.

In recent years Wakefield has expressed the fear that the Japanese, who fished out the king-crab population in their home waters, are overexploiting the Bering crab fishery. Recently, as a result of the growing controversy, the king crab has been included in the species governed by the International North Pacific Fisheries Commission.

Although the Japanese had been fishing for the North Pacific's giant crabs since 1892, the spiny crustacean had been relatively unknown in Alaska until World War II. The purple-brown-colored kings (scientific name: Paralithodes camtschatica) had been allowed to roam unmolested along the green mud bottoms of the Bering Sea, the Aleutian chain and down as far as southeastern Alaska waters.

Occasionally a purse seiner, fishing for Alaska red salmon around Bristol Bay, would pick up a king crab, and the crew would have a crab salad. A number of fishermen talked idly about their commercial possibilities, and one of them, "Kinky" Alexander, experimented with the idea for years. But without success.

"My brother Howard and I were fishing around Kodiak for herring before the war," said Wakefield. "The herring market was getting bad, and we were looking for something different."

The answer was unexpectedly provided one day in 1939. Lowell was working on his seine nets one afternoon at his Kodiak Island base, Port Wakefield (named for his father). Up to the dock came a truck driven by the foreman of a sawmill 10 miles down the bay.

"Say," the foreman shouted, "a bunch of big waves have hit the beach down at our mill, and they've left the damnedest looking crabs you ever saw on the beach."

Wakefield went down to the mill and suggested cooking the crabs in regular pots.

"We had the most delicious crab feed you ever ate," he remembered.

Wakefield sent one of the crabs down to the United States Fish and Wildlife Service office in Seattle. It was identified as a king crab, a species peculiar to the North Pacific. Next year the Fish and Wildlife Service sent a team up to investigate the density of the crab population in the area.

Their preliminary findings encouraged Lowell and Howard Wakefield to build a 35-foot boat, the *Prospector*, to go king-crabbing.

"We caught and canned quite a few kings," said Lowell. "But Pearl Harbor stopped us."

After the war the Fish and Wildlife Service finished its survey, indicating that the Alaskan waters were "loaded" with kings. Dr. Ira N. Gabrielson, then Fish and Wildlife Director, visiting Lowell Wakefield at Kodiak, said: "Somebody's got to go into this business. It might as well be you."

He returned to Seattle and went to see an 80-year-old naval architect named Duke Coolidge. The elder man, designer of many commercial liners and fishing vessels, told him he needed an Atlantic-type trawler which could stay afloat for long periods and handle rough weather. Cost: $500,000.

"I didn't know a damned thing about finance," said Wakefield.

"But I had so much enthusiam that I was able to raise $300,000 from some gullible souls. This capital, plus an RFC loan, enabled us to build our trawler, the *Deep Sea*, at Tacoma in 1947."

The *Deep Sea*, a 140-foot steel trawler, is designed especially for king crab fishing. The catch is cooked in huge steel vats and quick-frozen in blocks within 2 hours after the big trawl net has dumped the spiny creatures onto the deck.

"It's the most modern trawler afloat," says Wakefield. "We couldn't replace it today for $1 million."

VENTURE DUBBED "WAKEFIELD'S FOLLY"

In 1949, after three seasons of fishing, Wakefield's pioneering venture was being called "Wakefield's Folly" in Northwest fishing circles. His company, Deep Sea Trawlers, Inc., was $150,000 in debt, and he had creditors lined up from Los Angeles to New York.

But persistence finally began to pay out in 1950. The operation made a modest profit that year, lost it back in 1951, but by 1954 Deep Sea Trawlers, Inc., hit the overall break-even point. The 1955 catch was expected to put the operation respectably in the black.

"We're a going business now," Wakefield said. "When we started, food distributors could take it or leave it. We didn't have a penny for promotion, so we had to get consumer acceptance the slow, hard way. Now there is so much public demand that United States food distributors take all the crabs we can catch."

The task of hunting the king crabs belongs to the 22-man crew of the *Deep Sea*, headed by Capt. Bill Blackford, a square-hewn exskipper of a United States Navy destroyer-escort. The main hazards of the long voyages into the cold seas of the Arctic Circle are the chunks of floating ice that bob profusely throughout the Bering's roller-coaster waters.

Blackford, who shuttled convoys back and forth from Newfoundland to Murmansk, says that the Bering Sea beats the North Atlantic "any day for sheer nastiness."

"The ship is so sturdy that we can work in storms, gales, and 20-foot seas. Once the *Deep Sea* was frozen in the ice for a day, and while the men waited to get free, they stepped out on the floes and hunted hair seals and Arctic foxes."

When the *Deep Sea* locates a school of crab on its radar, the crew works 24 hours around the clock, laying down the big cone-shaped trawl net and picking it up every hour. At night, when radio reception is possible, a public-address system broadcasts music on deck while the crew works.

A single haul may yield from 500 to 800 crabs. They must be sorted by hand, with all females and immature males (under 6½ inches carapace, or back, width) being thrown back.

Handling the live crabs requires skill, for the large claw is capable of severing a mop handle even though the beasts are sluggish when the net hits water surface.

"They can bite right through the toe of a rubber boot," said one crewman. "I've got the scars on my left foot to prove it, too."

Crewmen detach the legs and discard the meatless body right after the net is in. The meat is removed from the shell by applying the tip of a leg to a compressed-air valve, which blows the fleshy part into a washing device. Then the crab is cooked and frozen for shipment to Bellingham, where it is packaged for the United States market.

Between rush periods there may be long lapses while the *Deep Sea* hunts another school of crabs. The crew has little to do but play cards, read, and carve objects from ivory they've picked up along the beach near the Aleut village at Akutan Island in the Aleutians. The *Deep Sea* puts in there about once a month for water and fuel.

Until 1953 the *Deep Sea* was the only boat in the Wakefield operation, ranging far into the Bering Sea. Then Wakefield did some experimenting with crab pots—similar to those used on the Oregon coast—and drag nets on Kodiac and along the Alaskan peninsula.

"I had a hunch there might be kings in the bays and protected waters," he said.

The returns bore him out. The area was teeming with crab, so Wakefield converted two old herring boats, the *Shelikof* and *Foremost*. Each boat caught 100,000 pounds of crabmeat apiece last year.

Wakefield looked across the well-scrubbed deck of the *Deep Sea*, riding evenly in the fishing harbor at Bellingham.

"You learn something new every day in this business," he said. "We're finally making a profit; so I'm not complaining. I still have as much confidence in king crabs as I did 10 years ago. But I'm not as starry-eyed as I was then."

Greek Independence Day

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. RODINO. Mr. Speaker, every nation in the world has figures of note who have left an impact on world history or whose advanced social and political concepts have gone into the stream of thinking over the centuries, inspiring countless other peoples to strive toward the fulfillment of high national goals. But there is perhaps no single country that has bequeathed to future generations as significant a list of such legacies as Greece. It is with extreme pride, therefore, that we congratulate the peoples of Greece and Greek decendants everywhere on the commemoration of Greek Independence Day. Since the idea of independence originated long ago with the ancestors of present-day Greeks, the day the Greeks themselves celebrate assumes a particular significance for the supporters of liberty and independence throughout the world.

Some 500 years before the birth of Christ the city of Athens was experimenting with a type of democratic government premised on ideas and aims which would benefit the individual above all else. The results of those early experiments were passed on to other peoples and countries, and, although the concepts were reinterpreted and elaborated upon in order to fit each changing scene, the basic beliefs in liberty, freedom, and individual dignity remained a central core of democratic philosophy. Greece, as the cradle of democracy, is the fountainhead of our own liberties and ideals, and the centuries have only served to mellow and refurbish the intrinsic qualities of the Greeks themselves, who remain stanch lovers of personal freedom and of human dignty.

As a gateway between Asia and Europe, Greece has suffered the incursions of foreign powers, events so unfortunately familiar to all areas lying in the path of states struggling for international aggrandizement and a strategic foothold. In the middle of the 15th century Turkish bands overran Greece, and the Greeks were under the invaders' domination for 4 centuries. Even though 1821 signaled the end of that phase of foreign rule, the Greeks were to feel again the tyrant's tread during the Second World War and in the years following its end. Nazism and communism were to test the fortitude and heroism of the Greeks, and they were to prove themselves equal to the task. At this very moment, however, the Communists within Greece are again persisting in seeking a predominant place within the Greek political structure, with the recent February elections showing that the Greeks still have a struggle ahead of them to counter this latest Communist ambition for power.

The future is bright, however, because the Greeks are united with us and with the adherents of the democratic way of life everywhere in the common moral battle to preserve democracy and personal integrity. Since President Truman in 1947 moved to help preserve the independence of Greece against the Communist onrush by extending military and economic aid to that country, the Greeks have continued to be a bulwark of strength within the Atlantic-Mediterranean community. We still remain at the side of Greece in her support of the cause of freedom on next Sunday, March 25, the independence day of the nation of Greece.

Planting of Crops in the Delaware Valley

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 20, 1956

Mr. MARTIN of Pennsylvania. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, a very interesting article published in the Philadelphia Inquirer of March 18, 1956, dealing with the planting of crops in the Delaware Valley, consisting of New Jersey, Delaware, and Pennsylvania. The article is written by Paul J. McGahan, Washington correspondent for the Philadelphia Inquirer.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Delaware Valley, U. S. A., farmers, and those in the Tri-State area, learned yesterday that some changes might yet be made in their prospective plantings this year, "after all influences have been reflected." These changes can arise as a consequence of changed crop acreage allotments, the future weather prospects, the profitableness of crops, and possible effects of the pending farm legislation.

As indicated by Delaware Valley, U. S. A., farmers, their present intentions will result in slightly smaller corn acreage as compared with 1955. It is planned to plant 1,372,000 acres of corn in Pennsylvania; 195,000 acres in New Jersey and 166,000 acres in Delaware. In oats, the indicated Pennsylvania acreage of 855,000 acres would be up from 1955, but the indicated 10,000 acres for Delaware is down. In New Jersey, the indicated oat acreage of 57,000 acres is up 14 percent over 1955.

Indicated acreage plantings for barley in 1956 in the Tri-State area is larger than planted in 1955. New Jersey at 30,000 acres is up 11 percent; Delaware with 16,000 acres is up 7 percent, and Pennsylvania with 235,000 acres shows an increase of 5,000 acres. The all hay acreage for the year stands at relatively the same levels as last year. For Pennsylvania, the indicated acreage is 2,344,000 acres; for Delaware, 67,000 acres, and for New Jersey, 258,000 acres.

There is a big jump in the indicated acreage of soybeans planted for 1956. For Delaware an acreage of 110,000 acres, up 28 percent from the 1955 acreage, is indicated. This increase is the greatest for the 31 States growing soybeans. Pennsylvania acreage at 55,000 acres is up 15 percent, and the New Jersey acreage of 49,000 acres is up 14 percent. The Pennsylvania tobacco acreage at 29,000 is about the same as in 1955. There is a decline apparently in potato planting acreage in the area for 1956 in Pennsylvania with 33,000 acres indicated, and in New Jersey with 20,000 acres. Delaware will put into

potato production 10,600 acres, a 15 percent increase over the 1955 acreage. Delaware will have the same sweetpotato acreage as in 1955. New Jersey, with 14,000 acres indicated, will be 18 percent under the 17,000 acreage of 1955.

Cotton Allotment Program in Alabama

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. ELLIOTT. Mr. Speaker, the reduction in Alabama's cotton acreage for 1956 is creating hardships for many cotton farmers throughout the South.

The legislature of the State of Alabama recently adopted unanimously a joint resolution concerning the cotton-allotment program and outlining the serious plight of Alabama's cotton farmers.

Under leave to extend my remarks, I include in the Appendix of the RECORD the following resolution adopted on March 9, 1956, by the Alabama Legislature:

Whereas the cotton-allotment program, as it is now being administered, is creating undue and extreme hardship upon individual cotton farmers in this State, and is causing reductions in many cases up to and in excess of 50 percent of normal cotton acreage on individual farms in Alabama; and

Whereas the national reduction in cotton acreage, since the free-planting year of 1953, has only been about 28 percent, but this State has taken reductions drastically in excess of that amount for that period, and many individual farms and farmers have taken reductions in excess of the State reductions, percentagewise, and these reductions are in many instances in excess of twice the percentage reduction for the Nation as a whole, and almost all Alabama farms have taken reductions in excess of 28 percent; and

Whereas these reductions have caused, and will continue to cause, wholesale financial distress upon the entire agricultural economy of this State, and as a result of this unwarranted and unnecessary financial distress many farmers have been, and will continue to be, forced off their land, others will be forced on relief, and these remaining can expect little more than a bare existence; and

Whereas our farmers see the need for, and do support, a reasonable and sensible cotton acreage program, and are and have been willing to take reductions up to and even slightly in excess of the national average reduction, providing that the said reduction is not so drastic as to cause an obviously impossible situation of economic distress on their farms, and wholesale unemployment to those depending upon the production of cotton for the use of their labor; and

Whereas the numerous severe cases of individual hardship brought about by these drastic reductions in cotton acreage have caused a state of emergency throughout the entire cotton industry in Alabama; and

Whereas immediate relief is mandatory if our cotton farmers are to avoid wholesale bankruptcy this year, and the resulting disastrous effect upon the entire economy of this State; and

Whereas it is the belief of this body that the reductions imposed upon the individual farms and farmers of this State should not be in excess of the national average reduction, percentagewise, based upon some normal free-planting year or years; and

Whereas this body has been informed of, and is aware of, the various bills to freeze cotton acreage allotments, which have been introduced in the Congress by various members of our Alabama delegation, and does hereby endorse these bills separately and severally; in the main, as stopgap measures, until such a time as more equitable long-range legislation can be made the law of the land; and

Whereas we do deem these various bills to freeze cotton acreage allotments, severally and separately, to be the most important legislation known to be before the Congress of the United States at this time, insofar as the cotton farmers of the State of Alabama are concerned, and we can see no sufficient relief in any so-called major proposed legislation before the Congress, insofar as the small farmer of our State, whose income primarily results from the sale of his labor through his cotton crop is concerned; and

Whereas we can see no justification for the extreme cases of individual hardship forced upon our cotton farmers, their employees, and other related businesses, by the inequitable administration of the cotton-allotment program; and

Whereas the loan-purchase program of the Federal Government as related to cotton, historically, has been a profitable institution of the Government, and at the present time is reported to show a net profit in excess of $200 million, and, therefore, this body feels that the administration of the cotton acreage-control program has overlooked the rights and necessities of our individual cotton farmers, who are a low-income, hardworking, and important segment of the national population, and a group whose love of the land and patriotism are unsurpassed in this great country; and

Whereas we do feel and understand that the real and damaging competition to our Alabama cotton farmers lies not, primarily, in our neighboring States of these United States and the cotton that they produce, but in foreign peoples, who have been established in the cotton business in recent years by American capital, American technique, American know-how, American machinery and equipment, and, by and large, with the support and influence of our Government's foreign policies; and

Whereas we realize that our people are being and have been penalized by these unintelligent foreign policies pertaining to cotton, which policies for years have been dominated by the interests of large American cotton corporations, which have invested vast sums of American money in foreign countries, buying lands, developing irrigation projects, building cotton gins, and developing the cotton industry in these foreign countries, and thereby putting cheap foreign labor in direct competition with our American cotton farmers, who historically have brought billions of dollars of foreign money into this country through the sale of their cotton abroad; and

Whereas this same foreign policy is demanding that these hardworking, low-income, and patriotic citizens, who have supplied this country with the cotton it needed to fight three major wars, at price far less than the world market existing at that time, be forced out of business, in return for the contribution which they have made toward the growth and security of this country while making little more than a meager living, and asking no more now than to be allowed to earn their living in the manner and way which tradition has taught them; and

Whereas we do not believe that the cotton-acreage program as it is now being administered is in keeping with the democratic principles upon which this country is founded, and we do not believe and cannot subscribe to a program which manifests the inequities known to exist in this State, with respect to individual farms and farmers and their cotton-acreage allotments; and

Whereas we do believe that when these inequities are made known to the entire body of the Congress of the United States, the Members of that body will, in their infinite wisdom take immediate steps to correct these inequities, and will pass legislation which will enable all sound, prudent, and efficent, cotton farmers at least to obtain a fair and reasonable return from their lifelong investments, and from the use of their labor as they have been trained to do: Now, therefore, be it

Resolved by the Legislature of Alabama (both Houses thereof concurring), That the members of the legislature do see the immediate need for, and hereby respectfully request, the Congress of the United States to enact long-range legislation which will correct the individual inequities which do now exist in great numbers in this State, which will allow our Alabama cotton farmers to exist at least on a reasonable and sound economic basis in the continued production of cotton, and which will protect the needs of the farmer whose chief income is the sale of his labor through his crops; be it further

Resolved, That the legislature of Alabama respectfully petitions the Congress of the United States to give this legislation the high priority which it merits, because of its importance upon the economy of this entire State; and that the legislature does hereby request each friend of the cotton farmer in Congress actively to seek and secure the immediate passage of some adequate legislation as indicated by the extreme emergency existing in this State at this time: be it further

Resolved, That the entire Alabama delegation be commended for their efforts, and for the legislation which they have introduced in attempting to halt this ruinous trend; and that they, both individually and jointly, are requested to seek and secure, before cotton-planting time in this State this year, the passage of some one of the pending bills, which will at least alleviate to some degree the emeregncy that exists in this State today, and, in the event such legislation is not immediately forthcoming, that the entire delegation from this State, both individually and jointly, secure from the Speaker of the House of Representatives, the President pro tempore of the Senate, and the majority and minority leaders of both Houses, the assurance that is necessary to inform the cotton farmers of this State that such legislation will be forthcoming, and that this be done immediately so that said information will be known before planting time, which is shortly upon us in this State; be it further

Resolved, That the clerk of the house of representatives transmit at once certified copies of this resolution to each and every Member of the Congress of the United States, so that they may be informed of the great emergency which now exists in the State of Alabama.

Exchange Club of Glendale Memorial Citizenship Award Program

EXTENSION OF REMARKS
OF
HON. CARL HINSHAW
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. HINSHAW. Mr. Speaker, I think it is time that we give national recognition to the Glendale, Calif., Exchange

Club for its praiseworthy efforts to promote better citizenship and a better understanding of our Government and American institutions.

The Glendale Exchange Club has undertaken for the last 8 years to send the two oustanding high-school boys from Glendale to the Nation's capital as a part of its Memorial Citizenship Award program.

This activity has been an outstanding success. At the end of World War II, the Exchange Club decided to establish a memorial to the sons of Glendale who gave their lives for their country.

Instead of erecting a monument, the club created a living memorial—that of sending the two outstanding senior boys from Glendale and Hoover high schools in Glendale for a week's visit in Washington, D. C.

This year, the eighth annual Memorial Citizenship Award winners—Gordon C. Gunn, of Glendale High School and Richard E. Foushee, of Hoover High School—will be with us. They arrive Tuesday, March 27.

Preceding them were Charles Waite and Wayne Anderson in 1955, Richard K. Harmon and Edward Coates in 1954, Jack Springer and David Anderson in 1953, Larry Hicks and Dudley Kebow in 1952, John Breckenrige and John Madden in 1951, Sumner Hopkins and Wayne Clemens in 1950, and Jack Hill and Charles Newman in 1949.

I might say that all these award winners have gone on to establish wonderful records in college and in their chosen fields of endeavor, reflecting the high caliber of these youthful ambassadors to the Nation's Capital from Glendale.

It is fitting and timely to announce that this year's winners will be guests of honor of the Washington Exchange Club on March 27, on which day the National Exchange Club will observe the 45th anniversary of its founding. Present with the two Glendale high-school seniors will be Harold Mott, of Washington, D. C., president of the National Exchange Club this year.

Statement by Angier Biddle Duke on Behalf of the American Friends of Vietnam in Reply to Chou En-Lai's Demand for Implementation of the Geneva Agreement on Vietnam

EXTENSION OF REMARKS
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mrs. KELLY of New York. Mr. Speaker, I desire to include the statement by Angier Biddle Duke on behalf of the American Friends of Vietnam in reply to Chou En-Lai's demand for implementation of the Geneva agreement on Vietnam. I feel this statement is sufficiently important to warrant this attention.

Mr. Duke's statement follows:

The free election to choose a democratic National Assembly in South Vietnam March 4 is an effective answer to Chou En-Lai's demand of January 30 to reconvene the 1954 Geneva Conference "to ensure implementation of the agreement on Vietnam." Chou En-Lai's transparent desire is to force communism upon the entire nation through all-Vietnamese elections which would permit 12 million Communist-captive North Vietnamese to take away the freedom of more than 10 million in the south. Under the thinly veiled guise of democracy, such all-Vietnamese elections at the present time are nothing more than another recognizable tactic of Communist imperialism designed to bring about the surrender of the newest free nation in Asia—South Vietnam.

The American Friends of Vietnam respectfully urge the American people and their elected representatives to support President Ngo Dinh Diem's call for truly free elections in the south and to totally reject Chou En-Lai's arrogant demands for the following reasons:

1. The 1954 Geneva agreement was not signed either by the United States or by the Republic of Vietnam, a government which has since been recognized by the United States and all of our Western allies. The official representatives of South Vietnam who attended the Conference bitterly opposed the provisions of the Geneva agreement at the time. Therefore, nothing which was said or done at Geneva is binding upon the Government of Vietnam, and any agreement imposed by others would be an infringement of the sovereign right of the people of South Vietnam to make their own decisions, through their own legally established Government. The whole purpose of Chou En-Lai's threat is to force the Western Powers into coercing the independent Government of Vietnam, which they have already recognized legally. Hence, even if there had been a firm and specific promise by the Western Powers to hold elections in 1956, they had no right to make such a promise, and would have no legal or moral right to enforce it now.

2. Actually, however, the Geneva communique merely expressed approval of holding elections throughout North and South Vietnam in 1956. There was no pledge to enforce such elections. There were no specific provisions as to how these elections would be carried out, or how they would be internationally supervised. There was merely a general agreement to the effect that such elections should be held by July 1956, assuming that conditions would then permit free elections and providing that conferences should take place between North and South Vietnam to work out the details. The agreement itself, therefore, presupposes not only the consent but the active participation of the Government of South Vietnam, before it becomes operative.

3. Moreover, there is a further development which wholly relieves the British and French of any legal or moral obligation about elections which they may have assumed at Geneva. The Government of North Vietnam (Vietminh) stands accused by the British and French Governments, as well as by the American Government, of gross and repeated violations of the specific terms of the Geneva Armistice, (a) in regard to the promise that citizens of North Vietnam could freely leave for the south before a specified date, (b) in regard to the specific provisions forbidding a military buildup in North and South Vietnam, and (c) in regard to the grave violations of the armistice which have also occurred through the Communist invasion and infiltration of Laos, whose independence was recognized at Geneva.

An armistice commission consisting of Canada, India, and Communist Poland was set up to supervise its fulfillment. This was a loaded commission, because India as well as Communist Poland has never recognized the Government of South Vietnam whereas they do recognize the North. Yet even so, not only the Canadian but the Indian members have protested against numerous Communist armistice violations.

It must be remembered that these are violations not merely of a vague and general agreement approved at Geneva, but of a specific and detailed signed armistice agreement between the commanders in chief of the opposing armies. This is the binding, legal document which governs the armistice, and this is the agreement which the Communists have repeatedly broken. There can, therefore, be no talk now of any obligation on any Western power to implement the Geneva agreement on elections, to which Chou En-Lai refers.

4. Beyond these compelling moral and legal considerations, there are broader political and moral reasons for believing that it would be suicidal for the free nations to accede to Chou's demand. Not only Vietnam but Germany and Korea are divided as a result of Communist aggression. The Western powers have steadfastly insisted on the necessity for truly free elections under international supervision in order to unite both Korea and Germany. We can do no less in the case of Vietnam without gravely weakening our whole diplomatic position.

This position is equally in line with the interests of our national security, for our whole purpose in organizing the SEATO pact to defend Southeast Asia from Communist aggression, or subversion, would be defeated if South Vietnam is lost to communism through a rigged election. If South Vietnam should fall, the whole precarious balance in southeast Asia would be destroyed. In particular the costly and prolonged effort we have made to democratize and protect Japan would be endangered, for the trade of Japan with southeast Asia is a matter of life and death to the Japanese economy now that it is largely cut off from trade with the Chinese mainland.

5. In the proposed elections the population of North Vietnam would vote under the control of a Communist dictatorship, with no protection except that of the so-called neutral armistice commission. If this commission has proved impotent to carry out the far simpler task of enforcing the armistice, how could it possibly protect the 23 million voters of Vietnam from interference, intimidation or reprisal?

Since the population of the North is larger than that of the South, under these circumstances it would be mathematically certain that the Communists would win, no matter how free the elections were in the South, or how great President Diem's anti-Communist majority. Thus the whole of Vietnam would pass without a struggle under Communist control.

Let it not be supposed that the Republic of Vietnam has reason to fear the holding of truly free elections. More than 800,000 Vietnamese have fled from the North to the South, and hundreds of thousands of others have been prevented from following their footsteps—in violation of the Geneva agreement. On the contrary, in line with our democratic faith and our knowledge that the Communists have never won a national election in any free country, the United States Government should take the lead in urging such elections whenever they can safely be held under the necessary safeguards.

6. In view of the above considerations, the American Friends of Vietnam respectfully urge upon our Government support of the March 4 elections and immediate public rejection of the Chinese Communist demand. We are confident that the American people will support any action which our Government takes to resist this new Communist threat to the youngest of our free allies.

ANGIER BIDDLE DUKE,
Chairman, Executive Committee,
American Friends of Vietnam.

The Unsatisfactory Nickel Situation

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. McCORMACK. Mr. Speaker, in the RECORD of March 15, 1956, I inserted an article from the Wall Street Journal of March 13, 1956, entitled "Black Market for Nickel Gets Blacker Despite Rising Output." Under leave to revise and extend my remarks, I include today an article from the American Metal Market of March 9, 1956, which contributes expert testimony on the present unsatisfactory nickel situation from the standpoint of civilian users:

W. F. ROCKWELL VIEWS GOVERNMENT'S NICKEL STOCKPILE POLICY UNREASONABLE

MIAMI, FLA.—The Government's 5-year stockpile of nickel came under attack here last night by a Pittsburgh industrialist and former Assistant to the Secretary of Defense.

Col. Willard F. Rockwell, chairman of the board of Rockwell Manufacturing Co. and Rockwell Spring & Axle Co., denounced the building of this stockpile as "unnecessary and asinine."

Colonel Rockwell addressed 400 officials of Pan American World Airways at the airline's annual management-club dinner meeting at Miami's Bayfront Auditorium. His subject was "Management Problems in a Growing Industry."

He singled out "Government nickel hoarding" as a typical example of the unnecessary controls and unreasonable Government actions that constitute a most serious hazard to business management today.

The Government's decision to stockpile up to 5 years of all-out war requirements of nickel as a critical and strategic material is ridiculed by most military experts, he said, in view of the almost universally accepted short-war concept.

Meanwhile, he added, the current artificial shortage of the metal for general industrial use is threatening the foundation of many American industries and the jobs of tens of thousands of their employees.

Colonel Rockwell cited the automotive bumper industry which, he said, had sales of approximately $160 million in 1955, had $80 million in invested capital and employed 50,000 trained workers here and abroad where the raw materials are mined.

"All this may be lost," he said, "if bureaucrats have their way and continue to build up an utterly unnecessary stockpile.

"Our Government's unrealistic demands for metal have created an artificial shortage, and caused drastic price advances of from 50 to 500 percent."

RECORD PRODUCTION

"Unfortunately, this hoarding has gone too far to be halted abruptly without creating some havoc," he said.

"World authorities on mining say that nickel is being produced at a rate 50 percent in excess of the current record peacetime consumption and that, if our Government withdrew from the market, many nickel ore mines would be forced to close.

"At the same time, our automotive industry spent at least $10 million during 1955 buying nickel in the gray market and the scarcity is increasing.

"Investigation indicated that much of the metal available in the gray market is coming from Government contractors who had nickel allocations far beyond their actual requirements and who are cheerfully selling 65-cent nickel at $2 a pound to less fortunate private industrial users.

"The automotive industry feels that there is no hope for correcting this situation, so the experts are seeking a substitute for nickel-plated bumpers—and that is the threat which every bumper manufacturer, his stockholders and his employees must reckon with."

The Training Institute of the International Ladies' Garment Workers' Union

EXTENSION OF REMARKS
OF
HON. IRWIN D. DAVIDSON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. DAVIDSON. Mr. Speaker, located in the heart of the congressional district which I have the honor to represent is one of the major industries of New York City, the women's garment industry. The International Ladies' Garment Workers' Union represents over 90 percent of the workers in that industry in the area known as Metropolitan New York. That union, which has for decades been regarded as one of the most progressive and enlightened labor unions in the country, if not in the world, has continually made significant contributions to the cause of industrial harmony and peace.

Under the farsighted leadership and direction of its president, David Dubinsky, the International Ladies Garment Workers' Union, established some 7 years ago, an institute in trade-union leadership and training. This institute is the first and only full-time school for union-leadership training in the United States.

Under leave to extend my remarks in the RECORD, I should like to include an article by Tom Brooks which appeared on March 10, 1956, in Labor's Daily and which explains fully the functions of this unique school:

NEW YORK.—If the AFL-CIO ever decides to establish a labor college, the Training Institute of the International Ladies' Garment Workers' Union may well serve as a model.

The institute, now in its seventh year, is America's first and only full-time school for union leadership training. Under the directorship of the late Arthur A. Elder and his assistant, Jack Sessions, the ILGWU labor college has graduated over 100 topnotch organizers into the service of the Garment Workers' Union.

Each year approximately 25 students are put through an intensive 12-month training program. Classwork is firmly wedded to practical training in the field in order to fit the graduates for the hectic life of an active unionist.

Any young man or woman willing to dedicate his or her life to the trade-union movement may apply for the upcoming session which opens on June 11, 1956, at the institute, 1710 Broadway, New York, N. Y. Tuition is free. However, the student must be willing to support himself for the year. A few scholarships are available for members of the ILG or of ILG families. While in the field the student receives an allowance.

UNION MEMBERS PREFERENCE

Applicants must be between 21 and 35 and possess at least a high-school education. Preference is given to members of the union, sons and daughters of union members, and to members of other AFL-CIO unions. However, no attempt is made to exclude those without a labor background if well qualified in other aspects.

The institute guarantees a job to all its graduates. Most graduates become organizers, a few education directors.

The life of a union organizer is no bed of roses, so in preparation the institute places a good many hurdles in the coures of study. The applicant is carefully screened. He is interviewed by the institute staff and by a subcommittee of the union's general executive board. If the student survives this experience he is on his way.

The Institute staff has skillfully blended a study-work program to give the student a broad theoretical background in labor problems and a practical knowledge of the methods by which unions organize and carry on their day-to-day affairs.

TWELVE-WEEK STUDY PERIOD

The student spends his first 12 weeks studying under the direction of the Institute staff. A rugged schedule of classwork is maintained throughout the period. Five days a week from 9 a. m., to 4 p. m. the student gets a heavy dosage of labor history, economics for workers, ILG history and structure, a course on the dynamics of the American community as well as training in specialized skills.

The second semester is spent in the field where the student is assigned to a local union or to an organizing staff. There are 5 semesters in all; 2 in the field, 3 in class.

Even in the classrooms, the accent is on a "curriculum in action." Workshops provide training in everything from cranking a mimeograph machine to sewing a dress. Some trade training is essential even for those students directly from the industry. All students are thoroughly grounded in the economics and engineering aspects of the garment industry.

The Institute draws upon the resources of the union for instructors in many of the courses. Outside teachers include labor historian Philip Taft, of Brown University. Adolph Sturmthal, of Roosevelt College, lectures regularly on the international labor movement, and Stephen Vladeck, noted labor attorney gives a course on labor law.

Homework may run the gamut from speech-making in Union Square to securing petitions for labor-endorsed candidates in New York City. If a nearby organizing campaign needs leaflets, more often than not, classwork will involve drafting material for the drive.

In the field, students have marched on picket lines, made house calls in an organizing drive, distributed early morning leaflets at the plant gate, landed in jail. They have worked in places as far apart as Kansas City and Puerto Rico.

EARN PLACE IN UNION

The institute graduated 118 students out of the first 5 classes; 20 more will join the ranks of organized labor this May. Since the institute graduated its first class in 1951, the students have earned a place in the life of the union. Early expectations of conflict have proved to be unfounded. Nearly all the graduates have remained with the union.

The ILGWU's pioneer attempt to train new people for careers in the labor movement has stimulated great interest in the American labor movement and abroad. Seven foreign students have been trained by the Institute. One graduate is prominent in the Government of Afghanistan; another is organizing workers in Nigeria; 3 are back in Indonesia

applying institute teachings there; and 2 are making a contribution to the textile and garment unions in Germany.

In 1937, the delegates to the ILGWU convention called for "the ILGWU, preferably in conjunction with the general labor movement, or under its own auspices, to establish a labor college where members of trade unions or persons recommended by trade unions shall receive the necessary training to fit them for service in the labor movement." Twelve years later that dream was realized in the institute.

PINPOINTS FAILURE

David Dubinsky, ILGWU president, has pinpointed the general failure to develop younger replacements for an aging trade-union leadership. He has also pointed out the increasing need for greater technical skills on the part of labor leaders.

Labor disunity forced the ILGWU to act on its own. Today, however, with unity a reality, the question of a general labor college once again may be raised. The practical experience of the ILG Training Institute and of its staff indicates that the job of creating and maintaining a labor college can be done.

Integration in Schools

EXTENSION OF REMARKS
OF

HON. ADAM C. POWELL, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1956

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters from Theodore E. Brown, director of education and research, Brotherhood of Sleeping Car Porters:

BROTHERHOOD OF SLEEPING CAR PORTERS,
New York, N. Y., February 6, 1956.
EDITOR, NEW YORK HERALD TRIBUNE,
New York, N. Y.

DEAR SIR: On February 2, 1956 your syndicated columnist, Walter Lippmann, in writing about the Powell amendment to the Federal school aid bill, made the following extraordinary statement: "The truth is that because of the position of the Supreme Court, Congress ought to reject the Powell amendment. For that amendment, far from upholding the Supreme Court's decision, would subvert it."

Mr. Lippmann went on to say that "the position taken by the Supreme Court is that segregation in the public schools is unconstitutional, being a denial of the equal protection of the laws, and that the court will pass upon 'the adequacy of any plans' that State and school authorities may propose 'to effectuate a transition to a racially nondiscriminatory school system. During this period of transition, the courts will retain jurisdiction of these cases'." Mr. Lippmann's central theme that "the Powell amendment runs counter to the letter and the spirit of the Supreme Court's decision" is based upon his erroneous statement that the Supreme Court said in its decree that it would pass upon the adequacy of any school plans, and so forth. Also, later on, Mr. Lippmann stated that "the Supreme Court has accepted the burden of presiding over this transition."

To begin with, the Supreme Court in its decree of May 31, 1955 did not say that it would pass upon the adequacy of any school plans; it said the courts would. The correct quotation of that part of the Court's decree is: "They will also consider the adequacy of any plans the defendants may propose to meet these problems and to effectuate a transition to a racially nondiscriminatory school system. During this period of transition, the courts will retain jurisdiction of these cases." The "they" in the sentence above meant the lower courts to which the Supreme Court remanded the cases, and these lower courts were referred to in footnote 3 of the decision as being the three-judge District Courts convened in Kansas, South Carolina and Virginia. All through its decree of May 31, 1955, the Supreme Court refers to "the courts," meaning either those three-judge courts or the regular District Courts. Even the quotation used by Mr. Lippmann showed that it was the courts to which the cases were remanded, rather than the Supreme Court, which were to retain jurisdiction to consider the adequacy of any school plans.

Thus, the Powell amendment would not, as claimed by Mr. Lippmann, take away from the Supreme Court "the power to determine whether the law is being observed." By its own decision and decree the Supreme Court has given this function to the lower courts where the cases originated. Neither the Supreme Court nor any other court exercises administrative or executive powers. The courts merely decide the legality of the actions of administrators or executives, such as adequacy of school plans. All the Powell amendment does is to set up a legislative standard, viz, that school districts which continue to segregate colored pupils in violation of the Supreme Court decision will be denied Federal school-aid funds. Under the amendment the Secretary of the Department of Health, Education, and Welfare, or some officer thereof, would decide whether any given school district was qualified under Federal law to receive Federal-aid funds. The usual and standard legislative procedure as to such Federal-aid grants and practically all other Federal money is to give to executive officers responsibility for its expenditures.

Mr. Lippmann goes on to say that "the amendment proposes to have Congress take over from the Court the burden of getting the rule against segregation observed." As shown above, the Supreme Court has not taken on the burden of getting its own decision observed or enforced, and has not retained jurisdiction to exercise any supervisory powers over the adequacy of any State or school district plans. The Powell amendment does not propose that the Congress "take over" the burden of enforcing the Supreme Court decision. It properly places the responsibility upon Federal executive officers of determining that the Supreme Court decision is being observed before those Federal officers certify the payment of Federal school-aid money to any school district. Congress has an undeniable right to do this, and it does it in innumerable instances. This is a usual procedure for the disbursement of Federal money where legislative standards have been established.

It would seem that Representative POWELL and House Minority Leader MARTIN have a much better understanding of the school-segregation decision than Mr. Lippmann seems to have. These major errors made by Mr. Lippmann are apparently caused by his fundamental misunderstanding of the Supreme Court decree, and also by his unfamiliarity with the normal operation of the various branches of the Federal Government. His insinuation that Mr. POWELL and Mr. MARTIN are playing politics with the public schools seems unwarranted. Nothing has been brought forward by Mr. Lippmann which would support such an idea.

Very truly yours,

THEODORE E. BROWN,
Director, Research and Education.

BROTHERHOOD OF SLEEPING CAR PORTERS,
New York, N. Y., February 8, 1956.
EDITOR, NEW YORK HERALD TRIBUNE,
New York, N. Y.

DEAR EDITOR: David Lawrence in his column dated January 31, Washington in your issue of February 1, asserts that "tests conducted in the Washington schools show that, since Negro and white children were put in the same classes, the educational level has dropped below the national average." Since 64 percent of the pupils in the Washington schools are Negroes, Mr. Lawrence assumes and says that the mixing of colored and white pupils has resulted in a lowering of the educational level.

However, the data brought forward by Mr. Lawrence is very ambigous and inconclusive, and do not support his conclusion. First, his conclusion is based upon city-wide achievement tests (made after segregation ended but at date not indicated) given in the 3d, 6th, 9th, and 12th grades. Mr. Lawrence gives the figures for the 6th and 9th grades for reading and arithmetic, but he omits the figures for the 3d and 12th grades; and we must assume that they must not support his conclusion but be against it. It would, therefore, appear that only half of the tests support his belief and half of the tests are against his thesis that mixed schools have lowered the educational level of the Washington schools.

We must next take into consideration the fact that the city-wide achievement tests were given in only one-third of the grades, and the conclusions of the columnist are based on tests for only one-sixth of the 12 grades, i. e. the 6th and 9th grades.

In the beginning of his article Mr. Lawrence says: "Previous tests in all-white schools in Washington showed that the national averages had been [generally] (word in brackets supplied) attained." Now this admission indicates that prior to the integration of the schools, the all-white Washington schools were already below the national averages as regards achievement tests, because the national averages had been only generally attained. If achievement tests are significant, then the all-white schools upon being integrated brought with them their substandard pupils, aspects conditions, and qualities which would help to bring down the integrated schools below the national averages—when city-wide tests were taken for four grades.

In view of the fact that the all-white schools prior to the ending of segregation were in some respects already below standards, it would seem that Mr. Lawrence has ignored another possible cause for the failure of the Washington schools to attain the national average in achievement tests. Many people, including large numbers of parents, believe that the so-called progressive methods of classroom instruction have resulted in the universal impairment of the ability of public school children to read, write, spell and do simple arithmetic. This impairment has been found to exist without regard to place or region of school, or race or economic or social status of the pupils. And it may well be that the "drop-off" in the Washington achievement tests may be merely symptomatic of a general national educational deficiency.

Mr. Lawrence does not show how much of the drop-off in achievement tests scores was due to the low performance of white pupils and how much to the low performance of Negro pupils. In view of the fact that he gives some blind or equivocal figures for just 2 grades, the 6th and 9th, and there are merely 2 of 12 grades, and also in view of the fact that the Washington all-white schools prior to integration were in some respects admittedly below standard, Mr. Lawrence's conclusion that the

Negro pupils are responsible for the lowering of the educational level of the Washington schools is wholly unfair and entirely unjustified and unsupported by facts. To arrive at his conclusion it would have to be assumed that none of the 34 percent of white pupils fell below the national achievement test average and that none of the 64 percent of colored pupils went above the national average. And such a situation would seem entirely improbable. Furthermore, Mr. Lawrence's own publication, U. S. News and World Report, said some time ago that soon after and because of Supreme Court decision of May 17, 1954, many white parents in better economic circumstances moved in large numbers to the suburbs of Washington or sent their children to private schools. In this latter connection we must bear in mind that many educators believe that the achievement tests are formulated in the familiar language or terms of knowledge or family information of those in the higher economic levels, and therefore, the questions given in these tests are more easily answered by children from such families. In other words these educational tests may be "slanted" (however unconsciously) in favor of upper middle class children.

Mr. Lawrence repeats in milder language the general complaint of the more vociferous southerners who contend that the Supreme Court's school decision was wrong because as claimed by those southerners it is not based on law but on psychology and sociology. This, however, ignores the plain fact that the Court held that the purpose of the 14th amendment was to abolish distinctions made by the States, its subdivisions, and officers, solely on the basis of the race of individuals. It would seem obvious that the Supreme Court in referring to certain admitted facts of sociology and psychology was merely trying to answer the assertions of some people that Negro children because of their race are inferior to white children.

No one supposes that the schools can be integrated without a great many difficulties and problems. But is it too much to expect the people whose actions have created the "achievement lag" in respect to Negro children to help remove this condition rather than continue to advance it as an argument against integration?

Sincerely yours,

THEODORE E. BROWN,
Director of Research and Education.

Problems of the Middle East

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mrs. GREEN of Oregon. Mr. Speaker, in the face of the present crisis in the Middle East, it is imperative that United States policy be based on the widest possible understanding and consideration of the very complex facts. A very fine contribution to wider understanding was made here in Washington on January 17 and 18 when a conference of major national Jewish organizations heard a number of fine speakers, including Senators DUFF and SPARKMAN, discuss the problems of the Middle East.

Because I think we all should read his eloquent and well-informed remarks, I would like to include in the RECORD excerpts from the address given at the conference by Rabbi Philip S. Bernstein, chairman of the American Zionist Committee for Public Affairs. I would also like to include the declaration approved by the conference.

The excerpts and declaration follow:

ADDRESS BY RABBI PHILIP S. BERNSTEIN, CHAIRMAN, AMERICAN ZIONIST COMMITTEE FOR PUBLIC AFFAIRS

It was just 10 years ago, in the early months of 1946, that I went to Germany to serve as adviser on Jewish affairs to the United States military commanders in Europe. This was an office set up by General Eisenhower to help the Army meet the special needs of the surviving victims of the Nazi holocaust. Here I had my first opportunity to see in the DP camps, the refugees from Nazi persecution whose plight I had encountered during the war when my duties as director of the Jewish chaplaincy program brought me to the areas where American troops were stationed.

There is no need tonight to belabor the unspeakable horrors these people had suffered—the loss of their families, their property, their rights, their roots. Nor is it necessary to expatiate on the guilt of the Western World which could have saved innumerable Jews by opening doors to them in the democratic lands of the West, and especially in Palestine. The excuses now given for not aiding Israel to survive are reminiscent of wartime explanations of alleged Western geopolitical needs which condemned untold numbers of Jews to a needless doom. What seemed plausible then proved to have little basis in fact when a tiny band of Israelis in 1948, fighting almost with bare hands, withstood and beat off the combined might of seven invading Arab armies. Of what was the West afraid? Of what should it be afraid today?

The survivors, numbering by the summer of 1946 about a quarter of a million, were gathered in camps in Germany and Austria under United States care. Let me say tonight what I have stated on other occasions, namely, that the protection, the sustenance, the rehabilitation, the aid and resettlement given to these displaced persons by the United States Army was the outstanding example of practical humanitarianism in the immediate postwar world. I pay tribute again to General Eisenhower, to General McNarney, to General Clay, and Generals Clark and Keyes in Austria, and to Secretary Robert P. Patterson and President Harry S. Truman, for this noble undertaking. It earned them, as it earned our country, an honored place in the record of man's humanity to man.

I add immediately another word of appreciation for the ultimate role played by the United States in the resettlement of these refugees. For the fact that compounded their tragedy was that nobody wanted them. We beat frantically on doors everywhere but they were closed against these Jews. It was only when UNSCOP recommended the partition of Palestine into Jewish and Arab States, only when the United Nations gave its approval of this plan, only when Israel came into existence as a state, that the DP camps were liquidated as with a magic wand. I saw these people in the camps caught, as they put it, like rats in a trap, and then later I saw them arrive in Israel, free human beings, with their fate at last in their own hands.

In this development, which changed the course of Jewish history, which righted an ancient wrong, which came as fulfillment to biblical prophecy, the United States played a decisive role. This reflected not only its sympathy for the Jewish refugees, but its approval of Zionist aims which had been endorsed by every President since Woodrow Wilson, reaffirmed by Congress and hailed by the American people. Those who say that these things were done out of political considerations do a grave affront to the decency, integrity, and intelligence of the American people and their elected leadership.

Israel came into existence by the will of the civilized world. It immediately established a democracy. It gave equal rights as citizens to women, to Christians, and Moslems. It transformed the land and the people.

As I contemplate this new living organism, rising Phoenix-like from the ashes of the destruction of the old, as I think with exaltation of the modern realization of ancient dreams, as I contemplate the role which ours, the oldest and the greatest of democracies, has played in establishing the newest and the smallest, I think of the words of Benjamin Franklin, the 250th anniversary of whose birth we commemorated yesterday. It is reported in Madison's Debates in Federal Convention, that when the last members were signing the Constitution, "Mr. Franklin, looking toward the President's chair, at the back of which a rising sun happened to be painted, observed to a few members near him, that painters had found it difficult to distinguish, in their art, a rising from a setting sun. 'I have,' said he, 'often and often, in the course of the session, and the vicisstudes of my hopes and fears as to its issue, looked at that behind the President, without being able to tell whether it was rising or setting; but now, at length, I have the happiness to know that it is a rising, and not a setting sun.' "

Yes, it was a rising sun, but the sun has not set on hostility to Israel and to Jews. The Arab leaders, frustrated in their effort to destroy the new State, refused to make peace, vowing to destroy Israel. Shrewd Communist aggression exploited Arab weakness and Arab needs, not with any real concern for the welfare of the people, but as another instrument to weaken the West. The declining British power left a vacuum filled by Arab fanaticism and Communist connivance. Our own State Department, concerned with worldwide threats and commitments, became hesitant and indecisive about the basic realities and the moral obligations in the Near East. These factors combined to give Israel a feeling of isolation and insecurity.

No one wishes to justify every act by every Israel Government, but we have the right to insist that these should be placed in their proper perspective. These have been occasional islands of retaliation in a sea of unremitting hostility.

The basic fact today is that Israel finds herself in grave danger. It may have been true at one point that the Israel army, defending a total national population of one million and three quarters, might again have withstood the invasion of Arab armies, representing nations of 40 millions. But the balance of power has been changed. It is estimated that Communist powers have already poured over $100 million worth of arms into Egypt. This was done swiftly, efficiently and with the aid of Communist technicians. Hanson Baldwin, the military expert of the New York Times, wrote on January 4: "The Communist contract with Egypt is believed to provide for delivery of about 200 MIG–15 jet fighters, 30 IL–28 jet light bombers, about 150 to 200 Stalin III and T–34 tanks and 6 to 10 submarines."

The Egyptians are now boasting that these "arms are already in the front in such numbers that it is too late for Israel to launch a preventive war." Experts say that Egypt now has air superiority, which may mean that Tel Aviv, Haifa and Jewish Jerusalem could be destroyed by Egyptians perhaps with the aid of Russian technicians flying MIG–15 jet fighters and IL–28 jet light bombers. This could happen so swiftly that the U. N. Security Council, hastily called together for such

an exigency, would find itself with an accomplished fact. Can you not then appreciate the concern of Israel and its friends for defensive weapons necessary for survival?

The British also have permitted the shipment of surplus, arms to Egypt, including 180–190 World War II Valentine tanks of 16 guns, each, 24 Bren gun carriers and 45 armored cars. This is in violation of the 1950 Tripartite Declaration designed to prevent an arms race in the Middle East and to preserve the balance of power.

Through the northern tier pact our own Government has been sending arms to Iraq, which to this day has not signed an armistice with Israel and has publicly recommitted itself even after signing the Baghdad Treaty, to solidarity with the Arab states in their hostility to Israel.

Ringed by hostile steel, Israel stands alone. The Russians are committed to the Arab states because that is their way of weakening the West and of driving the United States, Britain and France from the Middle East, North Africa and the whole African continent. The British, for their own imperial interests, also continue to court the Arabs. The French are preoccupied with their own troubles in North Africa. And the United States for some time now has hesitated to take the positive action necessary to help Israel to survive. It has given Israel no arms to offset the military aid provided to the Arabs from many sources, including our own arsenals. It has offered Israel no implementable security treaty even though it has security treaties with 44 nations. I do not overlook Secretary Dulles' historic offer of August 26. I point out that this was predicated on prior agreements between Israel and the Arabs which simply are not possible at the present time. And in the ensuing 6 months nothing further has been done to offer similar guaranties against aggression to states, such as Israel, which desire peace in the Near East. There has not even been the announcement of any economic aid to Israel in the current fiscal year.

Thus, Israel stands isolated and insecure. This makes for a tense and explosive situation. The lack of positive, helpful action by the United States weakens the moderates and plays into the hands of the extremists. Every reasonable person is opposed to war, in Israel as here, but sometimes life forces its own logic, sometimes people act out of desperation. Time is running out. To meet these dangers I urge wise, early helpful action by the United States Government.

First, there should be the sale of arms without delay to enable Israel to survive. Survival is the first need, the first duty of any organism. There is imminent danger of the destruction of Israel by Arabs with arms provided by the Great Powers. This can and must be averted without delay by the immediate shipment of United States defense arms to Israel in concurrence with the language and real intent of the Tripartite Declaration.

Secretary Dulles' promise of guaranties against aggression should now be renewed with the offer held out explicitly to any and all states in the Near East that are opposed to aggression and desire peace. Even if Israel alone accepts the offer, there is less danger to the United States in such a commitment than in the explosive, uncontrolled tensions that obtain today. The very fact that the United States would be ready to guarantee against aggression would prove to be a stabilizing factor in the situation.

The United States should not surrender to blackmail. If we were to kowtow to Egypt in order to counteract actual or alleged Communist offers, our world position would become unbearable. If we were to sacrifice our friends for fear of our enemies, how many friends would we have left in the shrinking world of freedom? This is the context in which we should look at the suggestions emanating from Britain which would truncate little Israel or throw a corridor across her midst. Are we so sure that we want to make it easier for the Russions to get from the Middle East into Egypt? Has the recent behavior of the Jordanians moved us to give them easy access to the Mediterranean? Two days after we helped to usher Jordan into membership in the United Nations, the American flag was torn down in Amman. Apart from moral obligations, our own self-interest should move us to support our friends and to be wary of those who aid and abet our foes. Who is bringing Russian submarines and Russian crews into the Mediterranean to menace our Sixth fleet? Israel or Egypt? Shall we reward Nassar for it?

Or shall we strengthen our one true and committed friend in the Near East? I must point out that this is not a one-way street. Israel has much to give. Her army is tough and mobile. Its morale is excellent. Israel possesses technical skills and the industry to meet many technical needs. She has found oil, and more will be forthcoming.

If Napoleon was right, that in war the morale factors are to the military as 3 to 1, the people of Israel have much to contribute to the defense of democracy. Unlike the Arabs who are ruled either by feudalistic dictators, or by wobbly, wilful, temporary governments, they operate successfully and in stability under a democratic government. Ideologically they are committed to the West. Their basic needs have been, and in the future can be met by the West. They have the active concern, the devotion of the Jews of the world, except behind the Iron Curtain, where the Jews are not free to express themselves. Let me say plainly for myself and for the overwhelming majority of Jews who are represented in this conference, that we will not let Israel down. In our generation we have seen too many Jews die needlessly through the indifference of others. We will do everything in our power to enable Israel and her people and those who find haven in Israel to survive.

We believe this and do this as American citizens, convinced that this is consistent with both the humanitarian tradition of this country and its current needs. Something new and wonderful came into the world when the United States was established. It was built by pioneers seeking freedom. It brought a luminous message of hope to the oppressed peoples of the world.

Something new and wonderful came into the world with Israel's establishment. It, too, is being built by pioneers seeking freedom. It, too, shows the way to emancipation for backward and oppressed peoples. It is my prayer, my hope, that these two democracies will be drawn together by their common needs and common aspirations and by their common devotion to the free way of life.

DECLARATION

PREAMBLE

At the call of the presidents of 17 major American Jewish organizations, this emergency conference has convened in Washington to consider the deepening crisis in the Near East which threatens the peace and security of America and the Free World and directly menaces the future of Israel.

I. THE BALANCE OF ARMS

Soviet imperialism has now moved into the Near East. The Czech-Egyptian arms agreement exposes the entire area to penetration by Communist arms, agents, technicians and propagandists.

Communist weapons can only equip Egypt to accelerate its attacks, to intimidate Israel and to spawn neutralist Arab alliances in the Soviet design to obstruct the efforts of the democracies to strengthen the frontiers of freedom.

Military equipment also flows to other Arab states. The United Kingdom equips the Jordan Arab Legion and the Iraqi Army and has supplied large shipments of tanks and other material to Egypt. Our Government has made arms available to Iraq without requiring reimbursement.

This is a violation of the Tripartite Declaration of 1950 by which the United States, the United Kingdom and France committed themselves to prevent aggression and to maintain the military balance in the Near East. This military balance has now been destroyed.

Israel has appealed to the United States for arms to restore that balance so that she may defend herself from aggression long and publicly threatened by the Arab states. This is vital if war is to be averted in the Near East.

We call upon the Department of State to grant Israel's request to buy arms for defense without delay.

II. A SECURITY GUARANTEE

Our Government has entered into security pacts with 44 nations in Europe and Asia to unite the peoples of the free world in the preservation of peace. It should extend this system of collective security to Israel. Such an undertaking would be a logical development of the tripartite declaration.

On August 26, 1955, Secretary of State John Foster Dulles advocated security guaranties with Israel and with the Arab States, but conditioned them on Arab-Israel agreement. But the mounting threat of war, growing out of the export to Egypt of Communist arms and intrigue, makes it imperative that our Government enter into such treaty engagements without waiting for final agreements between Israel and its neighbors.

An engagement by the United States to help preserve the peace should not be conditioned on Arab consent and thus made subject to Arab veto.

We therefore urge our Government immediately to negotiate a security treaty with Israel and with such of the Arab States as are ready to join in the promotion and preservation of the peace.

We trust that Congress will give favorable consideration to such treaties or any other legislation for maintaining an arms balance and safeguarding collective security.

III. ECONOMIC DEVELOPMENT

A large-scale program for economic development in the Near East is now being planned by our Government. The raising of living standards and the encouragement of regional economic cooperation will promote peace and democratic institutions. Israel is a graphic demonstration project of how American aid can stimulate development within a country which guards individual liberty and preserves free institutions.

We note with approval the repeated declarations of the Israel Government of its willingness to accept the principle of compensation for abandoned Arab refugee property, and in this connection, we welcome the announcement by Secretary of State Dulles that our Government is ready to assist in programs looking to the compensation and resettlement of the Arab refugees. As organizations interested in the problems of all humanity, we applaud these efforts and we encourage the governments involved to expedite the solution.

We trust that American aid to Israel will continue and that any large-scale economic program for the Near East will stress the importance of cooperation by all nations in the region and will bring about the termination of all blockades and boycotts, which defeat and obstruct the efforts of our Government to raise living standards.

IV. THE PROBLEMS OF THE PEACE

We call upon our Government to make every effort to promote an honorable peace settlement in the Near East.

Israel's repeated offers to enter into peace negotiations have been rebuffed by the Arab States which have made impossible demands on Israel for territorial and other concessions.

We note with regret an official utterance by the United Kingdom advocating that Israel yield territory to purchase Arab acceptance of Israel's existence, a view echoed in some quarters in our Government. We are opposed to any efforts to force unacceptable conditions which violate the integrity and sovereignty of the parties. We urge ur Government to decline to advocate peace on such terms or conditions.

Our country rejects appeasement as a policy for ourselves. We must not impose it as a policy on others.

Tiny Israel has 8,000 square miles and a growing population. Her land-rich Arab neighbors are spread across an area of 2.5 million square miles. Any pressure on Israel for cession of territory would serve to reward those who have turned to the Kremlin and to encourage them to make new and unending demands. The dismemberment of Israel would be as catastrophic for America and the free world as the dismemberment of Czechoslovakia was for European democracy.

In the forthcoming talks between President Eisenhower and Prime Minister Eden, we urge our Government to make it unequivocally clear that we will not participate in any program which requires the truncation or mutilation of Israel.

We earnestly pray that our Government will always be guided by the highest moral and ethical principles in efforts to achieve peace in the Near East. To aid in the defense of Israel at this critical hour is to strengthen America's own best interests.

The American Jewish community will forever be proud of the significant role it has played in the rebirth of Israel. Accordingly, this Conference of American Jewish leadership reaffirms its determination to work for Israel's security, to promote her strength, to consolidate her economy and to help her fulfill her great destiny under divine guidance.

We are now engaged in a titanic contest with the Soviet Union to win the friendship and adherence of many millions of uncommitted peoples throughout the world. These millions will test the vitality and moral strength of democracy by the readiness of our country to stand firmly with those who, like ourselves, are dedicated to the practice and preservation of freedom.

SUPPLEMENTARY DECLARATIONS

THE ARAB BOYCOTT

The Arab countries maintain an unrelenting boycott and blockade of Israel in violation of United Nations decisions and principles. These practices have been directed not only against Israel. Americans dealing with Arab countries have been warned against any kind of commerce with Israel and have even been asked to disclose the religious affiliation of employees. American citizens have been denied visas to enter Arab countries solely on the ground of their religion—a discrimination which has been practiced even against members of the Armed Forces. Such discrimination is repugnant to American principles, and we note with satisfaction that our Government has recorded objections. We urge our Government to take vigorous measures to terminate such practices.

ARAB PROPAGANDA AGAINST AMERICANS

Diplomatic representatives of certain Arab governments in the United States have infringed upon American hospitality by using the public platform to vilify Americans for their friendship for Israel. They have spread propaganda injurious to American Jewish citizens and institutions, and have even acted in concert with notorious hatemongers. We urge our Government to inform the Arab governments responsible that this country does not tolerate the abuse of American citizens by foreign diplomats or attempts on their part to foment hatreds and to set Americans against Americans.

Foreign Policy in the Near East

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Tuesday, March 20, 1956

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Fruits of Expediency" which appeared in the February 21, 1956, issue of the Boston Daily Globe.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE FRUITS OF EXPEDIENCY

The foreign-flag freighter *James Monroe* is nosing her way through the Atlantic, bound for Saudi Arabia with 18 tanks that country has purchased from the United States. Behind her, she leaves an American public thoroughly confused as to Washington's policies in the explosive Middle East.

That confusion has not been clarified this past weekend by the singular performance of the Department of State. Last Thursday the United Press learned that these tanks and other military equipment were being quietly loaded on the freighter in Brooklyn.

Queried in Washington, the Department at first professed ignorance. After a storm of protest exploded in Congress and elsewhere, the State Department early Friday morning announced that shipment of these heavy arms to one of the Arab States was halted by order of the President. Thereupon officials in Saudi Arabia hinted that, unless they are sold arms by the United States, American airbase rights in their country would be canceled next June. Late Saturday Washington announced that the embargo had been lifted.

In its statement, the Department of State said it found the sale of tanks to Saudi Arabia conformed in all respects to our Government's policy; that the purchase was made last summer; and that all relevant agreements had been carefully checked at that time; and that our Government's aim is to avoid any contribution to an arms race between Israel and the Arab States, which have publicly sworn to destroy it.

Meantime, for nearly a year, the Republic of Israel had been pleading for the right to buy modern heavy weapons to maintain its relative strength, vis-a-vis the Arab States. They were not forthcoming. Declaring that the Tripartite Declaration among the United States, Britain, and France, of May 1950, pledged them to maintain the balance, these nations took Israel's requests under consideration.

Nothing happened, however, until September 1955. Then Russia suddenly announced an $80 million arms deal with Egypt, deliveries on which began within 60 days. These have included heavy tanks, heavy and light artillery, up to 200 MIG jet fighters, an unknown number of jet bombers, 10 submarines, training crews, and other equipment.

On Sunday last, Dictator Nasser of Egypt reviewed his new Russian jet fighters and announced "Egypt is ready for war." The Communists have shattered the West's monopoly position on the arming of the Middle East. Since September Saudi Arabia and Syria have joined in a military alliance with Egypt; and Russian offers of arms have multiplied among Arab States.

Israel's redoubled pleas for the right to supplement her defenses have meantime been taken under further consideration at Washington, while Britain has been shipping planes, tanks and heavy weapons to Israel's neighbors, Jordan and Iraq.

What is our policy in the Middle East? Has expediency—and fantastically foolish expediency at that—replaced principle?

Why is Israel, the second strongest state in the Middle East, staunchly dedicated to democratic freedom, being dallied with?

The Senate Foreign Relations Committee wants to know, and is asking Secretary Dulles. The American people also would like to know.

One hundred noted citizens have asked the President for a careful restudy of our foreign policy. The Middle East would be an excellent place to begin.

Cooperation and the American Way of Life

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, March 20, 1956

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from a speech by Clyde T. Ellis, general manager of National Rural Electric Cooperative Association, at the 14th Annual Meeting of the NRECA in January 1956. This is a very timely speech and deserves thoughtful consideration.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

COOPERATION AND THE AMERICAN WAY OF LIFE

(By Clyde T. Ellis, NRECA General Manager)

FREEDOM AND ABUNDANCE ARE THE AMERICAN WAY

What is the American way? Well, to the monopolist, yearning for increased profits, anything crossing his path is un-American. The American way is his way.

But to most people the American way consists of certain fundamental principles—principles intended to achieve the greatest good for the greatest number:

1. Freedom of speech and press.
2. Freedom of religious belief and practice.
3. Freedom of political belief and action.
4. Freedom of enterprise—that is, freedom of economic life, freedom from domination by either private monopoly or government, and freedom from coercion.

We all know the meaning of the first three freedoms, but point 4 is too often abbreviated to just free enterprise, and a lot of monopoly corporations parade under the guise of free enterprise to conceal their real nature. Most of us, when we say free enterprise, means freedom of economic life, freedom from domination or coercion by either private monopoly or government; but we also mean individual freedom of access to our Nation's natural resources, and the right and opportunity to improve our lot in life

through individual effort, through cooperation with others or through government.

Whatever the propagandists may say, America, to the common folks, has always meant freedom and abundance—and abundance has been the product not only of a rich heritage of natural resources but of the freedom of millions of men to think and work and develop those resources—and themselves—free from the crippling grip of private monopoly.

It is because of the American freedom and opportunity that we are here today. Left to private monopoly, most rural areas would still be in the dark and the blessings of electrically powered, labor-saving devices would still be something to see in the cities or to read about in magazines. But we did not leave it to monopoly. In America, we did not have to leave it to private monopoly forever. We took the bit in our own teeth and, in the finest of American democratic traditions, we set about the task of supplying ourselves with electric power.

Therefore it was not private monopoly which lighted the rural areas of America. It was real free enterprise, the freedom to cooperate together, through cooperatives and through the people's own government, that has given us this key to abundance. It is not we who have employed any un-American tactics or engaged in any un-American activities—for we are free enterprise and private property and democratic action all rolled together.

THE SOURCES OF POWER OVER MEN

Political and economic controls are the sources of power over men. He who would regiment people must control either governmental or economic power or both.

Short of military dictatorship, economic power is the supreme coercive power. Sooner or later he who controls the means of life—the means of producing goods and services—gains the whip hand over his fellow men. So long as the concentration of economic power is not too great, so long as there is a preponderance of free competitive enterprise, it is impossible for a few men to use economic power to dominate the rest.

Political power, in a democratic nation, stems from the people. Political power, at any given time, is the result of the ability of a man or a party to secure the consent of the people, in the form of votes for office.

Those holding or seeking power over their fellow men use various devices. In other countries military and police power are sometimes used by those in control of government. But propaganda is a major tool of all power-seeking groups everywhere, economic and political. It is by propaganda that the people are persuaded or brainwashed into accepting arbitrary rule, whether by business or government.

Propaganda power is largely a function of economic power. In the struggle to control the minds of men today the purse can easily become master of the pen, unless vigilant people prevent it.

JEFFERSON, LINCOLN, AND LIBERTY

The most persistent stream of economic philosophy that has poured down the years in American life has been that stemming from Thomas Jefferson.

His own writings and those of his followers emphasized that the basic foundations of a free people are economic freedom, including equality of opportunity, and the absence of private monopoly and concentrated wealth.

Since about 95 percent of all Americans lived on farms at that time, land was the basic resource. In Europe, feudal totalitarianism rested upon monopoly control of the land. Consequently, the Jeffersonians insisted that this Nation should be a Nation of free farmers.

Writing to his friend James Madison from France in 1785, Jefferson told of the poverty and misery there which had resulted from the concentration in ownership of land and other wealth.

In this letter he said:

"Legislators cannot invent too many devices for subdividing property * * * (one) means of silently lessening the inequality of property is to exempt all from taxation below a certain point, and to tax the higher portions of property in geometrical progression as they rise. * * * The small landholders are the most precious part of a State."[1]

In the early decades of the American Republic, there were two views regarding disposition of the Government land resources, which belonged to all the people. One view was that the land should be given away as subsidies or sold for a song to the big-land companies; the other—that of the Jeffersonians—was that it should be made available in small homesteads to those who desired to clear and improve and till it.

Abraham Lincoln was a devoted Jeffersonian. It was Lincoln who said, "The principles of Jefferson are the definitions and axioms of a free society."[2] In the presidential campaign of 1860, Lincoln championed the Jeffersonian view. A few days before his inauguration he stated:

"In regard to the homestead law, I have to say that insofar as the Government lands can be disposed of, I am in favor of cutting up the wild lands into parcels, so that every poor man may have a home."[3]

The culmination of this struggle was the passage of the Homestead Act in 1863 during Lincoln's administration. The Homestead Act established a positive preference—an antimonopoly clause—for the people in the public domain—once and for all.

The passage of the Homestead Act marked the end of the principal struggles over land resources, but the Civil War also marked the rise of the great corporation. Small farmers had always feared big Government and centralization of governmental power. Now they were outflanked. It was not Government as such which threatened to destroy liberty; it was the giant corporation, usually Government aided and subsidized.

Abraham Lincoln foresaw the struggle which lay ahead. Writing to a friend in 1864, he said:

"I see in the near future a crisis approaching that unnerves me and causes me to tremble for the safety of my country. As a result of the war, corporations have been entrenched and an era of corruption in high places will follow. I feel at this moment more anxiety for the safety of my country than ever before, even in the midst of war."[4]

UNITED STATES HAS ALWAYS BEEN ANTIMONOPOLY AND PRO-COOPERATIVE

The people of the United States have always been antimonopoly and pro-cooperative. The Revolutionary War had been fought, among other things, to end the monopoly privileges of British trading companies in the colonies. The effect of that war was to wipe out private monopolies in the colonies and the United States.

Substantial private monopolies had not emerged again until the rise of the big corporations during and after the Civil War. Beginning in the decades following the Civil War, the farmers pushed through bill after bill in both the State and Federal Governments designed to prevent and destroy private monopoly. Outstanding among the earlier laws were the old State Granger Acts, the Sherman Antitrust Act and the Interstate Commerce Act. In the next half-century the Federal statute books became studded with such antimonopoly measures as the Clayton Act, the Federal Power Act, the Securities and Exchange Act, the Communications Act, the Natural Gas Act, the Robinson-Patman Act, and the Public Utility Holding Company Act.

Let me read the purpose of the first of our country's principal antimonopoly legislation from one of the leading reference works on the law. Here is what it says:

"Broadly stated, the purpose of the Sherman Antitrust Act is the preservation of a system of free competitive economic enterprise and the protection of the public against the evils incident to monopolies."[5]

There is no question in terms of the legislation and court decisions that in this country monopolies are not a part of the free enterprise system. Moreover, they are illegal except in those rare instances where they have been specifically permitted by statute to exist.

And during the same period, the legislatures and the Congress began deliberate policies and programs sponsoring or favoring cooperative-type enterprise in order to improve the farmers' bargaining position and as a countervailing power against monopolies. These included farmers' cooperative production and marketing laws, Federal power marketing laws and the REA Act.[6]

These and other laws and court decisions recognize and establish the cooperatives as a legitimate part of the free, competitive enterprise system.

Surely if tradition, law, and court decisions are the guide, it is monopoly and not cooperation which is un-American.

Despite the laws, however, the trend toward private monopolies continued, and, particularly in the public utilities field, there was a tendency to tolerate and legalize them within whatever limits it was believed they could be regulated. In doing so, however, the Congress, the legislatures and the courts held that "A public utility is not a private enterprise"[7] because in return for granting it monopoly privileges and freeing it from competition the lawmaking bodies provided that the utilities should give up their right to exploit the market free of regulation.

But Congress and the legislatures overlooked one little loophole. They overlooked dehorning the private utility monopolies of the right to engage in unlimited propaganda activities. Consequently, for years now a vast and clever brainwashing campaign has been underway to convince the people that the privately owned public utility monopoly is the American way but that the farmers' electric cooperatives are not.

We of the rural electrics don't engage in the un-American-like practice of branding respectable citizens "un-American" but it seems to me the time has come that we must reply. We must reply with the unchallengeable truth that as between co-ops and monopoly, only monopoly has been declared inimical to the American free enterprise system.

FARMERS HAVE ALWAYS FOUGHT MONOPOLY

Throughout American history every major effort to keep the economy free and competitive rather than regimented and monopolistic has either originated with or been strongly supported by the farmers. The reason is simple. The farmers often find themselves ground between the millstones of high costs and low farm prices. This is because the farmer practices free competitive enterprise in an economic game where most of the other players have switched the rules and are practicing restricted output and monopoly pricing.

Whenever the farmer has stirred under economic pressures, or struggled to secure something he needed, like electricity, he has had four alternatives:

1. One was to seek Government ownership of the monopoly industries that oppressed him. But the farmer never wanted that.

Footnotes at end of speech.

Footnotes at end of speech.

Instead, he has taken the other alternatives:

2. He has attempted to persuade Government to regulate against the worst monopolistic abuses in rail rates, interest rates, insurance rates and rates on elevator service, ginning, compressing, etc.; or

3. After his long attempts to regulate monopoly failed, he has called in the power of the Federal Government to help restore some of the balance, as in prices; or

4. He has endeavored to use cooperatives to obtain a better break in grading or marketing his products, to reduce his costs below some monopoly-fixed level, and to obtain electric service.

The so-called regulated industries have fought back with smokescreens of propaganda, have had their clever lawyers battle incessantly in the courts, and have even captured many of the regulatory bodies themselves—all at the consumers' expense for they are allowed their profits over and above these so-called expenses.

Of the four alternatives, the farmers' efforts through the use of Federal assistance in the area of price supports and credit and his efforts to inject competition and obtain needed services through the development of cooperatives have been much more successful.

TREND IS STILL TOWARD MONOPOLY—WITH THE GOVERNMENT AS PROMOTER

But despite all these activities by the farmers and others, the American economy has continued its trend toward concentration and monopoly.

The big combines of private empires, with the power trust in the lead, spend hundreds of millions a year trying to prove to the American people that monopoly and bigness and the power to control people and influence Government are wholly unrelated and that hundred-million-dollar and billion-dollar corporations—monopolies and all—are really just like one-mule farms or corner grocery stores. They say or imply that monopoly does not exist, that our economy, dominated by a handful of big corporations, is really one of completely free competitive enterprise.[8]

Last fall two economics professors, Doctors Horace Gray and Walter Adams, of the Universities of Illinois and Michigan, published a revealing book called Monopoly in America—The Government as Promoter. They document many Government activities which, despite the antitrust laws, extend special privileges and subsidies to monopoly. In language which must raise the blood pressure of the whole private electric industry, they say:

"Among all the devices used by Government to promote monopoly, public utility or public interest regulation is in some respects perhaps the worst * * * the monopolist, aware of his strategic advantages, becomes increasingly demanding and arrogant. In the end the servant becomes the master * * * (and) society must in one way or another subsidize the monopolist to induce a tolerable level of economic performance" (p. 39).

Regulation is no substitute for competition, the authors contend, because regulatory agencies just cannot do the job.

"More particularly, however, they (the advocates of utility monopoly with regulation) completely misapprehended the nature of legalized private monopoly * * * its resourcefulness, its ruthlessness, its economic and political power, its capacity to evade or subvert public regulation" (p. 43).

But, they say, even at the same time that Government has been failing miserably in its half-hearted attempt to regulate monopolies, it has been resorting more and more to Government grants of privilege and subsidy to them. Among the subsidies mentioned are the billions of dollars of free gifts to the power companies in the form of accelerated tax write-offs to induce them to do what the companies say they are ready, willing, and anxious to do anyway. These subsidies, the benefits of which they refuse to pass on to their customers—including 694 rural electric systems—amount to more than either the Government's total investment in the Federal power program or its total loans for rural electrification.

Power companies and other big business mergers, and the gobbling up of smaller companies, partly through the devices of holding companies controls, are the order of the day.

For example, let us examine the structure and manipulation of the new Pacific Northwest Power Co. (recently incorporated in Oregon). Pacific Northwest is to be a $50-million joint subsidiary of four major utility companies—the Portland General Electric Co. (incorporated in Oregon), the Pacific Power & Light Co., of Oregon (incorporated in Maine), the Washington Water Power Co. (incorporated in Washington), and the Montana Power Co. (incorporated in New Jersey). It has been organized to exploit for profit purposes Federal hydro sites in the Northwest and has already filed on three of them—Bruces Eddy, Pleasant Valley, and Mountain Sheep, all in Idaho.

Each of the holding companies of this $50-million subsidiary would normally be subject to Securities and Exchange Commission regulation under the Public Utility Holding Company Act of 1935. To avoid the financial disclosures and regulation required by the Securities and Exchange Commission, these four companies are urging legislation which would exempt them completely from SEC jurisdiction under the Public Utility Holding Company Act. No less than four bills have been introduced in this Congress to exempt these companies from SEC regulation.

One of these companies, the Pacific Power & Light Co., has in its own right recently absorbed three smaller companies: the Mountain States Power Co. of Oregon (incorporated in Delaware), the Northwestern Electric Co. of Oregon (incorporated in Washington), and the Western Public Service Co. of Wyoming (incorporated in Delaware). Another, the Washington Water Power Co., just missed taking over the Puget Sound Power & Light Co. of Washington (incorporated in Massachusetts) when strong rumors became prevalent that Washington Water Power Co. was operating through what was termed a fake Puget Sound Power & Light Co. stockholders' committee. This deal was the subject of a congressional investigation this past summer.

It is interesting to note that according to FPC records, of the 40 major voting stockholders of record in these four big utility companies which jointly own the Pacific Northwest Co., 17 are in New York, 5 in Wilmington, Del., and only 6 are west of the Mississippi—6 out of 40. One New York security house is a major holder of record in all four companies. We think the evidence strongly indicates that the effective control of these and many other utility companies rests with eastern financial interests.

Washington Water Power's recent gobbling up of the Stevens County rural electric system was such a small incident in the operations of that immense private empire that SEC and FPC will probably never even hear of it.

[8] So successful is this propaganda that two noted economists wrote, in 1955: "And, most important perhaps, the public aversion and hostility to concentrated power has apparently been superseded by an attitude of toleration and uncritical acceptance." (p. 173) This is partly the result of the failure of the free press to tell the people the facts. "In lurid headlines they (the country's editors) warned of the dangers of creeping socialism, but said little about corporate giantism." (p. 176) ("Monopoly in America—The Government as Promoter" by Adams and Gray, McMillan Publishing Co., 1955.)

Alaska's Constitution

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1956

Mr. BARTLETT. Mr. Speaker, it is with pleasure that I present an editorial on the constitution for the future State of Alaska as it appeared in the Great Falls (Mont.) Tribune for February 29, 1956:

ALASKA'S CONSTITUTION WRITTEN

Alaska's proposed State constitution has been written and duly signed by 54 of the 55 convention delegates. One delegate declined to sign because of objection to certain provisions. Before the proposed constitution goes into effect it will have to be ratified by the citizens of the Territory and Alaskan statehood will have to be approved by Congress.

The new constitution is being hailed by political-science researchers as "one of the finest documents of its type ever written." John E. Bebout, assistant director of the National Municipal League of this country, comments: "It is not based on regional or group interests. It includes only the fundamentals, and it sifts out the best of the United States experience."

Of its drafting, the Fairbanks Daily News-Miner comments editorially:

"Men and women from all parts of the Territory, who represent virtually every shade of political creed and vastly different backgrounds, gathered for 75 days to thresh out deep and serious problems concerning this constitution.

"In the heat of the most bitter controversy that flared, political considerations remained buried. Furthermore, the delegates remained to the end, welded together by a realization of the importance of their task.

"It was obvious that regional or group considerations were not part of their deliberations. They worked together for the good of all of the Territory.

"The document they have completed has been hailed by learned political-science authorities as a model constitution. If ratified, it will stand the test of time and changing conditions.

"The Alaska constitutional convention did something else that is 'model' in our opinion. The convention proved that Alaskans of every political creed from every corner of the Territory can gather together, work for the common good, exhibit statesmanship on the highest plane, and produce results that will equal or exceed in wisdom and organization

the best such a gathering in any State of the Union could do."

Agreement in convention on the provisions of this constitution is further evidence that Alaska is ready for statehood. Congress should no longer delay in granting it.

Organized Opposition

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. BARTLETT. Mr. Speaker, in connection with legislation now being considered by the Territories and Insular Affairs Subcommittee of the House Interior and Insular Affairs Committee, I desire to present an editorial which appeared in the Fairbanks (Alaska) Daily News-Miner on February 29, 1956:

ORGANIZED OPPOSITION

It is sometimes amazing the manner in which organized opposition appears each time an Alaska statehood bill, or some other measure designed to give Alaska a bit of home rule comes up in Congress.

We find Congressmen from many States of the Union vehemently against legislation concerning Alaska which they know little about. We also find newspaper attacks on the legislation breaking out, and usually there appears to be a strange similarity in these editorial attacks on the Alaska measure.

Alaskans have long suspected that a major industry which is exploiting Alaska resources—the salmon industry—is behind this staunch opposition to granting Alaskans their rights of citizenship.

At present, a bill in Congress which would give Alaska control of its fisheries is being fought by the salmon interests. Here is proof that this industry has organized a major campaign that extends all over the Nation, in opposition to the measure now in Congress.

We herein print a letter received by the Honorable OTTO PASSMAN, a Representative from Louisiana in Congress. This letter was written by an executive of the E. & M. Brokerage Co., which is a New Orleans concern and which apparently has no connection with Alaska whatsoever. The letter follows:

"Hon. OTTO PASSMAN,
"House Office Building,
"Washington, D. C.

"DEAR SIR: We are urgently requesting that amendments for bill No. H. R. 244 by Delegate BARTLETT, of Alaska, and one by Congressman UTT of California, No. H. R. 8405, not be passed because they are detrimental to the economy of the United States as a whole, and also a serious threat to the people who are involved in the selling and buying of products of the Alaska Fisheries. It is the opinion of the various segments of the distribution of these products that to pass this legislation, would be injurious to the progress of the fishing industry.

"The following reasons quoted herein reflect the thinking of those involved in this industry.

"1. The fisheries of Alaska belong to the Nation as a whole.

"2. They are threatened by foreign encroachment and the Territory lacks the authority to adequately safeguard the national interest in the field of foreign relations.

"3. Alaska has no adequate means or staff to carry on the work of conserving and perpetuating this great national resource.

"4. The Territorial legislature has indicated a desire to see legislation enacted excluding residents of continental United States from participating in the Alaska fishery.

"5. The passage of such discriminatory legislation would deprive thousands of residents of Washington, Oregon, California, and other States of their principal means of livelihood, and would confiscate much of the capital invested there.

"6. The proposed transfer is not supported by and is contrary to the best interests of both the Department of State and the Department of the Interior.

"Will appreciate your every effort in opposing these amendments.

"Respectfully yours,
"The E. & M. BROKERAGE CO.
"L. V. MARTENSON."

Why is a New Orleans concern putting pressure on a Louisiana Congressman to block a bill which grants Alaska the right to control its own resources?

Some investigation done by a friend of Alaska in New Orleans brought up the following facts:

The E. & M. Brokerage Co. is a jobber for Royal Beauty canned salmon which is packed by the New England Fish Co. of Oregon. This Oregon fish concern has its headquarters in the Exchange Building in Seattle. Thus the pressure being put on a Louisiana Congressman by a New Orleans firm can be traced right back to the Seattle office of a firm that operates canneries in Alaska.

Furthermore, look at the arguments offered in this letter. Aren't they virtually the same statements we read in an editorial in a Seattle newspaper last week? Obviously, the above letter is being circulated through many channels throughout the United States.

The letter itself contains false statements to which the News-Miner replied in an editorial last week.

At least we know who our enemies are in our battle to achieve statehood for Alaska. It is obvious that the salmon industry will go to great ends to protect the interests this industry has in Alaska.

Actually, we wonder what this industry has to protect? The salmon runs have been virtually depleted under Federal control. The salmon industry has exercised so much influence over Interior Department policies that the fisheries resource in Alaska has been almost exhausted. Yet, the industry wants to perpetuate Federal control.

The selfish, greedy attitude of the salmon industry is a major obstacle to progress and expansion in Alaska. It is a terrible thing to say, but we are of the opinion that Alaska might be further ahead today if it never had possessed the magnificent salmon fisheries.

Conservation: A Program of Merit

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 19, 1956

Mr. AVERY. Mr. Speaker, under leave to extend and revise my remarks, I would like to pay tribute to the memory of the late Col. Henry J. Weltmer, of Hiawatha, in my home district of Kansas and to the outstanding program of soil conservation which he helped foster in my home State and the Nation.

Agricultural interests throughout the country lost a stanch and leading advocate of conservation with the death of Colonel Weltmer last January 14 at the age of 68. His final day of work before he was fatally stricken by a heart attack was spent in editing material for the Disseminator, a semiofficial quarterly publication which he originated to disseminate information about the various activities of government and semi-government business and activities in Brown County, Kans. It is fitting that his final activity was in the field he loved so much.

Despite his strong home ties, however, Colonel Weltmer's activities were not confined to Kansas. His energy and talents always were directed toward the national level as he strived constantly to promote defense and agricultural measures which would make his fellow Americans more secure and self-sufficient. He was an Army veteran of the Mexican Border and World Wars I and II, and served actively in the miltiary reserve program prior to his retirement under the Reserve Officers Retirement Act. He was a former newspaperman, insurance agent, and postmaster at Hiawatha, where he was always active in civic affairs.

Greatly interested in soil conservation practices, Colonel Weltmer had been active in recent years in organizing subwatershed districts and promoting conservation farming everywhere he went. I state without reservation that the late Henry Weltmer contributed more toward the progress of conservation in Northeast Kansas than has any other individual. The success of his efforts and those of his associates is clearly evident in the 1955 reports of progress made by the various soil and water conservation offices in my home district.

Statistical information is usually uninteresting but it does give some indication of progress made and work yet to be done, so I will cite those official figures which have been transmitted to me from conservation offices in my district.

In Brown County during the past year there were 117 new conservation district cooperators. There remain only 306 of the possible 1,829 basic conservation plans in the county for which application has not been made. It would appear, therefore, there is in the county a great interest in soil conservation. The eventual goal is best summarized in the most recent issue of Colonel Weltmer's publication, the Disseminator:

There remains so much to be done that we cannot think of lessening our efforts toward soil and water conservation. We should increase our activities in order that sometime in the foreseeable future every farmer in Brown County will be able to stand on his land and say, "I have done all that can be done to keep this soil here for myself and my family and the generations that are to come."

Before all of the farmers in the county can do this, we must have every farm in the county with a basic plan. We will have 242,214 acres of rotated crops; we will have 11,457 acres in waterways; we will have 46,636 acres of brush under control; we will have added 54,415 acres of cropland to our pastureland; we will have developed 1,722 acres in wildlife area, drained 6,627 acres, and built more than 144 flood retarding structures. * * * Consider the innumerable * * * ponds which are needed for conservation of water and the 12,896 miles of terraces which will slowly drain the water

into the waterways and ponds. All of this would indicate the years ahead will be busy ones and that our technicians are going to be much behind with their work, especially when you consider that they will probably have at least three organized watersheds in the county by the end of 1956.

The 1955 annual report of the Jefferson County Soil Conservation District in the State of Kansas also lists major accomplishments. The district has received 879 applications in the 8-year period it has operated. These applications represent 166,672 acres. Basic conservation plans have been developed for 633 of these applications and the remaining applications are in initial or advanced stages of conservation planning.

Accomplishments during the past year are indicative of the current upward trend toward applying soil conservation practices in Jefferson County. During 1955, the first major irrigation project to occur within the district was started. Increased interest among bottomland farmers concerning irrigation indicates this practice will now become widespread and rather rapidly applied.

Within the past year the district also extended help to two groups organizing watersheds under the Hope-Aiken Act. This is typical of the cooperation found in my home district.

The annual report of the supervisors of the Nemaha County (Kans.) Soil Conservation District for 1955 shows similar progress has been made in that area. Community watershed activity has increased in the county, with eight additional watersheds being formed during the past year. Work is progressing satisfactorily on projects already in operation.

Nemaha County now has 25,382 acres in conservation crop rotation, 33,312 acres in contour farming, 62,202 acres in stubble mulching, 3,088 acres in waterway development, 13,728 acres in brush control, 6,990 acres in pasture planting, 27,446 acres in proper use practices, 568 rods in fence-row improvement, 85 miles in diversion construction, 1,436 acres in drainage, 229 ponds in construction stages, 4 drop spillways, 85 drop inlets, 303 gully-control dams with vegetated spillways, 1,575 miles of terracing, and 260 acres of water spreading. Although this is a fine record of accomplishment, much work remains to be done in each phase of conservation practice.

Soil-conservation practices, which are the backbone of any watershed-development program, have shown a remarkable upswing in Leavenworth County, Kans., since the first of this year due in large part to the activities of the people pushing for the creation of Big Stranger watershed district. The Leavenworth conservation office reports that applications have been received for 170 erosion-control dams, which are structures built in ditches and gulleys to stop further erosion. These structures also give the farmer a permanent body of water for livestock purposes. Applications have been received for 41 stockwater pond dams, 73 grass waterways, and 29 terracing projects. These applications were received during the first 2 months of the year. In addition, there were many other applications for other practices under the agricultural stabilization committee program, such as the initial establishment of permanent cover, seeding legumes, applying agricultural limestone, seeding pastures, spring development, seeding against erosion, diversion terracing, drainage ditches, clearing brush and trees from pastures, and leveling land for irrigation.

The applications filed the first 2 months of 1956 in Leavenworth County represent more soil-conservation practices than were carried out in the county during the whole of 1955 and many times the amount done in any year prior to 1955. This response of cooperators to the program is very heartening to the people who are backing the watershed district movement, since it indicates very clearly that the people want the project to be carried out. The success of the program is very largely due to the work of the subdistrict committees working in cooperation. The men of these committees have been giving much of their time and effort, holding meetings and making calls from farm to farm in an attempt to line up every farm in the watershed of Big Stranger Creek for the program.

The tricounty—Atchison-Jefferson-Leavenworth—steering committee for the watershed association, in a meeting March 8 at Leavenworth, started proceedings toward the filing of a petition with the Governor's water resources board for a charter for the watershed association. The group is also taking steps for filing an application with the United States Department of Agriculture for Federal assistance under the Hope-Aiken Act, Public Law 566.

Doniphan County, also in my home district, ranks second in its area for soil-conservation work accomplished. The annual report of the board of supervisors for 1955 shows there were 43 new cooperators who signed up with the district and there were 28 basic farm plans completed. Soil surveys were made on 6,450 acres. Among cooperators there were 3,002 acres in conservation crop rotation, 2,945 acres of contour farming, 97 acres of stubble mulching, and 140 acres of waterways developed. There were brush control programs on 162 acres, deferred grazing on 5,100 acres, pasture planting on 1,122 acres, and tree planting for windbreaks on 1 acre. Members of the district constructed 2.7 miles of diversions, provided drainage on 876 acres, constructed 1 pond, built 29 drop inlet dams, erected 8 drop spillway dams, and completed 116.4 miles of terraces. In part, the report reads as follows:

> Last year was dry and at the same time some flash floods occurred. In both cases the work of the Soil Conesrvation Service proved its value. No longer do we feel we cannot afford it, but rather that we cannot afford to be without it.
>
> Farm prices slowed down our work in some cases, but our personnel has been very busy. In fact, we could well find use for another man.

As you can readily see, my interest in conservation farming practices is more than perfunctory. In fact, I built the first detention dam in Kansas under the Agricultural Stabilization Committee program on my farm in Clay County. The evidence of progress I have cited above is repeated in each of the 13 soil conservation districts in my congressional district. Each district has the legal responsibility for developing a districtwide soil and water conservation program aimed at solving local soil and water problems. Each district is responsible for carrying forward that program by helping farmers, upon request, to plan, apply, and maintain soil and water conservation measures which are sound technically and economically.

I would like to point out that perhaps the greatest limiting factor in the rate of applying conservation practices of any nature is the shortage of personnel required to plan, lay out, and certify the proper application of any particular practice. It was for this reason that I appeared before the Subcommittee on Agriculture Appropriations of the House Committee on Appropriations on February 27, 1956, to request an additional $10 million increase in funds be appropriated for conservation service use. This would increase the allowance for each of the Nation's 2,700 soil conservation districts by $3,700, thereby enabling the addition of soil and water conservation technicians to presently undermanned staffs.

Another means of stimulating water conservation practices would be a revision of directives which have been given by the Department of Agriculture with reference to the Hope-Aiken Act. Money spent for conservation work done prior to enactment of this legislation is not reimbursable under present Department of Agriculture policy. Any program which does not take into consideration land treatment already done and to be done will certainly retard watershed development. When participating farmers are assured of reasonable cost sharing in the projects, there will be great progress in all watersheds of my home district. H. R. 8750, reported favorably by the Conservation and Credit Subcommittee of the House Committee on Agriculture, contains measures to correct this problem, and I am hopeful of favorable and early action on this bill.

Records in the Soil Conservation Service of the Department of Agriculture show there has been more interest and performance in water- and soil-conservation development in my home district than in any similar area in the United States. Further, 3 of the 6 pilot projects authorized in Kansas by the 83d Congress are in my home district. Despite the present unfavorable economic position of the farmers in my district, their determination to proceed with conservation projects has not diminished. We are proud of this unselfish attitude shared by our farmers.

During the past few months, I have visited with the governing bodies of these soil-conservation districts. They are comprised of public-spirited men who serve without pay and at a personal sacrifice to advance soil and conservation work. They told me about the work cooperating farmers are doing and showed me the results of this work in the field. They also showed me the many soil- and water-conservation prob-

lems that urgently need attention. They said this work is being retarded by a lack of conservation service technicians to direct the projects.

I recognize fully that many of the 2,700 soil-conservation districts throughout the Nation are in the same situation. I suggest to the Members of Congress that serious consideration be given to legislation which would further this valuable program. It seems to me that the Government spends no money more wisely than the small amount it appropriates for the soil-conservation activity. I believe it has accomplished more lasting good at less expense to the Federal Government than has almost any other Federal undertaking. I know this is true in my section of Kansas.

In closing, I want to state that this program is a relatively new approach to the vast problem of conserving our natural resources. It is a long-range program and at this time we cannot determine how long it will take to complete this highly important initial phase of work. Any delay resulting from lack of legislative support will further deplete a natural resource that cannot be recovered.

It is my belief that the speed with which conservation farming practices are adopted and the degree to which they are maintained play a key role in determining the future economic stability of this Nation. If a good job conservation on the land is done quickly, we can all eat better. If a poor job is done, we may not eat as well as we now do. I stand solidly behind a Federal program which would speed soil- and water-conservation work in Kansas and the other States of our great country.

Results of Poll on National Issues in the 39th Congressional District of New York

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. OSTERTAG. Mr. Speaker, during the month of February, I conducted a poll among the voters of the 39th Congressional District of New York on several of the major issues now before our country. The poll covered every third voter in the district who registered in the 1954 elections, regardless of party affiliation. Some 41,000 ballots were delivered to residents of the district, and of that total 5,569 were marked and returned, or approximately 13 percent.

The questions, 20 in number, covered major domestic and international issues before the country today, and included 2 of major interest to the voters in this Presidential election year: Who is your first choice for President? and who is your next choice?

On the first question, a resounding 87 percent of those who signified a choice designated President Eisenhower. On the second question, more than 36 percent of those who voted designated Vice President Nixon. Both men far outran their nearest rivals. The runner-up to President Eisenhower was Gov. Adlai Stevenson, and the runner-up to Vice President Nixon was Chief Justice Warren.

Since not everyone voted on every issue, 2 sets of percentage calculations were made on the returns: 1 based on the total number of votes cast and 1 based on the total vote on each individual question. The following tabulation is based on the latter set of calculations:

	Percentages	
	Yes	No
1. Do you favor the President's soil-bank proposals, to improve our farm economy?	77.43	22.57
2. If there is a revenue surplus this year, should it be used (1) to reduce the national debt (70.74); or (2) to further reduce taxes? (29.26).		
3. Should the Taft-Hartley Act be (1) revised (36.94); (2) repealed (7.96); (3) let alone? (55.10).		
4. Should our immigration laws be further relaxed?	22.37	77.63
5. Do you favor Federal aid for school construction?	64.58	35.42
If so, should it be available to all school districts (26.16); or only to those where there is proven financial need? (73.84).		
Should it be made available to school systems maintaining segregated schools?	32.0	68.0
6. Should hydroelectric power at Niagara be developed by (1) the Federal Government (12.28); (2) the New York State government (11.92); (3) private enterprise? (75.80).		
7. Do you favor further development of power by Government agencies, where private enterprise is prepared to do the job?	16.74	83.26
8. Should the postal service be self-supporting?	82.29	17.71
9. On the premise that further substantial expansion of social security will involve increases in social-security taxes, over and above those already scheduled, do you favor:		
Elimination of the earnings ceiling, now set at $1,200 annually?	64.57	35.43
Lowering the age of eligibility from 65 to 62?	68.26	31.74
Extension of benefits to the disabled at age 50?	84.64	15.36
10. Should the Attorney General have power, on court order, to tap wires in suspected kidnaping and national security cases?	85.91	14.09
11. Should the Constitution be amended to provide that treaties and executive agreements which abridge or nullify constitutional rights are of no force and effect?	72.56	27.44
12. Do you favor the revision of the electoral college to make the electoral vote more nearly reflect the popular vote?	89.33	10.67
13. Should foreign aid be continued?	61.54	38.46
14. If so, should it be stabilized on a long-range basis?	50.35	49.65
15. Should the United States extend recognition to Red China?	12.15	87.85
16. If Red China is admitted to the United Nations, should the United States withdraw?	23.03	76.97
17. Do you favor more cultural and commercial ties with Russia?	38.1	61.9
18. Do you favor the establishment in our National Government of a Department of Peace?	55.71	44.29
19. Who is your first choice for President in 1956? Eisenhower (87.49).		
20. Who is your next choice? Nixon (36.07).		

On question 19, Who is your first choice for President?, a total of 4,668 voted, and 4,084 designated Eisenhower. The runnerup was Adlai Stevenson, with 197 votes, and 36 others were also-rans. On the question of next choice, only 3,532 voted, and 1,274 designated Nixon, with Chief Justice Warren next in line with 811 votes. Altogether there were 65 individuals named for second choice.

To Save Our Forest Investment

EXTENSION OF REMARKS
OF
HON. WALLACE F. BENNETT
OF UTAH
IN THE SENATE OF THE UNITED STATES
Tuesday, March 20, 1956

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "To Save Our Forest Investment," published in the Salt Lake City (Utah) Deseret News and Salt Lake Telegram of March 16, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TO SAVE OUR FOREST INVESTMENT

Being a businessman, Senator WALLACE F. BENNETT has particular reason to know the cost of waste and to know that money spent on good maintenance is the most economical money that can be spent.

Those convictions are behind his appeal to Congress this week to embark on an 8-year program to expand and maintain recreation facilities on the national forests.

It is already tragically late for Congress to do something about the disgraceful neglect of these facilities. During the past 15 years, available funds haven't even begun to maintain existing facilities, let alone build new ones.

As a result, at least 40 percent of the excellent construction done by the CCC in the 1930's has been allowed to deteriorate beyond use. No wonder a man of Senator BENNETT'S business sense is profoundly shocked.

There have been voices raised to correct this shameful situation during the past few years. Each session of Congress has had bills before it. Some have asked that 10 percent of forest receipts be earmarked for recreation and wildlife habitat preservation. Others have sought larger appropriations from year to year or have tried to tackle the problem in various ways. There are nine bills before the present Congress, all dealing with the same problem.

But none of them, to our knowledge, has attempted the sort of long-range, planned approach that Senator BENNETT'S bill represents. Perhaps that is why Congress has shown no interest in them so far. One hopes so, and that the program Senator BENNETT has presented will get prompt, favorable consideration.

Generally, the Forest Service has been struggling along on appropriations of between a million and $2 million for recreation maintenance. There has been some improvement lately, and the appropriation for fiscal year 1957 carries an appropriation of $2,194,000, an increase of $470,000.

But even this, as Senator BENNETT pointed out in his statement to the Senate, is not even enough to rehabilitate present facilities. He proposed that $1.2 million be added to that appropriation this year and that the amount be scaled upward to $3.7 million during the next 8 years. In addition, for new capital improvements, he asked $1.5 million this year, $3 million next and $4 million each year thereafter through 1964.

Certainly the need for additional facilities cannot be argued. In the 1930's when most building was done, total visits to the national forests ran from 8 million to a high of 14½ million in 1938. Last year, 45 million jammed facilities that not only have not been generally improved since 1940, but have actually deteriorated.

Perhaps no other State has been harder hit than Utah in this respect, as anyone who has tried to find camping or picnic facilities in Wasatch front canyons can well imagine. Utah ranks third, behind only California and Colorado, in the number of recreation visits to its national forests.

Well then, it might be argued, let Utah take care of those forests and provide recreation facilities in them. But that represents an over-simplification in thinking, too. These are national forests; a fourth of the visitors on them, in Utah, at least, are from out of State. It is a national problem.

It may well be that some sort of partnership arrangement could be worked out whereby nearby cities and counties could help share in the burden in proportion to the recreational use of the forests by local people. Congressman CLIFFORD G. MCINTIRE, of Maine, has introduced a bill aiming in that direction. Certainly the intent of his bill, that private and public agencies and individuals should be allowed to enter into cooperative agreements with the Forest Service to make needed improvements, is worthwhile and Congress should study carefully ways and means to put it into effect.

But meanwhile, Congress must lose no time in shutting the doors of waste and neglect before it is late beyond recall.

The Indian Problem

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. BERRY. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting an editorial from the Mobridge (S. Dak.) Tribune, under date of March 15, 1956. Editor L. L. Coleman has done an outstanding job of discussing the so-called Indian problem:

THE INDIAN PROBLEM

Most South Dakotans recognize the fact that there is an Indian problem, but exactly what it is, and what is to be done toward solving the dilemma that faces the Sioux brings disagreement. Most local people are familiar with the poor living conditions on the reservations in the Dakotas, and acknowledge that the Sioux are being assimilated into the way of life typical of most other Americans only at snail's pace. And there are some who question the wisdom of the Indian deserting his old traditions to become part and parcel with the white community.

The problem goes back a hundred years, when the white man decided it would be better to buy the Indians than to fight them. Hundreds of treaties with the Indians have been made by the United States Government, and in every Congress scores of new laws are introduced with the objective of improving the lot of the Indian.

Education is the solution to the problems of the Indian, and if the red man is to compete with the white man in today's complicated commercial life, he must have the same advantages in know-how that hundreds of generations have brought for those who came to this country and drove them from the lands where they had lived in primitive fashion.

Indians on Cheyenne River and Standing Rock Reservations are about to face the greatest opportunity they have ever enjoyed with millions of dollars to be paid by the Federal Government for their lands that will be inundated by the Oahe Reservoir and more millions for rehabilitation and resettling of these latest victims of the white man's march ahead. A generous part of this money will be used for education of the younger generation now living on the reservation and attending Indian schools.

There will always be drunken Indians, just as there will always be drunken white men. Some will be guilty of crimes, and others will invariably be shiftless. But if they will substitute the customs that fit into the pattern of modern life in the United States for those of their forebears, it will be possible to solve the Indian problem within the next 2 or 3 generations.

Civil Service Retirement Legislation

EXTENSION OF REMARKS
OF
HON. GARDNER R. WITHROW
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. WITHROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a speech delivered by Joel J. Lundeen on civil-service retirement legislation at Minneapolis on March 12, 1956.

Mr. Lundeen has been an official in the National Postal Transport Association for more than 20 years. He has made a very extensive study of retirement legislation. You may be interested to know that Mr. Lundeen is the brother of the late Senator Ernest Lundeen, who served in the Senate with distinction for many years prior to his sudden death in an airplane crash.

In this analysis, Mr. Lundeen has not only discussed clearly how antiquated our civil-service laws have become, but also stresses the fact that serious attention must be given to those who are on the rolls of the retired and receive an annuity based on formulas that are long since antiquated as a result of inflationary trends.

I commend this speech to the Members of the Congress as it contains valuable information:

RETIREMENT LEGISLATION

Many bills have been introduced in the Congress to liberalize retirement for those who will retire in the future, and to increase the annuities of those already upon the retired rolls, and also for the widows of those employees who died prior to 1948.

The Congress authorized a committee, known as the Kaplan committee, to study the retirement question. This committee recommends that our Federal retirement be merged with social security. However, all postal unions have taken a positive stand in opposition to this recommendation, and are in support of S. 2875, introduced by Senator JOHNSTON, chairman of the Senate Post Office and Civil Service Committee. Many identical bills have also been introduced in the House. S. 2875 provides the following improvements:

1. Under existing law only an employee retiring on an immediate annuity can elect a joint and survivorship annuity. S. 2875 extends this right to employees receiving a deferred annuity.

2. Under existing law the election of a joint and survivorship annuity by an unmarried annuitant carries a reduction of 10 percent plus 5 percent for each full 5 years the survivor is younger than the retiring employee, except that the reduction for the 5-year span between 25 and 30 years is 10 percent. S. 2875 removes this inequity making the reduction for the joint and survivorship annuity 10 percent plus 5 percent for each full 5 years the survivor is younger than the retiring employee with a maximum reduction of 40 percent.

3. Under existing law an automatic annuity equal to 50 percent of the employee's earned annuity is paid to the widow of an employee who dies after 5 years of civilian service. S. 2875 continues the same provision and also extends similar benefits to widowers of employees but requires tha the surviving widower must be a dependent widower to be eligible for such annuity. Annuities to spouses under this provision terminate upon the death or remarriage of the widow or widower, or upon the widower's becoming capable of self-support.

4. Under existing law no annuitant may be reappointed to any Government position after attaining age 60 unless the appointing authority determines that he has special qualifications. S. 2875 provides that annuitant may be reemployed. If annuitant is reemployed in a position subject to the Retirement Act, annuity payments shall be discontinued during such employment and deductions for the retirement fund withheld from his salary. It provides further that if the former annuitant performs actual full-time service for a period of at least 1 year, his right to future annuities shall be redetermined. If the annuitant does not perform actual full-time service for at least a year his annuity payments are resumed without change and the deductions made from his salary for the retirement fund during such period are refunded to him.

5. Under existing law, an employee who completes 5 years of civilian service may be retired due to disability. However, he cannot be retired due to disability if he is eligible for immediate retirement by reason of age and length of service. Thus, a situation exists under which departments may separate employees who become disabled before reaching retirement age, but cannot separate disabled employees who have attained retirement age. S. 2875 corrects this injustice.

6. Under existing law, the annuity of a disabled annuitant who recovers before reaching age 60 is discontinued. S. 2875 provides that if the earning capacity of such an annuitant is restored to a level fairly comparable to that which he had prior to retirement, his annuity shall be discontinued even though he has not attained complete recovery from a medical viewpoint.

7. Under existing law, if a disability annuitant recovers and is unable to obtain reemployment or for any other reason does not return to service under the act, he is considered as having been separated from service as of the date of his retirement for disability and entitled only to a deferred annuity at age 62. S. 2875 modifies this provision so that a disability annuitant who recovers or is restored to earning capacity before he attains age 60 will be considered (except for service credit) as having been involuntarily separated from the service upon termination of the disability annuity. This change would permit the granting of

immediate annuity if the employee is otherwise entitled.

8. Under existing law, if employee has failed to make deposit (with interest) covering service when no deductions were withheld, the annuity otherwise due is reduced by one-tenth of the amount of the required deposit, unless he elects to eliminate the service from credit. S. 2875 removes the option to eliminate nondeductible service.

9. Under existing law, an employee retiring on an immediate annuity with at least 15 years of service may elect a joint and survivorship annuity in favor of the surviving wife or husband. S. 2875 changes the 15-year requirement to 5 years.

10. Under existing law, lump-sum payments include retirement deductions and interest on such deductions to the date of separation, or to date of entitlement to a deferred annuity, or date of death, whichever is earlier, except that no interest accrues if the service covered thereby aggregates 1 year or less. S. 2875 provides that there will be no interest after December 31, 1956, on the theory that to provide the protection afforded by the act and at the same time allow interest on deposits made for the purpose of obtaining protection amounts to dual benefits unwarranted by the circumstances. Accordingly, S. 2875 merely provides for a refund of deposits (without interest) to employees with less than 5 years' service and the right of election as between a refund of deposits (without interest) or entitlement to a deferred annuity at age 62 to employees with 5 but less than 20 years of service.

11. Under existing law if an employee in a position subject to another retirement system transfers to a position subject to the Civil Service Retirement Act he receives credit for time in the first position whether or not he makes an appropriate deposit to the retirement fund for such period of time. (This became known as windfalls.) S. 2875 requires redeposit with interest for any credit under the Retirement Act.

12. Under existing law no interest is required covering periods of separation from the service in the case of deposits made by employees to cover periods for which no deductions were made or for which a refund was received. S. 2875 provides that interest must be paid for periods of separation from the service as well as for periods of service. Interest would thus be charged for all periods during which the employee enjoyed the use of the money. The retirement fund would be earning interest on the money if it had been deposited into the fund.

13. Under existing law employees must retire at age 70 or upon completion of 15 years of service. S. 2875 eliminates the 15-year requirement, therefore automatic separation at age 70 regardless of length of service.

14. Under existing law a void exists for employees with 20 years or more of service but less than 25 years of service who are involuntarily separated through no fault of their own. Employees who have over 20 years of service cannot withdraw their deposits and because they have less than 25 years of service they do not have entitlement to an immediate annuity. S. 2875 provides an immediate annuity on a reduced basis to employees involuntarily separated who have attained the age of 50 years and have rendered 20 years of service.

15. Under existing law the formula for computing the annuity is 1½ percent of the highest 5-year average salary, multiplied by the number of years of service. S. 2875 changes the 1½ percent to 2 percent, with a maximum annuity of 75 percent of salary.

16. Under the existing law an employee may retire at age 55 after 30 years of service, but his annuity will be reduced by 3 percent for each full year he is under age 60. S. 2875 reduces the penalty to 1 percent for the first full year, 2 percent for 2 years, 3¼ percent for 3 years, 4¾ percent for 4 years, 6¼ percent for 5 years, and 2 percent more for each additional year he is under age 60.

17. Under the existing law an annuitant desiring to provide survivorship benefits is required to reduce his annuity 5 percent on the first $1,500 of his annuity and 10 percent on the balance. S. 2375 requires no deduction on any annuity up to $4,000. If the annuity exceeds $4,000 there shall be a 10-percent reduction on that portion which exceeds $4,000.

18. Under the existing law the widow must wait until age 50 to receive 50 percent of the earned annuity unless there are dependent children. S. 2875 provides that the survivor shall receive an immediate annuity upon the death of the anuitant whether or not there are dependent children.

19. Under the existing law if the wife is less than age 60, and the annuitant desires to provide survivorship benefits, his annuity will be reduced three-fourths of 1 percent for each full year she is less than age 60. S. 2875 requires no deduction.

20. Under the existing law if there is a widow and dependent children, the children receive $900 divided among them, or $360 whichever is lesser. S. 2875 increases the amount to $1,200 divided among them, or $480 whichever is lesser.

21. Under existing law if there is no widow but there are dependent children, they receive $1,200 divided among them, or $480, whichever is lesser. S. 2875 increases the amount to $1,600 divided among them, or $640, whichever is lesser.

22. Under existing law the formula for computing the annuity for a disabled employee is 1½ percent of his average salary, multiplied by the number of years of service. S. 2875 guarantees an annuity of 40 percent of his average salary.

23. Under existing law 6 percent of basic salaries are withheld for retirement purposes. S. 2875 retains the same provision.

This is considerable sentiment in favor of this retirement legislation, however, it is claimed that the cost will be increased $521 million, therefore amendments are being prepared to reduce the cost without impairing any of the benefits. The amendments suggested are as follows:

1. To increase Federal employee salary contributions for their retirement benefits from 6 to 7 percent.

2. To increase the Government's interest rate on bonds it sells to the retirement fund from 3 to 3½ percent.

3. To abolish the present 3-percent interest that the Government pays to employees who withdraw their retirement contributions on leaving the Federal service.

In addition to the legislation described, other retirement bills have been introduced and are still to be considered, such as S. 59, which provides for a 5-percent reduction on the first $1,500 and 10 percent on the balance of annuity to purchase survivorship annuity for those that retired between April 1, 1948, and October 31, 1949. This bill has passed the Senate and only needs consideration in the House.

Also S. 9, to provide group hospital, medical, and other personal health service benefits.

Also H. R. 500, by WITHROW, of Wisconsin, and H. R. 2400, by GROSS, of Iowa, to provide a survivorship annuity to widows of those who died prior to April 1, 1948.

An additional retirement bill is being studied to increase the annuities of those who are now upon the retirement rolls. All are receiving careful association attention.

It is very essential that you keep your Representatives and Senators in Congress well informed as to your desires on retirement legislation.

Don't Return To Rigid Price Supports for Farmers, Country Editors Warn

EXTENSION OF REMARKS
OF
HON. WILLIAM B. WIDNALL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. WIDNALL. Mr. Speaker, once again the American Press, an independent magazine for hometown newspapers, has completed a nationwide survey on the farm problem.

Fifty percent of the editors answered the questionnaire indicating their intense interest in the farm legislation presently pending.

Under unanimous consent, this important survey follows:

DON'T RETURN TO RIGID PRICE SUPPORTS FOR FARMERS, COUNTRY EDITORS WARN

"Continue Eisenhower's flexible price support program, or eliminate price supports altogether—but don't return to the rigid price support for farmers.

"Try out the soil bank idea.

"Repeal restrictions on sale of surplus farm products to Iron Curtain countries.

"Exempt farmers from the Federal gasoline tax."

That is the consensus of opinion of the country editors of the Nation on the farm program, as revealed by a poll just completed by the American Press, based on replies received from 653 editors from all sections of the United States.

The poll also showed majority approval of the job being done by the Secretary of Agriculture.

Conducted while discussion of the farm program was at its height, the American Press poll not only asked editors to give their opinion on various proposals, but also asked for their estimate of the opinions of their readers. This second part of the survey showed considerable difference between the opinions of the editors and of their readers.

Whereas only 18 percent of editors favored a return to rigid price supports, for example, 45 percent thought their readers favored the idea of going back to the old support system. And where 61 percent of editors approved the job being done by Secretary Benson, only 31 percent thought their readers approved of his work.

The survey revealed strong opposition among editors to the whole price-support idea. Many who voted for the flexible supports emphasized that they should gradually be reduced and the Government should aim at getting rid of all supports as rapidly as possible.

Many of the editors felt that price supports were simply being used by politicians to get votes and stated their belief that the idea is un-American, that the farmer should stand on his own feet like any other businessman, and that there is no more reason to give handouts to farmers than to newspaper publishers.

Sentiment in favor of the soil-bank idea was mild—many of the editors feeling that it is perhaps the only way out but not a sound answer to the basic problem of the farmer.

A good many editors who thought some kinds of supports were necessary, felt they should be restricted to small farms—or include ceilings on the amount paid out—in order to help out the family-type farmer who is having a difficult time but to avoid aiding the factory-type large farm which, they believe, is well able to take care of

itself and which should be discouraged from adding to our surpluses of farm products.

Response to the poll was the greatest of any conducted by the American press so far, indicating a high degree of interest in and knowledge of the farm problem among the country editors. Almost 50 percent of those who received the questionnaire answered it in detail, many making extensive comments on the subjects covered.

Many suggestions were made by the editors for helping to solve the farm problem, ranging from the suggestion that we adopt the plan, explained in the Bible, of a food bank such as was set up by Joseph in Egypt, to the idea that instead of worrying about getting rid of surplus products we center our attention on doing away with surplus farmers, and find jobs for them in industry.

Many other suggestions and views on the general situation are included in the comments published in this issue. A summary of the questions and answers to the poll, broken down by geographic areas, follow:

1. (a) The soil-bank plan, proposed by President Eisenhower, to help deal with the problem of farm surpluses, calls for the Government to pay farmers a yearly rental for each acre of land taken out of production. Are you for or against such a plan?

[Percent]

	Northeast	South	North Central	West	Total
For	47	51	63	52	56
Against	51	47	34	48	41
No answer	2	2	3	0	3

1. (b) How do you think the majority of your readers would vote on this question?

[Percent]

	Northeast	South	North Central	West	Total
For	50	60	75	52	65
Against	41	34	22	39	30
No answer	9	6	3	9	5

2. (a) As for farm supports, which of the three choices below appeal to you most?

[Percent]

	Northeast	South	North Central	West	Total
Flexible supports	44	38	55	48	48
Rigid supports	7	33	17	7	18
No supports	43	26	25	44	30
No answer	6	3	3	0	4

2. (b) How do you think the majority of your readers would vote on this question?

[Percent]

	Northeast	South	North Central	West	Total
Flexible supports	52	24	38	54	39
Rigid supports	15	67	50	24	45
No supports	27	7	7	15	11
No answer	6	2	5	7	5

3. (a) Do you favor the President's suggestion that we repeal restrictions on sale of farm-product surpluses to Iron Curtain countries?

[Percent]

	Northeast	South	North Central	West	Total
Favor repeal	60	61	70	65	66
Oppose repeal	34	37	30	35	33
No answer	6	2	0	0	1

3. (b) How do you think the majority of your readers would vote on this question?

[Percent]

	Northeast	South	North Central	West	Total
Favor repeal	47	54	57	41	53
Oppose repeal	40	38	35	44	39
No answer	13	8	6	15	8

4. (a) Do you think farmers should be exempt from gasoline taxes on gasoline used for farm production?

[Percent]

	Northeast	South	North Central	West	Total
Yes	44	63	68	70	63
No	50	36	31	30	35
No answer	6	1	1	0	2

4. (b) How do you think the majority of your readers would vote on this question?

[Percent]

	Northeast	South	North Central	West	Total
Yes	58	85	90	87	83
No	34	13	10	11	15
No answer	8	2	0	2	2

5. (a) Do you approve or disapprove of the job Ezra Benson is doing as Secretary of Agriculture?

[Percent]

	Northeast	South	North Central	West	Total
Approve	76	42	66	59	61
Disapprove	15	50	27	28	31
No answer	9	8	7	3	8

Approve	65	11	26	44	31
Disapprove	17	82	62	46	58
No answer	18	7	12	10	11

COMMENTS ON SOIL-BANK PROPOSAL

Although the majority of country editors covered in the farm survey just completed by the American Press said they approved of President Eisenhower's soil-bank proposal, there was little real enthusiasm for it in the replies.

Fifty-six percent of the editors voted for it; 41 percent against, and 3 percent didn't answer the question. As for their readers, 65 percent of the editors thought the majority of their readers would like to see it go through, 30 percent thought their readers would oppose it, and 5 percent didn't answer the question.

Some of the editors' comments on the soil-bank idea follow:

Earl Dawald, Geneva (Ind.) Progress: "While the soil-bank proposal, properly handled, has merit, a forest-bank program would have much more merit. This country is not planting enough trees. I am against land lying idle and unproductive. One of the best approaches would be to buy up millions of acres of submarginal land now under cultivation or privately owned and also thousands of acres of overflow land along streams and restore this entire area to woods and forest."

Ronald R. Furse, Plattsmouth (Nebr.) Journal: "In our county, with two short crops and drought behind us, the Agricultural Department again trims acreage by nearly 17 percent and cuts another 18 cents per bushel off the parity price. Our newspaper has run more farm closeout sales this year than at any time in the past 25 years—it is alarming. Taking a few hundred acres out of production for a man with 10,000 acres won't hurt, but take another 10 off the 80- to 160-acre farmer and we've got another farm sale on our hands."

Ben W. Strange, Risingsun (Ohio) Unique-Derrick: "It is discouraging to me to see productive land put out of use—it seems against God's will for man to till the earth and produce his needs. However, the President's plan is a sound one and, at this time, I believe is the only thing to do."

J. Alvin Druyor, Prairie du Chien (Wis.) Press: "The soil bank should be aimed at taking marginal producing farms entirely out of production. Not a few acres on each farm. These farmers then to be rehabilitated or transferred to industrial work. They are making the poorest living now of all farmers. If properly worked, this would let the Government work toward a goal of no support in farm prices."

ADA-TYPE PROGRAM NEEDED

Charles Warner, Brownton (Minn.) Bulletin: "The soil-bank program will help reduce supply. A rigorous hard-hitting sales program like that put on by the American Dairy Association will help to build a greater market."

Bill Klaber, Livingston (N. J.) Tribune: "A few years of soil bank and resale of surplus would get a little sanity into the system."

William W. Keeler, Wyalusing (Pa.) Rocket: "It is somewhat amusing to see the GOP resurrecting an ancient New Deal method and acting as though it were a newly conceived idea. Actually, the Republicans blasted this policy under the Democrats. Now they foster it. If we have been on the brink of war three times in the past year, we had better hold on to our surpluses."

J. Bill Frame, Lebanon (Tenn.) Democrat: "My answers have been checked with a number of farm folks. The soil bank is opposed locally because most of our farms are small and farmers could not afford to take land out of production. We realize that there are areas where this would be an ideal answer."

Jack L. Tannehill, Philadelphia (Miss.) Democrat: "Why pay the farmers not to produce? The country needs to get away from the idea that the farmer is a privileged citizen and needs to be handled with kid gloves."

Iris Lein, Telluride, Colo.: "To me, farming is a business just as is the newspaper business. We either sink or swim because of the job we do. I would say our return is less than the average farmer. We stay in the business because it is my husband's first love. We would not hear of the Government coming in and paying us to let the presses lie idle for 1 week. It is the same deal with the farmers. They are in the business because they like it. It is to their best interests to practice soil conservation, crop rotation, etc. Why should the Government pay them to do it?"

Stephen A. Williams, Milford (Utah) News: "The soil bank is the screwiest gimmick I've run into yet. I have a couple of surplus presses, but no weepy-hearted Congressman wants to rent them. If the farmer studied surpluses and planting trends, and planned his crop acreage, he could have a good money crop each year. Now all he looks for is the crop with the highest bounty tag on it."

Maxwell L. Thayer, Rouge River (Oreg.) Times: "Plowing under acres is like plowing under pigs. It smacks of Henry Wallace."

John E. Martin, Emmett (Idaho) Index: "The cost of enforcement of soil bank provisions would be high. As one farmer in our county noted, 'It takes a strong policeman to keep cattle and sheep off the grass.'"

Makarios in Exile

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, March 20, 1956

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial appearing in the Chicago Pnyx commenting on the unfortunate action by which the head of the Greek Orthodox Church in Cyprus has been placed in exile and also commenting favorably upon the bill introduced by the distinguished Senator from New York [Mr. LEHMAN], of which I am glad to be a cosponsor, urging that the people of Cyprus be granted the right of self-determination.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MAKARIOS IN EXILE

The entire civilized world was shocked at the brutal diplomatic move of the British in exiling the head of the Greek Orthodox Church in Cyprus for his determination to seek enosis of Cyprus with mother Greece.

An official statement issued in Athens following the British kidnaping of Cyprus' ethnarch said the Greek Government denounced the deportation of Archbishop Makarios and Bishop Kyprianos before public opinion as "an unprecedented act of violence incompatible with present day civilization, an act which has no other explanation than an attempt to stifle the voice of an historic people who seek their democratic liberties and national independence."

The Greek Orthodox Church's supreme council, the holy synod, decided at a meeting last week to appeal to the heads of all churches, including Russia's Patriarch Alexis, to support their demand for the liberation of Archbishop Makarios.

The deportation of Makarios to the Seychelles Islands received unprecedented world press prominence with screaming headlines in practically every newspaper here and abroad. This was in contrast to the universal self-imposed silence by the world press when the Turks committed an equal if not greater crime during the recent Constantinople riots against the Greeks which had its roots at the British instigated Turkish opposition for the enosis movement of Cyprus with Greece.

The Greek Orthodox Church, as the recognized state religion of Greece, has for time immemorial fought not only for the freedom of Hellas but has been responsible throughout the world for the perpetuation of Greek letters and culture.

To the Greek Orthodox Church once again has fallen the task of spearheading the Cypriotes' demand for self-determination and the eventual enosis of Cyprus with Greece.

In the meantime the duty of America's Greek Orthodox adherents is clearly cut. They should immediately ask the support of their respective Senators and Representatives in Congress to support the Lehman Cyprus resolution which was presented to the United States Senator by Senator H. LEHMAN, of New York. The Order of Ahepa as far as back as February 29 wrote every Senator and urged them to join Senator LEHMAN in cosponsoring this resolution in a bypartisan and nonpolitical spirit.

The resolution resolves that—

"It is the sense of the Senate of the United States that—

"(a) The British Government should be urged by our Government to see the wisdom of seeking to maintain its influence in this area by the exercise of leadership in the cause of freedom rather than by the use of force for the sake of repression; and

"(b) Free world security considerations and the legitimate security interests of Britain should be given due weight but should not be used as an excuse for the frustration of the legitimate aspirations of the people of Cyprus; and

"(c) The people of Cyprus should be consulted concerning their future political status consistent with that principle of self-determination to which the United States has historically subscribed."

Proposed Increase in Postal Rates

EXTENSION OF REMARKS
OF
HON. WALLACE F. BENNETT
OF UTAH
IN THE SENATE OF THE UNITED STATES
Tuesday, March 20, 1956

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Put the Post Office in the Black," published in the Salt Lake City (Utah) Deseret News and Salt Lake Telegram of March 16, 1956, dealing with proposed increases in postal rates.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PUT THE POST OFFICE IN THE BLACK

This newspaper, having repeatedly urged that postal rates be raised sufficiently to put the post office on a solid financial footing, is happy to find itself with some distinguished company. The publishers of the Denver Post and of the Columbus (Ohio) Dispatch and Ohio State Journal have come out solidly for a raise in post-office rates, including second-class rates, and their statements have been read into the record of the House Post Office Committee.

It is obvious that a raise in second-class rates would materially affect the costs of newspaper operation, and this fact is recognized by the three publishers who voice their own willingness, as has the Deseret News and Telegram, to pay their special share of the extra cost in the interest of sound government.

The forthright expressions of opinion from Palmer Hoyt of the Denver Post, and Preston Wolfe of the Columbus Dispatch and Ohio State Journal, should carry some solid weight with the gentlemen of the House committee. We trust they will. As for this newspaper's feelings on the subject, let us repeat a part of what was said in these editorial columns on February 3 of this year:

"It is not to the credit of many newspapers and magazines in the country that they have stubbornly resisted raises in the second-class rates under which they do their mailing. There is no evading the truth that the second-class operation piles up the biggest of all postal deficits and that newspapers and other publications have been enjoying a handsome Government subsidy."

Effective economy is not possible when it is always for the other fellow. Though it will pinch a bit, we hope Congress will pass the postal increases the President requests.

Testimony of Carl H. Wilken, Economic Analyst, Before the House Ways and Means Committee, on H. R. 5550, March 14, 1956

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

TESTIMONY OF CARL H. WILKEN, ECONOMIC ANALYST, BEFORE THE HOUSE WAYS AND MEANS COMMITTEE, ON H. R. 5550, MARCH 14, 1956

Mr. Chairman, and Members of the Committee, my name is Carl H. Wilken, Economic Analyst for the Raw Materials National Council of Sioux City, Iowa.

I signed the Articles of Incorporation for the Raw Materials National Council in 1936. It was set up to make a study of the effect of farm prices and the price of other forms of new wealth upon the income of the United States and the welfare of the American people. Further to make this information available to the American Public. The purpose of the organization has been carried out for 19 years.

The records of your Committee show that I appeared before this Committee about the time that we entered World War II. I pointed out to the Committee that if Congress would maintain a parity price for the raw materials used and put the Nation to work that we could produce the materials with which to win the war and that we could create the income to pay for it.

Congress did provide legislation to maintain a proper price for raw materials used. We did produce the materials with which to win the war and we did create the income to pay for it. Congress, however, did not levy the taxes to drain off the income to pay for it. The public instead bought the bonds offered by the Government and we had a tremendous expansion in our national debt.

HIGHER PRICE LEVEL

The increase in our national debt and other factors forced us into a higher price and wage level, both of which brought about some almost fantastic changes which must be considered in our relations with other nations.

Our national income has increased from $72.5 billion in 1939 to $322.3 billion in 1955. Our industrial wage level has increased from 63.3 cents per hour to $1.93 per hour at the present time. In addition the total debt has increased from a level of $209 billion in 1939 to approximately $750 billion at the end of 1955.

The Federal budget presently being considered by Congress is approximately $65.7 billion, which is $4 billion more than the average income of the United States in the period 1929–40 inclusive.

The interest charge on a basis of 4 percent on the total debt, a charge which can be met only through profits from our economy, is approximately $30 billion, the profit from $150 billion of national income.

These facts are very important to this committee in considering any factor affecting our price level, whether it be direct price supports for farm products and other types of American production or indirect price supports as a result of import quotas or import duties. Our national income is dependent

upon just two factors—our annual production of goods and services times the consumer price level.

In this struggle against communism and socialism our basic foundation should always be a sound and solvent United States. The consequences of an economic collapse in the United States would jeopardize all our other efforts.

CAN WE MEET OUR OBLIGATIONS?

My answer to this question is the same as that given to the committee regarding World War II. If Congress will maintain parity for raw materials, thus creating the primary markets to keep the Nation at work we can earn the income to meet our needs for a sound and solvent United States. On the other hand, anything which is permitted to break our price level internally or from international sources will head us into a depression.

H. R. 5550

In my opinion H. R. 5550 delegates the constitutional authority of Congress to regulate the value of the American dollar or in turn the American price level to an international organization. Such a step places our future economic welfare in the hands of a group of nations which will be swayed by selfish interests and a variety of price levels not in accord with our own needs.

The economic concepts of the entire reciprocal trade policy since 1935 and culminating in H. R. 5550 have been based on a theory that tariffs are the cause of lack of trade between nations. It is a theory advanced by the trading nations of Europe early in the 19th century as they engaged in a policy of exploiting the raw material production of weaker nations. The theory of free trade or the desire to obtain cheap products has been responsible for most of the poverty, depressions, and wars which have been fought since that time.

The real factor in removing restrictions to trade was stated quite simply by the late Vincent C. Vickers of England in his memoirs published under the title of "Economic Tribulations," copies of which are available in the Congressional Library. Mr. Vickers was a director of Vickers, Ltd., and also spent 9 years in an active roll with the Bank of England.

On page 46 of the publication mentioned, Mr. Vickers sets forth the following conclusion: "We do not possess, and never have possessed, a true and honest measure of value. The restoration and comparative freedom of international trade does not depend primarily upon the elimination of existing trade restrictions; it depends fundamentally upon a new and better money system, so that money based on goods and commodities shall represent the true international value of those commodities, and shall cease to be, as it is today, a permanent irritant and restriction standing in the way of the world's economic progress, the happiness of the peoples, and the achievement of lasting peace among nations."

Mr. Vickers' conclusion can be illustrated by a few concrete examples. About 38 percent of the external income of South American nations is dependent upon coffee exports. In the case of our own imports of coffee, a drop of 10 cents per pound in the coffee price shuts off approximately $270 million of buying power in South America. To protect their internal situation this would force them to put on import restrictions regardless of any agreement they may have entered into.

In like manner Great Britain, one of the leaders in world trade, is not in a position to validate an agreement as contemplated by H. R. 5550. Her gold reserves have reached the critical stage. In the next 6 months she may have to take some drastic steps. These steps may be boiled down into three categories:

1. Make another loan from the United States.

2. Devalue the British pound which gives merely temporary relief.

3. To ration her people through import restrictions.

The same is true of other nations depending almost entirely upon the price of commodities for income to use in exchanging goods. It also includes our own Nation.

Our own record proves the tremendous market for goods which is being lost as a result of the price of basic raw materials, farm products, far too low to support our own economy and the market for factory goods throughout the world.

OUR ECONOMIC RECORD

The world price level and income since 1941 has been maintained largely by the rapid increase in the total debt of the United States and our donations of goods and money to the nations of the world.

The committee will find attached an analysis of our own record for the past 10 years. In the year 1955, a year generally proclaimed as a prosperous year, the record proves that we created $60 billion of our 1955 income through an excessive increase in our total debt of $12 billion out of a total increase of $45 billion. Without a restoration of our farm price structure we will have to add approximately $50 billion to our total debt in 1956 to maintain the pace we set last year in our output of goods and services.

MARKETS FOR GOODS

The record further reveals that in 1955 on the basis of our actual income our market for consumer goods in ratio to income was about $17 billion below the 1946–50 level. It proves still further that our failure to maintain parity for agriculture in 1953–55 forced a loss of a potential market for $96 billion of consumer goods sales in the United States; $32 billion of which was the loss for 1955.

Other nations throughout the world have suffered a similar drop in farm prices and destruction of primary markets which could and should have been created. The loss of potential markets throughout the world in 1955 was approximately $70 billion due to low farm prices. H. R. 5550 will accomplish nothing in recovering this market. I might add that the drop in farm prices since 1951 has probably added more trade restrictions than all of those removed in the history of the Reciprocal Trade Agreement policy.

The record clearly indicates that it has had no effect on the overall use of imports by the United States. During the past 25 years we have averaged a little over 3 percent of our national income for imports. The rate in 1933 was 3.7 percent of our national income or a higher rate than can be credited to the United States in 1955. It is interesting to note that in the interim our national income changed from about $40 billion in 1933 to $322.3 billion in 1955.

The real conclusion that we should draw from this is that our foreign trade depends upon the internal prosperity of the United States. By maintaining our farm price structure in 1955 an additional market for $32 billion of consumer goods in the United States would have been available. This additional internal market would have been equivalent to almost three times our imports in 1955. The additional consumer sales would have required more imported products and would have done much to prevent the loss of markets in the rest of the world.

A FOREIGN ECONOMIC POLICY

We can have a sound foreign economic policy and at the same time protect our own welfare. Instead of following a course as contemplated by H. R. 5550 which will force a reduction of our price level, thus forcing us into a depression, we should be advocating an economic program which will make the American parity price for raw materials the world price, and the foundation for an honest dollar in international exchange.

With the American parity price as the world price for raw materials the world can earn the new capital with which to expand, to pay us for exports and to repay international loans. With such a program we can remove the stigma of imperialism now attached to our foreign economic policy which in reality contemplates the importation of cheap raw materials to pay for high priced exports as compared to the buying power of other nations.

HOW CAN IT BE DONE?

We can use the example of a successfully working agreement now in existence in regard to sugar. The sugar agreement presents to the world an example of exchanging goods on the basis of equity or a fair price for sugar imported, thus creating a reciprocal income with which to buy. This type of agreement with a little ingenuity on our part can be extended to all commodities without destroying our price level or income while at the same time serving as a stabilizing factor for the commodity prices of the world.

In fact with 45 percent of the income of the world in dollars being created by the production of the United States we have it within our power to give the world an honest dollar for the first time in the history of the world.

Until this step is taken any trade agreement we may make, such as contemplated in H. R. 5550, will be scraps of paper which nations, including ourselves, cannot honor if cheap raw material prices are permitted to destroy the new income and primary markets both at home and abroad.

In my opinion, if we were to use one-half the money used per year for foreign aid in the past 10 years, we could practically force the rest of the world to accept the American parity price for raw materials as the international measuring stick of income and trade on an earned basis. Until this is done there is no assurance of a solvent United States as a leader in promoting world prosperity and peace.

Since 1935 we have had two economic policies diametrically opposed to each other. On one hand we have favored high wage levels and have had direct price supports on farm products. On the other hand we have had a trade policy based on tariff reduction and imports at a price level lower than our own.

These conflicting economic policies have made it impossible to offer the world a definite foreign economic policy based on equity of trade. As a direct result currency devaluations and internal trade restrictions have multiplied all over the world. They cannot be removed by workable agreements unless we first establish a stable and fair price level on goods exchanged.

We have wasted much valuable time and money since the end of World War II to build up our own productive capacity and that of other nations.

Unless steps are taken to create a stable market for this increase in productive capacity by a proper price level for raw materials, the entire structure is in danger. Farm raw material prices throughout the world are too low to support it.

THE OPERATION OF OUR ECONOMY IN 1955

The data used in the following analysis was taken from the records of the Joint Economic Committee supervised by The President's Council of Economic Advisers and other Governmental Departments. It was prepared as a service to the American public.

Comparative analysis of economic factors in 1955 with average for 1946–50

	1946–50 average	1955	Percentage change from 1946–50 average
	Billions	*Billions*	
National income	$211.0	$322.3	+52.7
Total wages	136.5	221.3	+61.1
Net farm income	14.2	11.1	−22.0
Small business	21.4	27.3	+27.5
Rentals	7.2	10.7	+48.6
Interest	4.5	10.5	+133.0
Corporate profit	26.9	41.4	+53.9

NOTE.—The above items are used to compute the final national income. Income in 1955 partially due to 15 percent increase in the price level following 1946–50.

Other factors

	1946–50 average	1955	Percentage increase from 1946–50 average
	Billions	*Billions*	
Gross farm income	$32.2	$33.1	2.8
Mineral raw materials	12.8	19.5	52.3
Total	45.0	52.6	17.0
Durable goods	22.1	35.3	60.0
Nondurable goods	94.7	125.9	32.9

Analysis

The above comparison in terms of income sets up three red flags:

1. The terrific loss being taken by agriculture as compared to the economy as a whole.

2. The income and sales of small business increased only about one-half as much as labor income, corporate profits and rentals.

3. The increase of 133 percent in interest points to the very high rate of debt increase on all levels since 1946–50.

The normal ratio of utilization of farm products through the 25-year period 1929–53 was approximately 70 percent farm raw materials and 30 percent other raw materials. The ratio during 1946–50 was the same as in the 25-year period.

If gross farm income had been maintained in the same ratio to national income that existed in 1946–50 by a proper administration of farm support prices, the gross farm income in 1955 should have been approximately $49 billion, or $16 billion more than actually was paid to rural America. The increases in consumer markets would have required about $1.5 billion additional raw materials from mineral sources and our total utilization of new wealth would have approximated $70 billion.

Using the average trade turn of raw material income into national income during the 25-year period 1929–53, a raw material income of $70 billion in 1955 would have generated an earned national income of $350 billion. Adjusting national income factors in the same balance to national income that existed in 1946–50 and the total of consumer sales we could have had the following results:

	Billion
National income	$350.0
Wage payments	226.5
Net farm income	23.6
Small business	35.5
Rentals	11.9
Interest	7.5
Corporate profit	45.0
Durable goods sales	37.0
Nondurable goods	156.5
Treasury receipts (as compared to actual of $71.4 billion)	77.0

NOTE.—Consumer goods sales (durable and nondurable) were computed on a basis of the average use of 55.3 percent of the national income used in 1946–50. This ratio can be compared to 58.6 percent in the 5-year period 1935–39. Income factors 166 percent of 1946–50.

It will be noted that all segments of our economy except interest would have gained from the use of a proper supply of farm raw materials at a price in balance with 1946–50 parity. The larger interest total of $10.5 billion in 1955 is the interest charge resulting from excessive debt increases following 1946–50. For example, in the past 3 years we have added $20 billion to the national debt, approximately $9 billion installment credit and many billions of increase in outstanding mortgages. This excessive interest on the basis of 5 percent indicates an excessive increase in the total debt of about $60 billion. This could have been avoided by maintaining farm prices at 1946–50 parity.

Fiscal policy

Corporate profit in 1955 expanded $9.4 billion over 1954 or approximately 42.5 percent of the increase in national income of $22.6 billion. This illustrates how the Treasury which received $4.7 billion of the increase in corporate profits benefited at the expense of excessive private debt. If farm income had been maintained in proper ratio in 1953–55 a surplus could have existed in the Treasury and excessive private debt could have been avoided.

Consumer sales

Consumer sales in 1955 with farm prices and production in proper ratio to our economy as a whole would have been $32.3 billion greater than in the actual level of $161.1 billion.

Actual sales in 1955 in ratio to national income were $17.1 billion subnormal in the nondurable goods field. If farm income had been maintained the total of consumer goods of $193.5 billion could have been sold without any increase in the total of installment credit.

Economic balance

With a farm income in balance with the rest of our economy the income of the 9,300,000 farm operators and small-business units which make up the total of unincorporated business units would have been in balance with other segments of our economy.

For example, the average wage earner in 1955 averaged approximately $4,000. We have 5 million farm operators with a capital investment averaging $30,000 per unit. Their income based on a $49 billion farm income and $350 billion of national income which we could and should have had would have been $4,720 per operating unit. Adjustment for capital investment by each operator not charged to operating cost would put the farm operator's income in balance with the 55 million other workers receiving wages.

Operating analysis

The Nation utilized $52.6 billion of raw materials or new wealth in 1955 and using the 5 times turn of all raw materials into national income, the average for 1929–53, the earned national income was $263 billion.

The additional $60 billion generated in 1955 to bring the total up to $322.3 billion was unearned and created by the use of expected profits from tomorrow's income totaling approximately $12 billion which turned over backwards 5 times to generate the $60 billion of unearned national income.

Our annual capital operating profit is approximately 20 percent of the national income and this deficit can be traced in the operation of our economy in 1955. We spent $42.2 billion of capital profits for new construction—$28.3 billion for new plants and equipment, and expanded consumer credit $6.1 billion, or a total of $76.6 billion. Our profit on $322.3 billion of income was approximately $64.6 billion leaving a long-term deficit of approximately $12 billion.

This excessive increase is reflected in the total debt increase of $45 billion in the year 1955. If this $12 billion of excessive debt is to be repaid in the future it will require $60 billion of future income to earn the $12 billion of profit to repay it. In the meantime it becomes an additional charge against future profits through interest payments of approximately $600 million per year.

To earn the profits to meet the increase in interest charges on the $12 billion against our annual profits will require the profits from $3 billion of national income in 1956.

Summation

The net result of our operation in 1955 was a loss of approximately $87 billion of earned income which could have been generated by maintaining our farm production at a parity price with 1946–50. Approximately $60 billion of this loss was offset with the use of deficits and the balance of $27 billion was lost entirely.

The $64 question

Why didn't we maintain our farm production and farm prices? It was primarily due to the gross underestimation of the importance of farm income in our national economy. Most of the leading economists in Government and business almost completely ignore the agricultural segment of our economy.

The farm problem is discussed in terms of the farm operator rather than in terms of rural America. The real facts are that 50 percent of our population in the 1950 census lived in towns of 10,000 and under and the area surrounding them. Due to this fact one-half of the market for factory goods is created by raw material production.

In the case of agriculture in 1946–50 the farm operator received 44 percent of the gross value of his production. The balance went to create income for those living in rural towns. An additional factor is that the farm operator is a buyer of capital goods for his operation and agricultural States spend approximately 70 percent of their income for goods at retail as compared to 50 percent in States such as New York and Pennsylvania.

This farm market for factory goods in rural America is proved by a quite constant ratio of $1 of farm production to $1 of factory payrolls. This ratio ran in balance from 1919 to 1939. It was dislocated in World War II and resumed its normal of 1–1 ratio in 1946–50. At present we have approximately $50 billion of factory payrolls as compared to $33 billion farm income. Unless farm income is brought up in balance the factory payroll cannot be maintained except through further excessive increases in total debt. If our economy is to operate at the pace set in 1955 and farm income permitted to remain at present low levels it will require an addition of approximately $50 billion to the total debt in 1956.

As pointed out, this underestimation of the importance of the value of our farm production caused a loss of $87 billion in earned income and resulted in creating a burden of producing $60 billion of future income to repay the excessive debt created.

Other errors in regard to farm production and income

It has been stated over and over again that the 90-percent price support created the present surplus problem. This is not a statement based on facts.

The 90-percent price-support law was enacted in 1942. During the 11-year period, 1942–52, it gave to agriculture a little over parity. There was no need of production control except in limited areas and the Nation generated the income to pay its bills. If Congress had levied the taxes on the income which existed we could have paid for the war without any increase in the national debt. For example, in 1943–45 the public, after all consumer expenditures, had remaining approximately $200 billion. Instead of paying this in the form of taxes, the

money bought the bonds which now are a part of the national debt.

At the end of the 11-year period, 6 years of war and 5 years of peace, there was no surplus to speak of and at the end of 1952 total stocks were approximately $2.5 billion. Specifically in the case of our 3 principal basic crops, we had on hand 256 million bushels of wheat, 2.8 million bales of cotton and 487 million bushels of corn. The total of corn was less than a 2-months supply.

Lack of parity

The accumulation of farm surpluses could not have been due to overproduction of farm products. Total production in 1952 was 107 percent of 1947–49 as 100, as compared to 112 percent in 1955. This represents an increase since 1952 of 4.67 percent or 1.55 percent per year not enough to meet our economic growth. (Data as to production and carryover of stocks taken from Agricultural Outlook published by USDA for 1956.)

The real reason for farm surpluses resulted from a failure to maintain parity for our farm production in 1953–55. As farm income was permitted to drop below parity underconsumption of goods took place. The current situation of agriculture receiving about the same as in 1946–50 with $111 billion of national income increase cannot be explained in any other way.

For example, in 1953 farm prices were permitted to drop to 92 percent of parity, thus setting the stage for a similar cutback in our economy. This cutback took place in August 1953 and our total production dropped over 8 percent to the low in 1954. This cutback forced a loss of $30 billion of income that could have been created if July 1953 production had been maintained. The drop in farm income levels following 1951 wiped out the market to utilize our potential production.

Instead of correcting the farm price situation and restoring our primary markets, those in charge of government and business instituted the credit expansion to revive the economy. Instead of helping agriculture it merely forced farm prices downward as money was diverted away from the purchase of nondurable goods, 90 percent of which are processed from farm products, to capital goods or goods normally purchased with savings or profits.

Underconsumption

With farm production and prices in 1946–50 balance with the rest of our economy in 1953–55 our national income and consumer sales could have been as follows as compared to the actual:

Year	Earned national income	Actual consumer sales	Normal sales potential	Underconsumption consumer goods
	Billions	*Billions*	*Billions*	*Billions*
1953	[1] $325	$148.7	[2] $179.7	$27
1954	[1] 338	150.2	[2] 186.9	36.7
1955	[1] 350	161.2	[2] 193	32.3
Total				[3] 96.0

[1] National income computed on approximate 4 percent expansion ratio, the average from 1910–54 translated into income at 1946–50 farm parity.

[2] Normal sales are computed on basis of 55.3 percent of national income for consumer goods in 1946–50.

[3] Cumulative loss of consumer goods sales, 1953–55.

Analysis of consumer sales, 1953–55

Durable goods sales in 1953–55 were maintained in ratio to national income existing in 1946–50 with deficits and increases in installment credit. The loss of consumer-goods sales was entirely in the field of nondurable goods, 90 percent of which are processed from farm raw materials.

The underconsumption of farm products in the 3-year period at the consumer level was 90 percent of $96 billion or $86.4 billion. In 1946–50 the farmer averaged approximately 47 percent of the consumer's dollar, and on this basis the underconsumption at the farmer's gate in the 3 years 1953–55 was 47 percent of $86.4 billion or a total of $40.6 billion. If farm prices had been maintained at 1946–50 parity levels, our production of farm products in 1955 could have been at a level of 125 percent of 1947–49 as compared to 112 percent which is a surplus due to underconsumption. This rate of production would restore farm production to balance with other raw materials which have increased to 122 percent with a high of 128 percent of 1947–49 as 100 in December 1955.

Our national income in the 3 years 1953–55 totaled $793 billion. Our earned national income with farm production and prices in balance with 1946–50 averages could and should have been $1,013 billion. Therefore, our failure to maintain our farm economy in balance forced us to lose a potential of $220 billion of earned income. During the 3-year period we offset $135.6 billion of this loss with excessive increases in our total debt of approximately $27 billion. Stated in another way, we borrowed this profit from that of our great grandchildren.

We had a net loss of $84.4 billion that was not permitted to exist because of too low a level of farm prices. The additional income and the unearned income could all have been earned by maintaining farm prices. The cost of doing so would have been infinitesimal as compared to the losses sustained.

Legislative authority existed during this period to maintain farm prices and exists today. By taking a few key steps farm income can be restored almost immediately. Unless it is, our losses will continue.

This huge loss suffered in earned income in 1953–55 due to our failure to maintain farm production and price levels may seem fantastic. It is not the first time, however, that this kind of loss has existed in our economy.

In the period 1930–41, because of our failure to maintain farm prices at parity, the Nation suffered a loss of over $500 billion of potential national income and due to this loss of income we had to forego the use of 5½ years of output of goods and services. For example, in 1932 our total output was only 47 percent of 1929 levels and it was a surplus.

At that time we tried to correct the situation by spending an average of about $3 billion per year in national deficits, equivalent to about $14 billion at present national income levels. We killed pigs, let acres lie idle, and solved nothing. Current proposals in many ways duplicate those which failed in the thirties, thus proving the old axiom "History teaches that people never learn from history."

In conclusion, the record of our economy, the finest that any nation has ever had, proves the accuracy of the basic law of economics. This law is not found in our textbook on economics. It is found in the most widely published and highest authority in the world, the Bible.

The Bible tells us "Every laborer is worthy of his hire." This means that divine law dictates that we place a proper value on the new wealth which our Creator has made possible from the soil.

God did not intend that those who tilled the soil and cooperated with Him to feed the world should be underpaid. Therefore, he created a source of new wealth and a scheme of things under which society must suffer in direct proportion to the underpayment for his blessings at the market place.

During the past 30 years the taxpayers have paid for assembling and publishing the finest record of an economy that has ever existed in world history. Our record during the past 30 years proves that we have suffered in direct proportion to our underpayment for raw materials or our new wealth at the market place.

Emerson once said: "It seems as if America is the last effort of divine providence to help the human race." Unless we use the record to guide the way we cannot lead the world to a better day. On the other hand, we may repeat the happenings of history, go into bankruptcy and decay through a failure to maintain the foundation of our whole economic cycle—agriculture.

Restoration of the underpayment to agriculture of $16 billion will generate $80 billion of earned income which in turn will make the deficits unnecessary.

CONCLUSION

Congress can, whenever it chooses, take the steps to force a positive administration of a price-support law for farm products which will restore farm prices to the 1946–50 parity level.

No political administration can operate our economy on a sound and solvent basis unless farm prices and other raw materials enter the economic cycle at an average of parity. The past 3 years of operation prove the fallacy of the lend-spend theory of reviving our economy in a period of recession. Deficits merely cover up our losses and postpone the day of reckoning. Eventually we must earn the income to operate our economy. Unless our new wealth production creates the new earned income to generate the national income and profits required to pay our way for sound expansion, excessive debt will force us into a state of bankruptcy.

The present level of farm income is far too low to support the present skyscraper of debt and income needed to consume our potential production. Our under consumption of $17 billion of consumer goods in 1955 on the basis of existing income is far too great to permit the liquidation of current surpluses created by underconsumption. A restoration of the lost market to industry in rural America is a must and this can be done in only one way—restore the farm price structure.

Curtailment of farm production, already too low to support our economy will reduce farm income still further and force additional deficits.

The basic facts used in preparing this analysis have been presented from time to time before various congressional committees during the period 1937–54. It is the result of 19 years of study in which the effect of raw material prices upon national income and the welfare of the American people has been the governing yardstick.

TVA Repayments Into the Treasury

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1956

Mr. EVINS. Mr. Speaker, the TVA is required by law to pay back into the Federal Treasury the entire Federal investment in its power operations. TVA is far in advance of its scheduled annual repayments into the Treasury. Through 1955 a total of $127,500,000 has been repaid by TVA into the Federal Treasury. This year, through 1956, a total of $186,500,000 will have been repaid into the Federal Treasury. The following table of repayments show accurately the annual revenues paid by TVA into the Federal Treasury:

Payments made by TVA into the U. S. Treasury as repayment of investment in its power program

Fiscal year	Payment	Total payment
1948	$10,500,000	$10,500,000
1949	5,500,000	16,000,000
1950	5,500,000	21,500,000
1951	9,000,000	30,500,000
1952	12,000,000	42,500,000
1953	15,000,000	57,500,000
1954	20,000,000	77,500,000
1955	50,000,000	127,500,000
1956 (estimated)	59,000,000	186,500,000

"Czech Balloon Charges False," United Nations Told by Free Europe

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. HOLLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement which was sent to United Nations Secretary-General Dag Hammarskjold by Hon. Joseph C. Grew, chairman of the board of Free Europe Committee, Inc., on March 19, 1956:

"CZECH BALLOON CHARGES FALSE," UNITED NATIONS TOLD BY FREE EUROPE

On February 24, 1956, Vaclav David, the Foreign Minister of Czechoslovakia, cabled a statement to the Secretary-General of the United Nations alleging that American balloons carrying printed matter constitute hazards to air transport and a violation of the Chicago Convention on International Civil Aviation of 1944. With reference to this statement, I have the honor to submit the following, in the hope that you will wish to transmit it to all the delegations to the United Nations who have received the Czechoslovak statement.

1. Free Europe Committee, incorporated in the State of New York in 1949, seeks to disseminate free world concepts and material of an informative nature to the peoples of Eastern Europe. For this purpose radio broadcasts are transmitted, and printed material is distributed by means of small balloons launched from West Germany. This work is done in the belief that a free flow of information contributes to understanding and friendship among peoples. This view is reflected in the resolutions unanimously adopted at the UNESCO conference in Montevideo in 1954.

2. The Communist governments of Czechoslovakia, Hungary and Poland—those countries to which balloon leaflets are sent by Free Europe Committee—have for years violated the principle of free communication, by jamming foreign radio news broadcasts, by preventing the entry of Western books, newspapers and periodicals, by censoring family letters, and by rigorously restricting other media. FEC holds the view that these restrictions constitute violations of the Preamble of the UNESCO Constitution, which affirms the belief of the states who are parties to this constitution in, among other things, "the free exchange of ideas and knowledge", and which states the determination of these states "to develop and increase the means of communication between their peoples." Czechoslovakia, Hungary and Poland have each ratified the UNESCO constitution and have promulgated it as law.

If the unnatural barriers noted above should be lifted there would be no need to resort to exceptional methods of communication, such as balloons. But the very existence of the barrier which has become known as the Iron Curtain, and the persistent refusal of the Communist regimes in Eastern Europe to permit their people normal contacts with the free world, constitute international offenses of the most serious nature. At the meeting of foreign ministers in Geneva last year, Soviet spokesmen again refused, on behalf of the entire Soviet bloc, to permit any amelioration of this condition.

3. During the past 2 months, virtually every organ of the Soviet bloc has engaged in a massive propaganda campaign against American balloons, whether used for scientific purposes or for information purposes, seeking to create confusion about balloons generally in the public mind. Even countries to which no balloons have been sent have participated in this campaign. It is significant that the Soviet Union, to whose territory our balloons are not directed and in whose languages our material is not printed, has taken the lead in this campaign. It is also significant that, after almost 2 years of operations, balloons with information leaflets have suddenly become the object of abusive assertions reminiscent of Communist germ warfare accusations against United Nations airmen during the Korean conflict.

4. The Soviet bloc has chosen as the basis for their attacks an alleged hazard to air transport. In this connection, it should be made clear that the balloons leaunched by Free Europe Committee carry loads of from 1 to 7 pounds only. The largest of the balloons measures 10 feet by 13 feet, weighs 2 pounds, and is made of paper-thin plastic material 1.5 mils in thickness. Exhaustive studies conducted previously by the United States Civil Aeronautics Administration proved that the weight of loads which are being used by Free Europe Committee (1 to 7 pounds) does not constitute a hazard to aircraft. The results of these studies found expression in the fact that the rules of the Air Coordinating Committee of the United States—the country with the world's densest air traffic—apply only to balloons carrying loads of more than 10 pounds. The same is true of the United States Department of Defense regulations. Thousands of weather balloons carrying metallic transmitters weighing up to 6 pounds are launched daily all over the world, usually from airports and without regard for boundaries or borders. There is no evidence of any accidents resulting therefrom.

It should further be noted that Free Europe Committee balloons are also equipped with safety devices which cause these balloons to invert and the gas to escape well before reaching ground. During flight, the balloons travel at altitudes between 24,000 and 40,000 feet, far above the maximum ceiling for commercial aircraft.

5. The Czechoslovak Government, in its communication of February 24, 1956, specifically charges that the crash of an airplane in the Tatra mountain area of Slovakia on January 18, 1956, was "caused by the collision of the aircraft with a balloon" and strongly implies that the balloon was carrying printed material. The accident was a cruel one, for the 22 who died and for their families and friends. But the charge is false. In the first place, no Free Europe Committee balloons were launched to Slovakia on January 18 prior to the reported time of the crash, or on the previous day. Secondly, the only balloons which were launched on this or the previous day to other areas carried standard loads of only 3 pounds. Thirdly, publicly available records of wind direction and speeds demonstrate that no balloon launched from the West German bases of Free Europe Committee could possibly have reached the area of the Tatra mountains by 14:47 local time on January 18, 1956, at which time the airplane allegedly made the last radio contact just prior to the crash.

Certain statements made by officials of the Czechoslovak Government strongly suggest that the true cause of the unfortunate airplane crash was due to natural phenomena:

(a) It has been admitted that visibility at the time of the crash was only 70 feet.

(b) It has been admitted that the airplane, which was normally scheduled to fly from Bratislava to Kosice, had been forced by bad weather conditions to alter its route and attempt a forced landing at the Tatry airport.

(c) The Tatra mountain area is well known to be hazardous terrain for air navigation during unfavorable weather conditions.

(d) The official routine Czechoslovak and Polish weather reports issued from all three stations in the area stated that at 16:00 local time on January 18, 1956, the ceiling was obscured, with visibility reduced to between zero and three-tenths of a mile, by fog and snow.

A Czechoslovak regime spokesman has alleged that the leaflets dropped in the area on the day of the crash bore the title "Free Europe." Our records show that no leaflets carrying this title were launched on this or the previous day to any area whatsoever. Again, an official of the Czechoslovak civil air department stated on February 21, 1956, that a balloon carrying from 100 to 150 kilograms had caused the crash. No balloons carrying more than standard 3-pound loads were launched by Free Europe Committee on either day.

Finally, allow me to call attention to the fact that on September 5, 1955, the official organ of the Czechoslovak Communist Party, Rude Pravo, printed a photograph showing how airplanes knocked down balloons during an exhibition held on Czechoslovak Air Force Day. At this time there was apparently no concern that small balloons constituted any hazard to aircraft.

6. In view of the above considerations, therefore, I believe that the charges of the Soviet bloc are motivated, not by a respect for the facts, but by a persistent fear of the consequences of a free flow of information.

Integration and Dollars—Old Theory That Single School System Would Be Cheaper Falls Down in the District of Columbia

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. HUDDLESTON. Mr. Speaker, under leave to extend my remarks in the RECORD, before granted, I submit the following article written by Mr. James Free, Washington correspondent for the Birmingham News, which appeared in that paper on Sunday, March 18, 1956:

One of the arguments that advocates of racial integration in public schools have been making for years is that a single integrated school system would cost less to run than a dual system of segregated schools.

The idea was that, with the same number of pupils, the integrated system would save money on administrative costs.

It seemed like logical economics, but here in the District of Columbia it isn't working out that way.

Authorities from the District have asked Congress for funds to operate the schools in the fiscal year starting July 1, 1956. This will be the second year in which the District public schools function on a completely integrated basis. And the total requested for running the schools in 1956–57 was just over $32 million—roughly $800,000 more than the appropriations for the current year.

Only a small part of the increase—$5,755—was due to higher estimated administrative expenses. But the point is that after integration the overhead cost did not go down, as had been predicted.

Of course, the reasons why the forecast was wrong may be perfectly sound. Very likely the administrative process, like teaching problems, changed somewhat during the period immediately after the shift from segregated to nonsegregated schools.

INTEGRATED SCHOOLS WON'T SAVE TAXPAYERS MONEY

Whatever the reasons, it ought to be plain by this time that Washington's integrated public schools are going to cost at least as much to run as did its now eliminated segregated school system.

And one of the factors in the increased cost has thousands of families in the Nation's Capital worried about a lot more than the money involved. It is the fact that additional "special teachers" are needed to work with pupils who have serious trouble keeping up with their classmates in their studies.

(The District Board of Education asked for about 100 more special teachers next year, but the number was trimmed down to 40 by the District Commissioners. Whatever number may be approved, there can be no doubt but that the need for such special teachers has been boosted considerably by the integration process.)

There are some exceptions, naturally, but in general the additional special teachers are necessary because some of the Negro pupils in what formerly were white schools fall behind their classmates.

UHF Versus VHF Television—Competition or Monopoly in Communication

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. EVINS. Mr. Speaker, Mr. Phillip Merriman, president, Committee of Hometown Television Organization, this morning made a strong appeal for administrative or congressional action concerning the problems confronting small-town television operations present and prospective. I consider Mr. Merriman's statement of such importance that it deserves reproduction in the RECORD. I, therefore, ask unanimous consideration that Mr. Merirman's testimony before the Select Committee on Small Business of this morning be printed in the RECORD. Mr. Merriman's statement follows:

Mr. Chairman, members of the committee, I am here today as president of the Committee of Hometown Television, a group of station operators in New England. Between us we represent just about every kind of television operation: VHF as well as UHF operators; hopeful holders of CP's and owners no longer on the air; stations linked with radio operations, and stations standing alone; companies in the black and in the red; stations with and without network affiliations.

The one tie that binds us all together is this: We are all convinced that our national television system has now reached the point of no return.

What you gentlemen, the Congress as a whole, and the FCC make of our TV system this year will be its pattern for good. Later on there will be no chance to go back and reconsider the decisions of 1956, no use in taking another look. Pleaders for the status quo, and those who counsel us to go slow in making changes in the present setup—these people, whether they know it or not, are freezing our national television system forever in its present form—a form wholly inadequate to our country's needs.

What is that form?

The dominant fact about United States television today is quickly told: Only 295 communities have their own television facility. And there is very general agreement that under the FCC's present allocations system, no more than 350 of our communities can ever have television facilities of their own.

I think you will agree that this represents a disgraceful dead end for what is without question the greatest means of communication yet to be developed. Imagine a regulatory system which limited motion-picture houses to 350 communities or permitted railroad depots in only 350 towns.

But if that seems incredible, let me point out to you gentlemen that there are today people both in and out of our own industry, who are prepared to settle for television in a mere 100 communities—and as of now they seem in a fair way to prevail. In this connection may I invite your attention to the comments recently filed with the FCC by the Columbia Broadcasting System.

The CBS plan proposes to cover the United States from 100 principal cities, and in the process jettison the small stations completely. For instance, in New England, where I operate, this plan proposes stations in but four communities: Portland, Maine; Boston, Providence, and Hartford. Contrast this 4-community plan with the 165 radio stations and 128 daily newspapers currently serving New England.

Since the preservation of the 1955 status quo appears to have strong support inside the FCC itself, their justification for this stand needs some attention. In effect they say: It is not very important as national policy whether a television viewer gets his program from his own community station or from some out-of-town station. If we could agree to that premise, then in fact there would be very little urgency in these hearings, certainly not so much as recently produced over 350 statements to the FCC on the future of allocations.

What good is a television station to a community? Well, it provides a forum for local politics; an outlet for local fund raising, for the dissemination of local news; a medium for local advertisers; a channel for civic education, for the encouragement of civic enterprises. Without a local station, for instance, a local viewer may—and frequently does—watch the political campaign of a man for whom he cannot vote while the local candidate must remain invisible; he may be—and frequently is—urged to contribute to another community's charities while his local organization goes poor.

Again, consider the plight of the local merchant. Without a television station in town, he cannot use the medium for advertising—because, of course he cannot afford to go to the wide-coverage, out-of-town station. This is too bad, but not really so serious.

What is serious is that the local merchant's competitor, the chain outlet, having stores in communities all through the area can—and does—afford plenty of time on that wide coverage out-of-town station. Thus, we enter on that old and vicious cycle where the big get bigger and the smaller go under. And as any student of urban growth can testify, one result of this cycle is to orient the consumer toward the big city at the expense of his own hometown community.

But that's not all; there is the reverse of the coin. A television system limited to 295 communities must inevitably result in placing the whole system in the control of a monopoly. If this seems an extravagant statement may I refer you once again to the CBS statement I mentioned before. There you will find blueprinted the few easy steps by which our national television system can be reduced to 3 network stations in each of 100 communities. The steps are few and easy because the present FCC policy has brought us today so perilously close to that very pass; very little remains to be done.

Let me pause right here to make one emphatic point: In the course of my statement I have seemingly attacked the networks in general, and CBS in particular. But in our view, they are to be held blameless for the threat their plans pose. They are doing no more than to take full and normal advantage of what the FCC allows—a course any of us will always follow, I think. Our quarrel, then is not with CBS for its 100 market, monopolistic plan—but with the FCC for pursuing a policy which allows such a plan even to be considered.

The broad perspectives of history—and here we have only to go back to the last World War—show very clearly the great dangers inherent in any monopoly of the means of national communication. While I am not for a moment suggesting that the gentlemen in charge of our TV networks have any intention of placing our television system in jeopardy, I cannot refrain from making the point that their plans would unwittingly turn our feet down a perilous path.

From these considerations I think it is fair to conclude that the limitation of television to 350 communities is a great deal more than unfortunate or regrettable. Viewed as the result of a national policy such a hamstringing of a great national asset is no less than catastrophic.

What has happened under the FCC's present policy is quite simply that the VHF stations have been allowed to crowd the UHF stations off the air and off the map and out of business.

Just how impossible UHF operation now is can readily be deduced from some vital statistics:

Since 1952, the total of UHF stations forced out of business is 57. Twenty-one quit in 1955.

Of the 95 UHF commercial stations now in operation, about four-fifths are operating at a loss. A mere 18 are profitable.

One hundred and eleven recipients of construction permits for UHF stations have relinquished them. One hundred and four are sitting on them.

These statistics tell a plain story: UHF in the United States today is nearly dead. What's more, the impressive piles of financial wreckage that now cover the UHF landscape make it highly unlikely that any new capital for UHF will appear on the scene, now or ever—unless something is done about UHF right now, before the 95 stations still operating go under. Just how urgent this situation is may be seen in the fact that in the last 90 days, 6 more UHF stations went off the air.

After all, neither you gentlemen nor the FCC can simply legislate new UHF stations into being. For every station there has to be a group of businessmen willing to risk their capital in what they consider to be a sound investment; and in the context we are discussing here, these businessmen have to be local businessmen, that is, investors, with limited funds. You can spread just so much business failure on the UHF record, and then these potential investors will

turn their backs for good on TV as an investment possibility.

A case in point: Early in 1953 my company put up a building for our television operation in Bridgeport, at a cost of $163,000. Repeated efforts to finance the construction through the normal channels were unsuccessful, largely because we were a new station with a UHF license. Finally and in desperation, we secured a mortgage for less than one-third the construction cost from the builder himself—for which we must pay 10-percent interest, Small Business Administration or not.

Imagine trying to finance a UHF station in Bridgeport now.

I think you will agree with me that investment in UHF operation has now been brought by FCC policy (or lack of it) very close to the untouchable class. This progress of UHF to the brink of extinction comes as no particular surprise; it had been widely anticipated among UHF operators for some time.

This is all by way of enlarging on a statement with which I began my testimony here today: This is television's year of decision, and failure to act now on behalf of UHF will foreclose the possibility of any future resurrection.

Now, I have spoken several times of the need for helping the UHF operations, and I wish to make clear to you that what we seek is neither some sort of Federal bounty nor any special legislative dispensations. What we seek now is no more and no less than what the Congress has told the FCC to provide: "A fair, efficient, and equitable distribution of service." This would certainly involve some changes in current FCC policy, some steps they have taken will have to be retraced; but I wish to make the point that such changes are needed only to return to the path the Congress set for the FCC in the first place.

The question now becomes: How can we put the FCC and our national television allocation policy back on the track for priority 2—a television facility for every community?

There is evident in statements recently filed with the FCC a tendency to make this problem seem more complex than it really is.

This seeming complexity is due largely to the fact that discussion has centered around the engineering problems involved rather than addressing itself to the fundamentals of policy.

If you or I set out to put up an office building, we don't start by calling in the plumber and then design the building around his pipelines. We call in the architect, and require the plumber to figure out plumbing lines that will fit the architect's plan. No more should we now let engineering arguments shape the future of America's television. Policy comes first and engineering is the servant of policy, not its master.

Long ago Congress, that is, you gentlemen, told the FCC to provide "an equitable distribution" of television facilities, and the FCC at that time set up its allocation priorities as a translation of that policy.

The FCC has virtually abdicated as an instrument of Government policy; instead it seems to be attempting to rewrite congressional policy by a mystic and unprofessional estimation of which policy creates the least stubborn engineering problems.

What is it, then, that we seek from you gentlemen now? What precisely are we asking for?

If I may take the liberty of placing myself in your shoes for the moment, what I would do about the plight of the small television station, and about the hometown markets of the United States, is this:

First, I would address my remarks exclusively to the FCC. This is the body solely responsible for our dilemma today, and they have the full power to remedy the series of mistakes that have brought us to our present pass. After all it was the FCC which made these mistakes in the first place.

I would say to them: Implement the congressional mandate to provide a television facility to as many communities as want them.

Do it by deintermixture, by tax differential, by using drop-ins, by any means your engineers can devise, but do it.

And do it right away, while you still can, do it before the small operators essential to this objective have all gone out of business.

This means, do it before June 1—or at least take such a good and affirmative start in this direction that by June 1 there will no longer be any question as to where you are going, and whose interests you have at heart.

I would like to repeat something I said earlier: I am the operator of a UHF station in a VHF area. I have lost money every month since we began operations back in 1953. I see no immediate prospect of making any money. All that keeps me in operation is the hope that something will be done to make it possible for me to compete on even terms with the VHF monopoly of the air. But hope, gentlemen, is a tender flower and my resources are very nearly at an end. I am quite sure in my own mind that unless there come from these hearings some positive mandate to the FCC my hope and my resources will give out very quickly. The only justification for pouring money down a rathole is the expectation that someday I will get it back. If I cannot see how it will ever come back, I must close down—and I will.

I have just spoken in the first person singular. But I know, and you must also know, that my words are echoed to the last comma by very nearly every one of the 95 UHF operators still on the air.

What is needed now, by us, by the FCC, by the American public, is an affirmative statement of policy from you gentlemen—statement of a policy which will give us what I might describe as the business hope to keep going until equity can catch up with us.

If no action is taken, then not only will we go under, not only will television be denied forever to America's hometowns, but we will by the sheer force of inertia be delivered into the hands of a monopoly of 3 men: the presidents of the 3 networks. Such a monopoly will, we know, freeze the whole industry; freeze the art of television; freeze the TV film industry.

And—as I certainly don't have to explain to you gentlemen—where a monopoly has been allowed to triumph, there you will find the graves of small business.

Consider for a moment this fact: television is an infant industry. Technically, it stands now on the verge of enormous advances, advances in transmission and reception that will surely lead us as far ahead of today's operation as the hi-fi phonograph is ahead of the trumpet-horn model of Edison's day. In television what is probable today will become everyday tomorrow—and what seems impossible now may soon be cataloged for sale.

And it is at this crucial point, at this golden threshold, that the FCC would permit the small stations to die and the monopoly of wide-coverage stations to take over. If ever there was a small business worth protecting, and if ever there was a moment when that help was vital, it is the small television station right now. Rob a community of a factory and you create unemployment that can be remedied. Rob it of its own station and you create a void which can never be filled.

We are, in fact, at a moment of crisis in the history of communications, and our duty now is to recognize that this is a crisis; the perspective of history will make this fact plain enough. The first step toward saving hometown television must be taken in the minds of the Commissioners. They must concede that UHF and hometown television can be rescued by a series of immediate, forthright and affirmative actions well within the scope of their own authority. This done the vista is fine:

1. The present retreat into a stifling and dangerous monopoly will be ended.

2. The television industry will obtain better and closer coverage, better programing, more return for the advertising dollar, and—in short—more television.

3. America will get hometown television, an essential aspect of its democratic tradition.

Israel and American Policy

EXTENSION OF REMARKS
OF
HON. LAURENCE CURTIS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. CURTIS of Massachusetts. Mr. Speaker, under leave to extend my remarks, I commend to the attention of the membership of the Congress an editorial from the Boston Globe of March 13, 1956, entitled "Israel and American Policy":

ISRAEL AND AMERICAN POLICY

Dispatch of the aircraft carrier *Forrestal* to the Mediterranean follows, within a week, announcement that a battalion of United States Marines has been ordered to that dangerous sea "for training purposes."

Meantime, active preparations for war are speeding up at Cairo among Arab leaders; ground forces are being built up along the Egyptian approaches to the Republic of Israel; the inhabitants of that unhappy country are digging in desperately, resolved to sell their lives, if need be, as dearly as possible; Jordan, released from restraints which have kept her border inactive for 2 years, has renewed raids deep into Israeli territory; and the Egyptian Ambassador in Washington proclaims in a radio-TV broadcast that "Israel does not exist."

From every capital abroad come reports of increasing danger of an Arab-Israeli war, the stakes being the survival of the Republic of Israel. Simultaneously, the frenzy of Arab nationalism is being stoked by a stream of arms shipments, while an airtight ban is enforced against Israel's pleas for defensive weapons.

The United States is shipping tanks, planes, artillery and other weapons to the Arabs, meantime postponing Israel's arms requests till the Greek Kalends. Canada last week banned a shipment of ammunition to Israel, while sending forth a shipment of warplanes to Egypt. Sweden anounces heavy arms shipments to Egypt, but none to Israel.

What is our Nation's policy in this explosive dispute?

Both Secretary of State Dulles and President Eisenhower explain that one of our aims is "to prevent an arms race." Their statements certainly find verification in what our own and other governments are doing. This is, indeed, no "arms race.' It is a heavily loaded, onesided, studied program of denying the means of self defense to one country while building up armaments at the disposal of its self-proclaimed foes, whose announced determination is to obliterate it.

The President, last week at his press conference, further explained—again echoing ideas previously expressed by Mr. Dulles—that Israel is small and has but 1,700,000 population, whereas her hostile Arab neighbors have 40 million. This fact, said Mr. Eisenhower, makes it futile to ship arms to Israel, because neither her size nor her small

population would enable her to "absorb" sufficient arms to defend herself.

If relativity of size and population to the rights of survival of a free, independent democratic state is really the criterion underlying sound policy, some interesting revisions of history would seem in order. The Greeks at Marathon should have been directed by their rulers to disperse, because Persia was a huge country and Xerxes' armies numbered 2 million. The Continental Congress should never have assembled, because of the size and power of the British Empire.

Perhaps Mr. Dulles should even halt shipping arms to Pakistan, a small nation in comparison with the size, population and power of its Russian neighbor.

Week by week, parallels from the thirties rise wraithlike over this situation: Ethiopia, dismissed to tyranny because its succor against Mussolini might inconvenience the oil interests; Czechoslovakia, whose freedom was bartered to Hitler by "practical men." To what end?

If the United States and its British and French allies of the Tripartite agreement of 1951 are to rescue the moral foundations of any policy at all, they would do well to emerge at once from their artificial fog and reaffirm, explicitly, their guaranties under that pact to place their full might behind the protection of the Arab-Israel frontiers against aggression by either side.

The hour grows late.

UNCLE DUDLEY.

Dynamic Leadership Drives Forward Chicago's Destiny as First City of the World

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. O'HARA of Illinois. Mr. Speaker, that my colleagues may know the giant strides forward that Chicago is taking under the dynamic leadership of Mayor Richard J. Daley, I am extending my remarks to include excerpts from an editorial in the Chicago American of March 15, 1956, as follows:

MOVING AHEAD

The predictions of tremendous growth for Chicago in the next 10 years, which were made at the University of Chicago's civic dinner at the Palmer House Monday night, are cheering because they are based solidly on facts.

Mayor Daley said the next 10 years would see "jet planes of every nation landing at our airfields, ocean ships of every country docking at our port."

There is no daydreaming in that forecast. Our air traffic, already gigantic, is growing daily. It has made Midway Airport the busiest in the world and has overflowed to gigantic O'Hare Field. We are developing O'Hare to handle a business much greater than Midway's within a few years.

The ocean ships will come with the completion of the St. Lawrence seaway, and the great port we are building in Lake Calumet will be ready to receive them.

To prepare for the new industries, business and population the next decade will bring, the mayor anounced that the city will undertake a great 5-year program of widening streets, building overpasses, modernizing lighting, et cetera.

Dr. Harold C. Urey, University of Chicago nuclear scientist who had a part in accomplishing nuclear fission for the first time, said Chicago was well on its way to becoming the Nation's scientific capital. But Chicago, he said, must make living conditions attractive to scientists if we want them here.

Dr. Philip M. Hauser, University of Chicago professor of sociology and former director of the United States Census Bureau, said the metropolitan area would gain 1,300,000 new residents within 10 years. Dr. James H. Lorie, professor of business, said Chicago's economy would expand 45 percent in the decade, and Dean Jerald C. Brauer of the theological faculty declared that Chicago must and will keep pace spiritually with its intellectual and material growth.

BIG STEEL PRODUCTION

These are glowing predictions. But they are based on sound evidence.

An extremely substantial piece of this evidence was offered the same evening at a dinner in Gary. Roger M. Blough, president of United States Steel, announced that improvements would be made in the plants at Gary and Chicago to make steel production in the Chicago area—already the greatest in the world—still greater by 1,200,000 tons a year.

Northwest Airlines Handling North Pacific Route Satisfactorily

EXTENSION OF REMARKS
OF
HON. AUGUST H. ANDRESEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. AUGUST H. ANDRESEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Winona Daily News, Winona, Minn. It is from the edition of Wednesday, February 22, 1956, and it comments on the efficient handling of the North Pacific route by the Northwest Airlines.

NORTHWEST AIRLINES HANDLING NORTH PACIFIC ROUTE SATISFACTORILY

Competition can be a handy catchword that covers a condition quite at variance with the sturdy give-and-take which is customarily associated with growth and progress.

This is illustrated by the fact that it is being used by Pan American World Airways in its current ruckus with a Minnesota company, Northwest Orient Airlines.

PAA, which already has routes across the south Pacific and the mid-Pacific, wants a certificate from the Government to fly the north Pacific, a route which Northwest pioneered and now operates.

But how much is this competition needed? In fact, can it be justified?

The traffic along this northern route is quite thin compared with other international routes. Nor are the potentials for years to come likely to be great. Northwest, through efficient, economical, enlightened methods, has managed to build up enough business so that it doesn't have to look to the Government for help. Since January 1, 1955, it has operated without subsidy.

But to confront it with a competitor like PAA on this northern route would mean that it would again have to ask for subsidy. And Pan American might face the same necessity.

So this competitive arrangement would mean that the American taxpayer, already heavily burdened, would be called upon to support 2 airlines on a route that 1 has barely made pay.

The taxpayer would have to dig into his pocket, or else one of the carriers, Northwest or PAA, would have to give up. And, in that case, what would happen to competition?

Pan American once scoffed at the northern route.

Since then, Northwest has demonstrated that this route, following the great circle through Alaska, offers the shortest, fastest way to Tokyo; and has a better performance record than many domestic routes.

Why change what appears to be a satisfactory arrangement with the persons who travel this route?

Let's Cut It Down to Size

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Muncie Press of Saturday, March 17, 1956:

LET'S CUT IT DOWN TO SIZE

The taxpayers might as well brace themselves. According to advance reports, Secretary of State Dulles is returning from his Asian trip ready to present a new bill for vast outlays of American money to finance "underdeveloped" countries.

The cash would be ladled out regardless of whether some of these countries are playing the Soviet or Red China political game. As a practical matter the countries getting the lion's share would be India and Indonesia, both of which have yessed almost everything Moscow and Peiping have suggested.

A view in the Washington administration which regrettably seems to be prevailing at the moment is that we have to play follow-the-leader in every quirk of Communist policy. The present quirk is the Red promise-everything economic campaign.

The Russians are making spectacular promises which no realistic person believes they can fulfill expect in discarded military equipment. Yet some of our leaders seem to think we have to counter with even bigger bribes in order to hold the friendship of certain neutrals.

We hope Congress will take a good long look at this business of indiscriminate, blank-check foreign assistance. We hope our House and Senate Members insist that the money we spend overseas be spent only in those countries which have proved themselves as fully identified with the determination to resist Reds.

We go along with helping countries which fall in that category, like Thailand, the Philippines, South Korea, and Nationalist China in Asia. And like Turkey, Iran, Iraq, and Pakistan in the Near East.

As for the others—the hands-out-to-both-sides governments—we should say: "All right, if you want to sell your freedom for a pittance, have it your own way."

We venture the opinion they would be seeking a place behind our protective stockade in no time at all should we speak to them with this kind of courage and candor.

Meanwhile, the United States ought to put its foreign aid on a strictly selective basis and thereby cut it to size.

The national security would be far better served by applying some of the billions saved

to building up our own plane and guided-missile programs. To say nothing of the possibility of a modest lifting of the tax burden.

H. R. 7886 Is a Forward Step in Meeting Our National Obligation To Provide Adequate Security for Disabled and Unemployed Veterans

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 1, 1956

Mr. DONOHUE. Mr. Speaker, I should like to compliment the distinguished chairman of the House Veterans' Affairs Committee and the able members of his most efficient unit for initiating current consideration of and hearings on the several bills pending before the committee designed to liberalize the present veterans' pension and benefits laws.

One of these bills, H. R. 7886, commonly known as the War Veterans' Security bill, has attracted wide attention and favor because of its inherent merit, more especially as it beneficially affects needy and disabled World War I veterans who have lately been too much forgotten.

Two wars have taken place since World War I, and the veterans of that great conflict, to end all wars, have unfortunately tended to disappear from public attention and appreciation. Today more than 3 million World War I veterans survive, with an average age of 62. Many of them have already passed away without experiencing benefit of the traditional old-age security which needy veterans of all previous wars were granted in recognition of their sacrificial service to their country.

This unfortunate disregard of the security of our World War I veterans, and the veterans of all our wars, must not be permitted to continue. In these days of persistent extreme tension and ever-threatening war, it is not only the honorable assumption of a high obligation, but it is indeed most practical to insure a resolute morale among present and prospective military defenders of our national safety through clear demonstration that the American people will never be miserly in repaying the debt rightfully owed to all our veterans and will be forever mindful of the substantial physical, mental and financial sacrifices of veterans and their families during service in wartime.

In summary, this measure advocates two major changes in our current system: First, breaking up the present pension system and making two separate divisions of payments to veterans in need: (a) disability security for war veterans under 65 who need it, and (b) old-age security for war veterans over 65 who need it; second, liberalizing the ceilings and amounts of payments in both classes of security benefits.

Specifically, the suggested amendments embodied in H. R. 7886 would raise the monthly payment to $85, and after 10 years to $105 a month; the payments to the helpless would be increased to $150 a month. It is further proposed to raise the income eligibility ceiling from $2,700 to $3,000 with dependents, and from $1,400 to $1,800 without dependents.

Under modern economic conditions and practical recognition of the realities of this atomic age living, these figures certainly cannot be termed extravagant or unreasonable. To grant a needy and helpless veteran $150 a month in consideration of his patriotic sacrifice surely cannot be cited as overindulgence when we think for a moment of the costs of the required attendant, medicines and basic foods for mere existence. To raise the income eligibility ceilings to $1,800 and $3,000, respectively, is only honest admittance of the economical fact that present ceilings and perhaps even these proposed changes have too long been ignoring of and blind to the high American living standards we have established as being Christian and of which, under other circumstances, we so often boast. If we choose to disregard need, let us at least be truthful about the actual income figure even a willing, able, and employed American requires to live decently in this blessed, prosperous Nation. Let us further realize the fact that in a great many cases the Veterans' Administration interpretation of the present disability and unemployability clause disputes the right to pension payments in instances where only half of the amount now specified in the income ceilings has been earned. An additional feature of this bill, then, is to remove any conscientious administrative doubts of the Veterans Bureau because of yardstick uncertainties in the present law.

Let us finally and realistically appreciate that in this modern industrial and commercial and material age unemployability is too often not as synonymous with inability as it is, unfortunately, with the word "age." Many persons 60, 65, and over are ready, willing, and able to do some work, but the sad fact is that practically all segments of our business and industrial life are not even inclined to hire employees who are over 40 years of age. As a truth, that deplorable situation is becoming a major problem in this country and has already been made the subject of serious investigation and concern by our Labor Department and related agencies of the Federal Government. It is clear, then, how unreal the current system is in trying to carry out the intent of our existing pension law by applying the "disability and unemployability" clause to men over 65. As now applied, the "unemployability" must be due to the "disability." Probably it is closer to the truth to state that the proportion of World War I veterans in need because of age-alone unemployability is 2 to 1 over the number in need because of disability.

Mr. Speaker, a study of the proposed changes and suggested improvements included in H. R. 7886 reveals that no alteration in principle for the under-65 veteran group is urged, but merely an extension of the present principle to provide better security for the disabled and unemployable in this age group through liberalization of the present ceilings and payments consistent with modern economic conditions. Let us also note that the bill does not conflict with the social-security program, since such benefits are included in income that would carry a veteran over the allowance ceilings. Let us further observe that some of the proposed benefits would serve to reduce other Government payments to the aged, such as the aid to the aged program carried jointly by the Federal and State Governments; it would displace part of many local aid programs for the aged at community and municipal levels.

In conclusion, may I simply say that it is obvious to anyone studying the subject that our present veterans payments and pension system requires sensible upward revision in recognition of the moral obligation this Nation owes to our veterans and in reasonable recognition of the plain economic facts of everyday living. It appears that we can afford to give billions of dollars for the prime purpose of attracting doubtful allies in case of Communist aggression. It would, then, seem very sensible to express a Christian measure of gratitude to those loyal Americans whose patriotic sacrifices are of record, while at the same time we demonstrated good faith to those who will be called upon to fight and die for America's safety in any future wars, God forbid. I urge every Member of this House to carefully study the provisions of H. R. 7886, and all the other similar measures now pending before the House Veterans' Affairs Committee, so they will be ready to conscientiously vote for the security of all our veterans and the continuing welfare of the Nation when this legislation is presented to us for action in the near future, I hope.

Inestimable Benefits

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. OSTERTAG. Mr. Speaker, Congress is often chided for the sums it authorized for flood control projects, the implication being that these programs are just big, mindless giveaways.

Yet no one can estimate the savings in lives and property that are the direct result of these projects, for the savings are truly incalculable.

Mount Morris Dam, on the Genesee River in western New York is a case in point. Had it not been there during recent torrential rains and spring runoff, the downstream communities, including the city of Rochester, might well have suffered damage of disastrous proportions. As it was, the dam backed up the swollen Genesee for 16½ miles in its great gorge, thus protecting the communities below it from the cumulative runoff of the upstream area, and undoubtedly sparing them a major disaster.

Today, when many communities in our country are still staggering under the effects of last fall's destructive floods, and when Congress is trying to cope with the problem of providing some feasible kind of flood and disaster insurance, one is forced to the conclusion that the main thing wrong with our flood-control program is that it has not been big enough.

Under leave to extend my remarks, Mr. Speaker, I include in the RECORD an editorial from the Times Union of Rochester, N. Y., of March 9, bearing on the great protective value of the Mount Morris Dam:

GOOD OLD MOUNT MORRIS DAM

Again the Mount Morris Dam, completed in 1952, proved its value when floods roared down the Genesee.

This test was the most severe since the dam was completed. It already had passed former volumes of retained water before cresting this afternoon. Today it was 117 feet at the dam with water backed up 16½ miles through the gorge.

Of course the big dam cannot guarantee complete relief from high water down the river because the watershed this side of Mount Morris is big enough to produce floods with sufficient rainfall. And there are some jumpy creeks below.

It does, however, cut the river in two and separate floods that together would be extremely costly.

State of Alaska

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. BARTLETT. Mr. Speaker, there was published in the Washington Post and Times Herald, Sunday, March 11, 1956, an editorial entitled "State of Alaska" which I desire to call to the attention of my colleagues:

STATE OF ALASKA

Fifty-four representative Alaskans from every corner of that northern Territory recently completed the drafting of a State constitution with a very interesting gimmick. When the people are asked to ratify the constitution at the polls in April, they also will be asked to approve the so-called Tennessee plan to dramatize Alaska's case for quick congressional action on statehood. This plan, which was used by Tennessee and six other territories to gain statehood, was adapted to Alaska's needs by a New Orleans businessman, George H. Lehleitner. Under it two Senators and a Representative would be chosen at the 1956 general election to come to Washington and request Congress to seat them and accept the State of Alaska.

The constitution itself has been praised by political scientists as a model document. It provides among other things for a bicameral legislature, distinct separation of powers with a strong executive, home rule for cities and vigorous protection of natural resources. It would set the voting age at 19 and also contains the salient guarantee in its declaration of rights that "the right of all persons to fair and just treatment in the course of legislative and executive investigations shall not be infringed." There is no reason to think that Congress would not welcome it as a modern and constructive State charter.

Whether the Tennessee plan would have any chance for success is another question. The principal objection is that hardening of the national arteries has set in since the last State was admitted to the Union in 1912, and that it has been so long since such a demonstration has been tried that congressional reaction could not be predicted. Yet any assessment of the present Congress shows that the chances for Alaskan statehood are dismal indeed, and the Eisenhower administration shows no inclination to include Alaska in its recommendation that Hawaii be admitted. People in the burgeoning territory are understandably impatient over the drag on their development and the frustration of their rights as Americans. The Tennessee plan would confront Congress with an unusual problem, but the spectacle of Alaska's duly elected representatives beating at the door would certainly emphasize the issue. In the last analysis Alaskans have little to lose by this sort of appeal for the freedoms enjoyed by the present 48 States.

Luther Burbank

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. PHILBIN. Mr. Speaker, I ask unanimous consent to revise and extend my remarks in the RECORD and include therein a most appropriate editorial from the Boston Record entitled "Burbank's Day."

The subject of this timely, able writing is, of course, the great Luther Burbank, horticultural genius, plant wizard, and humanitarian, who was born in my district in Lancaster, Mass., 107 years ago. On the occasion of the 300th anniversary of the town of Lancaster in 1953, I addressed the House at length concerning the contributions of this great American who did so much for humanity.

Such men as Luther Burbank belong to the centuries because there are so few of them. He ranks with Michelangelo, Shakespeare, Edison, and a very small number of men throughout the ages in whom the Creator implanted the spark of great genius.

For the town in which he was born and the great district in which he spent his early life, I am privileged to express my gratitude to the Boston Record for so fittingly commemorating his birthday. All Americans can thrill with pride at his many revolutionary discoveries and innovations affecting plant life which have been so beneficial to our Nation and the world. The ages will add to the luster of his achievements.

The editorial follows:

BURBANK'S DAY

At Lancaster, here in Massachusetts, 107 years ago today, the kindly angels who preside over things that are beautiful and healthful to mankind undoubtedly hovered over the cradle of a newborn child, Luther Burbank by name.

They bestowed on him one great gift: the genius to make plants grow and multiply into endless varieties.

They added a rare quality: the intellect, desire, and energy to devote his gift entirely to the welfare of humanity.

His birthday, by act of the California Legislature, is also Arbor Day and dedicated to his memory.

For Burbank did most of his invaluable and enduring work at Santa Rosa, Calif., where he settled as a nurseryman in 1875.

There he produced 60 new varieties of plums and prunes, dozens of new berries, the spineless cactus, virtually new families of roses, iris, peaches, quinces, almonds, nectarines, tomatoes, corn, asparagus—not to forget the famous Burbank potato.

He lived to ripe old age to know fame, receive countless honors. He never knew pride, envy, or greed. To the last he was a simple, soft-spoken, retiring man, humble before the miracle of life, serving humanity silently and richly.

Republican Day March 20 Becomes a Reality

EXTENSION OF REMARKS
OF
HON. WILLIAM K. VAN PELT
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. VAN PELT. Mr. Speaker, the Republican Party was born 102 years ago today in a little white schoolhouse in Ripon, Wis., located in the Sixth Congressional District, which I have the honor to represent in this Congress.

The occasion is being observed throughout Wisconsin today and special ceremonies are being held in Ripon. Pilgrimages to the birthplace of the Grand Old Party have been arranged from many parts of the State.

The event is interestingly described in the March 16 edition of the Ripon Press. Because the article also contains some historical information about the founding of the party, I insert it in the CONGRESSIONAL RECORD as a part of my remarks:

(By Paul C. Richards)

The Republican Party, which was born here in the little white schoolhouse on March 20, 1854, has been the dominant political party in Wisconsin for 90 years of its 102 years of existence, but during that long span of time not one single thing had ever been done to point to proper official and legal recognition to either the party or the birth.

That old story—for want of a nail a shoe was lost, for want of a shoe a horse was lost, for want of a horse a rider was lost, for want of a rider a message was lost, for want of a message a battle was lost—was the exact position of both Republican Day and Ripon was in until April of 1955.

Because of Maj. Alvan E. Bovay's perseverance and active participation his message was not lost for want of a rider for he carried his own message and thereby won the "battle" that resulted in the birth of the Republican Party.

Just 101 years and 1 month later, the job that Major Bovay started came to an official conclusion. As a result of his efforts the Republican Party was born, and as a result of that birth Republican Day was originated. And now March 20 of each year beginning with this year will be known as Republican Day in Wisconsin.

CUDA SPONSORS RESOLUTION

The 1955 legislature, in making the official conclusion, passed a joint resolution sponsored by Pat R. Cuda, a Milwaukee public relations man active in Republican affairs, that requests the Governor to annually proclaim March 20 as Republican Day.

Ripon is cited in the resolution as the actual birthplace of the Republican Party. The little white schoolhouse where the blessed event took place remains intact, and is situated on the same corner lot as the famous Republican House.

Cuda said he originated Republican Day because: (1) Wisconsin has never given proper recognition to the fact it was the birthplace of the Republican Party during the 101 years since its birth; (2) to officially and legally establish the fact that the Republican Party was born on March 20, 1854, and that the actual birth took place at Ripon, Wis.

TWENTY-FIVE GOP GOVERNORS

Since the birth of the Republican Party, Wisconsin has had 25 Republican Governors. And from Abe to Ike there have been 12 Republicans elected as Chief Executives of this great Nation.

The proceedings of the famous political meeting in the little white schoolhouse received very little publicity in the Wisconsin press at the time. Thus this story is a good place to report the results of the research concerning the Ripon blessed event.

GREELEY AGREES ON NAME

In 1853, Major Bovay was visiting with Horace Greeley, editor and publisher of the New York Tribune. Bovay mentioned the word "republican" as an adjective, but Greeley replied that "Republican" as a noun, would be a good name for a new political party.

Greeley told Bovay, "The name Republican, for a political party will serve all purposes, present and future—the only one that will live and last." (Greeley later became a member of the new party and helped to achieve Lincoln's nomination in 1860.)

One year later, on March 20, 1854, Major Bovay changed the word republican from an adjective to Republican as a noun. He added the word party and together they spelled out Republican Party.

Later that same day, a meeting was held in the little white schoolhouse. Of the 100 eligible voters Major Bovay had invited, 53 showed up.

TOWN COMMITTEES DISSOLVED

A committee of 5—3 Whigs, 1 Free Soiler, and 1 Democrat—was appointed to consider Major Bovay's proposal for a new political party, the Republican Party.

Prior to the committee of five going into executive session, by a formal vote the Free Soil and Whig town committees were completely dissolved.

Major Bovay in describing the historical meeting later said, "We came out of it Republicans, and we were the first Republicans in the Union."

An attorney and educator, Major Bovay served with the 19th Wisconsin Regiment during the Civil War. Prior to that he was an assemblyman in the Wisconsin Legislature. He died at Santa Monica, Calif., on January 29, 1903.

LITTLE WHITE SCHOOLHOUSE

The history of the little white schoolhouse is a story in itself, but a few of its highlights are important to this story, and here they are.

When the Republican Party was born, the schoolhouse was located on the grounds now known as the campus of Ripon College. Since that time the school has been moved five times.

For 2 years the school building was used as a residence by George W. Peck, who later as a Democrat served two terms as Governor of Wisconsin from 1891 to 1895.

John C. Fremont, who was the first Republican to seek the office of President of the United States, visited the birthplace of the Republican Party during his campaign in 1856. He carried the State with 66,090 votes; his 2 opponents garnered 53,000.

During Abraham Lincoln's campaign for President in 1860, he also visited and spoke in the schoolhouse. Lincoln was the first Republican to be elected President. He carried Wisconsin with 86,113 votes. The combined vote of his 3 Democratic opponents was 66,000.

Federal Budget and Accounting Practices

EXTENSION OF REMARKS

OF

HON. GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1956

Mr. LIPSCOMB. Mr. Speaker, in remarks before the annual dinner meeting of the American Institute of Accountants on Friday, March 16, 1956, in Washington, Hon. Joseph Campbell, the Comptroller General of the United States, outlined the progress the General Accounting Office has made in bringing about better accounting practices and procedures in the Government.

The Comptroller General emphasized the need for greater recognition of the professional character of the work being carried on by accountants in the Federal Government and for greater recognition of the need for the accounting profession to aid in making an accounting career in Government more attractive to young men. In concluding his remarks, the Comptroller General pointed out the necessity for putting into effect certain recommendations contained in the Hoover Commission's Budget and Accounting Report.

During February, Senator PAYNE and I introduced identical bills—S. 3199 and H. R. 9402—which would enact into law the majority of the recommendations of the Hoover Commission with respect to budget and accounting reforms.

Because of the current legislative interest in such accounting and budgetary reforms advocated by the Comptroller General and being initiated administratively within the limits of the authority and responsibility of the General Accounting Office and cooperating agencies, and because of the significant potential savings that could result from improved financial management of the Government, I would like to call the attention of my colleagues the full text of the remarks of the Comptroller General before the American Institute of Accountants:

REMARKS BY COMPTROLLER GENERAL OF THE UNITED STATES AT THE ANNUAL DINNER OF THE AMERICAN INSTITUTE OF ACCOUNTANTS

Mr. President, honored guests and members of the institute, it is my great pleasure to participate in this third occasion arranged by the institute to honor its members in public service. I hope it will serve to emphasize two ideas—first, greater recognition of the professional character of the work being carried on by the present staff of accountants in the Federal Government, many of whom are members of the institute, and second, greater recognition of the need for the profession to aid in making an accounting career in Government more attractive to young men.

We are all well aware of the magnificent contribution made by many members of the profession in each instance when our country has called upon its citizens in times of war. We also are aware of the great personal contributions of those who have been singled out as leaders of the profession to undertake specific tasks. Such efforts will always be needed and the opportunities for service are great.

Today we have still a different kind of problem. We are not at war in the sense that a significant number of members of the profession can reasonably be asked to sacrifice their carriers to enter public service for an indefinite period. Yet, the problems of wisely using the tremendous resources being absorbed by our Government warrant a greater staff of professional accountants than the present competitive situation has permitted. This is a matter in which you as leading citizens and leaders of your profession have a vital interest.

I wish to give no impression of hopeless gloom about the accounting and auditing situation in the Federal Government today. Quite the contrary, the last decade has been one of great progress. Many of the developments have been evolutionary in nature and in many cases a foundation has been laid which can rapidly lead to much greater progress if the momentum is sustained.

The joint accounting improvement program under the leadership of the Bureau of the Budget, the Treasury Department, and the General Accounting Office, but, more important, participated in by almost every operating agency in Government, has stimulated the inherent desire in officials and employees at all levels to do a better job. Great strides have been made in eliminating burdensome central agency requirements which in the past stifled operating agency initiative. It is now well recognized that the way is open for each operating management to develop an accounting system suited to its needs. True, not all have accepted the challenge because of lack of leadership within the agency, but many have and the way is open. Moreover, some agencies have been unable to acquire an adequate staff of professional accountants, but it is surprising what can be done with a little guidance even with a less than adequate staff if the will to do so exists at the top.

I would like to deal more specifically with our own situation in the General Accounting Office. Perhaps we have been more fortunate than many agencies in the matter of quality of our professional staff. This is to the credit of others rather than myself. We have a professional staff of accountants and auditors of about 1,200. Of this number, 70 percent are college graduates. Over 300 are certified public accountants—about one-fourth of the staff. About 65 percent of our 200 top supervisors are CPA's. Over 160 are members of the American Institute of Accountants and over 140 are members of State societies and of many other professional groups. Need I offer any apologies for them? I think not.

What I have indicated, of course, represents only one side of the coin. First, there is the magnitude of the total job to be done. Second, with what resources have we to do it?

In our accounting systems work we have never contemplated building up a staff to do

more than advise and assist the agencies—it is and should be the primary responsibility of the agencies to devise accounting systems suited to their management needs within the broad framework of the principles and standards which we are by law responsible for providing. We are and should be largely a catalytic agent and adviser. Our staffing problem in this area has been difficult but not unmanageable.

In the audit area our problem is a quite different one. If we are to expand our modernized audit program to all areas of Government—and particularly Defense—we are confronted with a major recruiting problem at all levels. Our concept of audit permits no compromise in the quality of our staff. We recognize that we have many handicaps to overcome in today's competitive market. However, we believe we can offer a challenge, equaled by few, in the scope of diversity of our work.

We are undertaking an aggressive recruiting campaign in the colleges this year but it has been difficult to gain recognition, within the Government, of our need for a flexible action program. We do not yet know how we will make out. We plan to follow through with intensive training efforts but it is obvious that we have a long road ahead to meet our ultimate needs. We feel reasonably optimistic about this side of our picture but we also need your understanding and assistance in developing those facets of our career program which will make continued employment with the Federal Government a recognized segment of the accounting profession.

In this regard, we have noted with great interest and I heartily endorse the recent action of the executive committee of the institute, to recommend to the council that members not in public practice be accorded the opportunity to participate fully in the institute's work. Such a course will permit greater recognition of the professional accountant in Government when appropriate.

I would be begging the question if I did not frankly state that this need for greater professional recognition also includes greater consideration of appropriate Government experience in determining qualifications to sit for CPA examinations. Otherwise, a considerable number of those we recruit and train will leave us to seek the professional recognition represented by the certificate. At the same time, members of our staff who have no greater ability but who have been more fortunate in receiving such recognition are frequently in demand outside of Government. If the professional character of our work is appropriately recognized, we believe the challenge it presents will permit us to effectively compete even though financial incentives at the top levels in Government will always be less than in private employment.

To round out my discussion of our staff picture in the General Accounting Office, I wish to pay tribute to the fine groups we have in other professional endeavors. I refer to our legal staff, our transportation experts, our legislative liaison and others. Along with our accountants and auditors, they make a great team.

I would like to present one final thought for your consideration. Although we are well along the way in the evolutionary development of improved accounting in the Federal Government, accounting would reach its full measure of effectiveness much sooner were current management and congressional practices changed to provide greater impetus to accounting improvements. To our way of thinking, the cost budget proposals and the related accrued expenditure approach to the granting of appropriations recommended in the Budget and Accounting Report of the Hoover Commission represent a practical contribution to the solution of this problem and do merit your support.

McKay Plunges Into the Showdown Fight

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mrs. GREEN of Oregon. Mr. Speaker, under unanimous consent, I include here an editorial from the Lewiston, Idaho, Morning Tribune of Saturday, March 10, 1956:

MCKAY PLUNGES INTO THE SHOWDOWN FIGHT

Secretary of Interior Douglas McKay's decision to oppose Senator WAYNE MORSE, Democrat, Oregon, in the Oregon senatorial election gives the voters of Oregon the clearest possible choice between two philosophies of government.

Probably this contest between one of President Eisenhower's chief cabinet officers and one of his most intelligent and forceful critics will be the most important senatorial election in the United States. Certainly it will be the most important test in the Nation of two conflicting theories of natural resource development and control.

Both McKay and MORSE are top-flight campaigners. Both understand thoroughly and are willing and able to defend to the finish the policies they believe in. They are bitter political opponents of long standing and deep convictions. The highest political ambition of each now is to completely eliminate the other as a major force in Oregon and national affairs. If ever the stage was set for a showdown battle in a senatorial election, it is set now in Oregon.

McKay's decision to run against MORSE represents a complete change of intentions. In 1953, while he was still Governor of Oregon and just before he was named to the Cabinet, McKay already was explaining in convincing detail why he never would run against MORSE in 1956. He would be too old to take on such a major battle by that time, he said, and all he wanted to do was finish his term as Governor and retire to private life to enjoy himself the rest of his life.

That, however, was before he found himself, as Secretary of the Interior, the target of continuous, effective, relentless criticism for his handling of the Hells Canyon Dam issue and a host of other natural resources policies. Almost invariably that criticism was led by one of the Senate's most brilliant men, his old political foe, WAYNE MORSE.

That was before the tragically unexpected death of McKay's successor as Governor of Oregon, Paul Patterson, who was ready to take up the senatorial cudgel against MORSE when fate suddenly left Oregon Republicans without a major candidate.

Finally—and McKay indicated yesterday this was the most important factor—that was before Mr. Eisenhower decided to put his record to a test of public confidence by seeking a second term.

It was, said McKay, "the superb example of resoluteness and courage" in the President's decision to run again, that decided him.

The President, in turn, took personal responsibility for Interior Department policies to a degree that is most unusual for him with an unqualified endorsement of McKay. In a very real sense the President and his Secretary of Interior both will be running against MORSE in Oregon. That is the way MORSE would want it. The decision should be as sharp and clear as any political decisions ever can be.

"For the past 3 years," said McKay, "the Eisenhower administration and my administration of the Interior Department have endured the harassing and belittling attacks of this individual and others who represent a basic concept of government that is foreign to our historic traditions and beliefs."

MORSE said he welcomed McKay's candidacy and that the campaign "will clearly draw the issues on the giveaway record made by this administration in the field of natural resources * * *. The handpicked candidate of the White House and (Secretary of Agriculture Ezra) Benson will discover that not only Democratic and independent voters but a great many Oregon Republicans will welcome the opportunity at the polls to repudiate his record as Secretary of the Interior."

So there we have it. If this campaign does not force Oregon voters specifically and voters of the Nation generally to make some sharp choices on issues, then the hope for such choices might as well be abandoned.

The Hells Canyon issue, the offshore oil issue, the "partnership" dam-building issue, the public-lands issue—these and many similar issues which lie at the very heart of the Republican Party's domestic policy structure—will be fought out by experts and submitted to the people for a decision in Oregon next November. By all the laws of logic, Mr. Eisenhower and McKay both should carry Oregon or both should lose. However Mr. Eisenhower fares, though, his natural-resources policies would be repudiated in Oregon if MORSE wins. The Democratic Party's approach to natural resources will be repudiated in Oregon if McKay wins.

Two strong personalities go into battle in Oregon in a climactic test on the issues. The struggle will be bitter and intense. The voters cannot very well avoid this time taking sides on the basis of issues rather than personalities. And the decision, it would now appear, will be second only in importance to the Presidential election in determining the direction of domestic policy for the next 4 years.

The Dangers in Doing Nothing

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. HOLTZMAN. Mr. Speaker, under leave to extend my remarks in the RECORD I wish to insert an article on the critical situation in the Middle East, which appeared in a recent edition of the New York Times, and which has been reprinted as a public service by the International Latex Corp.

The article follows:

THE DANGERS IN DOING NOTHING

There are many items of dispute concerning the Middle East, but on one aspect everyone except the Russians is agreed—the situation is deteriorating. Such being the case, what is the United States going to do about it? We must be clear in our minds that the United States cannot much longer sit back and do nothing, which has been the case for the past 6 months or so. No other country in the free world is in a position today to exercise real, decisive power.

The story for these whole 11 years since the war ended has been one of protecting and strengthening the Middle East against Russian pressure in the light of the collapse of British and French power. The Truman doctrine of 1947 bolstering Greece and Turkey, the extension of NATO to the eastern Mediterranean and beyond to Pakistan, the economic and military aid—these and other measures have been positive exertions of American power, often made with our allies.

But last September the Russians moved into the Middle East with arms for Egypt, with offers of arms to other Arab countries, with economic and technical aid. There has been a new upsurge of Arab nationalism. The whole of French North Africa has been in ferment and today Algeria is like a keg of dynamite. The British completed their withdrawal from the Suez Canal Zone to Cyprus and now Cyprus is in flames. The Arab-Israeli conflict has gone from bad to worse.

There has been and still is a good deal of talking going on behind the scenes with the British and French and perhaps something will come of it. We try quietly and diplomatically to prevent a fire from breaking out here or there. Yet the situation goes on deteriorating.

We encouraged the formation of the northern tier of states into the Baghdad Pact of Turkey, Iraq, Iran, Pakistan, and Britain—but we refused to join it. Why? If it is good for these states it is good for the United States and in any event the Baghdad Pact has no reality without us.

We are parties to a Tripartite Declaration of 1950 with Britain and France guaranteeing opposition to either the Arabs or Israelis if there is an aggression against the present frontiers. But this is a mere declaration of intention that has never been submitted as a treaty to our Congress. It is a weak instrument with which to keep the peace in such a tense and heated region.

We say we will not furnish arms to Israel because we do not want to see an arms race. This merely confuses the issue. How have we kept the peace in the world against Russia since the war except by arming ourselves and our allies to the point where the Russians do not dare to start a war? It is not an arms race to let Israel acquire fighter planes for defense against the Ilyushin bombers the Czechs have sold to Egypt. There may well be war in the Middle East if one side gets much stronger than the other. We even failed to back France in shipping a standing order of 12 Mystere jet planes to Israel.

We are letting the British and French Governments condemn the nefarious activities of Egypt in stirring up bloodshed and hatred in North Africa and the Middle East without ourselves saying a word.

It is argued that we must not antagonize the Egyptians or the Arabs or the Moslem nationalists or the Greeks or the Turks or, evidently, anyone except our old allies the British and French. Is it possible to be the greatest power in the world and not antagonize someone?

These gnawing, insistent questions keep cropping up as one thinks about the dangerous situation in the Middle East. One wonders why we are apparently doing nothing. One wonders what we can do. The only unquestionable fact is that we cannot let the situation deteriorate much further without grave peril.

Alien Property Denial

EXTENSION OF REMARKS
OF
HON. GARDNER R. WITHROW
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. WITHROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times of March 20, 1956:

ALIEN PROPERTY DENIAL—NOT WEIGHING BLANKET RETURN OF ASSETS, WHITE HOUSE SAYS

WASHINGTON, March 19—The White House denied today reports that the administration was considering any blanket return of $500 million in alien property that was seized by the United States during World War II.

James C. Hagerty, White House press secretary, disputed at his news conference a report carried by The North American Newspaper Alliance and published in The New York Times yesterday. That report said the White House had directed an indepartmental group to review the administration's policy, which has been generally unfavorable toward a blanket return of the property.

"The story is not correct," said Mr. Hagerty. "No such order has ever been given and no such review is being made or is being contemplated."

His denial was made, he said, to answer queries made to him by foreign newsmen.

Moderation Is Needed in Extension of Territorial Waters

EXTENSION OF REMARKS
OF
HON. CHARLES E. BENNETT
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. BENNETT of Florida. Mr. Speaker, a matter of importance is being discussed at the meeting of the Inter-American Specialized Conference on the Conservation of the Resources of the Continental Shelf and Marine Waters, at Cuidad Trujillo, Dominican Republic. This is the proposal by some of the member states to extend territorial waters to a distance of 200 miles.

There has been much friction between the United States and Latin American nations over the extent of sovereignty over coastal waters, and there is great need for a just and equitable solution to this problem.

However, the proposal for 200 mile soverignty seems to me not only to fly in the face of tradition and accepted international law, but also to fail to be in accord with realities. It is my understanding that sovereignty over coastal waters has traditionally been determined by practical considerations of the area over which the nation can effectively exercise control. It has been said that the 3-mile rule originated at a time when the range of coastal guns was approximately that distance. While it is true that technological advances may have rendered that limit obsolete, 200 miles offshore is still far more than nations can effectively control. Imposition of the 200-mile rule can only intensify friction between our American Nations and damage the cause of peace.

The matter is no academic one, for American fishermen have habitually fished in waters which would be prohibited to them by this new ruling and their industry could be very detrimentally affected by its imposition.

Mr. Speaker, I believe our representatives to this conference deserve our thanks for their steadfast opposition to the inauguration of this new proposal. I want them to know that the people of the second district of Florida appreciate their efforts to work out a more realistic solution to the offshore sovereignty problem.

St. Patrick's Day

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD I include one of the finest editorials I have ever read, entitled "St. Patrick's Day," which recently appeared in the Boston Record, one of our outstanding New England newspapers.

This editorial, so very well conceived and written, is descriptive of the significance of St. Patrick to the Irish people and indicative of the great contributions which they have made to our country and and to the cause of freedom throughout the world.

It succinctly and eloquently portrays the profound influence which the Irish have had in originating, in shaping, and in protecting this great Nation.

In this crisis of human affairs when fortitude and tenacious purpose are required to guard our liberties, the spirit of St. Patrick and the spirit of the Irish who have contributed so gloriously and so unselfishly to our country must have a place in the hearts of all true Americans. In the end, it will be that indomitable spirit, that unyielding purpose and that unselfish devotion to the great ideals of liberty which the Irish have so brilliantly exemplified throughout history that will be the redeeming force in defending democratic institutions and preserving the American way of life.

The editorial follows:

[From the Boston Daily Record of March 17, 1956]

ST. PATRICK'S DAY

St. Patrick's Day, which in Massachusetts is also evacuation day, is one of our most inspirational observances.

We look back to the great bishop of fifth century Christendom who proved that fearlessness, faith, and indomitable will are of no particular age or era, but of eternity.

We look back at the same time to our American ancestors and draw strength from the knowledge that they, like St. Patrick, were dedicated to the ideal of right over might in their struggle against British oppression.

Every person who loves liberty loves it the more as he reads the life of St. Patrick and discovers how tremendously this remarkable teacher-missionary influenced Western civilization.

The spiritual descendants of St. Patrick illumined the pages of European history in a seemingly divinely ordained manner throughout the darkest chapters and the most depressing times.

They were always opposed, but they could never be overcome.

It is impossible to record the contributions of the Irish in one editorial or in a thousand.

Here we must content ourselves with the statement that the children of Erin have written their names with imperishable grandeur in every line of the American story.

They were among the earliest settlers in the new world. They gave their names to many of our oldest cities and towns. They fought valiantly under George Washington in the War for Independence. They died by the thousands to preserve the Union under General Meagher at Fredericksburg and in all other battles of the War Between the States.

They broadened our culture and brightened our law and literature. They built our loveliest churches and cathedrals. They founded our foremost industries.

In statesmanship the Irish have been uniquely zealous and illustrious. John Hancock, an Irishman of proud lineage, was the first to affix his signature to the Declaration of Independence. John Rutledge was the first to address the Continental Congress. Charles Thomson was the first secretary of that assembly.

Patrick Henry and Matthew Lyons were the most eloquent orators of the Colonies.

John Barry was the first commodore of the United States Navy. Robert Morris was the leading financier of the Revolution.

Twelve signers of the Declaration of Independence and eleven of Washington's generals were Irish.

The blood of the Emerald Isle flowed in 6 Presidents—Andrew Jackson, James K. Polk, James Buchanan, Chester A. Arthur, William McKinley, and Woodrow Wilson.

Former President Harry S. Truman delights in talking about his Irish ancestors.

Robert Fulton with his Clermont, Cyrus McCormick with his reaper, John Holland with his submarine, John McCormack with his golden tenor, J. Pierpont Morgan with his vision and ambition were among the millions of Irishmen who have enriched our country.

The first American to receive a Presidential citation was James Powers and the first United States airman to fly over Berlin was William P. O'Brien.

The first Yankee glider to land on D-day in World War II was piloted by Lt. Col. Michael Murphy.

The liberator of Bataan was Lt. John F. Murphy.

The first American mother to lose five sons in World War II was Mrs. Thomas P. Sullivan.

Enshrined forever on the roll of honor of that conflict are such names as Colin Kelly, Commando Kelly, Callaghan, Conroy, McGuire, Devereux, Finn, Flaherty, ODonnel, and McAuliffe.

In the Korean war, the accomplishments of the Irish and their heroism were no less notable.

Almost every community in the land boasts a McCarthy or a Flynn or an O'Connor who gave his young life to halt the global march of communism.

We in America and those in other countries and continents who revere St. Patrick rightly rejoice in the ties that bind us to this indomitable Christian spirit.

They constitute our strongest armor against the assaults of atheistic tyranny of Moscow.

Historians say that St. Patrick drove the snakes out of Ireland, and we have every reason to believe he did. He was there. So were serpents, as early manuscripts show. But none of these reptiles is there now.

It is a fact that if St. Patrick were living in our corrupt, decadent year of 1956, he would drive out some other snakes which have infested American life and its institutions and brought needless suffering upon trusting people.

If we take St. Patrick to our hearts on this glorious anniversary and strive to make his principles a guide for our daily lives, we cannot fail to hasten the day of universal peace and justice.

ICC Ignores Farmers' Interests

SPEECH
OF
HON. H. CARL ANDERSEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 6, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 9739) making appropriations for sundry independent executive bureaus, boards, commissions, corporations, agencies, and offices, for the fiscal year ending June 30, 1957, and for other purposes.

The CHAIRMAN. The gentleman from Minnesota [Mr. H. CARL ANDERSEN] is recognized for 2 minutes.

(Mr. H. CARL ANDERSEN asked and was given permission to revise and extend his remarks.)

Mr. H. CARL ANDERSEN. Mr. Chairman, I want to say this: I do not think this is the time to give the Interstate Commerce Commission a single dime additional in view of what they did to the farmers of the Nation last week when they approved an increase of 5 percent in freight rates on agricultural commodities, against the opposition of Secretary Benson and every farm organization of this Nation.

I wrote them the following letter on February 3, 1956:

You have before you a petition for a 7-percent increase in freight rates. As you know, the railroads have had a total of 11 general freight-rate increases since early 1946 which represented a total increase of 63 percent on agricultural products.

The Secretary of Agriculture has petitioned you to suspend this application for a 7-percent increase with respect to raw- and processed-farm products, farm supplies, and fish. I fully concur in the Secretary's petition, and will not repeat the economic need for such suspension as this has been well stated by the Secretary.

In addition, I would respectfully call to your attention the fact that retail businesses in the major farm areas of the Nation, my own congressional district in southwestern Minnesota is a good example, are faced with reduced sales volume because of the lower income of their farm customers. The petitioned increase of 7 percent in freight rates would, if approved by you, represent an added squeeze on many small-business men in rural areas who can ill afford any increase in overhead or stock costs.

It is urgently recommended that you give full consideration to these important factors in your study of the railroad petition.

The Interstate Commerce Commission apparently gave scant consideration either to the merits of these protests or the adverse effect freight-rate increases at this time will have on already hard-pressed farm- and rural-business-community economies.

I think if that is the best job they can do for us, to give the railroads on a silver platter, so to speak, a handout of many millions of dollars as an additional charge against farm produce going to market, I have very little sympathy for them.

While the rest of the Nation feels compassion for our farmers caught as they are in a price-cost squeeze not of their own making and over which they have no control, and while the Congress moves to develop new farm programs which we hope will help alleviate those conditions, we find the Interstate Commerce Commission condoning a further grab for scarce farm-income dollars.

As to this specific matter affected by this amendment, I do not think this amendment will provide any cure to the boxcar shortage. The Interstate Commerce Commission has obviously become the instrument of the railroads, which leaves us no reason to believe they would use any additional funds we gave them for the benefit of the public.

The boxcar-shortage situation, which is at times a very serious problem, can only be remedied in two ways as I see it. First, of course, by the construction of additional boxcars which is a responsibility of the railroads and would not be accomplished by an appropriation to the Interstate Commerce Commission. But even if this was done, there would still be the question of proper utilization which leads to the second solution—namely, the charging of a proper rental for those boxcars which are held idle by railroads which do not own them.

If the Interstate Commerce Commission is genuinely concerned, in the public interest, with this boxcar shortage, it should give immediate consideration to raising this rental on idle cars to a more realistic figure and then it should use all its regulatory powers to bring about the maximum use of all available boxcars for the use for which they are intended—the hauling of freight in the public interest.

I hope the amendment will be voted down.

Alaska's Fisheries

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. BARTLETT. Mr. Speaker, under permission to extend my remarks in the RECORD, I should like to present here an editorial from the February 27, 1956, Washington Daily News, relative to the question of control of Alaska's fisheries:

COLONIALISM AT HOME

The virgin forests of Alaska and Labrador might hold the solution to our chronic newsprint shortage, according to a spokesman for the lumber industry, Julius Stulman.

That may be, but unless the Canadians do more about developing the timber resources of Laborador than we are doing about those in Alaska, most of us won't live to witness that solution.

As Ernest Gruening, long-time Governor of Alaska, put it in keynoting that Territory's constitutional convention, Alaska is American colonialism in the true sense of the word. And rather stupidly administered colonialism at that.

Alaska's forests, however, at least remain standing. What has happened to its even greater resource, salmon, is a result of deliberate mismanagement by Federal bureaucrats here in Washington. Although salmon runs have declined steadily to a point where last year's pack was the lowest in 50 years, Alaska's stubborn rulers here still permit traps that literally take every fish in the

water where they are located. These were outlawed long ago by the individual States, which control their own fisheries.

Secretary of the Interior McKay, who exercises over Alaska many of the same powers King George III did over the Thirteen Colonies, and is regarded somewhat similarly in Alaska, finally has got around to recommending the abolition of salmon traps—10 years from now. But the way things are going, by that time there won't be any salmon to trap.

Alaska has asked Congress for control of its fisheries, and bills by Delegate BARTLETT and others, are being considered in the House. But as might be expected, the Department of the Interior is opposed. Has a Government bureau ever been willing to give up anything?

Only Congress can give the Alaskan people the authority to regulate the Territory's resources and provide for their orderly development. It should do so, and thus speed the day when Alaska can take its place as a State of the Union.

Resolutions of the National Wildlife Federation

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 6, 1956

Mr. REUSS. Mr. Speaker, the National Wildlife Federation, at its 20th annual meeting in New Orleans on March 2 to 4, 1956, adopted unanimously two resolutions which well express the deep concern felt by all conservation-minded citizens at the current threats to our national wildlife refuges.

The first resolution calls upon the Secretary of the Interior to revoke or modify the regulations signed December 2, 1955, pertaining to oil and gas leasing on national wildlife refuges, so as to provide more adequate safeguards for the wildlife values. It further requests Congress to enact legislation that will afford adequate protection against pressures for oil and gas development, homesteading, or other invasions which would impair the usefulness of the refuges, or conflict with their primary purpose.

The second resolution requests Congress to enact legislation to provide for a public hearing and consideration by appropriate committees of Congress in connection with any proposal to transfer or dispose of lands in the national wildlife refuge system.

The two resolutions follow:

RESOLUTION NO. 2—OIL AND GAS LEASING ON NATIONAL WILDLIFE REFUGES

Whereas the prospecting and drilling for oil and other minerals require human and mechanical operations likely to cause undue disturbance to sensitive wildlife populations; and

Whereas such operations are destructive of natural vegetation and other essential components of wildlife habitat and further involve hazards of oil pollution and salt-water pollution in waterfowl areas; and

Whereas regulations promulgated by Secretary of Interior Douglas McKay on December 2, 1955, resulted in applications for permits and leases for oil and gas prospecting and development on the national wildlife refuges; and

Whereas these regulations in our opinion do not adequately recognize the primary purpose for which the wildlife refuges were established and fail to provide adequate safeguards for wildlife values with the exception of 10 specific areas listed in appendix A of said regulations, as follows: Aransas National Wildlife Refuge (Texas), Wichita Mountains Wildlife Refuge (Oklahoma), Red Rock Lakes Migratory Waterfowl Refuge (Montana), Okefenokee National Wildlife Refuge (Georgia), Patuxent Research Refuge (Maryland), National Bison Range (Montana), National Elk Refuge (Wyoming), Fort Niobrara National Wildlife Refuge (Nebraska), Sullys Hill National Game Preserve (North Dakota), and certain of the Aleutian Islands and Hawaiian Islands groups; and

Whereas these regulations may tend to result in political pressures brought to bear on the Fish and Wildlife Service and Department of Interior for approval of lease applications; and

Whereas the laws pertaining to mineral leasing on public lands which were cited by the Department of Interior as justification for the new regulations are permissive and not mandatory, leaving ample authority for the exercise of secretarial discretion for the purpose of safeguarding wildlife values, and

Whereas any decisions of the Fish and Wildlife Service or rules laid down by the Service for the purpose of protecting the wildlife values are subject to appeal to the Secretary and may be overruled; and

Whereas official estimates of the petroleum reserves and of the oil and gas needs of the American economy indicate no present shortages and no national need in the foreseeable future for development of such mineral resources as may underlay the wildlife refuges: Now, therefore, be it

Resolved, That the National Wildlife Federation, in convention assembled at New Orleans, March 2, 3, and 4, calls upon the Secretary of Interior to revoke or to modify the regulations signed December 2 in order to provide more adequate safeguards for the wildlife values; be it further

Resolved, That the federation requests the Congress to enact legislation that will afford adequate protection against pressures for oil and gas development, homesteading, adverse manipulation of water levels, or other commercial or exploitative invasions which would impair the usefulness of wildlife refuges, or conflict with the primary purpose for which said wildlife refuges were established.

RESOLUTION NO. 4—TRANSFER OR DISPOSAL OF NATIONAL WILDLIFE REFUGE LANDS

Whereas there have been and no doubt shall continue to be proposals for the transfer or disposition of lands of the national wildlife refuge system for a variety of purposes; and

Whereas such proposals are sometimes accompanied by pressures from special interest groups, or from other agencies of Government, that conceivably could result in such transfer or disposal without due consideration of wildlife values involved or of the impact upon the national wildlife refuge system as a whole: Now, therefore, be it

Resolved, That the National Wildlife Federation, in convention at New Orleans March 2, 3, and 4, 1956, requests the Congress to enact legislation that would provide for a public hearing and for reference of any such proposal to appropriate committees of Congress before final approval of such transfer or disposal is made by the Secretary of the Interior.

Korea

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks to include therein a recent exclusive article which appeared in the Boston Sunday Advertiser entitled "Rhee Ponders Suicide Because of Backdown to Reds." This article was written by Kingsbury Smith, able manager of the International News Service and quotes President Rhee on the point of his great disillusionment following the truce in Korea.

It will be noted that President Rhee states he accepted the truce, first, because he was told by the United States that continuance of the fighting might precipitate world war III, and, secondly, because he was assured that the armistice would lead within 3 months to negotiated unification of Korea.

Under the situation which developed subsequently, can there be any wonder that President Rhee is perplexed, disheartened and disillusioned. We can all well understand why he asks, "What hope is there for Korea?" "Unless you stand firm and resist evil," he said, "evil will never surrender."

This great Korean patriot willingly admitted that if American help had not arrived when it did, that the Koreans would have been pushed into the seas. It is what happened afterwards that has given President Rhee such grave concern and I think we can all feel with him for the present plight of the Korean nation which is still divided in spite of the promises that were made and remain unkept up to this time.

As has been the case in other areas of the world, there is a great deal underlying the situation in Korea that does not meet the eye. Fundamentally, the question is to what extent this Nation is prepared to carry out its commitments and promises, whether it is willing to stand up firmly against communism, or, on the other hand, yield to the doctrine of appeasement and compromise which will, in the end, diminish our prestige, lose the respect and confidence of nations aspiring for freedom and self-determination, and thus greatly strengthen the hands of the Soviet throughout the world.

The article follows:

[From the Boston Sunday Advertiser of March 11, 1956]

RHEE PONDERS SUICIDE BECAUSE OF BACKDOWN TO REDS

(By Kingsbury Smith)

SEOUL.—President Syngman Rhee disclosed yesterday that he has thought of committing suicide because of the failure to achieve unification in Korea.

In a dramatic 2-hour interview with William Randolph Hearst, Jr., editor in chief of the Hearst newspapers, the Korean leader, who will be 81 years old this month, said he

had turned down a nomination for a third term as President because he had led his people to accept an armistice which had proved a disillusion. Rhee said that although strongly opposed to the armistice, he had accepted it for two reasons:

First, because he was told by the United States that continuation of the fighting might precipitate world war III.

Second, because he was assured that the armistice would lead within 3 months to the negotiated unification of Korea.

"I told General Eisenhower (when he visited Korea in December 1952, as President-elect) that if we were allowed to drive north then, Russia would not risk entering the conflict and we would prevent a world war later.

"I told him the United States and the United Nations should stand firm and tell the Russians 'One step further and something will happen.' That would have been the turning point for the free world.

"But they told me, and they keep telling me, that to drive the Communists out of North Korea would start world war III. They insisted that I support an armistice. I asked for how long; they said for 90 days. They assured me that if I supported an armistice for 90 days they would peacefully settle the Korean question and achieve unity for my country.

"Now the line is coexistence. What hope is there for Korea?"

Rhee made it clear that what is weighing on his mind is the lack of any prospects for unity of his country despite the tremendous sacrifice which involved the loss of almost 2 million South Korean civilians and military casualties.

"I told those who offered me the nomination: 'If I had not been leading you at the time the Communists attacked, you might have surrendered. You would have lost your freedom. But we could have lived like a satellite state. But I had faith in democracy. I stood up and said we are not going to surrender our freedom. The people followed me and they are still following me. But where is the hope? Our champion and leader of world democracy against the Communists is the United States. Our champion is backing down all the time. Where is the hope for Korea in this situation?' "

TEARS IN EYES

With tears in his eyes and his voice breaking with emotion the leathery faced, fragile old man who was tortured almost to the point of death in his youth while fighting for the independence of Korea said:

"Sometimes I feel like committing suicide. That is why I told them (the Liberal Party leaders) that I had better stay out of the race. I think of the millions of Koreans that were lost."

Suicide seemed to be on Rhee's mind. He alluded to suicide several times during the course of the interview. At one point, he recalled the death of Jan Masaryk, the Czechoslovakian leader who was found dead beneath the window of his apartment in Prague at the time the Communists seized control.

"Masaryk said to me: 'You have got to be good boys with the Communists.' I told him that if he thought that way he would be terribly disappointed. He later committed suicide." (Editor's note: Exact circumstances of Masaryk's death have never been established.)

When pressed as to whether he would refuse to serve for a third term if drafted, Rhee indicated that he might reconsider on that basis.

"My people," he said, "know my life is theirs. Anything they want I will do. If they want me to commit suicide I will. If they want me to be with them I'll be with them. They know I'll do anything, but——"

At this point Rhee broke down. He clasped and unclasped the hand that has been tortured by the Japanese.

His lips moved without words. Tears welled in his eyes.

The interview took place in the presidential palace, over the walled-in windows of which hung camouflaged netting reflecting a military-camp aspect of this capital of South Korea.

DEMOCRACY AT STAKE

Hearst was accompanied by his brother, Randolph Hearst, president of the Hearst Publishing Co.; Frank Coniff, editorial assistant; Marvin Stone, INS Far Eastern director, and this correspondent.

Rhee, whose memory of events seemed at times to be a little hazy, said the United States and the free world should adopt a stronger stand against international communism.

"Unless you stand firm and resist evil, evil will never surrender," he said.

Rhee said the Korean people were very grateful for the help which the United States had rendered the country in repulsing the Communist invasion in 1950.

"If American help had not arrived when it did, we would have been pushed into the seas," he added.

"American democracy is at stake in this struggle. If America keeps its democracy, then we have reason to hope."

The Majority Leader of the House of Representatives

EXTENSION OF REMARKS
OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1956

Mr. McCORMACK. Mr. Speaker, I have received a number of inquiries concerning the position of majority leader of the United States House of Representatives and the duties and responsibilities of the majority leader thereof. I assume that from time to time other Members of the House have also received similar inquiries.

As a result, I requested the Legislative Reference Service of the Library of Congress to prepare a history for me on the subject of the majority leader of the United States House of Representatives. Dr. George B. Galloway, acting on my request, has done considerable research on this subject and has prepared an excellent article on the office of the majority leader and in it there is described the duties and responsibilities of the incumbent of this office.

It is a pleasure for me to give full credit to Dr. Galloway for the fine work that he did in preparing this article. I am pleased to insert the article in the CONGRESSIONAL RECORD for the information of the Members of the House and for other persons who may have occasion to refer to this subject now or in the future:

THE MAJORITY LEADER OF THE HOUSE OF REPRESENTATIVES

Political leadership is a fascinating subject for study, and nowhere more so than in nations with democratic forms of government. Such countries are governed in large part by their national legislatures the role of whose leaders excites perennial interest. Writing in 1885 Woodrow Wilson remarked that "in a country which governs itself by means of a public meeting, a congress or a parliament, a country whose political life is representative, the only real leadership in governmental affairs must be legislative leadership—ascendancy in the public meeting which decides everything. The leaders, if there be any, must be those who suggest the opinions and rule the actions of the representative body."

The position of Congress in the American system of government may not be so supreme today as it was when Wilson wrote his little classic on congressional government. But the leadership of Congress continues to intrigue the interest of scholars and laymen alike. Especially is this true in the House of Representatives where the character and conditions of leadership have had a most interesting history.

In any numerous body leaders must arise or be chosen to manage its business and the American House of Representatives has long had its posts of leadership. Outstanding among them have been the Speaker, the floor leader, and the chairman of the Committee on Rules. The chairman of Ways and Means and of Appropriations have also long been top leadership positions in the hierarchy of the House, followed by the chairman of the other great standing committees of that body. This article will be limited to the office of the majority leader of the House: its history, role, and relationships.

HISTORY OF THE OFFICE

In the history of the evolution of the office of majority leader the year 1910 marks a major dividing point. For the reform of the House rules adopted in that year brought about a redistribution of the powers of the speakership and a significant change in the position of the floor leader.

During the 19th century the floor leader was customarily selected by the Speaker who often designated either his leading opponent within the party or the chairman of Ways and Means or of the Appropriations Committee or one of his faithful lieutenants. Thus Winthrop appointed his opponent Samuel F. Vinton in 1847; Banks designated Lewis D. Campbell in 1856; Pennington named John Sherman in 1859, and Reed selected McKinley in 1889. Ranking membership of Ways and Means accounted for Clay's appointment of Ezekiel Bacon in 1811; Stevenson's choice of Gulian C. Verplanck in 1822; Polk's selection of Churchill C. Cambreleng in 1835; Orr's promotion of James S. Phelps in 1858; Randall's advancement of Fernando Wood in 1879; Keifer's appointment of William D. Kelley in 1881; Carlisle's designation of Roger Q. Mills in 1887; and Henderson's selection of Sereno E. Payne in 1899. Faithful lieutenants were rewarded by the appointment of James J. McKay by Jones in 1843; Thomas S. Bayly by Cobb in 1849; George S. Houston by Boyd in 1851; William H. Morrison by Kerr and Carlisle in 1875 and 1883; and William M. Springer by Crisp in 1891.[1]

According to Riddick, "in the House, the early titular floor leaders were at the same time the chairmen of the Ways and Means Committee. Before the division of the work of that committee, the duties of its chairmen were so numerous that they automatically became the actual leaders, since as chairmen of that committee they had to direct the consideration of most of the legislation presented to the House. (Ways and Means handled both the revenue and the appropriations bills down to 1865.) From 1865 until 1896 the burden of handling most of the legislation was shifted to the chairman of the Appropriations Committee, who then was designated most frequently as the leader. From 1896 until 1910 once again the chair-

Footnotes at end of speech.

men of the Ways and Means Committee were usually sought as the floor leaders." [2]

Since 1910 the floor leader has been elected by secret ballot of the party caucus. During the Wilson administrations the Democrats resumed their former practice of naming the chairman of Ways and Means as floor leader, but since the 72d Congress (1931–33), when the Democrats recovered control of the House, their floor leaders have not retained their former committee assignments. JOHN W. MCCORMACK, who was elected Democratic floor leader on September 16, 1940, and who has held that office longer than any predecessor, resigned his seat on Ways and Means when he became majority leader. In 1919, when the Republicans captured control of the House, they elected as their floor leader the former chairman of Ways and Means and made him ex-officio chairman of their committee on committees and of their steering committee. He gave up his former legislative committee assignments in order to devote himself, with the Speaker, to the management of the business of the House.

CHANGES AFTER 1910

As a result of the so-called revolution of 1910, notable changes were made in the power structure of the House. Under "Uncle Joe" Cannon who had been Speaker since 1903, the Speaker was supreme and all-powerful. He dominated the Rules Committee which made the rules and was a law unto itself. The majority party caucus was seldom needed or used. The Speaker appointed the standing committees which were entirely free from control by a majority of the House, while the floor leader was a figurehead.

After the congressional elections of November, 1910, in which the Democrats won full control of the House, they held a party caucus on January 19, 1911, and chose Champ Clark as Speaker and Oscar Underwood as their floor leader and as chairman of the Ways and Means Committee. Under the new system that became effective in the 1911–12 session of the 62d Congress, the Speaker was largely shorn of power and the majority party caucus became the dominant factor. The Rules Committee was controlled by the floor leader and the caucus; it made the rules and retained all its former powers. The Democratic members of Ways and Means organized the House by naming its standing committees.

Under Underwood the floor leader was supreme, the Speaker a figurehead. The main cogs in the machine were the caucus, the floor leadership, the Rules Committee, the standing committees, and special rules. Oscar Underwood became the real leader of the House. He dominated the party caucus, influenced the rules, and as chairman of Ways and Means chose the committees. Champ Clark was given the shadow, Underwood the substance of power. As floor leader, he could ask and obtain recognition at any time to make motions to restrict debate or preclude amendments or both. "Clothed with this perpetual privilege of recognition, and backed by his caucus," remarked a contemparary observer, "the floor leader had it in his power to make a Punch and Judy show of the House at any time." [3]

After the First World War the party caucus gradually fell into disuse, the floor leader ceased to be chairman of Ways and Means, the standing committees continued to function as autonomous bodies, and the Rules Committee became a more influential factor in the power structure of the House. After 1937 this powerful committee ceased to function as an agent of the majority leadership and came under the control of a bipartisan coalition which was often able to exercise an effective veto power over measures favored by the majority party and its leadership.

Footnotes at end of speech.

The net effect of the various changes of the last 35 years in the power structure of the House of Representatives has been to diffuse the leadership, and to disperse its risks, among a numerous body of leaders. The superstructure which has come to control "overhead" strategy now includes the Speaker, the floor leader, the chairman of rules, and the party whip. At a somewhat lower echelon behind this inner "board of strategy" are the chairman and the secretary of the party caucus or conference, the majority members of rules who have grown from 3 to 8, and the members of the steering (Democratic) and policy (Republican) committees and of the 2 committees on committees. Thus the top leaders of the House are no longer "the chairmen of the principal standing committees," as Woodrow Wilson described them in 1885, although the chairmen still have large powers over bills within their jurisdiction.

So far as the position of floor leader is concerned, he no longer occupies the post of supremacy that Oscar Underwood held. There is no provision for his office in the standing rules of the House. Nevertheless, he stands today in a place of great influence and prestige, the acknowledged leader of the majority party in the chamber, its field general on the floor, No. 2 man in the party hierarchy, and heir apparent to the Speaker himself. All the Speakers of the past quarter century have been advanced to the speakership from the floor leadership position.

QUALIFICATIONS AND PREVIOUS EXPERIENCE

After retiring from the House of Representatives where he represented Buffalo from 1897 to 1911, DeAlva Alexander wrote an informative history of that body which contains a series of character sketches of the floor leaders of the House from Griswold in 1800 to Underwood in 1911. Most of these mighty men of old are now forgotten, but to their contemporaries they were men of exceptional capacity. "In interesting personality and real ability the floor leader is not infrequently the strongest and at the time the best-known man in the House."

Alexander went on to give his own evaluation of the characteristics of a good leader as follows: [4]

"It certainly does not follow that a floor leader is the most effective debater, or the profoundest thinker, or the accepted leader of his party, although he may be and sometimes is all of these. It should imply, however, that in the art of clear, forceful statement, of readily spotting weak points in an opponent's argument, and in dominating power to safeguard the interests of the party temporarily responsible for the legislative record of the House, he is the best equipped for his trade. It is neither necessary nor advisable for him to lead or even to take part in every debate. The wisdom of silence is a great asset. Besides, chairmen and members of other committees are usually quite capable and sufficiently enthusiastic to protect their own measures. But the floor leader must aid the Speaker in straightening out parliamentary tangles, in progressing business, and in exhibiting an irresistible desire to club any captious interference with the plans and purposes of the majority."

Thirteen men have held the office of floor leader of the House of Representatives since 1919. Six of them were Republicans: Mondell, Longworth, Tilson, Snell, Martin, and Halleck. Seven were Democrats: Garrett, Garner, Rainey, Byrns, Bankhead, Rayburn, and McCormack. Elevation to the floor leadership comes only after long service in the House. The Republican floor leaders had served, on the average, 16 years in the Chamber; the Democrats 21 years before their election. The combined average for the whole group was 19 years previous service in the House. The long-run trend in point of previous House experience is downward, both McCormack and Halleck having been elected floor leader after serving only 6 terms in the House.

All the floor leaders since the First World War have also enjoyed long service on some of the most eminent committees of the House. Of the six Republicans, three had served on the Rules Committee, two ranked high on Ways and Means, and one on the Appropriations Committee. Of the seven Democrats, three were high ranking on Ways and Means, two on Rules, one on Appropriations, and one (RAYBURN) had been chairman of Interstate and Foreign Commerce.

FUNCTIONS AND DUTIES OF FLOOR LEADER

The standing rules of the House are silent on the duties of the flood leaders who, as we have seen, are selected by the caucus or conference of their respective parties. As his title indicates, the principal function of the majority leader is that of field marshal on the floor of the House. He is responsible for guiding the legislative program of the majority party through the House. In cooperation with the Speaker, he formulates and announces the legislative program, keeps in touch with the activities of the legislative committees through their chairmen, and stimulates the reporting of bills deemed important to the Nation and the party. After conferring with the Speaker and majority leader, the majority whip customarily sends out a "whip notice" on Fridays to the party Members in the House, indicating the order of business on the floor for the following week, and the majority leader makes an announcement to the same effect on the floor in response to an inquiry from the minority leader. The legislative program is planned ahead on a weekly basis according to the readiness of committees to report, the condition of the calendars, the exigencies of the season, and the judgment of the party leaders. Advance announcement of the weekly program protects the membership against surprise action.

The role of the majority leader was lucidly summarized in a statement inserted in the CONGRESSIONAL RECORD on May 11, 1928, when the Republicans were in power, by Representative Hardy, of Colorado: [5]

"The floor leader, especially the leader of the majority side, has much to do with the legislative program. The majority leader, of course, represents the majority on the floor. Motions he makes are usually passed. He endeavors to represent the majority view and the majority follow his leadership. He leads in debate on administration matters and gives the House and the country the viewpoint of his party on the legislative program.

"The leader keeps in touch with proposed legislation, the status of bills of importance, with the steering committee of which he is chairman, and with the attitude of the Rules Committee. He confers with committee chairmen and Members in general. The majority leader often confers with the President and advises with him regarding administrative measures. He takes to the President the sentiment of the party in the House and he brings to the party in the House the sentiment of the President. The majority leader acts also as chairman of the committee on committees and of the steering committee."

The Democratic Party in the House set up its own steering committee in 1933, composed of the Speaker, floor leader, chairman of the party caucus, party whip, the chairmen of Ways and Means, Appropriations, and Rules,

Footnotes at end of speech.

Footnotes at end of speech.

and one Representative from each of the 15 zones into which the country is divided for party purposes, each such Representative being elected by the Democratic delegation in the House from the zone. The steering committee elects its own chairman, vice chairman, and secretary and cooperates with the leadership in the planning and execution of party policy. In actual practice, nowadays, however, "the Democratic steering committee seldom meets and never steers," according to James F. Byrnes.

Various parliamentary procedures are employed by the floor leader in directing and expediting the legislative program. Much noncontroversial business on the Unanimous Consent Calendar is disposed of without debate and without objection. The work of the House is sometimes described as "lawmaking by unanimous consent" because the floor leader uses this device to fix the program of business. Members know that it would be futile to object to his unanimous consent requests to consider legislation because the same end could be achieved via a special rule from the Committee on Rules. Similarly, if a Member sought to bring up a matter out of its turn, without prior agreement with the leadership, the floor leader could defeat him by objecting.

The floor leader can also limit debate on a bill, if it tends to get out of control, by making the point of order that debate is not germane to the pending subject or by moving that all debate on the pending bill and all amendments thereto close in a certain time. By his temper and spirit he can also influence the tone of debate.

As the end of a session approaches, with many measures pressing for passage, the Speaker and the floor leader cooperate closely to avoid a last-minute jam. The procedural devices employed at this time are largely unanimous consent, special orders, and motions to suspend the rules which are in order on the last 6 days of a session and require a two-thirds vote. "There is a usual speeding up of the program during the last days. But there is also a tightening of control. In strong contrast to the Senate, the House remains a poised, businesslike body as it approaches adjournment. The men in the cab hold the legislative train steady to the very end of its run." [6] At the end of each session the floor leader customarily extends his remarks by inserting a record of its accomplishments, showing the major legislative actions taken and the number of public and private laws enacted, viewing with pride the role of the majority party in the legislative process.

In 1909 the House adopted a rule whereby Wednesdays were set apart for the consideration of unprivileged bills on the House and Union Calendars. Under this Calendar Wednesday rule, when invoked, the clerk calls the roll of the committees in turn and authorized members call up bills that their committees have reported. At the time of its adoption this rule was regarded as perhaps the most vital of the reforms that the progressives won under Cannonism. For it reserved Wednesday as the one day of each week which had to be given to the consideration of bills upon the House Calendar. Before its adoption, the call of committees was rarely reached as the result of the accidental or intentional manipulation of privileged matters. To remedy that condition the new rule provided that on one day each week no business, regardless of its privileged character, should be allowed to interfere with the regular routine. In obtaining its adoption the progressives demanded, and thought that they had secured, 1 day so guarded that nothing could interfere with the consideration and final passage of general legislation.

Footnotes at end of speech.

For many years, however, the Calendar Wednesday rule has been more honored in the breach than in the observance. Session after session passed without a call of the committees. In practice, Calendar Wednesday is usually dispensed with by unanimous consent at the request of the majority leader. If there is objection, it requires a two-thirds vote to dispense with it, but no one ever objects. The leadership has evidently felt that there is little, if any, need for Calendar Wednesday because of the alternative methods by which bills can be brought up and over which they have more control. In the modern practice there are five routes by which bills and resolutions reach the floor of the House: (1) By the leave of certain committees to report at any time; (2) under unanimous consent, on call of the Unanimous-Consent Calendar or the Private Calendar; (3) on special days, as on District Day, when particular types of business are privileged; (4) under suspension of the rules on the first and third Mondays and the last 6 days of the session; and (5) under special orders reported by the Committee on Rules.

Since the floor leader is responsible for the orderly conduct of the business of legislation on the floor, it is necessary for him to keep in close touch with the sentiment of the House and with the chairmen of committees that have under consideration bills of interest to the House, the country, and the party. To this end he holds frequent conferences with those concerned with prospective measures in order to compose any differences that may arise, as well as to plan the strategy and tactics of his campaign. Information as to party sentiment on a particular bill is also obtained, with the aid of the party whips, by polls of the State delegations.

On the Democratic side the whip organization in the House consists of a chief whip who is appointed by the majority leader in consultation with the Speaker, and 15 assistant whips who are selected by the Democratic Representatives from as many zones into which the country is divided for party purposes. Representative CARL ALBERT, of Oklahoma, is Democratic whip at the present time. It is the whip's job to be present on the House floor most of the time the House is in session. He helps the majority leader keep tab on legislation, and he keeps the Members advised of the legislative schedule. He attempts to make sure the Members of his party are on the floor when a significant vote is imminent. On occasion the whip joins the Speaker and the majority leader in seeking to round up votes on an important issue.

On the Republican side the whip organization includes the chief whip who is elected by the Committee on Committees, 3 regional whips selected from 3 regions by the Republican whip, and 10 assistant whips who are also appointed by the chief whip. Representative LESLIE C. AREND:, of Illinois, is presently the Republican whip.

Under the old system the congressional parties held frequent caucuses at which party policies were vigorously discussed and differences settled. Every major measure of a session was considered in party caucus and Members were bound to abide by its decisions. The leadership then knew exactly where it stood, whether bills could be passed on the floor without amendment or whether compromises would have to be made. After Champ Clark became floor leader in 1909 the House Democrats held many binding caucuses and much of the success of the legislative program of the Wilson administration was attributed to the effective use of the caucus by the Democratic Party in both Houses of Congress. For many decades House Republicans also held frequent party conferences which, although they were not binding, made for a consensus among the party membership and helped a succession of strong GOP Speakers and floor leaders to hold the party reins tightly.

Under the new system, however, party causes are seldom held except at the opening of a new Congress to nominate House officers and approve recommendations of the leadership for committee appointments. Perhaps party leaders nowadays consider these meetings too hazardous. The leadership cannot compel Members to vote against their will or conscience nor can it discipline them by removal or demotion from committees. In latter years the floor leader has relied for the cooperation of his followers not upon the compulsion of party rules but upon his own powers of logic and persuasion and considerations of party welfare. "Under the new system the floor leader is dependent not upon his power under the rules, but upon his own personality and character, upon the esteem in which he is held in the House for his political sagacity and his wisdom as a statesman, and upon the natural instincts which prompt men belonging to a party, and held together by natural selfish instincts for mutual protection, for his success in harmonizing differences and thus being able to go into the House with a measure assured of sufficient support to secure its enactment * * * the floor leader has become the general manager of his party in the House, the counselor of his colleagues, the harmonizer of their conflicting opinions, their servant, but not their master." [7]

Summarizing, the function of a leader is to lead. In the case of a majority leader of a legislative assembly, leadership involves planning the legislative program, scheduling the order of business on the floor, supporting legislation calculated to implement the party's platform, pledges, coordinating committee action to this end, and using his individual influence to keep the members of the party in the House in line with party policies. The majority leader's task is to steer his party in the House toward the formulation and adoption of policies and strategy designed to carry out the administration's legislative program, where the House and the Presidency are controlled by the same political party. As floor leader his function is to employ all the arts of parliamentary procedure to expedite the enactment of that program.

Under existing conditions in the Democratic Party in the House of Representatives, this is a large order. For the party is deeply divided along sectional lines. It has both conservative and liberal Members who wear the same party emblem, but lack a common political philosophy. Loyalty to local and sectional interests sometimes transcends a sense of responsibility to the national political party. Under these circumstances, the task of the party leader is difficult to accomplish. Who can lead where others will not follow? Who can discipline recalcitrant party members for failing to cooperate when effective sanctions are lacking? To be sure, rule 2 of the House Democratic caucus rules provides that "any member of the Democratic caucus of the House of Representatives failing to abide by the rules governthe same shall thereby automatically cease to be a member of the caucus." And rule 7 provides that "in deciding upon action in the House involving party policy or principle, a two-thirds vote of those present and voting at a caucus meeting shall bind all members of the causes: Provided, The said two-thirds votes is a majority of the full Democratic membership of the House." But for all practical purposes these rules are moribund.

RELATIONS WITH COMMITTEES

During the 19th century, as already noted, the actual floor leader was often the chairman of Ways and Means prior to 1865

Footnotes at end of speech.

when this committee handled both the revenue and appropriation bills. In that year the supply bills were given to the Committee on Appropriations and thereafter the floor leader was often the chairman of Appropriations. When the 62d Congress (1911–13) transferred the power to appoint committees from the Speaker to the Democratic members of Ways and Means, its chairman (Underwood) who was also floor leader thus acquired an indirect influence over legislation not enjoyed by his predecessors. Today Democratic vacancies on Ways and Means are filled by election by the party caucus which ratifies the choice of the party leadership which is thus able to exercise influence over tax and other legislation reported by that committee. Representative MACHROWICZ was elected to fill a vacancy on Ways and Means in this manner early in 1956.

As already noted, the Republican floor leader serves as chairman of the Republican Committee on Committees of the House which has the task of filling its party vacancies on the legislative committees. This involves hearing the claims of interested candidates and deciding who should be chosen.

The floor leader on both sides of the House aisle is also a member of his party's Steering or Policy Committee. The Republican floor leader has been ex officio chairman of his steering committee. An interesting account of the role of the Republican Steering Committee several years ago was given by Representative HARDY of Colorado, as follows: [8]

"An influential factor in Government is the steering committee. It exerts a powerful influence but makes no effort to exhibit power. It works along diplomatic lines to feel out and consolidate sentiment for administration measures and procedure. It meets at the call of the chairman, and considers the welfare of the Government from the party point of view. It advises with the White House, the chairmen of important committees, the party leaders, and the Rules Committee. It helps to iron out differences, and to formulate the majority program in the House. The chairman of the steering committee is the floor leader. When the committee meets the Speaker sometimes and the chairman of the Rules Committee usually are invited in for consultation."

Relations between the leadership of the House and the Rules Committee have varied over the years. From 1890 to 1910 they were merged, for Rules was then a triumvirate composed of the Speaker and his two chief lieutenants, often the chairmen of Ways and Means and of Appropriations. After 1910 the speakership was "syndicated" and the leadership was separated from the members of the Committee on Rules who ceased to be the dominant figures in the House, although their chairman continued to be an important personality because of his position.[9] Writing in 1927 Hasbrouck said of the Rules Committee: [10]

"It is the trump card of the floor leader, but he himself is not officially identified with it. True, he must appeal to the reason of 12 men, and win a majority of them to the support of his proposals. But the mainspring of action is not in the Rules Committee. The impulse comes from the floor leader after consultation with his board of strategy or, for purposes of more formal and routine action, with the Steering Committee."

In 1937 the leadership lost control of the House Rules Committee, thanks to the seniority custom, when three of its Democratic members joined with the four Republican members to block floor consideration of controversial administration bills. The coalition succeeded in preventing many New Deal-Fair Deal measures from reaching the House floor except by the laborious discharge route. After World War II a rising demand developed for reform of the Rules Committee whose powers were temporarily curbed during the 81st Congress (1949–50) by adoption of the so-called "21-day rule." This rule strengthened the position of the chairman of the legislative committees of the House vis-a-vis both the Rules Committee and the leadership. While it was in effect, the 21-day rule brought the antipoll-tax bill to the House floor for a successful vote and forced action on the housing and minimum wage bills. It also enabled the House to vote for the National Science Foundation, Alaska and Hawaii statehood legislation, and other important measures. Altogether, during the 81st Congress 8 measures were brought to the House floor and passed by resort to the 21-day rule, while its existence caused the Rules Committee to act in other cases. Repeal of this rule in January, 1951, restored the checkrein power of the Rules Committee which it has since exercised on various occasions. "Until the 21-day rule is restored," remarked Representative HOLIFIELD, "we can expect further situations in which a few men, strategically situated in the Rules Committee, can impose their will on the Congress and prevent the enactment of legislation deemed by the House majority to be essential to the security and welfare of this Nation." [11]

Today the Rules Committee is regarded as an important arm of the House leadership whose wishes it is expected to respect. Presumably it does so on most occasions. But "traditions of seniority and tenure have at times made certain of the majority members of the Rules Committee of the House somewhat out of tune with the larger portion of their party colleagues, with the result that there has been something of a cleavage between the actions of the Committee and the wishes of the core leadership of the party." [12]

The influence of the party leadership on the legislative committees of the House is suggestive, not coercive, informal, not official, tactful, not dictatorial. The floor leader seldom appears in person before a committee, but he maintains close and friendly relations with their chairmen on matters of party policy, seeking to mediate between the wishes of the administration and those of the committeemen. Prior to 1947, before the committee structure had been streamlined and jurisdictions clarified, leadership could influence the fate of a bill by referring it to a favorable or unfavorable committee; but freedom of choice in bill referrals was reduced by the Legislative Reorganization Act of 1946.

The practice of flood leaders regarding their own committee assignments has varied in recent times. Representative MCCORMACK, now the majority leader, voluntarily resigned from Ways and Means in 1940 when he was elected floor leader on account of the strenuous duties of that office. But when the Republicans captured control of the House in the 80th Congress and Mr. MCCORMACK became minority whip, he accepted membership on the Committee on Government Operations and has since continued to serve on that committee. On the other hand, Mr. MARTIN, now minority floor leader and former Speaker, has had no committee assignments, while Mr. HALLECK, who was majority leader in the 80th and 83d Congresses, has served on the Rules and House Administration Committees.

RELATIONS WITH THE PRESIDENT

For more than 15 years now regular conferences have been held at the White House between the President and his party leaders in Congress—the so-called Big Four: The Speaker and majority leader of the House and the Vice President and majority leader of the Senate, when they belong to the President's party. When, as at present, opposing political parties control Congress and the Presidency, the minority leaders attend these meetings at the White House which are usually weekly while Congress is in session, if the President is in town. These Big Four meetings have helped to bridge the gap between the legislative and executive branches of the National Government created by our inherited system of separated powers.

Mutatis mutandis, they are the American counterpart of what Bagehot, referring to the British Cabinet, described as "the hyphen that joins, the buckle that fastens, the executive to the legislature." They are advantageous to both ends of Pennsylvania Avenue because they give congressional leaders an insight into the President's plans, while affording the President valuable counsel and guidance on the prospects of his legislative program. When of the same political party, the floor leaders are expected to serve as spokesmen for the administration, although there have been a few noteworthy departures from this practice. On the House side, however, during the 83d Congress, Majority Leader HALLECK successfully made the transition from opposition to administration leader and became the most effective champion in Congress of Eisenhower's program. In the White House those days CHARLIE HALLECK was the best liked man on Capitol Hill.

When President Roosevelt took office in 1933, he launched such a varied legislative program that it was necessary for him to keep in close touch with Congress through the leaders of both Houses. He consulted with his party leaders and committee chairmen with respect to the New Deal measures before they were introduced as administration bills, usually by the majority leaders. Sometimes he called the majority leader of the House or Senate individually to the White House to confer about some problem peculiar to one chamber or the other. After his return from trips abroad he sometimes asked the floor leaders of each house to brief him on legislative developments during his absence.

When opposing parties control the two branches, the President is more likely to discuss domestic legislative matters with the congressional leaders of his own party, although in the early days of the 80th Congress President Truman occasionally conferred with Messrs. Vandenberg, White, Martin, and Halleck, especially on legislation of a nonpartisan nature. In view of the vital role of Congress in the field of foreign relations, the President must sometimes take the leaders of both political parties in both Houses into his confidence. In the days before the Second World War, when President Roosevelt was seeking to strengthen our defenses, he frequently confered with both Democratic and Republican leaders in both Houses of Congress. Such a conference was the famous night meeting at the White House late in July 1939, when the President and Secretary of State Cordell Hull urged that Congress repeal the Embargo Act. Among those in attendance were the chairmen of the Foreign and Military Affairs committees, members of the Cabinet, and the majority and minority leaders of the House and Senate.

JOHN M'CORMACK'S SERVICE AS MAJORITY LEADER

JOHN W. MCCORMACK has represented the 12th Massachusetts District in the House of Representatives since November 6, 1928. Twelve years later he was first elected majority leader of the House on September 16, 1940: an office which he has held ever since except during the Republican 80th and 83d Congresses when he served as minority whip. Thus, he is serving his 28th year in the House and his 12th year as majority leader, longer than any predecessor in this

Footnotes at end of speech.

Footnotes at end of speech.

post. For many years he was the faithful lieutenant of Presidents Roosevelt and Truman, and was responsible for steering through the House the vital legislation of the 1940's.

McCORMACK's incumbency of the floor leadership coincided with the Second World War and the postwar years. During the fateful forties Congress made many vital legislative decisions in important fields of public policy. The problem areas that called for legislative action included conversion and control over manpower, money, and supplies; labor policy, price control, monetary policy, military policy and the conduct of the war, foreign policy and postwar commitments, and reconversion to peace. Among the typical issues of congressional politics during this eventful decade were the efforts to achieve "equality of sacrifice," to "take the profits out of war," and to "freeze economic relationships," as well as wartime elections, the New Deal, and bureaucracy. Far from becoming an anachronism or merely a rubber stamp in providing funds and delegating powers to the President, the role of Congress in wartime increased rather than diminished. The National Legislature considered simultaneously many facets of the war and postwar economy of the Nation.

During the Second World War, Congress performed three major functions: it made both broad and specific grants of power to the President; it adjusted conflicts of interest among various groups in American society; and it supervised the execution of policy. Many difficult decisions were made by the Congress on organizing the resources of the Nation and allocating men, money, and materials among competing claimants. Alternative choices and different standards of judgment gave rise to political competition both within Congress and between Congress and the President. Partisanship continued throughout the war with recurring elections and debates over such controversial issues as price control, consumer subsidies, war taxes, and reconversion.

After the war, Congress repealed the emergency grants of power, abolished the war agencies and administrative courts, disassembled the great military machine, and reestablished a free economy. It regained the great powers it had delegated to the President during the war and reestablished the constitutional position it enjoyed before the war.

Representative McCORMACK was in the forefront of all these momentous wartime and postwar activities on Capitol Hill. Although deeply devoted to his political party, he has always put national above party and personal interest. He believes that above all sections is the Nation, and above all nations is humanity. He is very close, officially and personally, to Speaker SAM RAYBURN for whom he feels deep respect and friendship. They assumed their respective offices on the same day back in 1940 and they have functioned as a team ever since. Mr. McCORMACK has frequently been elected as Acting Speaker pro tempore and has presided over the House in Mr. RAYBURN'S absence.

The subject index of the CONGRESSIONAL RECORD affords one measure of Mr. McCORMACK'S amazing versatility. It shows that during the 2d session of the 83d Congress, for example, he made speeches on the House floor and took part in the debate of 200 subjects. These included discussions of our two-party system of government, the campaign promises and responsibilities of the majority party, the career jobs of politicians, the responsibility of Congress to the Nation, the conditions of leadership, and the accomplishments of the session.

JOHN W. McCORMACK has received many deserved tributes down through the years. One of the most informative of these tributes, as regards the nature of his services as majority leader, appeared in the Lynn (Mass.) Telegram-News on April 17, 1949. It read in part as follows:

"The press of the Nation has again acclaimed the leadership of Massachusetts' outstanding citizen for his effective masterminding of America's most important legislative position.

"Momentous moments arrive, and critical crises come, but Leader McCORMACK meets them head on. Through his legislative magic, what at one time appear to be insoluble problems, finally go through the legislative channels smoothly and quietly and become a part of the warp and woof of our governmental processes.

"Down through the years, House Leader McCORMACK has demonstrated this extraordinary ability to mold public opinion and to produce legislation which meets almost unanimous approval of Congress.

"During the hectic years of the depression, Congressman McCORMACK was always in the vanguard of our progressive governmental forces that were seeking remedial legislation to cure the ills which produced such distress, discouragement, and near disaster.

"When World War II, with its turmoil, trouble and turbulence, broke upon a disheartened world, again the magic of McCORMACK came into being, and again huge appropriations for armament and defense became law under his guidance. All the necessary legislation to take care of business, rationing, shortages, and a million other dislocations in our national economy, received the magic touch of McCORMACK in the legislative halls at our National Capital.

"With the end of World War II, House Leader McCORMACK was again confronted with innumerable requests for his services in straightening out our postwar economy. In addition to our own domestic problems, rent control, housing, veterans' care, taxation, and so forth, there came a crushing burden of legislation whose objective was to crush communism and to further the American way of life.

"Thus as time goes on, President Harry S. Truman finds modest Mr. McCORMACK, of Massachusetts, as his best bet when it comes to getting things done. Under McCORMACK's direction, the aid to Greece and Turkey bill, the Marshall plan for European relief, the Economic Cooperation Administration with Paul Hoffman as Director, the Treaty of Rio with its necessary appropriations, as an aid to hemispheric solidarity and defense of North and South America, and now the epoch-making North Atlantic Pact with its huge billion-dollar program for rearmament of Europe in order to prevent the spread of Marxian communism and to contain Soviet Russia within its own territorial domain, have all become part and parcel of the legislative burden that our own JOHN W. McCORMACK has had to shoulder.

"But Congressman McCORMACK has broad legislative shoulders that have been broadened by 20 years of intelligent, intense leadership. His habit of industry and his intense devotion to his country, to his President, to his church, and to his dutiful wife have made JOHN McCORMACK, of Massachusetts, one of America's great leaders and a great Christian gentleman."

A TYPICAL DAY

A few years ago a Washington reporter devoted a day of his life to trailing the majority leader of the House and setting down his activities. He concluded that his duties were comparable to those of the entire personnel of a traveling baseball club. "He is at once the manager directing general team activity; the field captain keeping tab on individual players; the pinch-hitter preparing to step in and deliver a blow at a crucial moment; the mascot trying to produce a barrel of luck; the first-base coach encouraging his own men or harassing the enemy; and the clubhouse man seeing that all the paraphernalia are ready before the game starts." [13]

Here were the high points in a typical day of CHARLES A. HALLECK, then the majority leader: [14]

8 a. m.: While breakfasting at home, read the House proceedings of the previous day from CONGRESSIONAL RECORD, delivered on his doorstep shortly before daylight.

9 a. m.: Arrived at office in Capitol and began to scan important mail. Talked with early visitors and newspapermen. Answered 15 telephone calls. Dictated several emergency telegrams and started answering mail.

10 a. m.: Resumed dictating letters, interrupted repeatedly by telephone calls from Speaker and special pleaders regarding the current and future floor program.

11:45 a. m.: Went to floor to meet committee chairman in charge of bill about to go under consideration, arranging such details as time for speakers, etc.

12 noon: Took over post at majority table and, with Speaker and Parliamentarian cooperating, made the various motions which are necessary to getting House work under way.

12:30 p. m.: Decks cleared of routine, turned control over to chairman of committee which brought in current bill and sat by in role of referee to smooth majority inter-party situations, direct attack on opposition, or speak in an emergency. (Time out for a sandwich; there is no luncheon recess.)

1:30 p. m.: Returned to office to preside as chairman over committee on committees, which makes committee assignments for majority. Talked before meeting with various applicants for committee appointments or transfers.

2 p. m.: Got committee underway and found there were a dozen applicants for two vacancies. Urged sponsors to explain in open meeting reasons why candidates should have job and thus started field day of talk.

2:15 p. m.: Called to floor to straighten out a parliamentary situation which threatened to get out of hand. Mixed good humoredly with minority leadership and made impromptu 5-minute speech.

2:30 p. m.: Resumed chair at committee session. Settled major appointment by inducing all members to compromise.

3 p. m.: Conferred on anti-inflation legislation with Senator Taft and Chairman Wolcott of House Banking and Currency Committee. Answered 10 more phone calls. Dictated letters.

3:30 p. m.: Attended majority steering committee meeting to decide on anti-inflation program.

4 p. m.: Met newspapermen to discuss the legislative program. Resumed dictating. Interrupted by long distance call of 10 minutes from a Pacific Coast Republican State leader who felt that a certain bill, if passed, would lose State for GOP next fall. Calmed caller's fears.

4:30 p. m.: Resumed dictating but soon was stopped by hurry-up call from floor for him to have whip round up majority membership for important vote. Returned to floor and conferred with Members about party matters.

4:45 p. m.: Made closing 10-minute speech on current bill appealing for favorable vote by both Republicans and Democrats.

5:45 p. m.: Made necessary motions for filing committee reports, etc., and House adjournment.

5:50 p. m.: Met with veterans' delegation concerning pending bill.

6 p. m.: Took series of telephone calls, dictated more letters and telegrams, conferred with research staff on material to be used in an address in Chicago.

Footnotes at end of speech.

6:45 p. m.: Left for home to dress for three evening engagements. Read in car summaries of stack of bill.

7:30 p. m.: Dropped in at State association party in downtown hotel, remained a few minutes, called briefly at second meeting of another group in some hotel, and took a taxi to a second hotel.

8 p. m.: Attended dinner meeting of business group.

10 p. m.: Addressed meeting on national problems, including taxes and reduction of Government costs.

11:15 p. m.: Arrived home to find several long-distance calls and telegrams requiring attention.

12 p. m.: To bed and, except for a few calls from morning newspapermen, nothing to do until tomorrow.

Answer to Vicious Smears Against the Vice President

EXTENSION OF REMARKS

OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1956

Mr. DEROUNIAN. Mr. Speaker, the following article by Frank R. Kent, which appeared in the Washington Sunday Star on March 18, pinpoints the nasty campaign against Vice President NIXON:

THE GAME OF POLITICS

(By Frank R. Kent)

NEW HAMPSHIRE VOTE JARS NIXON'S FOES

The real blow dealt by the unexpected results of the New Hampshire primaries last Tuesday was to the Democratic National Committee, the Americans for Democratic Action, ex-President Truman, the Daily Worker, AFL–CIO propaganda directors and the New Deal-Fair Deal columnists and commentators—all of whom are lined up behind Adlai Stevenson for President—just as they were 4 years ago. Seldom in political history has a blow fallen more unexpectedly and devastatingly. It took nearly 3 days for the hardiest among them to get their breath and begin to assemble alibis.

Many anti-Nixon rumors

It was from these groups that the anti-Nixon campaign had been spread for many months. Despite what the President had publicly said, he was still portrayed as having "refused" to endorse Mr. NIXON; and as being still urged by his "closest political advisers" to "dump" him on the ground that to have him on the ticket would cost the party "more than a million votes." It was also asserted that what is cloudily referred to as the White House "regency" and "palace guard" were working against Mr. NIXON. In particular it was said that Gen. Lucius Clay and Sidney Weinberg, of New York, two "close personal friends" of the President, were poisoning the Eisenhower mind against Mr. NIXON. And there was the further report emanating from the same sources that ex-Governor Dewey and Governor Herter of Massachusetts were, themselves, anxious to get on the ticket and therefore, against NIXON.

These were not all the anti-Nixon rumors produced by these groups but they are a good sample. Several things could be—and were—said of such stories before the New Hampshire vote that can be said more emphatically now. First, they were wholly false. For example, General Clay and Mr. Weinberg were—and are strongly for Mr. NIXON. They were never against him. The same is true of Mr. Dewey and Gov. Herter, of Sherman Adams, Chairman Leonard Hall of the Republican National Committee and the President. It is true the President has failed publicly to proclaim Mr. Nixon his choice, but there is a difference in not proclaiming and refusing. This difference enabled the Eisenhower-Nixon opponents to interpret the President's failure as a refusal. They utterly ignored the fact that any other stand would have made the President appear to dictate to the convention, which would have seemed presumptuous and would have been very poor politics.

Instead of being disappointed by the President's failure, Mr. NIXON, according to Chairman Hall, believes the President's handling of the situation was exactly right. The interesting thing was that those responsible for these reports persistently and consistently ignored what Mr. Eisenhower had publicly said on the subject. Not once but three times he used these unqualified words: "My admiration and affection for him is boundless." How could a man say more? What words could be used that would add to that? In addition, he has shown anger at the suggestion that he might ditch Mr. NIXON and on Wednesday the President declared that those who were trying to drive a wedge between him and NIXON might just as well try driving it between him and his brother. Notwithstanding all this, an effort is still being made to make something significant of the President's statement that he had told Mr. NIXON to chart his own course and let him know what he wants to do.

Nixon's desires clear

Well, there is not much doubt about what Mr. NIXON wants to do and very little that Mr. EISENHOWER wants the same thing. Mr. NIXON, naturally, wants to be renominated. Clearly anything else would be a step down, a victory for his enemies. No one can read the just-published NIXON biography by his friend, Ralph de Tolendano, and really doubt that Mr. NIXON has already "charted his course," and that Mr. EISENHOWER knows it. It is, to be sure, a friendly picture of Mr. NIXON, but it is a factual one, ably presented and extremely interesting. It makes it very clear that Mr. NIXON is not a man to step aside, or down or out. Nor is there any need to.

That unsolicited 22,000 writein vote is a pretty full answer to the vicious campaign that has been made against him. It is almost if not quite as much a shock to the Stevenson forces, which have been trying to make an issue of Mr. NIXON, as the clear-cut sweep of Senator KEFAUVER over the Stevenson supporting machine in the New Hampshire primary. The extent of his sweep was a surprise even to the optimistic Mr. KEFAUVER, who had only claimed a partial victory. It leaves Mr. Stevenson still the "front runner" for the nomination but it makes it more certain he will have to fight to get it. There is an old political adage that says, "It is the expected that happens in politics." Of course, there are exceptions, but at least it can be said that the renomination of the EISENHOWER-NIXON ticket is now generally expected.

Resolution Passed by Members of the North Dakota State Water Conservation Commission at Their Regular Meeting Held on March 9, 1956, in Bismarck, N. Dak.

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 19, 1956

Mr. BURDICK. Mr. Speaker, I have here a resolution which I should like to insert in the RECORD, as I believe the question of further encroachment by the Federal Government in matters which are, and of right ought to be, reserved to the States is one which deserves the serious consideration of every Member here. In the Western States particularly, the question of water rights has always been one of vital importance to their citizens, and any attempt of the Federal Government to obtain control of these valuable rights should be stopped at its source.

The resolution above refererd to is as follows:

RESOLUTION

Whereas it has been the settled rule of law for nearly a century that water rights in midwestern and western States are determined by State law, and not otherwise; and

Whereas it has also been the established rule that control and jurisdiction over the waters of streams and rivers have been vested in the several States subject to whatever control the Federal Government has found necessary to exercise in the case of navigable waters in its regulation of navigation under the commerce clause of the United States Constitution; and

Whereas section 210 of the Constitution of North Dakota provides that "all flowing streams and natural watercourses shall forever remain the property of the State for mining, irrigation and manufacturing purposes", and section 61–0101 of the North Dakota Revised Code, as amended, provides that "all waters within the limits of the State belong to the public and are subject to appropriation for beneficial use;" and

Whereas the decision of the Supreme Court of the United States in the recent Pelton case, which virtually divested the State of Oregon of complete jurisdiction over the waters of the Deschuttes River, a nonnavigable stream therein, threatens to jeopardize and impair the control of States in granting and adjudicating rights to the beneficial use of the waters of their streams: Now, therefore, be it

Resolved by the North Dakota State Water Conservation Commission in meeting regularly assembled this 9th day of March 1956, That Congress be, and is hereby urged, to definitely and unambiguously recognize the right and jurisdiction of the several States in and to the waters of streams and natural watercourses therein by speedily enacting into law Senate bill 863 proposed by Senator BARRETT, of Wyoming, and thereby settle for all time, and beyond question, that the control, use, distribution, and appropriation of the waters of streams and rivers is vested in the States, and not otherwise; and be it further

Resolved, That copies of this resolution be sent to Senator BARRETT and to our Senators and Representatives in Congress.

Barbara Is Our Teacher

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. O'HARA of Illinois. Mr. Speaker, there is a story in the Washington Evening Star of March 15, 1956, that has no relation to the many weighty problems that confront us in the performance of our legislative duties. Yet by unanimous consent I am inserting it in the CONGRESSIONAL RECORD because it comes close to being the best news story of the year in inspirational values. I am sure the reading of this tribute of a father to a courageous daughter will make better Congressmen of us. The article follows:

BARBARA WON A SCHOLARSHIP TODAY AND TOOK HER 1,561ST INSULIN SHOT

(By Frank Carey)

This is the story of my 16-year-old daughter, Barbara, who won a $500 scholarship prize today—the same day she took her 1,561st daily shot of insulin.

She didn't get the prize for taking the insulin; rather, you might say, she got it in spite of it.

She won the prize in a competitve examination—the fourth award of various kinds she has won in 3 years.

NATURALLY PROUD

Naturally her mother, her two sisters and I are proud. We are especially proud because Barbara is a diabetic.

She has jabbed herself with a needle every morning since December 6, 1951, the day after we found out she was ill. She has to do it; otherwise she would die.

I'm telling her story because it occurred to her mother and me that it might be encouraging to other juvenile diabetics, and to their parents, or to any child with a handicapping illness.

My wife and I thought the bottom had dropped out of the world that day, almost 4½ years ago, when a doctor gave us the verdict.

And I'll never forget his telling Barbara—then a child of 12—that unless scientists came up with something else, she'd probably have to stick that needle into herself every day for the rest of her life.

She took the verdict without a whimper, and she hasn't whimpered since.

We knew that, compared to some illnesses, diabetes is not a major tragedy. Still, there was the plaguing thought of that daily injection—the possibility of insulin "reactions."

We were afraid her illness might have a bad psychological effect upon Barbara. We were afraid that the daily need for insulin, and for adhering closely to a sugar-free diet, might tend to make her feel different from her friends—perhaps leading her to retire into a shell.

How wrong we were.

After she was graduated from our parish grammar school, St. Thomas More in Arlington, she entered Holy Cross Academy in Washington—an hour's bus ride (with two changes) from our house.

She became active in debating, in working for her school newspaper and in dramatics and glee club.

WINS CU STUDY

As a sophomore, she won a scholarship to take a summer journalism course at Catholic University. Last year, she won the District of Columbia oratorical contest sponsored by the American Legion. A few weeks ago, she won the poetry section of an essay contest conducted by the Star.

Today's award—the $500 one—was for winning second honors among District of Columbia high-school girls in the Betty Crocker Homemaker of Tomorrow examination sponsored by General Mills, Inc.

An honor student scholastically, she has a happy social life, too. She loves to dance, is a good swimmer, and is not bad at tennis.

She even jokes about her jabber—saying she's "probably the only diabetic ever to take a hypo to a formal dance." (She carried the needle in the pocket of her mother's fur jacket one night when she planned to stay overnight at a friend's house after a school prom.)

So, that's the story of my Barbara, and I hope it may help someone with the same or a similar handicap.

Barbara herself is going to try to help people in another way; she's planning to be a nurse.

Address by Former President Truman at Scranton, Pa., on St. Patrick's Day

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by the Honorable Harry S. Truman at the 51st annual dinner of the Friendly Sons of St. Patrick of Lackawanna County, held at the Hotel Casey, Scranton, Pa., on Saturday evening, March 17, 1956:

On this day, our thoughts naturally turn toward the subject of freedom. After all, you know, the Irish are the most incorrigible exponents of freedom mankind has ever seen. They have not been content to confine their battle for freedom to the Emerald Isle—but have exported it all over the world. I think perhaps this love of human freedom has been Ireland's most important product.

The Irish have been leaders in revolts against tryanny on every possible occasion. I ascribe this not to any general belligerence of character, but rather to a love of freedom, pure and undefiled. As all of you here well know, the Irish passion for freedom served us nobly in the American Revolution.

This Pennsylvania country is a living testimonial to the Irish heroes of our movement for independence. John Barry, Thomas Fitzsimons, Gen. Stephen Moylan, the first president of the Friendly Sons of St. Patrick in Philadelphia. Timothy Murphy, the hero of the Battle of Saratoga, and many another of Morgan's riflemen—all of them gave us something to be proud of and thankful for.

The Irishman's love for freedom has persisted through the years and is very much alive today. This is most fortunate, for the world has a great need today for a firm and unrelenting opposition to the gravest threat to freedom in the last thousand years. This threat is world communism with its godless atheism and its imperialistic ambitions for world conquest. The Irish have taken their place in the forefront of those who stand hard and fast in the defense of freedom against the Communist threat.

Unfortunately, things have been going badly of late in the free world's struggle against communism. The political leaders of the present administration keep telling us that the Communists are failing throughout the world and that our position is improving. However, this is in absolute contradiction of the facts as they are known to every impartial expert on foreign affairs.

When you look at the world today you see communism pushing ahead, building up its forces, extending its influence.

While we are not engaged in active warfare anywhere, still the Soviet Union keeps up its tactics successfully. With this approach it can bring the rest of the world under the thumb of communism without even firing a shot.

Just take a look around the globe. In Korea, since our surrender there by this admininstration, the Communists have reinforced their military position north of the 38th parallel, and the country remains divided and in danger. And Korea was set up as a Republic by the United Nations from the Yalu to Pusan.

Formosa is in a state of seige and is threatened by a strong Communist buildup on the mainland of China.

In southeast Asia, half of Vietnam has fallen under Communist control, and the other states of Indochina are under heavy Communist pressure. India and Burma are being courted hard by the Russians. The Southeast Asia Defense Pact has few adherents on the mainland of Asia and is unpopular with most of the free nations there.

In the Middle East, we are sitting around a powder keg, watching the fuse burn. Instead of accomplishing peace between the Arabs and the State of Israel, our foreign policy seems to be designed to infuriate both camps and to invite Soviet intermeddling.

There is growing danger in Africa. Criticism of American policy is mounting among our best and most reliable friends in Europe. The growth of Communist political influence is noticeable in Greece.

Even in the lands of our good neighbors in Latin America, the Communists are stepping up their brazen efforts.

All over the world Communist-inspired propaganda against the United States is mounting—and more and more people are being persuaded that this Nation, the leader of the free world, is a dangerous friend if not a potential enemy.

The Communist threat is supported by an ever-increasing array of armaments and weapons of destruction. There is a constant increase in the military and air power of Communist China. The Soviets have far more military aircraft than we and are threatening to overtake us in the quality of aircraft. They have the atom and hydrogen bombs and are far advanced in the development of guided missiles. Their ground forces, of course, are far bigger than ours.

They are using these arms and armaments with growing arrogance to further their political intrigue and pressure. Witness the planes, tanks, and submarines they are pouring into the Middle East.

At the same time, the Communists have stepped up their efforts at economic penetration of the free nations and are attempting to win the uncommitted nations to their side through trade and loans for economic development.

To meet the growing danger, we need new and creative measures to restore confidence in this country and to rally the free nations. A few years ago we developed a policy to halt the rush of communism. Today, we do not seem to have any policy. We seem to jump from one thing to another, improvising answers to what the Russians do and say and have no plans of our own.

If this struggle against communism were not so desperately important, we might be able to muddle along like this—at least for a time—and live through it. But the struggle against communism is desperately important. It is the struggle to preserve freedom. The Communists are powerful and implacable foes of human liberty. They are making grave and serious inroads on the freedom and independence of many peoples throughout the world.

The United States cannot continue to exist as a free and independent Nation if the rest of the world falls under the yoke of communism. This is the central issue for us today. This is what our foreign policy is all about. We are not concerned about foreign policy merely because of our friendly interest in people of other lands—although we are interested in the people of other lands and want to be their friends. We are not concerned about foreign policy merely because we want to live in friendship with other nations—although we do want to live in friendship and at peace with every other nation in the world.

Our primary concern with foreign policy is because we want to live as free Americans in Scranton, Pa., and Philadelphia, and Independence, Mo. Our primary concern is to preserve the freedom and independence of the United States of America. And the threat to liberty in the world today is a very grave and present danger to that freedom and independence.

The Secretary of State professes to take comfort from the fact that the Soviet leaders appear to be making some changes in Communist doctrine. I do not know why this should be so comforting. If there be changes in Communist doctrine, you can be sure they are not being made for the benefit of the free peoples, but in order to lull them into letting down their guard against communism.

The Communists have put on the mask of friendship before. Back in the 1930's they posed as defenders of freedom against Fascism and Nazism. They fooled a lot of people then, but that was 20 years ago and I do not see why they should fool anybody with that same old line in 1956, least of all the American President and the American Secretary of State.

It may be that the Communists today are fixing up a united front to beguile the free nations as they did in the 1930's, but there will be a difference. The united front of the 1930s was directed against Germany. This new united front will be directed against the United States of America.

What are we going to do, my friends—what are we going to do about communism's terrible threat to our liberties? I can tell you some of the things we ought to do.

First, we ought to let the revealing light of honesty and truth into reports about the state of affairs in the world today. The American people can stand the truth, and they will respond to it. But if they are told that all is well, when all is not well—if they are told that we are winning the battle of freedom versus communism, when in fact we are losing ground—if they are told that every move our Government makes is a success, when in fact all too many of them are failures—if they are fed pap and platitudes for reasons of political expediency—then the American people are deceived, then they are lulled to sleep, and they will not understand why they must support the strong measures necessary to meet the fateful challenge that faces us.

Second, we must maintain our defensive strength. The military power of this Nation is the greatest asset of the free world. If we lacked military power, other nations would be paralyzed by fear of Russia, and they would become easy targets for communist expansion. Keeping our military strength up, whether we ever use it or not, is indispensable to keeping our freedom. It is an essential deterrent to aggression.

We must not relax in the development of new weapons. We must not let the Russians forge ahead of us in planes and missiles—as they are threatening to do. We must not cut down on our Army, Navy, and Marines. For if we fall behind the Russians—if we become manifestly second-rate in these things—we can expect the strength and unity of the whole free world to fall unto ruins.

Third, we ought to strengthen our foreign-aid programs to meet the new Soviet economic offensive. Military aid to other free nations has been essential, and is still essential, to deter outright armed aggression and subversion. But we should not let it overshadow the kind of aid that our allies prize most highly—aid to raise their people to new levels of economic well-being, and open for them the road to progress. We pioneered in this kind of aid, knowing that it was the only sure foundation of freedom. We embodied it in our point 4 program, our trade programs, our programs of economic development.

The only way to beat the new Soviet economic offensive is to continue and strengthen these programs of ours, proving to the underdeveloped or the uncommitted countries that our way is best—that we can and will help them to improve their conditions, over a long period, and for their own benefit. In this field of competition, we ought to be able to beat the Soviet Union hands down. But we can't do it if we keep trimming our foreign-aid programs down, tying them in with political deals, and wringing our hands over the cost.

There are some who say we cannot continue and strengthen these defense and foreign-aid programs—because they cost too much—because they will keep us from balancing the budget, because our economy can't stand the expense. Poppycock and nonsense. To preserve liberty, our economy can stand a lot more than it is being called on for today. How much is freedom worth? Who will swap it for lower taxes or a balanced budget? Freedom is not something whose price you haggle over. Freedom is priceless—and we cannot compute its value in terms of dollars and cents or even in terms of life itself.

Fourth, our Government can get back to the real basis of our leadership of the free world. We did not get into this fight against communism because we were looking for political arguments. We got into it because we believe in freedom—freedom for ourselves and for others. We offered aid to other nations, not because we wanted to use them as pawns in a power struggle, but because we sincerely wanted to help them maintain their freedom and independence. America has always stood for independence for all peoples. We have always wanted to help people in other lands improve their well being. We believe that all men—all men, as the Declaration of Independence states, are endowed by their Creator with certain inalienable rights. This must be the fundamental basis for the conduct of our foreign affairs.

If we do these things—

If we face the facts as they are and make the call to serve the cause of freedom firm and clear.

If we keep our defenses at top strength.

If we reshape our foreign-aid programs, and stand behind them to the full measure of our economic resources.

If we show real consideration and understanding of the needs and problems of other free nations.

Then we shall be able to rally the free nations once again to work together in mutual trust and confidence, then we shall be able to regain the ground we have been losing, and then the cause of freedom will be sustained throughout the world.

Thoughtfulness and Courtesy of Truck Drivers

EXTENSION OF REMARKS

OF

HON. CHARLES E. POTTER

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Tuesday, March 20, 1956

Mr. POTTER. Mr. President, I am sure that anyone who drives the highways of our country today must be aware of two things. First, that there is a great number of trucks on our highways, and that they play an essential part in our economic system by their distribution of goods. Secondly, I know that any observing driver cannot help noticing that as a group the truck drivers are not only good drivers, but courteous ones. It is true that the exceptions to this rule receive more publicity than all the rest put together.

In line with my personal belief, when something good could be said, it should be said, I should like to have correspondence with the Indiana State Police inserted in the Appendix of the RECORD. I believe this is typical of what could be said many times about the thoughtfulness and courtesy of the truck drivers of our country.

There being no objection, the correspondence was ordered to be printed in the RECORD, as follows:

REPRODUCTION OF LETTER FROM INDIANA STATE POLICE

STATE OF INDIANA,
INDIANA STATE POLICE,
Indianapolis, Ind., February 15, 1956.

SOBER TRUCKING CO.,
Lansing, Mich.

DEAR SIR: On February 10, at about 8 p. m. eastern standard time, I was patrolling U. S. No. 27 south of Angola, Ind. I observed an incident in traffic that I've seen many times only this was a little more so, and this driver should be commended for his tolerence.

He had the misfortune of pulling in behind a slow moving housecar, and the traffic coming from the opposite direction was spaced in a fashion that the driver would be forced to make a decision whether to attempt to pass or not, this went on for some time, until finally the driver got a break where he was positive he could pass with safety.

I had first intended to pull the housecar off when I could get up to it, however some distance later your driver pulled off for a rest stop, on impulse I decided I would rather talk to driver that could tolerate that much, and not become offensive. We in-

troduced ourselves, he stated his name was Wilson, he was driving tractor No. 67, I'm positive he did not know I was in the vicinity, and from my observation this is typical of your drivers.

This kind of driving attitude is appreciated more by the public and police officers more than you realize, only normally we don't take time to say so.

Very truly yours,

CHARLES BUSE,
Indiana State Police.

COPY OF REPLY LETTER TO INDIANA STATE POLICE

FEBRUARY 20, 1956.

Trooper CHARLES BUSE, No. 303,
Indiana State Police, Angola, Ind.

DEAR TROOPER BUSE: We certainly appreciate your interest as a law enforcement officer in taking the time to write us a letter giving due credit to our driver, Howard C. Wilson, for exercising good judgment on the public highways of Indiana.

Our company has a driver training program and a refresher course wherein we stress defensive driving, courtesy, and good public relations on the part of our driver personnel.

Naturally, we receive complaints, but it is unusual for anyone to take the time to compliment us—particularly our driver employees who are the very backbone of our business and the trucking industry.

We thank you for your complimentary letter.

Sincerely yours,

HOWARD SOBER, INC.,
J. H. STARK, Jr.,
Vice President and General Manager.

COPY OF REPLY LETTER TO DRIVER

FEBRUARY 20, 1956.

Mr. HOWARD C. WILSON,
Marion, Ind.

DEAR HOWARD: We certainly want to compliment you on using good judgment on the highway while driving one of our tractor-trailer units.

Enclosed for your records is a copy of the letter the Indiana State Police wrote to our company.

We join them in complimenting you for it is always gratifying to hear such fine remarks about the men who build good will for the trucking industry.

Sincerely yours,

HOWARD SOBER, INC.,
J. H. STARK, Jr.,
Vice President and General Manager.

Retirement of Charles P. Nelson

SPEECH
OF
HON. GERALD R. FORD, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 19, 1956

Mr. FORD. Mr. Speaker, will the gentleman yield?

Mr. HALE. I yield to the gentleman from Michigan.

Mr. FORD. The gentleman from Maine, CHARLES NELSON, came to the Congress at the same time I did in the 81st Congress. I have known him personally very well during the past 7½ years. He will be greatly missed for he has been an outstanding Member with an enviable record in all respects. We certainly hope that his future life will be enjoyable and fruitful. He and his family will always be most welcome in the Congress or elsewhere.

Mr. HALE. I thank the gentleman from Michigan.

No Changes in United States Policy Toward India

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD, I include therein a very interesting, recent article from the Times of India, published in Bombay, relative to the recent visit of Secretary of State Dulles.

This article is more or less of a summary of some of the conferences which were held between Indian officials and Secretary Dulles. It clarifies the official attitude on several important matters on which there is no agreement between the respective countries.

The article follows:

[From the Bombay Times of India of March 11, 1956]

NO CHANGES IN UNITED STATES POLICY TOWARD INDIA—MR. DULLES ALLAYS INDIAN FEARS ABOUT PAK MISUSE OF ARMS AID

NEW DELHI, March 10.—At the concluding session of the Nehru-Dulles talks today which lasted 2 hours, the United States Secretary of State renewed the official invitation and made a personal appeal to the Prime Minister to visit Washington in the near future for talks with President Eisenhower on current world problems.

On the eve of his departure from New Delhi, Mr. Dulles gave India a categorical assurance that the United States has taken and will continue to take adequate precautions against Pakistan misusing American military aid material for any aggressive purposes.

Mr. Dulles went even a stage further and declared that if, despite these precautions, Pakistan did commit aggression, the United States would not fail to support India in accordance with the provisions of the U. N. Charter.

He also renewed President Eisenhower's offer of proportionate military aid if India would accept it.

The "brink-of-war" Mr. Dulles, who spoke with a well-pronounced accent of peace at a packed press conference in the ballroom of Rashtrapati Bhavan, pleaded eloquently for patience and tolerance in understanding American policies in Asia and elsewhere. He said both India and the United States were dedicated to the cause of peace on earth and good will to mankind and maintained that there was a vast area of agreement between the two countries. He was hopeful that his talks with Mr. Nehru would lead to a better understanding of their respective positions.

Mr. Dulles also emphasized that the United States had not taken sides in the Goa and Kashmir disputes and had scrupulously avoided expressing opinions on the merits of the two issues. All that the United States had done so far was to appeal to the concerned parties to settle these disputes peacefully.

STRESSES GOOD WILL

Mr. Dulles manfully warded off a barrage of uncomfortable questions at the press conference, which sought to corner him on the implications of his recent reference to Goa as a Portuguese province and the more provocative SEATO interference in the Kashmir issue, by pleading good faith and waving the olive branch of peace and good will for all.

As was expected, he vigorously defended the regional military pacts emphasizing their defensive character and describing them as the only effective deterrents to the menace of Communist expansion.

Mr. Dulles recalled that the United States had helped at least 15 Asian and African countries, including India, during the last 10 years in not only regaining their independence, but also sustaining their hard-won freedom. The United States had also established an all-time record of economic sharing which had never before been equalled in the world.

CHANGE NOT NEEDED

He denied the press reports attributed to him that his present visit to India would lead to a modification of United States policy towards this country. His argument was that, despite occasional disagreements, Indo-United States relations were on a happy footing and there was no need for any change in their respective positions.

During their two meetings yesterday and today, lasting altogether 5½ hours, the Indian Prime Minister and the United States Secretary of State made, as Mr. Dulles himself put it, a very comprehensive review of the world situation with particular reference to problems of mutual concern. Despite Mr. Dulles' encouraging references at the press conference, there has been no evidence of any tangible results emerging from these talks.

If anything, the Nehru-Dulles talks have only helped to further crystallize the respective positions of the two countries, thus enabling them to understand each other's point of view better in regard to basic world problems—so that when they cannot find common ground for agreement the two countries can at least agree to disagree, as a political commentator here put it.

Indian sources at last threw some light on the nature of the Nehru-Dulles talks by confirming that they had discussed in particular the implications and consequences of the regional military pacts with special reference to the SEATO Council meeting in Karachi this week.

It was further disclosed that the talks had covered in general terms the current situation in West Asia, East Asia, and Southern Asia. And in the context of the SEATO Council's reference to the Kashmir issue, the problem of Goa, as well as the question of American military aid to Pakistan came in for detailed discussion.

BELLICOSE PAK ATTITUDE

Mr. Nehru also drew Mr. Dulles' attention to the increasing number of Indo-Pakistani border incidents which, in the light of the mounting United States military aid to Pakistan, were assuming a rather bellicose and provocative character. The emergence of this mentality in Pakistan, based on the strength of the American arms she was receiving, was creating a dangerous situation in this subcontinent.

Mr. Nehru, on his own, did not raise the question of additional United States economic aid, but Mr. Dulles showed great interest in India's second 5-year plan. Mr. Robert Bowie, one of the four Assistant Secretaries of State accompanying Mr. Dulles, arrived 3 days earlier to meet officials of the Finance Ministry and the Planning Commission and get a feel of India's requirements for the fulfilment of the second plan. Mr. Dulles today hinted that in the next few days President Eisenhower would send a message to Congress giving details of the proposed foreign-aid program for the next financial year.

On the larger international plane the talks, as reported already, covered the crucial problems of disarmament and the moves for a ban on thermonunclear explosions against the background of recent shifts in Soviet policy. Mr. Dulles, too, conceded at the press conference that the Communist Party Congress in Moscow last month had indicated some changes in Soviet policy, involving a renunciation of the use of violence as a means of assuring Communist domination. He considered the Congress a very important

event, but was not quite clear in this mind whether the latest shift in Soviet policy merely represented a change in tactics or a genuine change of policy.

CHINA AND THE U. N.

The question of China's seat in the United Nations and the status of the offshore islands in the Formosa Strait centered round the current Sino-American Ambassadorial talks in Geneva with the ultimate object of bringing about a meeting between the Chinese Premier and the United States Secretary of State.

Mr. Dulles indicated that the United States was still trying to get agreement on a renunciation of the use of force in the Formosa Straits as a prelude to a discussion of the larger Sino-American problems, including the question of Peking's seat in the United Nations.

Mr. Dulles refuted the Peking allegation that Chinese nationals in the United States were being intimidated and prevented from returning to the Chinese mainland. He pointed out that the Indian Embassy in Washington, which has been entrusted with the job of repatriating Chinese nationals in the United States desiring to return to the Chinese mainland, has not so far brought to the notice of the State Department even a single instance of intimidation.

On Indochina, Mr. Dulles appeared to take a rather narrow legalistic stand, maintaining that the United States was not a party to the armistic agreements and as such had no direct responsibilities there. The American policy appears to be to continue the present partition of Vietnam on the lines of Korea and leave the political issues in abeyance. India cannot, therefore, count much on American cooperation in putting pressure on the Diem Government to respect the Geneva agreement.

Mr. Dulles concluded his talks with Mr. Nehru, and left New Delhi tonight without leaving behind any perceptible evidence of an improvement in Indo-American relations. Typical of him, he boarded his special plane at 11:30 p. m., and retired to bed, although the plane was due to take off for Colombo in the early hours of the morning.

Mr. Nehru attended a reception and dinner given by the United States Ambassador in honor of Mr. and Mrs. Dulles. Earlier, Mr. Dulles called on the President and stayed on for lunch. He also paid a courtesy visit to the Vice President and laid a wreath at Rajghat in the morning.

In a farewell broadcast to the Indian people, Mr. Dulles paid tribute to India's contribution to the promotion of international understanding and commended the dedication of the Prime Minister to the pursuit of peace.

PTI adds: At the press conference Mr. Dulles was asked. "Your joint statement on Goa with the Portuguese Foreign Minister and now the SEATO stand on Kashmir to which you are a party have been widely interpreted in this part of the world as America's attempt to 'teach India a lesson' for her refusal to join Western-sponsored military alliances; would you tell us whether this interpretation is basically correct and if it is correct, how would you explain the American attitude on these two issues?"

WRONG INTERPRETATION

Mr. Dulles answered: "I can answer absolutely categorically, and emphatically, that the idea of 'teaching India a lesson' never for 1 moment entered my mind in connection with these two matters. I would absolutely reject any such interpretation. We do have views on collective security which are not wholly shared by the Government of India. We would be happy if we were alike in that respect.

"That is a kind of difference which always exists in a free society and among free nations. While we may not agree, certainly we fully respect the right of India as a sovereign state to have its policy in this matter. The idea of taking any action against India on that account is totally without foundation."

Question. How do you explain your recent statement that Goa is a province of Portugal?

Mr. DULLES. I recall referring to the fact that under the terms of the present constitutional laws of Portugal, Goa and certain other areas called provinces. This is a fact which few people would deny, but that does not carry any necessary implications.

ARMS RACE FEAR

Replying to another question, Mr. Dulles said he did not see any reason why the supply of arms to Pakistan should lead to an arms race in this part of the world. It did not in any way represent a threat to India. "The United States has taken every precaution to see that it will not lead to such a threat."

"I think there can be every confidence on the part of India that there will be no use of these armaments in any aggressive way against India and certainly Pakistan knows that if that should happen, there will be a quick ending of its good relations with the United States and that, on the contrary, under the principles of the U. N. Charter, the United States would be supporting India if it became the victim of any armed aggression."

Question. Has it been realized that you are supplying arms to a country which is still at a cease-fire stage with another country?

Mr. Dulles replied that the United States had supplied arms to a number of countries which were in a cease-fire situation. "I do not know of any principle which prevents nations from giving arms because it has an armistice."

ATOMIC WEAPONS

Asked whether atomic weapons were given to SEATO nations, Mr. Dulles said the giving of atomic arms to any other country was specifically prohibited by United States legislation.

Question. If you give more arms than are necessary to Pakistan, are you aware that the Indian Government might be compelled to go the "Egyptian way"?

Mr. Dulles said that it was wrong to say that the United States was giving more arms than were necessary to Pakistan.

Asked whether supply of arms by one bloc to Pakistan would not make a fair and just plebiscite (in Kashmir) impossible, Mr. Dulles said: "We do not feel that because there is a dispute between Pakistan and India about Kashmir, Pakistan should be unarmed or should not resist Communist aggression."

Editorial Tribute to President Eisenhower

EXTENSION OF REMARKS

OF

HON. CHARLES E. POTTER

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Tuesday, March 20, 1956

Mr. POTTER. Mr. President, "Once a good soldier, always a good soldier." I think the truth of that statement is borne out in the example set by President Eisenhower. We all know that when President Eisenhower was a soldier, he was a good soldier, and now as our President he is also a good soldier in the true sense of that meaning. This thought has been so well phrased in an editorial in the Flint, Mich., Journal of Thursday, March 1, that I should like to have it printed in the Appendix of the RECORD for all to see and consider.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IN OUR OPINION—GOOD SOLDIERS IN TRUE CHARACTER

Those who, starting months ago, were confident President Eisenhower would not become available for a second term had to base that judgment on the belief that his health would not permit it. Otherwise, they were selling him short on qualities which have distinguished him as a great soldier, a noble humanitarian, an astute statesman, and an all-round rugged American. A frequently proven sense of duty dictated a single course in the absence of any physical handicap.

His integrity was demonstrated again in connection with the heart attack he suffered. Instead of covering up and minimizing, the public was informed immediately and was kept fully acquainted as to his condition. He followed through completely Wednesday night in reporting directly to the people as to his health.

The President is devoted to his country and its well-being. One of the most successful soldiers of all time, he loves peace. He believes firmly in the American system of free enterprise. He recognizes a sound economy is essential to basic material security. He and all who are unselfishly like-minded, know there has been progress on all of these counts under his administration. He and they know we have to travel farther along these roads to consolidate and otherwise make more secure these vital gains. The greatest assurance of carrying on lies in his continued leadership. Anyone understanding the facts of political life cannot sincerely argue otherwise.

All of this added up to the decision Mr. Eisenhower announced Wednesday. To have chosen otherwise would have been like withdrawing after successfuly establishing the European beachheads in World War II. He would have been completely out of character and his record proves this never happens. This applies also to his family. A like spirit can be expected quite generally in his administration. Except for good reason acceptable to the President, they will carry on even in the face of the sacrifices so many of them are making.

God willing, it will be the same Republican ticket this Fall. At this time, the President could not have said more regarding his running mate. He properly pointed out that choice is not made until after the Presidential nomination. The "experts" and those with ulterior motives may toss that around as much as they please but Mr. Eisenhower actually cited the reasons why Mr. Nixon should be renominated. That judgment will not be overruled.

We will go through the motions of a national election but with both standard bearers reasonably healthy in November, we will be assured another four years of competent and high-minded leadership in Washington.

More Bananas on Pikes Peak

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1956

Mr. HOSMER. Mr. Speaker, sometime ago I said that Congress might as well appropriate money to grow bananas

on Pikes Peak as to approve the upper Colorado River storage project.

Since the passage of this bill by the House a few days ago, the press of the country is gradually getting on to what this project is really about.

A few days ago, the editor of the Moultrie County News, Sullivan, Ill., forwarded me an editorial from that newspaper of March 16, 1956, which is appended at the end of this statement.

This editor lives in the heart of the Corn Belt. It is easy for him to understand that this bill will put into production approximately 400,000 more acres of land at the same time that the Secretary of Agriculture is trying to reduce acreage by 30 million acres. It is just as difficult for a rural editor to understand why the 12 irrigated land projects in the upper Colorado River storage project should cost an average of $2,142 per acre, with the central Utah project costing $3,953 per acre. Neither can he understand why this project for 4 far Western States should cost the State of Illinois $261 million, with an average cost of $170 per family for every family in the State of Illinois.

Those are figures that any editor can understand, whether it be a small county newspaper or a metropolitan daily.

All of the irrigated projects, except one, are more than a mile high. Any dirt farmer could judge just how long the growing season would be in those areas. Yes, the Congress might as well appropriate money to grow bananas on Pikes Peak as to approve the upper Colorado River storage project.

These are probably some of the reasons why my colleague from the 22d District of Illinois [Mr. SPRINGER] voted against the upper Colorado. These same reasons probably induced this country editor to speak out for the right vote. Mr. Speaker, the editorial is appended herewith in full:

THE RIGHT VOTE

The legislative branches of the Government often act in diverse and confusing ways. Last week presented an excellent example. The House of Representatives passed the upper Colorado River storage project. This is a controversial measure designed to provide public power and to bring some 380,000 acres of land into cultivation through irrigation. This land is located in Colorado, Wyoming, and Utah, and might be used for growing hay, barley, sugar beets, and perhaps some corn.

At the same time the Senate was working on a new farm bill, with provisions to take acreage out of production, so that less corn, wheat, cotton, and peanuts would be grown.

On the one hand legislators were seeking to take land out of production, and use taxpayer's money to pay farmers to let the land lie idle. On the other hand they are using taxpayers' money to bring more land into production through an irrigation program.

Such action just doesn't make sense, and it behooves taxpayers to ask their Congressmen to oppose legislation that would bring more land into production of farm crops at this time.

To the credit of the Congressman from the 22d District, WILLIAM L. SPRINGER, he voted against the upper Colorado River project. In so doing he showed sound thinking, and he ably explained his stand in his report from Congress, published in the News last week. Mr. SPRINGER is the type of Representative that this district should keep in Congress. He is unopposed in the Republican primary next month. Nevertheless he should be given a substantial vote. It will show that the voters in the 22d District appreciate the work that he is doing in representing them in Washington.

Religion as a Weapon Against Communism

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1956

Mr. ANFUSO. Mr. Speaker, one of the strongest weapons we have in the struggle against communism is the belief in God. Unfortunately, we are not using this weapon sufficiently and the people of the free world somehow fail to realize the significance of religion in this struggle. It regards communism as a political conspiracy, but fails to realize that it is also an antireligious conspiracy. I believe we should give religion a greater role in this struggle for freedom.

Under leave to extend my remarks in the RECORD, I want to insert the text of an address on the above subject which I delivered on Sunday, March 18, 1956, at a communion breakfast of the Lexington Council of Knights of Columbus in Brooklyn:

ADDRESS BY CONGRESSMAN VICTOR L. ANFUSO, CATHOLIC COMMUNION BREAKFAST, SUNDAY, MARCH 18, 1956

My dear friends and fellow Americans, I am delighted to be here this morning and to have the opportunity to address your communion breakfast. I appreciate the invitation to meet with you and to express some thoughts which I should like to share with you.

But first let me tell you a little story which I recently heard and which is quite appropriate to what I am going to discuss with you. According to this story, a highly significant trade conference was held recently in Moscow among the nations the Soviet orbit. The chairman—a Russian, naturally—reported as follows:

"As you know, Bulgaria produces bricks. These bricks will from now on be sent to Poland, which will give Bulgaria clothing in exchange."

All the Bulgarians applauded vigorously. The chairman then continued:

"Then Bulgaria will export this clothing to Czechosolvakia in exchange for Czech machinery."

Again the Bulgarians applauded, but not so vigorously. The chairman went on:

"However, this Czech machinery is needed more in Hungary, so it will be shipped there, and the Hungarians will send in exchange their excellent salamis."

This time the Bulgarians applauded very loudly. Then the chairman said:

"Finally, the salamis will be exported to the Soviet Union, which in exchange will send Bulgaria an excellent quality of clay for brick-making."

All the Bulgarians collapsed.

My friends, this story may perhaps be a bit exaggerated, but it gives us a clear picture of the people and the governments behind the Iron Curtain, the life they live, the problems they face, their struggle for existence as human beings, their struggle to worship God. It is impossible for me—as a Member of Congress and a loyal American—to face this devoutly religious audience in this safe and free environment of ours, and to close my mind to the outrages that are being perpetrated, even as I speak to you, against the religious spirit of man wherever communism hold sway.

I shall not distress you with the antireligious tortures and the massacres and the purges, the confiscation of church property, and the misuse of the church as an instrument of the Communist state. You know that story very well. I merely wish to point out that communism is not only a political conspiracy whose primary aim is to dominate the entire world, but it is also an antireligious conspiracy whose aim is to wipe out all religious thinking and beliefs and to destroy everything that is spiritual. The Communist state has no room for God. It cannot share its authority with any other institution, spiritual, or temporal. Its basic credo forbids it to accept the supremacy of the people in government or the principle of obedience to God.

Communism, therefore, constitutes a threat to our civilization and our way of life in many ways. It is a threat to democratic government. It is a threat to the national independence of whole peoples. It is a threat to human rights and human dignity. And it is a threat to our right of worshipping God in freedom. With diabolical cunning, communism seeks to subvert religion and God to a position of subordination to the state.

This is one of the most wicked elements of all in the fraud being perpetuated against people everywhere by communism. It calls for a struggle against this most devastating enemy, a spiritual war in which none of us can afford to rest. I believe it will shape up as a monumental and historic world struggle, for it is clear to all of us that in the field of religion co-existence is impossible because of the godless philosophy of communism.

The point that I wish to impress upon you as strongly as I can is this: We can lose that struggle against communism without a shooting war. In fact, we are very much in danger of losing that struggle without a blow. We are on the defensive everywhere today, spiritually as well as politically. Communism coils its poisonous tentacles from its center in the Kremlin beyond the Iron Curtain into every part of the world. It represents a clear and definite danger to free civilization and goes to the very roots of life in all its aspects, political, economic, social, religious and even personal.

It uses subversion and chicanery, defection and brutal tyranny. Soviet Russia continues to chip away at the free world, knocking off a piece here and a corner there, gradually encircling pivotal nations and eventually crushing them. All this she does not by war or violence or revolutionary means, but by exploiting democratic methods and weaknesses which serve her purpose best. Right now the Communists are concentrating on the 800 million people in Asia, whom they are constantly inciting by pointing a finger of guilt at us, by seeking to convince them that we, the nations of the free world, stand in the way of human progress. If they succeed in winning them over through these tactics, you can readily see what a blow this would constitute to the whole free world and how much it would weaken us.

So, let us not minimize the danger of losing this struggle without a shot being fired. It is a very real danger, indeed. And the danger is even greater when we realize that these are not the only tactics employed by the Communists. One of the methods they use, for example, is the spread and en-

couragement of narcotic addiction, particularly among our youth in the armed forces, in the schools, in places where our youth congregate. This is done with but one purpose in mind: to weaken and corrupt American youth, to make criminals out of them, to bring them to a state of desperation where they will be completely dominated, to show to the world that our youth is weak and sick and unable to present any resistance. That is why, some months ago I proposed that not only should we establish a very strict control at our borders, docks, and airports to stop the traffic in narcotics from abroad, but that the death penalty be meted out to all dope peddlers and traffickers in narcotics who, to my way of thinking, are committing murder and national treason.

Another reason why we are losing the struggle against communism is that for some unexplained reasons the West has always been on the defensive, and has never displayed enough initiative in cementing greater unity of the free world. I cannot believe that the peoples of Asia, in their desire to maintain their freedom and independence, will voluntarily suppress this desire and allow themselves to be swallowed up within the Communist empire. It is incumbent upon us, the people of America, to bring to the people of Asia a clear conception of the advantages and disadvantages of a free and democratic society such as ours based on the belief in God, as against the ruthless and despotic society of the Communist world which is based on immorality and godlessness. There is no doubt in my mind as to their choice, if given the true facts and the opportunity to pursue their choice. Unfortunately, we are not doing enough, we are always on the defensive, so that our motives are sometimes misconstrued by the peoples of Asia who suspect us of endeavoring to impose our domination over them. Nothing is further from the truth, but the Communists are exploiting this suspicion in order to divide the free nations and to entrap in their clutches the weak and the naive.

And let me mention another very significant factor why we are losing the struggle I refer to the role of religion in this vast struggle. Unfortunately, it is not playing the leading role that it should. Somehow we fail to realize that the strongest weapon which the democracies have is not the atomic bomb, nor the hydrogen bomb, nor any other weapon of huge destructive force. Our strongest weapon is and always will be the belief in God. To a tortured mankind which is hungry for genuine peace this means justice, morality, dignity, freedom and the good life. Unfortunately, we have failed to make this sufficiently clear to the suffering millions all over the world. Unfortunately, we have also failed to raise our voice loudly in behalf of freedom of worship everywhere and religious toleration. My friends, I shudder to think what this world would be like, and what it would come to, without religion. This is a thought worthy of deep concentration as we plan our struggle against this godless evil in the days and months ahead.

Now, the question I wish to raise is how we can win the struggle against communism. First and foremost, of course, is for us to reverse the policies which we are pursuing and which I indicated above. Let us expose the tactics used by the Communists against the free nations. Let us put a stop to the deadly traffic in narcotics. Let us stop being on the defensive and undertake effective means of bringing the true facts to peoples everywhere. And above all let us give religion its rightful place in this universal struggle. It may prove to be the decisive weapon to win the hearts and minds of men.

In addition, there are many more things we can do. Allow me to enumerate just a few such steps and to discuss them briefly.

First, the eradication of famine in the world. It is contrary to all reason—I would go a step further and say it is well-nigh criminal—that in a world of abundance of food and great scientific progress in producing more food, people should starve. There is no need for anyone to go hungry, anywhere. Mankind has the means and the wherewithal to produce all it needs. Much can be done in this respect. In my own way, as one Member of Congress, I instigated some action. Let me tell you about it.

As a member of the House Committee on Agriculture, I am well aware of the problems of our farmers, particularly the disposal of food surpluses. During the past year I have been continually advocating the distribution of some of these surpluses to institutions for the poor in this country, to private relief organizations and religious agencies operating here and abroad (such as the National Catholic Welfare Agency), and even distribution of food on a direct people-to-people basis overseas. In November 1955 I was a member of the United States delegation to the Food and Agriculture Organization (FAO) conference in Rome. During the conference, I discussed with Assistant Secretary of Agriculture Earl L. Butz, who headed our delegation, the question of distributing food to religious and private welfare agencies. He promised me to look into the matter upon his return to Washington. Upon our return, I again conferred with Mr. Butz and others in Washington about releasing more of our food surpluses to these welfare agencies. As a result of these discussions you will recall that shortly before Christmas our Government announced it is making available considerable quantities of wheat, corn and other products to welfare organizations for distribution to needy persons abroad. I am convinced that this aid will prove most helpful in countries like Italy, France, Greece, Turkey and other parts of the world, in combatting communism and strengthening the forces of freedom.

Second, stockpiling of food surpluses for emergencies. In July of 1955 I was a member of the United States congressional delegation to the NATO Parliamentary Conference in Paris, which discussed problems dealing with the security of the North Atlantic nations. There I advocated a plan to stockpile food surpluses for future emergencies, primarily intended for use during war, but also for use in fighting famine, floods, etc. These stockpiles of food are to be kept in strategic areas throughout the world, in Europe, Asia, Africa, the Far East, and in this capacity it would serve as a lifeline extending over the world for use of the free nations or those associated with us in the struggle aaginst communism.

Specifically, I suggested that we establish a quasi-Government agency which is to be entrusted with the task of stockpiling and distributing our food surpluses abroad, but that it is to be done in a manner intended to aid the nations and forces which are fighting communism. Those using our stockpiles or accepting our gifts of food must know that this aid comes from the people of the United States.

Third, extension of our school-aid program. My proposal is that this be done not only domestically, but also in foreign countries. You can well understand what it would mean to the prestige of the United States if we could bring some of our food and milk into the schools of friendly nations and the people would see how their children are directly benefited. Furthermore, I am strongly in favor of extending this program to public and parochial schools so that all children could benefit. I recently advocated both to the House Appropriations Committee and the House Agriculture Committee that this program be extended and that the required sums be allotted for this purpose.

Fourth, send surplus food to the starving people behind the Iron Curtain. During the past year I have been advocating the idea of sending some of our surplus wheat to feed starving people behind the Iron Curtain, not only as a humanitarian act, but also for its propaganda value in winning over those people to our cause. Only very recently, in January of this year, Secretary of Agriculture Benson came out in favor of the idea, but nothing has been done to date. In order to win the cold war and to avert a world catastrophe, we must reach the people flanked against us and those undecided with actions of love, charity, and understanding; not with acts of hatred which will further inflame them to support their leaders against us. I believe that had we done this, we might have prevented the shipment of Czech arms to Egypt. Czechoslovakia needed cotton, while Egypt wanted arms. Had we suplied some of our surplus cotton to Czechoslovakia, we could have attached a condition not to export arms, and perhaps prevented the present situation in the Middle East.

And finally, United States representation at the Vatican. I have been urging this ever since I came to Congress. I am sure there is no need for me to go into an extensive explanation to this audience why it is urgent that the United States have a diplomatic representative at the Vatican. It is well known that the Vatican maintains diplomatic relations with some 50 countries, but among the major countries which have thus far not established such relations are Communist Russia, Red China, and, I regret to include in this group, our own United States. The Catholic Church is today a major force, spiritually and morally, in the struggle against the evil forces of communism. The Vatican is an important source of information and intelligence concerning the countries and peoples behind the Iron Curtain. This information would unquestionably be available to us, if we had a diplomatic representative there.

These, then, are a few of the things I should like to see done in pushing this struggle to a final victory. The free world is anxiously waiting and watching our actions. As the moral leader of the free nations it is up to us to show the way. We who have faith know that, regardless of its temporary gains, communism will be eventually defeated and destroyed because of its godless philosophy and its persecution of everything that is sacred to mankind. Faith, my friends, can be a tremendous driving force in our daily life. For Christ has taught us:

"If thou canst believe, all things are possible to him that believeth." (Mark 9: 23.)

Surplus of Farm Commodities

EXTENSION OF REMARKS

OF

HON. HAMER H. BUDGE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1956

Mr. BUDGE. Mr. Speaker, on March 18, 1956, Gov. Orville Freeman, of Minnesota, stated on a national television program that there was "no farm surplus whatever" up to the time the Eisenhower

administration went into office—that there was in fact a shortage of farm goods.

The following information was today furnished me by the Department of Agriculture:

In January of 1953, when this administration took over, the Commodity Credit Corporation had investments in price-supported commodities totaling $2,905,000,000. This included 469 million bushels of corn and 499 million bushels of wheat.

In addition, former Secretary Brannan had announced the elimination of production controls for the 1953 crop. Thus it was impossible for this administration to bring production under control until the end of the 1953 marketing year. By that time, the Commodity Credit Corporation investment had reached $6,005,000,000.

Further, there was a law on the books which made necessary the continuation of price supports at an incentive level for the 1954 crops, further adding to our surplus.

To summarize, this administration inherited a $3 billion surplus.

In addition, we inherited administrative actions of the previous Secretary which boosted the surplus to $6 billion.

Beyond that, we inherited a law under which the surplus reached $7 billion.

Latest available figures show a Commodity Credit Corporation investment of $8,690,000,000.

The present administration has faithfully invoked acreage controls and marketing quotas in an effort to bring production into line.

By the end of this fiscal year, this administration will have disposed of surplus stocks with a total value of approximately $6,500,000,000.

Address by Mr. Arthur White, of Junction City, Oreg., at Annual Memorial Service for Members of the Spanish-American War, Held at Eugene, Oreg., July 18, 1954

EXTENSION OF REMARKS

OF

HON. HARRIS ELLSWORTH

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 20, 1956

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks, I wish to include the following address made by Mr. Arthur White, of Junction City, Oreg., at the annual memorial service for members of the Spanish-American War, held July 18, 1954, in Eugene, Oreg. Mr. White is a veteran of the Spanish-American War and a man whose high standards of American citizenship, integrity, and loyalty have won him the affection and respect of his community:

At this time, I think it appropriate that we should express our thanks to the pastor and the congregation of this church for their hospitality in making welcome the members of our organizations from all parts of the State.

It is very appropriate that the memorial services for our departed comrades and sisters should be held in a church. Within the shelter of the walls of this edifice, which was erected and dedicated to the worship and service of the ever-living God, the bereaved may find comfort and solace in their sorrow. The assurance of Christ's message, "He that believeth on me, though he were dead, yet shall he live," is the hope of all the world.

As I heard the names read of those who passed to the great beyond in the past year, my memory went back to all those who have gone to the eternal campground since we donned the uniform of blue in 1898. We cannot call them all by name, but we can eulogize them as a group and recall the conditions under which many of them served.

I will try to give some of the conditions very briefly: The islands were governed by those who did not heed the demands of the people. Time and time again insurrection broke out over a period of 50 years. The Spanish Government grew more tyrannical. The concentration camps of Cuba were a disgrace to the world. The oppressed people were having a great struggle and the sinking of the Maine in Habana Harbor brought to a climax existing conditions.

President McKinley asked for, and Congress made, a declaration of war on Spain.

The purpose of the war, as announced by President McKinley was to free an oppressed people, not to acquire territory, and that was the first time in history that a great nation had ever declared war on such grounds.

The declaration of war was April 19, 1898, and in July our armies were fighting in Cuba near our shores and near Manila which was 7,000 miles away. Probably no armies ever went into combat in tropical campaigns as poorly equipped, as compared to the enemy, as did our men of 1898.

State regiments were equipped with the Springfield, single-shot, black-powder rifle of about 1875 vintage. The enemy had high-power, repeating, smokeless-powder rifles of German manufacture.

The Medical Corps knew nothing of preventive shots for typhoid, malaria, dysentery or other tropical diseases, consequently deaths from diseases, now preventable, were very high. It is the carefully considered opinion of medical men who have made a thorough study of health conditions at that time that service in that war shortened the life expectation of those who survived its battles and destruction by disease by an average of from 3 to 6 years.

With no spirit of boasting, and certainly no desire to lessen the credit justly due servicemen of other wars, we feel that a true account of our service is entitled to a place in history. This war has been played down in history, especially in our schoolbook histories. Recently, several editorials in papers opposed to veteran benefits have referred to it as a 90-day pleasure trip.

The truth of the matter is that the defeat of the Spanish fleet and armies in Cuba, Puerto Rico, and the Philippine Islands, the suppression of the rebellion in the Philippines, the China Relief Expedition resulted in a longer combat period, recognized by our Government for pension purposes than the Civil War or World War I—from April 19, 1898, to July 4, 1902—over 4 years. A greater percentage of our men went overseas than in World War I. Our losses from death, percentagewise, were about 6 times greater than in the Civil War or World War I.

There were more than 600 combat actions which includes the Philippine Insurrection and the China relief expedition. These men received no bonus, no aid to an education, no Government insurance, and it was almost 20 years after the war before a pension law was passed for their benefit. These men were paid $13 per month with 20-percent increase while overseas.

Of the young men who entered the service in that more than 4 years' combat period, today there is but 1 out of 7 living and the loss by death is about 6,000 per year or 500 per month going off the pension roll.

Nor would I in this memorial service forget the dead of other wars; those who left their blood in the green at Lexington and the snow of Valley Forge, on the walls of Fort Sumter, and the fields of Gettysburg, on the waters of the River Marne and in the shadows of the Argonne Forest, on the beachheads of Salerno and Normandy, and the sands of Okinawa, or on the bleak hills of Heartbreak Ridge, or in the gray wastes of the seven seas.

A million and more of my countrymen have died for freedom and millions more stand ready to defend freedom today as it is threatened at this time by as evil a power as this world has ever known.

The United Spanish War Veterans is a militant organization, constantly on the alert to actively support everything that is for the best interests of our country, and oppose vehemently everything subversive.

Communism itself is not new. It is a practical throwback to jungle life, and in terms of disregard for God's law, in practice of pagan immorality, those who practice it seem hardly removed from the jungle. Communism is not a political party as we comprehend a party to be; it is a criminal conspiracy controlled in Moscow, whose purpose is to overthrow every free government in the world and enslave the people of all countries.

Communism has never deviated from the teachings of Karl Marx and Fredrick Engles, whose writings have become the bible of communism.

The code of the Communist is lying, subtle deception, treason, hatred of religion, and contempt for the God-given rights of individuals. Wherever the Communists achieved power, there followed murder, slave labor, concentration camps, and despotic control of every phase of human life.

Can any good end ever be achieved by evil means?

The Soviet Union has developed a malignant mania for world control that dwarfs the imperialist ambitions of any regime known in history.

From their headquarters in Moscow, the leaders of international communism fanatically plan, foster, and support subversion, sabotage, and military action within the free world.

The fundamental policy of the Kremlin did not change on the death of Joseph Stalin and its godless program of world revolution and conquest is being vigorously carried out by its present rulers.

Today, the church and school are among the top targets of the Communist apparatus. This is not my conclusion, but is made on the authority of the Federal Bureau of Investigation. Of these two, I believe the church is the main target of communism today.

I pray that the churches may be fully aware of this insidious attempt to corrupt them and resist with all their power. May our school authorities be very vigilant to resist any attempt to infiltrate the policy of communism into our schools.

The struggle between communism and the free world is the greatest battle of our time, perhaps of all time. It is a fight for the whole man—body, mind, and soul.

Russia was our ally during World War II though we know now she was never our friend.

I believe in America and the human rights for which it stands. I believe that the united and unanimous voice of our country

today would say to Russia, in a tone which even they would understand:

"We will not trade our public parks, recreation areas, and playgrounds which we enjoy freely for your concentration camps."

"We will not trade freedom to work at places of our own choice for your slave labor."

"We will not trade our right of a free ballot where we may vote in secret as we wish for your system of one ballot with but one name on it."

"We will not trade our free and unrestricted worship for your atheism."

"We will not trade our right to select our own governing body for your system of tyranny."

"We will not trade our system of equality before the law for your system of rule by men."

These are the issues before us today, and may God guide America is my hope.

I am proud of the fact that many of our Nation's leaders are not ashamed to publicly ask, in humble prayer, God's daily guidance.

I am glad the American Legion is so sincerely entering into the "back to God" movement in their organization.

So we pause in reverence to our departed comrades of the United Spanish War Veterans and especially to those who gave their lives that the blessings of America might be preserved for all posterity.

It was the lot of some to fall on the field of battle. In that war that we remember many were sick in Southland camps, while others served in the disease infested jungles of the tropics where typhoid and yellow jack burned out their lives. We also do not forget those who came home sick and wrecked in body, and after years of disability they, too, joined our departed comrades.

They gave their lives with hearts of total loyalty and we exalt in their sacrifices for the human family learned through them how to preserve life and to protect countless millions against fever, filth, and disease.

Their sacrifices made more clear to the world the unselfish standards for which our flag stands and the freedom enjoyed under the Stars and Stripes.

The big question today throughout the United States and the world is which will prevail—the Star-Spangled Banner representing our representative form of government, life, liberty, and the pursuit of happiness, or will it be the hammer and sickle representing the bondage and tyranny of communism?

Heaven forbid that we shall ever deteriorate to such a state of senile Americanism that we let the Communists overpower us. One good look at the red, white, and blue, comprising the stars and stripes in that grand old flag of the United States of America should be enough to stir the blood of every loyal citizen into a tight-fisted resolve that we are here to remain freemen forever.

It is not necessary for this flag to fly to remind all red-blooded Americans to get their hearts into America, but it is necessary to remind some so-called Americans to get their hearts into America or get out of America.

These are my sentiments.

Thirty-eighth Anniversary of Byelorussian Independence Proclamation

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. ANFUSO. Mr. Speaker, March 25 marks the 38th anniversary of the proclamation of the independence of Byelorussia, sometimes known also as White Ruthenia. This is another one of the captive nations swallowed up by Communist Russia in 1921. Like the others of Eastern Europe, the people of this nation and their kin now living in this country and elsewhere are observing this anniversary with a feeling of sadness.

Nevertheless, it is good to observe such occasions because they serve as a moral encouragement to the people of Byelorussia and their kinsmen to continue their struggle for national independence, for justice and democracy. The people of Byelorussia cannot celebrate this anniversary. They are behind the Iron Curtain where freedom is not tolerated and democracy has been perverted in its meaning and purpose. They can only hope for a better day in the future, free from the yoke of Communist oppression.

On this eventful anniversary, I am happy to join with all freedom-loving people in commemorating this day and in sending our greetings and our prayers for the liberation of the White Ruthenian nation. We join in the fervent wish that delivery of the White Ruthenian nation from her oppressors will not be long delayed.

Award to Edward L. Baker, Postmaster at Detroit, Mich.

EXTENSION OF REMARKS
OF
HON. CHARLES E. POTTER
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Tuesday, March 20, 1956

Mr. POTTER. Mr. President, Mr. Edward L. Baker, the postmaster of the Detroit, Mich., postal district, has been named the outstanding Federal Administrator of the year in Detroit. This is a rightfully bestowed honor, and I should like to have printed in the Appendix of the RECORD the letter which nominated him for this award, and which puts clearly the many qualifications which won him such a citation.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

JANUARY 30, 1956.

Mr. KEITH ROELOFS,
Secretary-Treasurer, Civil Service Field Office,
Federal Building, Detroit, Mich.

DEAR MR. ROELOFS: It is my pleasure to present the name of Edward L. Baker, postmaster of the Detroit Postal District, as a nominee for the honored designation as "Outstanding Federal Administrator of the Year."

I make this presentation with the knowledge that any one of the some 7,000 postal employees would be willing to sign this letter because in a period of 28 months they have learned to respect and admire this capable, humble, and very gracious man. We all feel that he has the requisites of an outstanding administrator.

In your deliberations and selection of the outstanding administrator, please consider the below listed qualifications.

1. Many believe that a good administrator should have several years of experience with an organization. I believe this to be a fallacy. I have 30 years' service, and I feel that I am qualified, to some degree, to make this statement. Too much emphasis is placed on years of service, yet we know that wisdom does not come with the years, but with what you do to improve yourself each day.

Mr. Baker came to us just 27 months ago, plus some weeks, but he crammed into those busy months a knowledge of our service which amazes everyone. He acquired this knowledge by listening to everyone; he asks your opinion, delves into things which he reasons are not clearly presented; he did not dodge the tough problems, nor was he content to "let it ride" for want of a better solution.

The Post Office Department introduced more sweeping changes in almost every phase of its operation within the past 2 years than we have seen in the previous 25 years. All of the problems connected with these changes have been resolved. It sounds easy, but, believe me, it wasn't.

Strangely, too, while his previous experience in the field of electrical engineering, chemistry, basic medicine, law, investigations, and the State legislature may have been helpful, his former colleagues tell us of his hard work and success in those fields also. It is the pattern of a great administrator who is determined to win regardless of the nature of the work or the obstacles he must overcome.

2. One of his many qualifications is his ability to handle people. This falls into many categories: the irate patron, business and civic organizations, major industries, religious, racial, and nationality groups, labor unions, and the internal organization of the 7,000 post-office employees represented by 9 organizations. Grievances and general welfare meetings are held with these organizations very frequently, yet the lone employee is just as welcome if he prefers to present his own problem. He is never too busy to listen to anyone, regardless of their station or mission in life. He listens patiently and never offends, and everyone who talks to him leaves with a feeling that he is interested in their welfare. This, too, is a rare quality and we believe it makes him a topnotch administrator.

3. Mr. Baker is humble and modest, dignified and polite. He is an excellent representative of a Government agency. All of us feel proud to point to him as our boss. Mr. Baker exemplifies the finest tradition of what a representative of the Government should be, act, and look like.

4. Mr. Baker's loyalty to his agency and its head never wavers and he is always ready to defend it to the utmost. Many would consider other means of escape to enhance their personal standings by saying "It's not my idea; I only do as I am told," but he accepts the responsibility, as a good administrator will always do.

5. Mr. Baker is honest and sincere in his daily meetings with everyone, meting out the same decisions and the same treatment every day. There are no "hot" and "cold" answers; they come with the same conviction every time.

6. He wears his responsibilities well. The toughest day finds him just as patient as any other day. He thinks a problem out first. He makes very few mistakes and if he does, he will be the first one to tell you.

7. Finally, what did Ed Baker do for us? Personally, he brought new light into our Agency. Everyone works harder, together. We enjoy our work more and, to top it off, he started a "back to school" movement which I felt was next to impossible to achieve. Today, we have waiting lists for those wanting to go to school. Training in our Agency in the past was a "hush" or forbidden project. Today, everybody is conscious of it or has had some of it, or looks to the future with eager anticipation. Ed Baker did that too.

After summing up the qualifications numbered from 1 to 7, I realize I could, if time permitted, keep going for hours. But why? Your honorable committee is made up of Detroiters and you all know the local accomplishments of this wonderful man. But, just in case you missed some of his accomplishments which extend beyond our community, I want to tell you a little more about him. Ed Baker won't tell.

(a) Mr. Baker is a team player. On his first day in office he became a member of the National Association of Postmasters of the United States, an organization of some 39,000 postmasters.

(b) In a few months, he was named as a member of the executive committee of that organization.

(c) In October 1955 he served as host postmaster to the 51st annual convention of the Postmasters' Association. That word "host" looks simple, but Ed Baker alone planned, arranged financing, entertainment, housing, etc., for what the 3,000 postmasters, guests, and officials of the Post Office Department said was the most productive and entertaining convention in the history of their organization.

(d) Not only Detroiters but folks everywhere are cognizant of the leadership qualities of Mr. Baker. He was recently elected president of the Michigan postmasters and vice president of the National Association of Postmasters. All this recognition in just a little over 2 years as a postmaster.

Thank you very much for this opportunity to put on paper briefly the way we feel about our boss, Ed Baker.

Sincerely yours,

H. H. KUSISTO,
Assistant Postmaster.

The American Bar Association

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. MULTER. Mr. Speaker, on March 15, I inserted in the Appendix of the RECORD my remarks under the heading "The American Bar Association Fails the American People." On March 17, I received a letter from one of the vice chairmen of the membership campaign committee of the American Bar Association which in all fairness to the association should be added to the RECORD since the letter does say, in so many words, that Negroes are now admitted to membership in the American Bar Association. The letter of March 15 reads as follows:

MY DEAR MR. MULTER: There has been forwarded to me for reply your letter of February 28 to Mr. Travers E. Devlin, of Caverly, Dimond, Dwyer & Lawler.

The question on the application form to which you refer no longer has any bearing on the eligibility of any individual for membership in the American Bar Association. Prior to undertaking this campaign, the New York City committee asked for and received a firm assurance from the association that no individual would be barred from membership on the basis of race. Fulfillment of this assurance is attested to by the participation of several Negroes in the current campaign and the enlistment of many more to membership during the last few weeks.

You may be assured that Mr. Seymour and I, and as far as I know, all of the members of the New York committee, agree with you that the race question should be removed from the association's application and have been actively endeavoring to have it removed. We agree with you in principle—we have only differed in our belief that we stood a better chance of effecting its removal as members than as outsiders. I personally believe that the association has a fine record of accomplishment even though I have disagreed with it on particular questions, including this one.

I do wish you would reconsider and rejoin the association.

Sincerely yours,

LYMAN M. TONDEL, Jr.

I answered Mr. Tondel on March 19 as follows:

DEAR MR. TONDEL: Receipt is acknowledged with thanks of yours of March 15 in answer to mine of February 28 addressed to Mr. Travers E. Devlin.

I am pleased to have your assurances that Negroes are now being admitted to membership and are being allowed to participate fully in the activities of the American Bar Association. Until the reference to race is removed from the association's application form, however, I will continue to believe that those in control of the association are opposed to the principle upon which you and I agree.

Can you tell me how many Negro lawyers have been admitted to the American Bar Association within the last year, who reside and practice in any State south of the Mason-Dixon line? Also, has a single Negro been admitted to membership who resides or practices in the District of Columbia?

Sincerely yours,

ABRAHAM J. MULTER.

When that letter is answered, the reply also will be placed in the RECORD.

A Regrettable Incident

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Newsweek. On March 6, 1956, I inserted in the CONGRESSIONAL RECORD a letter from Mr. Roy Iketani criticizing a letter published by Newsweek, February 20, from one Lincoln Yamamoto. I also wrote to the chairman of the editorial board of Newsweek, enclosing Mr. Iketani's letter, and criticizing that publication that "more care was not given in checking the responsibility of such a communication before publication." I would like, Mr. Speaker, in the spirit of fair play, to insert in the RECORD the reply I received from Mr. Dwight W. Norris, on behalf of the editors of Newsweek explaining the situation:

NEWSWEEK,
New York, March 8, 1956.

Hon. JAMES ROOSEVELT,
House of Representatives,
House Office Building,
Washington, D. C.

DEAR MR. ROOSEVELT: This will acknowledge your letter of March 2, 1956, to Mr. Malcolm Muir in regard to the publication in the February 20 issue of Newsweek of a letter to the editor from one Lincoln Yamamoto. Your letter has been referred to me in Mr. Muir's absence.

We received a number of letters and telegrams with reference to the Yamamoto letter and in our March 5 issue which went on sale February 29, a copy of which is enclosed, we devoted nearly all of our Letters column, running over nearly three pages, to the publication of these letters and telegrams, or excerpts from them. Our column concluded with an expression of our regret that the publication of the Yamamoto letter had suggested any disagreement with the views and sentiments expressed in the letters and telegrams reproduced or extracted in the March 5 issue.

We have been in touch with the national headquarters of the Japanese American Citizens League and, upon their being informed of the publication of the letters and telegrams in the March 5 issue and our expression of regrets, they have expressed their entire understanding and satisfaction.

The letters column of Newsweek in which the Yamamoto letter appeared is, of course, a column given over to the presentation of the views of readers and we do regret that the appearance of the Yamamoto letter in the column was construed by some to indicate that Newsweek agreed with it.

Inasmuch as it appears from your letter that you intend to insert Mr. Roy Iketani's letter in the CONGRESSIONAL RECORD, we would very much appreciate it if you would also insert in the RECORD an appropriate notation showing our publication of contrary letters and telegrams and our own expression of regrets in our March 5 issue.

Sincerely yours,

DWIGHT W. NORRIS,
(For the Editors).

What the FBI Is Doing in Dixie

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the March 15, 1956, issue of Jet magazine:

WHAT THE FBI IS DOING IN DIXIE—LIMITATIONS OF FEDERAL LAWS

(EDITOR'S NOTE.—The FBI has been described as "the long arm of the law that reaches everywhere." It has also been accused of looking the other way while the civil rights of Negroes were violated in the South. Jet asked FBI Chief J. Edgar Hoover why, and publishes his replies in question-and-answer form below:)

Question. How many racial murders in the South has the FBI entered since the Supreme Court education decision?

Answer. The wanton taking of human life violates the laws of God and man. In most cases murder constitutes a crime against the State and does not come within the jurisdiction of the Federal Government. But when a murder does occur within our jurisdiction, the full resources of the FBI are assigned to the detection and apprehension of the murderer. The right to life is inherent but under our Constitution Federal jurisdiction is limited where a life is taken. Since, however, the questions propounded to me cover the entire field of civil rights vio-

lations, I would first point out that Federal civil rights statutes under which we are authorized to make investigations are limited in scope.

When allegations of Federal civil rights violations come to our attention we call the preliminary facts to the attention of the Civil Rights Section of the Depatrment of Justice's Criminal Division. After reviewing the facts, the Civil Rights Section orders a full investigation if it feels a Federal law violation is involved. We do not make full and complete investigations unless we are so instructed by the Department of Justice.

The two basic civil rights statutes are found in sections 241 and 242, Title 18, of the United States Code. Section 241 deals primarily with situations wherein a person is held in involuntary servitude, peonage or where his right to vote for a candidate for Federal office is infringed. Violations of this section of the statute apply to private individuals acting in a conspiracy without legal authority.

Section 242 applies essentially to the actions of duly constituted law enforcement officers acting under color of authority wherein their acts deprive an individual of his rights guaranteed by our Constitution and Congressional enactment. The violations arising under this statute involve such acts as the third degree, the depriving a person of life, liberty or property without due process of law, the denying of any persons of equal protection of the law. This section also applies to individuals acting in concert with duly constituted officers under the law.

Question. What are the grounds for the FBI to enter these cases?

Answer. Pursuant to instructions issued by the Attorney General, the FBI conducts a preliminary inquiry immediately upon the receipt of information alleging a civil rights violation, and the facts gathered are reported to the Department of Justice for its review, prosecutive opinion and instructions as to further investigation if the Department concludes a Federal violation is involved. Full investigations are not conducted in civil rights cases unless the Department of Justice or a United States attorney so directs. The FBI does not make evaluations, draw conclusions, or express prosecutive opinions.

Question. Is the FBI continuing probes of the murders of Rev. George W. Lee and Lamar Smith and the shooting of Gus Courts in Mississippi?

Answer. After Reverend Lee was killed on May 7, 1955, the FBI conducted a preliminary investigation and the results of this investigation were promptly furnished to the Criminal Division of the Department of Justice. On May 24, 1955, the FBI was instructed to make a complete investigation into this matter inasmuch as an allegation had been received that Reverend Lee had been killed because he refused to remove his name from a list of registered voters. The FBI conducted a complete and thorough investigation into this matter and the results were promptly furnished to the Department of Justice.

The available facts concerning the killing of Lamar Smith were furnished to the Department of Justice, and the Department of Justice stated that no investigation should be conducted by this Bureau.

The FBI conducted a preliminary investigation into the shooting of Gus Courts. The results were promptly submitted to the Department of Justice. At the instructions of the Department, further investigation was conducted to determine if the shooting had occurred because Courts had refused to remove his name from a list of registered voters. Upon completion of the investigation, the reports of our agents were furnished to the Department of Justice.

Question. What are the major difficulties of the FBI in solving racial crimes in the South?

Answer. In some areas of the South, the FBI has found itself confronted with the problem of having to penetrate a curtain of silence in seeking the facts concerning alleged Federal civil rights violations involving both Negoes and Whites. There are many persons who believe that civil rights matters are strictly the concern of State authorities. These individuals feel that the Federal Government is intruding upon the sovereignty of the individual States in investigating alleged violations of the rights secured to Americans by the Constitution and laws of the United States and fail to realize that Congress, not the FBI, made the laws and so long as the laws remain in force the FBI has a duty to investigate when directed.

The majority of citizens in the South, as elsewhere, fully appreciate the FBI's role as an impartial fact-gathering agency which has jurisdiction over such matters and do not permit personal feelings to interfere with their cooperating with the FBI in any type of investigation. On numerous occasions, law-enforcement officers, who have been accused of civil rights violations, have encouraged FBI investigation because they knew that if unjustly accused the FBI would establish their innocence.

Question. Do you believe that the FBI, under present law, can cope with racial violence which may occur in the South due to integration threats? If not, what steps would you recommend?

Answer. It has long been the policy of the FBI to make no recommendations concerning legislation. The FBI is not a policymaking organization. We feel that the FBI is prepared to cope with any situation that represents a violation of Federal law within our jurisdiction.

Question. Are there any Negro FBI agents being used to solve racial crimes in the South?

Answer. The records of special agent personnel are not kept according to race, creed or color. The selection of an agent to handle a specific investigation is predicated strictly upon the best available man. Negro agents, like all agents in the FBI, are assigned where they can render their most effective service.

Tax Relief for Small Business

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 19, 1956

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I would like to include a statement which I have prepared in conjunction with my introduction of a bill to amend the corporation income tax rate to provide needed tax relief for small businesses. The statement follows:

STATEMENT OF THE HONORABLE GEORGE M. RHODES, MEMBER OF CONGRESS, 14TH DISTRICT, PENNSYLVANIA, ON THE NEED FOR TAX RELIEF FOR SMALL BUSINESS

I have today introduced a bill to amend the corporation income tax rate to provide needed tax relief for small businesses.

It is manifestly clear that a strong and healthy economy requires the continued prosperity and growth of our small-business establishments. Recent trends in our economy have raised certain danger signals concerning the ability of small business to grow and prosper in proportion to the rest of our economy.

Recent reports of the Joint Committee on the Economic Report, as well as the House and Senate Small Business Committees have documented the serious problems facing small businesses. There is every indication that this problem is growing ever more serious. Many of these danger signals have been pointed out in previous discussions of this subject. They are important and bear repeating.

The rate of failures among small businesses has risen to an alarming degree over what it was 10 years ago. In 1945 there were only 809 business failures. This figure had risen to 11,086 in 1954, and statistics for the 1955 boom year reveal an almost equal number of failures. Individual retail establishments across the country have been especially hard hit.

The sharply increasing number of corporate mergers is another alarming development. In 1952 corporations with more than $100 million in assets had 52 percent of the total assets held by manufacturing corporations in the United States. After 3 years of Republican rule, these giant corporations now have 57 percent of all such assets. In its report on Federal Tax Policy for Economic Growth and Stability in January of this year, the Joint Committee on the Economic Report stated:

"The importance of small and new business in preserving and strengthening a competitive market economy has long been recognized. A large number of small business units is required to insure that control over the use of resources and therefore over output and prices is widely diffused. A high entrance rate of new businesses is required to insure the continuing challenge of established firms so essential to the development of new products and more economical production processes and methods.

"In recent months, increasing attention has been focused on the rise in mergers and consolidations of corporate enterprise. While this development does not uniquely involve small businesses, their position is weakened by any tendency toward concentration of enterprise in fewer and fewer hands."

It seems obvious that if big business continues to gobble up small businesses at the present rate, the hand of monopoly will be fastened securely around the throat of every community in our Nation.

The plight of many small businesses has been closely related to the policies of the administration in the awarding of defense contracts. Small business has been denied hundreds of thousands of defense contracts amounting to millions of dollars because of certain bidding procedures and the unwarranted and excessive use of negotiated contracts which favor giant business. Small business has not received a fair share of our billions of dollars of defense contracts; instead it has been offered the leftover crumbs.

Recent estimates made by the Small Business Administration show that 6 percent of our largest corporations produce 70 percent of all manufactured goods in this country. The other 94 percent of the corporations produce only 30 percent.

Profits of corporations with assets of over $100 million amounted to 13.7 percent of stockholders' equity in 1954, while the smallest manufacturing corporations went into the red by 3.5 percent upon their equity, after paying taxes.

Latest available figures for the second quarter of 1955 show that large corporations earned 7.4 cents for each dollar of sales, on the average, while small corporations averaged only 1.1 cents per each dollar of sales.

Under present conditions, many small businesses have found it difficult if not impossible to expand their productive facilities or extend their markets because capital needed for expansion must come largely from retained corporate earnings after taxes. While many big businesses receive tax amortization writeoffs in the form of subsidies from the Government, small businesses have been strangled by inequitable tax rates. A sudden business recession such as the one experienced in 1954 may drive thousands of marginal small businesses into bankruptcy.

The bill which I have introduced would provide for a tax of 22 percent on a corporation's net earnings, plus a 33-percent surtax on earnings over $25,000 a year. The present law, of course, levies a tax of 30 percent on net earnings, plus a 22-percent surtax on earnings over $25,000.

Table I, prepared by the Joint Committee on Internal Revenue Taxation, shows the comparison of tax liabiltiy under my proposal with the tax liability under the present law for selected levels of corporation incomes:

TABLE I. *Comparison of tax liability under proposal with tax liability under present law on selected incomes*

Proposal: Corporation rates—22 percent normal, 33 percent surtax, $25,000 surtax exemption

Income subject to both normal and surtax	Tax under proposal	Tax under present law	Increase (+) or decrease (−)	
			Amount	Percent
$5,000	$1,100	$1,500	−$400	−26.7
$10,000	2,200	3,000	−800	−26.7
$25,000	5,500	7,500	−2,000	−26.7
$50,000	19,250	20,500	−1,250	−6.1
$91,666.67	42,166.67	42,166.67		
$100,000	46,750	46,500	+250	+.5
$225,000	115,500	111,500	+4,000	+3.6
$500,000	266,750	254,500	+12,250	+4.8
$1,000,000	541,750	514,500	+27,250	+5.3
$10,000,000	5,491,750	5,194,500	+297,250	+5.7
$100,000,000	54,991,750	51,994,500	+2,997,250	+5.8

The joint committee estimates an increase in corporation income tax liability under my proposal of about $725 million annually, based on the level of corporate profits for the first half of 1955. The bulk of the tax relief would be provided where it is most needed—among corporations having net earnings of less than $91,000 a year. Most of the increased corporate income tax revenue would come from the giant corporations who already have a stranglehold on our national economy.

I am convinced that some action must be taken to encourage the growth of small business and to offset the recent alarming trend toward monopolization of business in this country. I feel that this small-business tax-relief measure which I have introduced is a positive and necessary approach to meet this problem.

Employment Problem at New York Naval Shipyard

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1956

Mr. ANFUSO. Mr. Speaker, on February 26, 1956, the New York Herald Tribune published a story under the headline "Democratic Criticism Said To Hurt Yards Here," in which reference was made to protests by Democratic Congressmen from New York in connection with the layoff of 600 workers at the New York Naval Shipyard, which is located in my congressional district.

Several days later, on March 1, I wrote a letter to Navy Secretary Charles S. Thomas in which I asked him "to allay my own disturbed feeling and the feelings of the thousands of employees involved." I also urged that the New York Naval Shipyard "be considered fairly on all future contracts."

I am now in receipt of a reply from Navy Secretary Thomas in which he denies that the reduction in personnel at the New York Naval Shipyard was part of a scheme by the administration to turn this work over to private shipyards. In view of the widespread interest in this matter in New York generally, and in my district in particular, I am inserting into the RECORD the text of my letter of March 1 to Mr. Thomas and his reply of March 13:

MARCH 1, 1956.

Hon. CHARLES S. THOMAS,
Secretary of the Navy, Department of the Navy, Washington, D. C.

DEAR MR. SECRETARY: This letter is in reference to the New York Naval Shipyard in Brooklyn, which is in my congressional district.

I was very much disturbed by the New York Herald Tribune article of February 26, 1956, entitled "Democratic Criticism Said to Hurt Yards Here," copy of which is enclosed. I further quote from the article:

"The congressional group headed by Representative EMANUEL CELLER, Democrat, New York, protested the layoff of 600 workers just before Christmas. Mr. CELLER asserted then that it was 'part and parcel of a scheme by Mr. (Charles E.) Wilson and the Republican administration to turn this work over to private industry.'"

I recall very well the meeting which we had with Under Secretary of the Navy Gates. Representatives of the more than 17,000 workers at the yard were present at this meeting; also Congressman FRANCIS E. DORN, Republican, of New York. I pleaded for bipartisan support to prevent the further layoff of workers. At no time did I complain of overtime work which I know is absolutely essential to meet commitments.

I have kept in constant touch with your office and have never issued any statement to the press. Recently I was satisfied that no immediate layoffs were contemplated and overtime work would continue to meet necessary deadlines. It is my impression that Rear Admiral Roy T. Cowdrey, Commander of the Brooklyn Navy Yard, has been doing a good job to keep the yard busy.

I am compelled to write you this letter because of the acknowledged fair stand which I have always taken in the matter and because so many people at the Brooklyn Navy Yard now seem to be disturbed because of the newspaper article referred to above.

I am certain that all members of our New York delegation, both Democrats and Republicans, want the New York Naval Ship Yard to be considered fairly on all future contracts because it is one of the best yards in the entire United States from the point of view of management and efficiency.

I do not believe that you, Mr. Secretary, had anything at all to do with the article I have referred to, and for that reason I would appreciate receiving a letter from you to allay my own disturbed feeling and the feelings of the thousands of employees involved.

Sincerely yours,

VICTOR L. ANFUSO.

THE SECRETARY OF THE NAVY,
Washington, March 13, 1956.

Hon. VICTOR L. ANFUSO,
House of Representatives.

DEAR MR. ANFUSO: This will acknowledge receipt of your letter of March 1, enclosing an article which appeared in the New York Herald Tribune on February 26, 1956, entitled "Democratic Criticism Said To Hurt Yards Here."

In answer to your question, the Navy had nothing whatsoever to do with the article. As for myself, I had never seen or heard of it.

As a matter of fact, the Navy has made every effort to see that employment at the New York Naval Shipyard has been maintained at the highest possible level consistent with the available workload. I am sure you realize that it is impossible to maintain the personnel of an operation of this size and type at a fixed level. There are bound to be variances in the workload and some resultant fluctuation in personnel.

However, as we have explained to the various representatives and committees who have called upon us, we always try, insofar as possible, to absorb any reductions by attrition, but this cannot always be done.

I would think that the best proof of what we have done for the New York Naval Shipyard is the fact that while the total employment at all the shipyards is 149 percent of the pre-Korean employment, that at the New York Shipyard is 170 percent.

The Navy, at the same time, has a responsibility to maintain the mobilization capacity of the private shipyards. Obviously, all the work cannot be given to the naval shipyards, or otherwise we would have no mobilization skills and reserves in the private yards, and which will also be essential during a period of emergency.

The Navy has, however, tried to use its best judgment in maintaining this balance, but, as you will see from the above figures, the New York Naval Shipyard has done exceptionally well and has been maintained far above the average.

There is no truth whatsoever to the statement quoted in your letter that the reduction in personnel was "part and parcel of a scheme by Mr. Charles E. Wilson and the Republican administration to turn this work over to private industry."

We, of course, in the Navy cannot prevent any criticism of the Navy and the administration of the shipyards which are a part of the Navy. All we can do is cite the record and let that stand for itself. I think, however, the record will show that the Navy has done everything it properly can to maintain employment at the New York Naval Shipyard at a high level. This we will continue to do, regardless of any criticism to the contrary.

Sincerely,

CHARLES S. THOMAS.

Blast at Blasting Radio-TV Commercials

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. HOSMER. Mr. Speaker, on March 5 I complained to the Federal Communications Commission that radio and TV broadcasters are imposing extra volume on listeners during commercials as follows:

CHAIRMAN, FEDERAL COMMUNICATIONS COMMISSION,
Washington, D. C.

DEAR MR. CHAIRMAN: It occurs to me that there is an area in which your organization might perform a service to the American people either by tightening up its regulations or enforcing those now on the books. This concerns the irritating and obnoxious practice of radio and television stations, both local and network, permitting the sound volume to increase during the presentation of commercials.

Everyone has experienced many times the adjust of his set to an agreeable sound level during the entertainment portion of a program, only to be blasted unmercifully by the noise of the commercial.

It is understood that present regulations maintained by you require stations to maintain as high a volume output without distortion as possible at all times. Possibly stations are deliberately preparing their commercials in such a manner as to be particularly distortion-free and thus permit the increase of modulation in a feigned compliance with the Commission's regulations.

At any rate, I believe that you will agree that whatever needs to be done, should be done to protect the American people from the imposition upon them of these excessively loud commercials.

I would appreciate your advising me in connection with the above and as to any steps which you may take to remedy the situation.

Thank you for your courtesy.

Very truly yours,

CRAIG HOSMER,
Member of Congress,
18th District, California.

Mr. Speaker, I have waited 2 weeks for a reply or an acknowledgement from the FCC, but as yet none has come. Approximately March 15 a number of newspapers printed a very short item regarding my complaint. There was an immediate and decisive public response. The following are extracts from typical letters I have already received from all over the country:

We are behind you 100 percent on your stand concerning the irritating and obnoxious practice of turning up volume during commercials on TV. (Mr. and Mrs. J. W. Wallace, Wichita, Kans.)

We thank you again and again and hope you can get results for us. (Mrs. Evelyn Binns, Hollywood, Calif.)

Thank you for your protest against the noisy TV spielers. (Miss Nellie C. Sprague, Los Angeles, Calif.)

Congratulations! Keep up the good work. Try to correct a very annoying practice. (Mr. Joseph Kane, El Cajon, Calif.)

Bully for you—keep at 'em. One of my pet peeves. (Mr. Walt Haring, Rocky River, Ohio.)

When I read your article in my home paper urging the Federal Communications Commission to stop radio and TV stations from turning up the sound volume during the commercials, I said, "Amen to that." Maybe if you would call for write-ins, we would get results. (Mrs. H. J. Baber, Waxahachu, Tex.)

I certainly want to thank you. My interpretation of the real meaning of your effort is to stop that unmerciful blasting noise of the commercial advertisers. I pray that you may be able to help the listeners of the radio and television audience. (Mr. Clinton W. Fancher, Hamburg, N. J.)

If it will be of any information and benefit to you, permit me to say that I canvassed the office yesterday and I find that each and every one that I talked to have also shared my view as well as yours, and they are very anxious that something be done to remedy this very irritating situation. (Mr. W. F. Durbin, New Albany, Ind.)

I am delighted to see that someone is interested in stopping a practice which has annoyed me and interfered with my pleasure from radio programs for a long time. (Dr. Charles L. Clay, M. D., Auburndale, Mass.)

You are so right and more power to you. It is high time that someone took the bull by the horns, my hat is off to you. (Mr. Edward Sander, Sr., St. Louis, Mo.)

Hurrah for your stand! (Mrs. E. W. Loenig, Lincoln, Nebr.)

Your action toward noisy commercials is well taken. There is no reason why the listening public should be blasted out of the house when the commercials come on and the volume is doubled. (Mr. R. R. Goodson, Malibu, Calif.)

It's about time something was done about it. Nothing is more annoying than to have the set properly tuned for enjoyable listening and viewing, and then have the quiet of the living room shattered by some loud, noisy, and uninteresting commercial. As far as I'm concerned more sales are lost on my family due to this bad practice than any other reason I can think of. Certainly hope you are successful in your complaint to the Commission. (Mr. Elmer E. Donald, St. Louis, Mo.)

We are truly grateful to you for advancing a protest against noisy television commercials. We have written to every known authority, but have had no result. (Mrs. Elinor Oliver, Beverly Hills, Calif.)

Thank the Lord someone has seen fit to take up the cudgel against the loud, blaring, blatant commercials forced on television viewers. Your efforts are certainly appreciated by this writer, and I certainly hope you will be able to force some action to be taken in this respect. (Mr. Franz A. Hirt, Atlanta, Ga.)

Millions of Americans hope that your recent letter to the Federal Communications Commission will bring the long-sought relief from extra loud radio and television commercials. The unnecessary and obnoxious increase in modulation or power which accompanies most commercials is a violation of good taste and no doubt makes the advertised products less attractive to the consumers. (Mr. R. A. Mattmueller, Arlington, Va.)

It has been a situation that I have criticized many times and not knowing just who to refer the matter to have failed to do so myself or I would have with plenty of weighty emphasis. (Mr. Frank A. Winslow, Long Beach, Calif.)

It is not often that one in office can comprehend a nuisance and a cure for same, that will serve so many. (Mr. Chris Pritchard, San Leandro, Calif.)

Many millions may not write you, but I'm sure they're with you. I've heard many say, "I'll never buy a product they shout at me." (Mrs. Jessie G. Norton, Bronxville, N. Y.)

Pleased to have someone in a high office express my feelings exactly. (Mrs. Claud Nixon, Lynwood, Calif.)

More power to you in combating the nuisance of loud TV and radio commercials. (Mr. Jack Gibson, Long Beach, Calif.)

All hail to you in your fight on noisy commercials on TV. (Col. R. McKerchar, Los Angeles, Calif.)

You took the words out of my mouth, in your outcry against loud commercials. (Mr. William Austin Moore, Long Beach, Calif.)

Mr. Speaker, this means is taken to discuss public reaction to my complaint to illustrate that it is not an isolated one. I hope it may serve either to get action from the FCC, or to spur broadcasters themselves to adopt self-disciplinary measures against "riding the gain," the trade's expression for blasting out commercials at a greater volume than the entertainment portion of a program. The mildest thing that can be said of the practice is that it is unsportsmanlike, the worst that can be said of it is unprintable.

These remarks will be sent directly to the major radio and TV networks with a request they take action to clean up their own houses. If so, perhaps their example will be followed by nonnetwork stations which I do not have the means of contacting.

It's Your Congress

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. SIKES. Mr. Speaker, under permission to extend my own remarks and to include extraneous material, I wish to have inserted in the CONGRESSIONAL RECORD a reprint of an outstanding article by Mr. John R. Blandford, counsel of the Committee on Armed Services, House of Representatives, which appeared in the United States Naval Institute Proceedings, February 1956. Mr. Blandford's article is entitled "It's Your Congress," and contains important facts about the United States Congress which everyone should know:

Since the founding of the Republic, members of Congress have been considered fair game for every type of jibe, innuendo, and cartoon which could be devised by human minds. Every trip to a foreign nation is referred to as a junket; every investigation is presumably politically inspired; every speech in opposition to a proposal is considered a harangue; and somewhere in our history the word "statesman" has disappeared and the word "politician," in its uncomplimentary sense, has been substituted. And yet these men and women collectively hold the most important positions in the world. Upon their judgment may rest the future course of world events for generations to come. They do not have to be defended—for the very obvious fact that our nation has prospered under this system of representative government is answer enough. But perhaps an explanation of their powers, limitations, and duties will clarify some misunderstandings that have arisen.

These men and women hold their office under the most valuable document in American history—the Constitution. They take

an oath to support the Constitution. Their powers are derived directly from the Constitution.

Contrary to popular belief, both Senators and Members of the House of Representatives are Congressmen. For some reason or other, a nomenclature has been devised which limits the name "Congressman" to a Member of the House of Representatives, but there actually are 531 Congressmen in the Congress of the United States—96 in the Senate, and 435 in the House of Representatives. In addition, Hawaii and Alaska are each represented by a Delegate, while the Commonwealth of Puerto Rico is represented by a Resident Commissioner, each of whom may introduce bills, but may not vote.

HOW THEY ARE APPORTIONED

Each State, under the Constitution, is entitled to two Senators, regardless of population; Representatives are apportioned among the States according to population. Likewise, under the Constitution, a national census must be conducted every 10 years (the next one will be in 1960) in order to determine the number of Representatives each State may send to the Congress of the United States.

The only restriction contained in the Constitution with regard to the number of Representatives who may serve in the Congress is contained in article I, section 2 of the Constitution which proves that "The actual enumeration shall be made within 3 years after the first meeting of the Congress of the United States, and within every subsequent term of 10 years, in such manner as they shall by law direct. The number of Representatives shall not exceed 1 for every 30,000, but each State shall have at least 1 Representative."

In spite of an ever-increasing population, the Congress has not authorized an increase in the number of Representatives since 1913 even though the population has almost doubled since that date. However, under the 1929 Apportionment Act, an automatic reapportionment is authorized on the basis of each decennial census. Under this act, the Clerk of the House must certify to each State the number of Representatives to which each State is entitled. And as a result of this act, at the end of each decade, the number of Representatives from some States is invariably increased, at the expense of States that have experienced a loss of population or have not increased as rapidly as States that gain added Representatives. The number of Representatives, however, under the 1929 act, remains at 435. Congress, of course, always retains the right to authorize additional Representatives, or enact new apportionment legislation.

QUALIFICATIONS

To take office as a Representative, an individual must be not less than 25 years of age; he must have been a citizen of the United States for 7 years; and he must, when elected, live in the State in which he is elected.

To take office as a Senator, an individual must be not less than 30 years of age; he must have been a citizen of the United States for 9 years, and he must, when elected, live in the State in which he is elected.

However, in the early history of the Nation, several Members of Congress were elected and took office even though they were under the minimum ages established by the Constitution, since no Member raised a question concerning their age. For example, Henry Clay, of Kentucky, served as a Senator in 1806 at the age of 29. William Charles C. Clairborne, of Tennessee, served in the House of Representatives in 1797 at the age of 23. Had anyone raised their age disqualification, however, they undoubtedly could not have taken their seats in the House or the Senate because of the constitutional minimum age requirement which the Congress cannot alter.

TERM OF OFFICE

Members of the House are elected for 2 years, while Members of the Senate are elected for 6 years. Only one-third of the Senate stands for election every 2 years; whereas the entire House membership must be elected every 2 years.

WHO DETERMINES THE RIGHT TO TAKE OFFICE

Each House is the sole judge of whether or not a person claiming election to that House shall be allowed to serve. Thus, on the basis of a majority vote, Representatives alone may determine the qualifications of Representatives; on the other hand, only Senators, on the basis of a majority vote, may judge the qualifications of Senators. However, the constitutional right to determine the qualifications of Members of either House must necessarily be limited by explicit constitutional restrictions, such as age, which leave no room for interpretation if a Member's qualification is challenged.

To expel a Member of either House after he has been sworn in requires a vote of two-thirds of the Members of the House concerned. Thus, if a Member's qualifications are challenged before being seated, the question is determined by a majority vote; but after a Member has been seated, he may only be expelled by a two-thirds vote of the House involved.

HOW THEY ARE ELECTED

Insofar as election to the Congress is concerned, the Constitution provides that "the times, places, and manner of holding elections for Senators and Representatives, shall be prescribed in each State by the legislature therein; but the Congress may at any time by law make or alter such regulations, except as to the places of chusing Senators." The reference to the "places of chusing Senators" was inserted to protect the State legislatures who, until the adopition of the 17th amendment, chose United States Senators.

In each State, except Maine, elections for Representatives and Senators are held on the first Tuesday after the first Monday in November in even years. All Congressmen are elected by popular vote—statewide in the case of Senators, and by district in the case of most Representatives. A few Representatives are elected-at-large, that is, by a statewide vote.

WHEN CONGRESS MEETS

Under the Constitution, the Congress must meet at least once each year, and after the Congress has met, neither House can adjourn for more than 3 days, nor meet at "any other place than that in which the 2 Houses shall be sitting," without the consent of the other House.

The Congress is required to meet at noon on the 3d day of January, unless another date is fixed by law.

"IMMUNITIES"

Members of Congress enjoy a unique immunity for "They shall in all cases, except treason, felony, and breech of the peace, be privileged from arrest during their attendance at the session of their respective Houses, and in going to and returning from the same; and for any speech or debate in either House, they shall not be questioned in any other place" (art. I, sec. 6).

It is the latter provision that is referred to as "congressional immunity," for no Member may be sued for libel or slander for anything he may say on the floor or insert in the CONGRESSIONAL RECORD of either House. The immunity also applies to congressional committee meetings. The protection against arrest is limited to arrests in civil suits, and affords no protection against arrest for a criminal offense. Likewise, the privilege does not protect a Congressman from service of process in civil or criminal actions. However, since a Congressman's duty and responsibility is to serve the Congress, he may not be required to appear in either a Federal or State court while the Congress is in session, without the consent of the House involved. This is a simple extension of the theory of separation of powers (separate and independent executive, legislative, and judicial branches of government), for otherwise any court in the Nation could conceivably prevent the Congress from meeting or conducting the legislative process.

RESTRICTIONS

Members of Congress are also faced with certain restrictions. Thus "no Senator or Representative shall, during the time for which he was elected, be appointed to any civil office under the authority of the United States, which shall have been created, or the emoluments whereof shall have been increased during such time; and no person holding any office under the United States, shall be a Member of either House during his continuance in office" (art. I, sec. 6).

As a result, no present Member of either House may hereafter be appointed, for example, to a Federal judgeship, until the Member's term of office expires, since the salaries of all Federal judges were increased in the first session of the 84th Congress. However, if the Congress were to pass a law repealing the previous law that had granted the increase, so that the salary reverted to the original amount, the appointment would probably be constitutional. As a matter of fact, a Member of the Senate, Philander C. Knox, in 1907, was appointed Secretary of State after the salary of that office had been increased while he was a Member of the Senate. Prior to his accepting the appointment, the Congress enacted a law reducing the salary to its former amount so that the appointment could be made.

OTHER EXCLUSIVE POWERS

In addition to being the sole judge of their own qualifications as Members, certain other exclusive powers are prescribed by the Constitution for each House. Thus, the House has the sole power of impeachment, while the Senate has the sole power to conduct the trial of all impeachments. In effect, this means that the House must act as a grand jury and vote in favor of an indictment; but after the individual has been indicted by the House, he can only be tried in the Senate, and then can only be convicted by a two-thirds vote of the Senators present.

During the trial in the Senate, House Managers are appointed by the House, usually ranking members of the House Judiciary Committee, who act as prosecuting attorneys. The impeachment power of the Congress has been rarely used. As a matter of fact, the Senate has only sat as a court of impeachment in 12 cases since the adoption of the Constitution. Four United States judges have been removed from offices, 4 United States judges have been acquitted, 1 President of the United States (Andrew Johnson) was tried and acquitted, 1 Secretary of War was tried and acquitted, the impeachment proceedings against 1 Federal judge, at the request of the House, were dismissed because the judge involved resigned from office, and charges against 1 United States Senator were dismissed for lack of jurisdiction.

Members of Congress, of course, are not subject to impeachment since each House is the sole judge of the qualifications of its Members. But, as previously indicated, Members may be expelled by a two-thirds vote.

The House possesses one extremely important exclusive power, in that all bills for raising revenue must originate in the House. Thus, all tax measures must have their genesis in the House of Representatives. However, the Senate can freely amend any such revenue measures that pass the House.

By custom and tradition, which has now attained the status of an unwritten law,

general appropriation measures must also originate in the House, and the House will invariably refuse to act upon, or will return to the Senate as an invasion of the rights of the House any general appropriation bill which originates in the Senate.

On the other hand, the Senate possesses two exclusive powers. Treaties must be ratified by the Senate, acting independently, and require a two-thirds vote of the Senators present. Furthermore, Senate confirmation is required for the appointment of many Federal officers appointed by the President.

The powers of the Congress are many and varied. The responsibilities of this great legislative body are tremendous and the decisions that must be made, almost daily, are staggering.

PAY, ASSISTANCE, PERQUISITES, ETC.

What kind of aid and assistance is available for these men and women who truly carry the weight of the world on their shoulders?

In the House, each Member is limited to not to exceed eight employees, with an overall limitation in base pay for the office force of $17,500 per year. This limitation, translated into net salaries, results in varying payments to office assistants. Only one employee in the office of a House Member may receive a base pay of $7,000, which amounts to a net pay of $12,131.47, annually. The remaining salaries of other employees would be limited by the balance of the total $17,500 restriction in base pay.

In the Senate there is no fixed limit on the number of employees who may be hired by each Senator, but the maximum salary that any employee of a Senator may receive is $14,800. The overall limitation on salaries for all employees of Senators for this fiscal year is $6,247,000, and this amount is apportioned among the various Senators according to the population of the States they represent.

In addition, under the Legislative Reorganization Act of 1946, each standing committee of the House of Representatives and the Senate is authorized four professional staff members, without regard to political affiliations and solely on the basis of fitness to perform the duties of the office, and not to exceed six clerks.

Under this same act, the Library of Congress was directed to establish a Legislative Reference Service to advise and assist committees of the Congress and Members of Congress in the "analysis, appraisal, and evaluation of legislative proposals," and to "gather, classify, analyze, and make available, in translations, indexes, digests, compilations, and bulletins, and otherwise, data for a bearing upon legislation and to render such data serviceable to Congress, and committees and members thereof, without partisan bias, in selection or presentation."

In addition, the Members have available to them the Office of the Legislative Counsel to assist in the preparation of bills, resolutions, amendments, and other legislative matters, as well as the Office of the Coordinator of Information.

The total number of employees in the Capitol itself numbers approximately 6,000, which includes secretaries, typists, clerks, attorneys, mailmen, carpenters, plumbers, electricians, elevator operators, janitors, refrigeration experts, architects, pages, doorkeepers, Capitol police, gardeners, etc.

For the magnitude of the job involved—the task of legislating for the benefit and welfare of nearly 170 million people in this Nation, as well as countless others who are citizens of other nations—the overall expenditure for the legislative branch of the Government is infinitesimally small. The proof that the job has been done well since the founding of the Republic is self-apparent.

The average Representative or Senator is, without doubt, one of the busiest persons in the Nation. Daily correspondence is staggering; personal requests for everything from hotel reservations to Army-Navy football tickets are common. And in that connection, it should be noted that Members of Congress do not get free tickets to that annual classic.

The most time-consuming task, while the Congress is in session, is almost daily attendance at committee and subcommittee meetings. For example, in the 1st session of the 84th Congress, the House Committee on Armed Services, from the period January 26, 1955, to July 27, 1955, held 76 full committee meetings, 99 subcommittee meetings, and 34 special subcommittee meetings, for a total of 209 meetings.

During this period of time this committee alone considered more than 100 bills and resolutions, which resulted in 43 public laws, and 3 private laws. More than 4,700 pages of testimony were presented during this session for the House Armed Services Committee alone.

During the 1st session of the 84th Congress, the House was in session for 112 days and the Senate for 105 days; 390 public laws, and 490 private laws were enacted. There were 74 quorum calls in the House and 62 in the Senate. The Senate had 88 yea-and-nay votes, and the House 73.

All told, 11,914 measures were introduced in both Houses, of which 1,426 were reported in the Senate and 1,528 in the House (obviously many of these were the same or similar bills, since both Houses must act).

To all this must be added the personal calls that each Member receives either by telephone or by personal visit.

And, of course, these statistics do not reflect the speeches, radio, and television appearances, and countless other demands upon a Member's time that must be cheerfully met.

When a Member is in Washington, he can refer many of the inquiries he receives to the proper Government agencies. To assist in this type of work, many Government agencies have congressional liaison offices in the Capitol, or liaison employees who are available to the Members to aid them in their problems.

However, when a Member returns to his home State or district, he must be reasonably prepared to answer hundreds of questions on all phases of the Government. He is logically expected to be an expert on that phase of Government with which he works daily in his committee activities. (He frequently is assigned to a committee because his profession or vocational background makes him particularly well qualified for that committee. For example, all members of the House Judiciary Committee are attorneys.) But beyond that, he is also supposed to know, or be familiar with, all other Federal matters.

Thus, a member of the Armed Services Committee, for example, while having considerable first-hand information with regard to our National Defense, is also expected by his constituents to be able to answer questions concerning parity prices, veterans benefits, corporation taxes, public lands, tariffs, inland waterways, social security benefits, international affairs, atomic energy, freight rates, Indian reservations, public power projects, anti-trust violations, government aid to education, health insurance, and public highways—to name but a few.

It is obviously impossible for each Member to be thoroughly familiar with all of these legislative subjects, but it borders on the miraculous how many of them can carry such a vast store of unrelated items in their minds and can express intelligent opinions on practically all subjects that are debated in either House.

And, the only way that a Member can acquire a working knowledge of all of these items is by faithfully reading the CONGRESSIONAL RECORD which is published each day the Congress is in session. Thus, a Member, after dictating replies to his correspondence, preparing a radio speech, answering several telephone calls, conversing with constituents from his district, organizing his thoughts for remarks he wishes to make on the Floor during that day's debate, reading the testimony of a previous hearing to refresh his memory on a bill in which he must play an active part, must also find time to read the CONGRESSIONAL RECORD of the preceding day in order that he may keep ahead of the legislative flood. And, if he wishes to further acquaint himself with a pending bill that has been reported to the House, he will send for the report and the hearings.

It's a tall order for any person—and the amount of work performed by an average Congressman is fantastic.

And, after all the preliminaries are completed, after all the speeches have been made, the interminable banquets attended, the questions asked, the reports and the hearings read, and the debates concluded—the Congressman must then make the most important decision of all—how he will vote on legislation that affects him, his family, his neighbors, his constituents, his State, his Nation, and frequently, the world. To add to this burden, each House Member faces the expensive and time-consuming chore of running for reelection every 2 years. Indeed, some House Members, because of this short term of office, must inevitably participate in a perpetual campaign for reelection.

For all of this, he receives a salary of $22,500 a year; one round-trip a year to his home at 20 cents a mile; a stationery allowance of $1,200 ($1,800 in the Senate); a stamp allowance of $200 per year for airmail and special delivery official mail ($300 in the Senate); free franking privileges for official mail; 2,700 minutes of telephone toll calls per year (450 minutes, or 90 calls per month, whichever is first reached, plus a $1,200 credit plan for calls made outside of Washington, for Senators); 12,000 telegraph words per year (Senators are authorized telegrams on a distance and population quota basis); a $600 per year allowance for office expenses; a $900 allowance for office rent in his district or State—if no federally owned office space is furnished; free haircuts if he is a Senator (but the tip usually equals the prevailing cost); several snuff boxes with snuff, on the Senate floor; and spring water, but for the Senators only.

Contrary to public opinion, no free meals are provided for anyone in the House or Senate restaurants.

Probably no single group of individuals in the world today is called upon to assume responsibilities as grave as those inherent in the duties of a Member of Congress.

He is quite acclimated to the ever-present criticism that now appears to be an inherent burden of his office; and he fully realizes that by accepting public office he has exposed himself to a fish-bowl existence.

But, as a Member of the House, he is representing, on the average, in excess of 350,000 American citizens; as a Senator, he is one of two representing a sovereign State of the Union.

Undoubtedly, no person in the world more fully earns his modest salary than your Congressman.

The ramifications and procedures of the legislative process are many and varied. What you have read is only a bird's-eye view. The system is complex, but orderly. It's a system that works, and works well. Perhaps the information presented here may help you to better understand, and appreciate, your Congress.

Old Rugged Cross Author Dedicates Poem to President Eisenhower

EXTENSION OF REMARKS
OF
HON. ELFORD A. CEDERBERG
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 19, 1956

Mr. CEDERBERG. Mr. Speaker, one of my distinguished constituents is Rev. George Bennard, author of The Old Rugged Cross, that beloved hymn we have all sung so many times at religious services. Reverend Bennard lives at Reed City, Mich., and is still very active both in the ministry and with his pen.

Recently he has composed two very fine poems, one of which he has dedicated to President Eisenhower. The latter is entitled "God and the Nation Needs You." It follows:

GOD AND THE NATION NEEDS YOU
(By Rev. George Bennard)

God and the Nation needs you,
Apostle of peace for our day;
God and the Nation needs you
We'll follow if you lead the way.

God and the Nation needs you,
We hope that you'll "choose to run,"
God and the Nation needs you
To finish the work you've begun.

God and the Nation needs you,
Great soldier and statesman you stand;
You ended the war in Korea;
You've brought lasting good to the land!

God and the whole world needs you
To help stem this Communist tide;
Your faith in the Lord and the Bible
Will cause Him to stand at your side!

In recent years we have been concerned about the fate of our churches and our church folks behind the Iron Curtain. No matter how high nor how wide the atheistic enemies of the Bible build their curtains there is One who sees over and beyond and Reverend Bennard has put this sentiment to verse in his poem entitled "God Sees Behind the Iron Curtain."

It follows:

GOD SEES BEHIND THE IRON CURTAIN
(By Rev. George Bennard)

God sees behind the Iron Curtain,
He knows just what is there;
He sees the millions held in bondage,
Living in despair;
No God—no Christ—no Book Divine,
No truth to make them free;
O how they need our love and prayers,
How sad their plight must be!

God sees behind the Iron Curtain,
He knows just what is there;
He sees the Kremlin's hellish planning,
Spreading gloom and fear;
Ever seeking worldwide conquest,
So on the Red tide flows;
Swallowing up the weaker nations,
Adding to their woes.

God sees behind the Iron Curtain,
He knows just what is there;
He sees the atheistic madmen,
Fanning flames of war;
Threat'ning all with mass destruction,
By atomic power;
God of mercy look upon us,
And save us from that hour!

God sees behind the Iron Curtain,
Behind the Bamboo too;
And one day by His might and power,
He'll break the curtain thru;
And Christ shall reign in triumph,
And spread His peace afar.
We're longing for that golden day
When there shall be no war!

Manifesto on Integration

EXTENSION OF REMARKS
OF
HON. ALBERT THOMAS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. THOMAS. Mr. Speaker, under leave granted me to extend my remarks, I wish to say that I am in sympathy with the general intent of the manifesto because I do not believe in integration, nor have I in the past. However, I have not signed it because I fear it will do more harm than good. The Supreme Court surely did some legislating that the Congress has refused to do.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

Appendix

A Housing Program for Today and Tomorrow

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, March 21, 1956

Mr. LEHMAN. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a speech I had the privilege of delivering before the legislative conference of Building and Construction Trade Unions, AFL–CIO, on March 5, 1956, at the meeting of these great unions in Washington, D. C.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A HOUSING PROGRAM FOR TODAY AND TOMORROW

(Remarks of Hon. HERBERT H. LEHMAN at legislative conference of Building and Construction Trade Unions, AFL–CIO, March 5, 1956)

When representatives of the building and construction trades assemble to discuss legislation, it seems to me that we who have the responsibility for legislating should pay close attention. Through your role in the construction industry, you account for a substantial portion of our total national product. You are a major part of the labor force and a major factor in the national economy. I am grateful for this opportunity to address you.

One of my main areas of interest in the Senate, just as it was for many years before I came to the Senate, is labor. As a member of the Labor Committee, I have always given, and will continue to give, concentrated attention to the views and problems of labor in this country.

To my mind, the organized labor movement as a whole has shown as much statesmanship as any other group or movement in America. It has shown an enlightened interest in the welfare of all Americans, regardless of whether they are or are not members of labor unions. The labor movement has shown farsighted concern with the cause of civil liberties and civil rights and with our national security and our foreign policy.

Despite what my colleague, Senator GOLDWATER, of Arizona, says, I think the American labor movement is one of the most constructive forces in America today and one of the greatest supports of our democracy and of what we call our American way of life.

As far as your particular unions are concerned, you, too, have wide-ranging interests covering the complete spectrum of the problems facing our Nation.

Among these problems surely one is the problem of housing. I am gratified to know that you are giving major attention to the question of Federal legislation on the subject of housing.

It is, of course, understandable that you should, because housing accounts for about 40 cents out of each dollar spent for construction in America. Without a dynamic home-building industry, geared to the needs of the American people, our economy must languish and suffer.

Of course, you have a vital stake in an expanding home-construction program. You have a deep interest in the perpetuation of a strong and prosperous construction industry, grounded on a system of free, competitive enterprise and dedicated to the general welfare of our entire population.

In this matter your own organizational interest and the public interest happily coincide.

I am sure that all of us here will agree that our Government has a wide range of basic responsibilities to the people. We believe that the Government is the servant of the people. One of the ways in which Government needs to serve the people is in the field of housing.

I believe, and I think you believe, that every inhabitant of our land should be able to look to Government for help in making whatever arrangements are necessary to stimulate and provide adequate housing. It is an obligation of Government to see that no individual is precluded from an opportunity to obtain decent housing conditions for himself and his family at a price he can afford.

This obligation began to be recognized quite a few years ago when our Government, in the administration of Franklin D. Roosevelt, began to pass housing legislation. I feel that in recent years we have lost sight of the exact nature of this obligation. Today in the field of housing the Government no longer acknowledges a responsibility to the people, but instead an obligation to the private construction industry.

In very recent days Housing and Home Finance Administrator Albert M. Cole has lashed out against the omnibus housing bill which I and nine of my colleagues joined in introducing recently.

Mr. Cole charged that our bill was an "undisguised anti-private-enterprise bill virtually from start to finish and would not get more homes built."

He charged that our bill would go far toward wrecking the private housing economy on which our housing production depends.

He stated that our bill would commit the Government to the expenditure of "untold billions of dollars for unsound and unproductive purposes."

He said that a provision in our bill for a $2-billion Government-financed middle-income housing program would "invade the mass market of private housing and make a large number of our families dependent solely on the Government for a decent home."

I assume that Mr. Cole speaks for the administration, although he might also be speaking from the background of his own prejudices. Mr. Cole, it must be remembered, was a Congressman from Kansas who was defeated for reelection. His principal distinction as a Member of the House was on account of his vicious attacks against the housing program. He did his best to defeat the Housing Act of 1949, and then, after the present administration came to power, he was designated by President Eisenhower to administer that program. So I am not surprised at Mr. Cole's attitude toward the Lehman housing bill. I am only surprised at his frankness.

Implied in Mr. Cole's criticism of this bill is the present administration's housing philosophy. They conceive, as I said, that their primary obligation is to the private construction industry, rather than to the people who are going to rent or buy the houses.

Millions, yes, billions, of dollars of Government credit has been and is being provided to take the risk out of private housing and to support and subsidize private housing. But any suggestion that the Government help ordinary citizens to acquire the housing they need at prices they can afford, or any suggestion that the housing industry be pushed in the direction of providing housing of a kind that is needed, rather than of the kind that can be most profitably built, is immediately and violently attacked as contrary to the principles of private enterprise.

The administration's housing philosophy is but another version of its general economic philosophy—the philosophy of trickle-down. The administration sees nothing wrong in writing down land values for urban redevelopment and providing almost unlimited credit to banks and lending institutions at almost nominal rates of interest. But when it is proposed to guarantee a minimum rate of interest to individual home builders, or to build a sufficient number of low-rent public-housing units, the administration raises its hands in horror and cries socialism.

The philosophy underlying the administration's housing program can best be compared to a school-building program which would be managed for the primary benefit of the building contractors rather than of the children who will attend the schools.

The idea behind the present program is to have the benefits trickle down from the lending, realty, and construction people to the people who need to build, buy, and occupy the homes.

I yield to no one in my devotion to the private-enterprise system. I am for free private enterprise, but I am also for using the powers of Government to see that private enterprise does the kind of job that needs to be done and to see that the needs of the people in regard to housing are met.

Practically the entire range of private risk in the housing field has been socialized, but there is no protest against this from the spokesmen of the realty interests or of the big banking interests. Yet they are quick to raise their voices against any proposal for a program to build public housing for families of low income. No, that is immediately labeled as socialism or, in the current idiom, creeping socialism. These spokesmen see socialism creeping everywhere, even in this Republican administration.

Well, I am not concerned over this name-calling and this attachment of scare labels. I don't think you are, either. We are going to continue to push for legislation that will give the country a housing program designed to meet the critical need.

I think we need a New Deal in housing. My colleagues and I have proposed such a New Deal, and with all my heart I welcome your support of it and the support of all the other constituent unions of the AFL–CIO.

Actually, it was and is my purpose to be totally nonpolitical in my remarks this afternoon. Be very sure that slums, bad housing, unfit neighborhoods, and all our other housing problems are totally nonpartisan. We do not know half of what we should about our housing problems. We have refused to face the facts. The last clear picture of our national housing situation was drawn in the

census of 1950. Since then, no new data has been assembled. Yet we have but to drive through our cities to know that great changes have taken place. We can only assess the problem with the tools that we have at hand.

For several years the AFL–CIO has been urging an overall housing program that would produce a minimum of 2 million new homes a year. Of that amount the AFL–CIO has recommended at least 200,000 new public-housing units a year over a period of years to meet the needs of the lowest income families.

You have further advised us on the Senate Banking and Currency Committee that we should approve a new program to assist families of middle income—those families whose income are too high to be eligible for low rent public housing and below the level for which private enterprise is presently supplying homes in any significant amount.

You have urged better housing in farm areas.

And finally you have given recognition to the growing problem of decent housing for our senior citizens so that the elderly and the aged may have proper surroundings adopted to their special needs, but as part of the community.

Time and again I have been proud of your union representatives as they have come before our committee urging that we face up to the horrible housing conditions surrounding families loosely classified as coming from minority groups. These are families who, under today's conditions in many northern as well as southern communities, are unable even to secure land on which to build segregated communities, not to mention their constitutional right to bid for homes in a free market. Unlike other people, these families suffer regardless of their income levels.

Yes, if there is one public interest group which has shown an awareness of the housing problems, and has been unceasingly active in the search for solutions, it has been the AFL–CIO.

Why do we say that our immediate goal in this country should be the construction of a minmum of 2 million new homes a year, for the next 20 years?

Let's look at the record. According to the 1950 census there were 15 million American homes, urban and farm, that were substandard. If current facts were available the number would be substantially larger today. Ten million of these homes should be replaced, and approximately 5 million need to be rehabilitated. Seven million of the houses that must be replaced are in our urban centers. These are slum houses that I am talking about. These are the areas that by their very nature create health, social and economic problems that defy solution unless we have the courage to attack the problem boldly, and as a whole.

These figures represent only the rotten core of our housing problem.

There are constant, vast, new housing needs that must be recognized. For example, 3 million families migrate from city to city each year. In addition, thousands of homes are destroyed by fire and other disasters. These must be replaced. Other homes in increasing numbers are being torn down each year through urban redevelopment, highway and other construction programs. These must be replaced. Finally, hundreds of thousands of homes annually reach obsolescence and must be replaced or rebuilt.

This problem can never be successfully attacked piecemeal. The Housing Act of 1949 established the national housing policy as that of "A decent home in a proper living environment for every American family." It provided the broad framework of governmental guaranties and assistance essential to achieve that goal. You are all aware of the continuing attacks by special interests that have torn that act to shreds bit by bit.

Low-rent public housing has been reduced to an almost meaningless gesture. Urban redevelopment has moved at a snail's pace, and can never succeed until there is a dynamic program of low-rent public housing to shelter families of low income displaced through slum clearance, as well as a new program to assist displaced families of middle income.

To be sure, there has been a gigantic program of private housing throughout the postwar years, made possible through FHA mortgage guaranties and VA loans. In 1950, 1,400,000 new homes were started. In succeeding years the figure dropped, but spurted ahead in 1955 to 1,335,000 new homes. That great building boom, the most dramatic in our history, was almost totally limited to families of high and upper middle income. It has just about kept pace with normal growth. It did nothing to relieve the backlog of substandard shelter.

What must we do to meet these housing needs that I have described? I only wish that I, working with you and others devoted to the public interest, had a perfect answer.

We have, however, what we believe to be a reasonable answer, a good beginning.

On February 8, I introduced two bills in the Senate of the United States. First of all, there was S. 3158, a substantive housing bill, divided into 8 titles, aimed at making possible the production of at least 2 million new homes a year. Joining me as cosponsors were Senators DOUGLAS, MORSE, HUMPHREY, NEUBERGER, MAGNUSON, MURRAY, HENNINGS, KEFAUVER, and MCNAMARA.

Simultaneously, I introduced, with practically the same list of cosponsors, S. 3159, establishing a new Cabinet-level department to be known as the Department of Housing and Urban Affairs. All existing housing agencies would be combined within this executive department.

If we are to achieve our total construction goal we must stimulate the production of at least 1,200,000 new homes for families of upper middle and high income. Then we need to stimulate at least 400,000 new homes for families of middle income for whom practically no assistance exists today. Then we require 200,000 new units of low-rent public housing a year to meet the needs of low-income families.

Finally, about 200,000 farm homes are required each year to replace existing substandard units.

This is my prescription for a housing program to meet our present needs and to anticipate the needs that are crowding in upon us. What is now a great shortage will become, in the months and years ahead, I fear, a crisis. The bill which I, together with my colleagues, have introduced, undertakes a program which, we hope, will result in a program of the magnitude I have just described.

I want to deny here and now—although it should not be necessary to do so—that this program is designed in any way to hamstring, hamper, or interfere with the private construction industry. Rather, it should be a great boon to the private construction industry. I must confess, however, that it is designed primarily to serve the needs of the people rather than of the private housing industry.

The middle-income housing program, for instance, would be conducted entirely through private industry, although an initial program of Government loans would be available.

The housing program I have proposed is by no means a perfect program. It is, in some respects, experimental, and provides, by its own terms, for review. It also provides for an expanded program of research.

It is a program of action. It is a program on a scale comparable to the need.

Certainly the administration's program, recently introduced by Senator CAPEHART, is not such a program. It has some good elements in it. It carries over some good features of the Truman program. But by and large it is a patchwork program. It is primarily, by its own emphasis, a program of repairs. It consists, to a great extent, of slogans, and its chief mechanisms are scarcely disguised subsidies to the lenders, realtors, and promoters. It is not a dynamic program of stimulus and leadership.

My bill would nearly double the annual amount of home construction. It would maintain the construction industry at a higher peak than it has ever known before. It would be a major contribution to full employment in this country.

It will mean jobs, but most of all, it will mean homes. It is not a dream. It is a practical program.

I do not propose to discuss this bill in any further detail today. Each of you can study the detailed analysis of this bill which is, I understand, available to those participating in this conference. Make up your own minds. I hope you will indicate any defects you see in my bill, as well as any defects you see in the administration proposal.

I have no pride of authorship in my bill, although I think it is a fine one. Indeed, I would be less than candid if I did not make it a matter of public record that I borrowed liberally from the ideas which your union has advanced from time to time on this subject.

I am proud that the AFL–CIO executive council has endorsed this bill. I am much more eager for action, however, than I am for endorsement. I regard housing as much more of a need than an issue.

Let us all join in demanding and urging that this Congress, at this session, enact a housing bill that makes sense not only for today but for tomorrow—a housing bill not to catch votes but to house the families of America.

And I urge you, who in fact build the homes that are so desperately needed, to inform yourselves thoroughly on this subject.

Make up your own minds on the facts and carry the truth to your Representatives in Congress and back home to your coworkers and your community leaders. We can win this fight for decent housing. We can destroy the slums. We can rebuild our cities if we employ the mighty forces of informed public opinion, based on the facts as they exist.

Bureau of Older Persons

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mrs. GREEN of Oregon. Mr. Speaker, recently I introduced a bill to create a Bureau of Older Persons, H. R. 8941. Today I should like to present as clearly and forcefully as I can the reasons why this is a very important bill and why the problems it deals with must be met, and soon, with vigorous action.

H. R. 8941 proposes the creation of a bureau especially charged with developing a program to meet the pressing problems of our fast-growing number of older persons. It calls for planning and operation, at the State and local level, of specific programs for this purpose.

It provides funds, to be matched by the States, to furnish tangible, practical benefits—specifically such things as job placement, more and better homes, more and better medical care for the aged.

The United States will spend, in the coming year, $8 million for the control of disease among farm animals and nearly $8 million more for research on field crops. The first year of this older person's program calls for a budget of only $2 million. I believe that the American people consider the problems of our older citizens more important than cattle and seed corn. It is time we said so.

What we can do now is to make a beginning on this program—a beginning that cannot wait unless we are to delay disastrously the solution to problems that are already upon us with terrible urgency. Let me state what seem to me the facts that demonstrate the urgency of action.

We are living through a quiet revolution—a revolution that is tranforming our society. Its character is simple: We as a nation are growing older. The number of Americans over 65 has quadrupled in the past 50 years; it will continue to grow at a rapid rate, thanks to the improvements in our standard of living and in our health and medical care. Indeed, the number of people over 65 is increasing twice as fast as the total population. For more and more Americans, more and more of their lives will be lived as older people.

Yet ours is a society which is geared to youth. It is a society which has seen the city replace the countryside as home to most of its citizens, without creating, in the city, replacements for the security, the status, and the useful life that the rural community provided its older members. It is a society that has delayed too long its recognition and adjustment to the quiet revolution. As a result we, as a community, are not prepared to face the problems created by a longer life expectancy. We are not meeting our responsibility to our older citizens; and each of us, as he gets older, will himself pay the price of this social indifference. The older American today sees his problems neglected in the clamor of other public concerns. Yet there are 14 million of these forgotten men and women today—and by 1975 there will be 21 million over 65. Our obligation to them is not being met.

Far too many of these millions of older Americans are ill-clothed, ill-fed, ill-housed. Their material wants and their spiritual wants are great. Too often they are shunted aside and ignored, exiled from their full place in the life of our communities. Job opportunities for the worker past 40 become fewer and poorer as his years increase. Civic activities fail to utilize fully the talents and experience of the older citizen.

The creation of a Bureau of Older Persons, charged with the responsibility and granted some funds, can begin to meet this challenge. We have bureaus for every purpose in the Government today—even statistics have their special bureaus. It really is deplorable that there is no agency of Government specifically charged with a total concern for the problems of the aged.

Now I am not proposing simply to add more desks, telephones, and offices in Washington. But I am certain of this: Unless we create a specific agency, with the power and the responsibility to get action, we will get nothing done. Somebody has to be in charge, with the full-time job, the professional knowledge and ability and the strong desire to do something and to represent in the work of government a group that now has no representative—our older citizens. That is the job of the Bureau of Older Persons.

Well, just what is the Bureau to do? There is certainly no shortage of acute needs and tough problems. The job is limited only by the present plight of our older citizens—which means it is a vast job.

We can start out, here and now, by writing a bill of rights for our senior citizens, and dedicating ourselves to seeing that those rights are respected. The most fundamental of these, of course, is the right to a decent living. Just in terms of money income, which is only part of the problem, the facts are grim. The income of the average person over 65 is less than half that of his neighbor who is between 45 and 65. Over a fourth of the older men, nearly a half of the older women, are in a really serious economic situation. Their incomes fall below the level the experts call an emergency budget; they are below not merely an adequate, but below a substandard survival income. The appalling fact is that these older people, to whom we owe so much, are in many cases living in want and in the spiritual insecurity that want breeds. This is their reward for a lifetime of useful and honorable work.

It is true, no doubt, that not all who could have done so have shown the foresight to provide for their old age. But it would be shortsighted and uncharitable for us to show indifference to any of our older citizens whether unfortunate or improvident. For all our sakes, we should lend our aid to insure, as far as is reasonably possible, that our older citizens have an income sufficient to allow a life free from want and insecurity. Our public programs, particularly Social Security, must be continually reappraised, their adequacy measured by the real needs and those needs met. Individual savings, the pension plans of private enterprise and of the trade unions, and our public insurance programs are the foundations on which retirement security must be built. The Bureau of Older Persons can perform a constructive service by working to insure that these foundations are well and wisely laid to support the best possible security for our older citizens. Not all of them now have ample food, decent clothing, the comforts or even the necessities of life. It is absolutely the first and most elemental job to raise the incomes of these people to an adequate level.

But we must do more. Real income is not just money income. It is not practical, for example, to expect that all the varying and often crushing burdens of medical care—a cardinal necessity for the older person—can be met out of a limited regular income. Medical care, including the true economy of preventive care; nursing care; the expenses of the hospital or the nursing home—these are costly. While long-term home care often represents an impossible financial burden, the alternative of entering an institution is often a personal tragedy. Voluntary medical plans, today, cover hardly a third of our older citizens. Facilities for their care and medical supervision are clearly inadequate. Two out of every five old people cannot, today, meet their medical bills, even for present inadequate levels of care. This is a grim picture; I think our older citizens have a right to a brighter prospect. The program I propose can help to achieve it.

Vast improvement and some new ideas are needed in housing. Our older neighbor, today, lives in a home that is, on the average, substantially inferior to the homes most of us enjoy. In few cases is his home designed for the comfort and convenience of older people. Some progress is being made in this field. In some States, public low-cost housing specially designed for older people is being built. There is a growing awareness of the special needs of the aged—for one-story housing, near ground level, perhaps with ramps in place of stairs, and with other details that can make so much difference in the comfort and pleasure of older, less-active occupants. Often, well-planned housing can provide facilities for an appropriate and richer social and recreational life for the older community, among neighbors of similar age and interests. Yet we have only begun to attack these problems. There is great need for a systematic and energetic program to improve and develop such housing. It can only be met by encouragement and leadership such as this bill would provide.

One of the most serious and pressing problems we face is widespread discrimination in employment against the older worker. While the number of older people steadily increases, their proportionate share of the labor market is steadily shrinking. Studies indicate that a great many, perhaps as many as half of all companies, set age limits for new employees—no jobs for people over 45, sometimes a bar at 35 or even 25. Compulsory retirement at 65, a sound general rule, has become an inflexible law; in some cases, it is not only wasteful but an unnecessary restriction on people who can be happiest and most useful continuing to work. Education of employers, an intensive campaign of public information to emphasize the value of older workers, increased organizational efforts in job placement—all these are sound, constructive contributions to a solution of this problem. Our efforts in this direction should be greatly increased.

Finally, in this brief survey of a vast problem, I want to mention an often-overlooked part of it. Sometimes our communities pay scant attention to the social needs and the civic value of their older members. They have a right to social opportunity—to social and recreational clubs, to a share of the community's recreational facilities. A new pattern of senior social life is developing—in such forms as the successful Golden Age Clubs—and it should have every possible help and encouragement from

the community. These are practical, tangible things we can do.

But we can do more. We can make fuller use than we are doing of the skills, the energies, and the experience of our older citizens. In some communities, for example, retired businessmen have organized themselves to provide business help and advice to younger men, giving them the benefit of their own experience with gratifying results. In many cases, we could call on older people more than we do for a part in our many voluntary civic enterprises. In countless ways we can recognize and welcome their contribution, to our mutual benefit. Our older people are assets to the community, and they are people with rights of their own. They deserve a place in the sun instead of a rocking chair in the shadows. We all gain by granting it to them.

All I have said here is based on my firm conviction that today, and even more in the future, the needs and problems of our older citizens represent one of the great challenges of our time. I could, at great length, list the inventory of our failure so far to meet it. Yet what is more important than these facts and figures is the real human predicament that lies behind the figures. These are our people, the fathers and mothers whom, in the biblical commandment, we are enjoined to honor. We have paid them scant honor. I cannot, in words, sufficiently convey my own sense of urgency about the unnecessary suffering—the humiliating want and corrosive insecurity, the demoralizing sense of not being wanted, of being cast aside and forgotten—that exist far too often now and will continue to exist until we act to eliminate their causes.

I believe that these are, too often, forgotten men and women. I do not believe that in good conscience or in commonsense we can allow this to go on. I do not pretend to know how we are to meet this problem in all the details. None of us knows all the answers in this big and difficult field. We do not know nearly as much as we should.

But I do know this. If we are going to get anything accomplished, if we are going to learn more and act wisely and do the best possible job of what must be done, then we should get started now and get started by putting some people to work on these problems, with some money to do the job. And let us get organized so that all of us—the National Government, the States, and the local communities—are working together with a common purpose and common energies, to write and realize this bill of rights for older people.

The Mistakes of the Hoover Commission

EXTENSION OF REMARKS
OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 21, 1956

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include the following article entitled "The Mistakes of the Hoover Commission" prepared by me and appearing in the Veterans of Foreign Wars of the United States magazine of March 1956:

THE MISTAKES OF THE HOOVER COMMISSION

(By JOHN W. McCORMACK, majority leader, U. S. House of Representatives)

I am particularly pleased to contribute this article to VFW magazine, doing so at the invitation of Commander in Chief Timothy J. Murphy, who has been a close and valued friend of mine for many years.

Commander in Chief Murphy is not only one of our outstanding citizens, but one of the greatest advocates the veterans have in our country.

Commander in Chief Murphy and I are in complete agreement on a subject that we both consider to be of vital importance to all of the veterans of our country, about 22 million in number. We are both opposed to the recommendations of the Hoover Commission relative to the Veterans' Administration hospital and medical program and the operation of the Veterans' Administration.

In my 28 years in the Congress, it has been my pleasure and privilege to help enact into law the great veterans' benefit program that we have today. This program is a very excellent one, with improvements that must be made from time to time. It is a program which I can assure the readers has only become law after full and deliberate study by the able lawmakers of the past three decades.

During this period, with few exceptions, such as the Economy Act of 1933 which I voted against, the Congress has enacted a generally fair and equitable set of laws for veterans. It is true that there have been some inequities which from time to time have been corrected or taken care of, and there are a few that still should be taken care of; but all in all, we have a good set of veterans' laws.

We suddenly find that a study group—the Hoover Commission, if the majority of the members of the Commission had their way—would write off much of the fine work of many Congresses of the past. We find that this commission, in a handful of ill-considered conclusions, which it incorporates into recommendations, would strike a death blow to the justifiable rights of our veterans.

In passing, and yet important, I might say that many of these recommendations have failed to gain even the support of the agency that would have to administer them—the Veterans' Administration. I think I can confidently predict that the Congress will attach very little importance to the recommendations that have been made by this Commission.

None of us oppose any recommendations or actions, whatever their source, that will provide better services for our veterans; but in connection with any recommendations that will eliminate existing veterans' benefits, I am unalterably opposed to them, and particularly when we consider that under the guise of economy—which should properly be termed false economy—results will flow that would be an injustice to our veterans and their dependents.

I consider it a grave mistake on the part of the Hoover Commission in the making of its recommendations in relation to our veterans. In my opinion, this Commission has played into the hands of those persons who are always trying to stir up public opinion against veterans in an effort to take away from them benefits that a grateful country owes to them. We know that the ultimate goal of the antiveteran forces in the country is the eventual eradication of veterans' benefits from our Federal statutes. I cannot picture Congress being a party to any such action.

The goal of the Hoover Commission is a limited veterans' hospital and medical program for service-connected disabled veterans only, under the supervision of a Federal Advisory Council of Health. There are some who even advocate the more disturbing goal of the transfer of the veterans' hospital and medical program to the Department of Health, Education, and Welfare; in which case, veterans would lose their identities.

In its report on Federal medical services, the Commission's first recommendation was that the President appoint a Federal Advisory Council of Health. There is considerable doubt in the minds of those who direct the Veterans' Administration hospital and medical program, and certainly in my mind also, as to the degree of authority the Commission intends for a Federal Advisory Council. At no time does the Commission say that the Council would not attempt to supervise the operations of the various agencies, including the Veterans' Administration. As I remember, the Veterans' Administration, in its comment on the proposed Advisory Council, said it should be emphasized that such a Council, if established, should be restricted to advisory functions as distinguished from supervision of agency operations. In my opinion, the best way to stop any confusion at all is to defeat any effort to create an Advisory Council.

To achieve its goal of limited government hospital and medical care for only the service-connected disabled veterans, the Hoover Commission recommended the closing and disposition of all VA hospitals which can no longer be operated "effectively and economically," a withdrawal of authorized construction funds, and a halt in the construction of additional veterans' general hospitals. Inasmuch as veterans with non-service-connected disabilities are treated on a "beds available" basis, fewer hospitals would mean fewer non-service-connected patients. Of course, the Commission overlooks the fact that if this should happen, there would be a tremendous increase in the cost of the hospitalization and treatment of service-connected patients.

As I view it, the Hoover Commission insists upon reading into Federal statutes something that is not there, and which the Congress has consistently refused to include. The Commission recommded that the statement (VA Form 10–P–10, together with its addendum) of a veteran of his inability to pay for hospitalization for non-service-connected disabilities should be subject to verification; and that the Veterans' Administration be authorized to collect in case such a statement is not substantiated.

Not content with limiting this recommendation to non-service-connected disabled veterans, the Commission suggested that veterans having service-connected disabilities, but who might need treatment of non-service-connected disabilities, also be required to sign the inability-to-pay statement. The Commission would make no distinction.

To compound its unsound recommendations, the Commission offered the incredible recommendation that the veterans should assume a liability to pay for care of his non-service-connected disability at some reasonable time in the future. There was no clarification of what "some reasonable time in the future" might be.

It was further suggested that outpatient care be furnished indigent veterans with non-service-connected disabilities, but that they too, be required to pay for this care—when able—at some time in the future. All of this, and the foregoing, adds up to recommending that the Veterans' Administration should go into the business of selling hospitalization and medical treatment to veterans.

The Commission would give the unsavory chore of passing the laws providing for the collection of these obligations to the Congress. This is one legislative proposal that I do not believe Congress would touch with the proverbial "10-foot-pole."

I wish to assure Commander in Chief Murphy, and the one and one-quarter million members of the Veterans of Foreign Wars, that I, as one member of Congress, and as a veteran, will not be part of parcel to any

move to dismember the Veterans' Administration and the veterans' benefit program—the recommendations of the Hoover Commission notwithstanding.

Should Economics or Politics Control the Develoment of our Water Resources and Power?

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 19, 1956

Mr. GWINN. Mr. Speaker, here is the writing of a man who needs no introduction to this House. Adm. Ben Moreell spoke to the Economic Club of Detroit on January 16, 1956, as follows:

SHOULD ECONOMICS OR POLITICS CONTROL THE DEVELOPMENT OF OUR WATER RESOURCES AND POWER?

(Address by Adm. Ben Moreell to the Economic Club of Detroit, January 16, 1956)

The development of our Nation's water resources, including hydroelectric power, covers a vast field, in terms of variety of functions as well as geographical dispersion. The result is that each region is tempted to interest itself only in those projects which appear to have a direct bearing on its own economy. The thought is, apparently, that if each region takes care of itself, the overall needs of the country will be met.

This is good economic theory and practice, provided each region does its own financing and, also, assumes responsibility for the success or failure of its projects. But when one or more regions draw their financial needs from the rest of the country, with little or no direct return to those who pay the bill, and with no acceptance of responsibility for the results, all of us who pay taxes have a vital stake in what goes on.

We in the United States fell heir to a bountiful part of the earth's surface. To those who come after us, our children and their descendants, we want to transmit this country improved—or at least unimpaired. The meaning of conservation boils down to this—the preservation of our country's resources so that those who follow us may have at least the same advantages we have had. Conservation means the most economic use of our resources. Uneconomic conservation is a contradiction in terms. Uneconomic conservation is what you get when political calculations gain the upper hand in plans for the development of our water resources and power. Any conservation program undertaken for political reasons means an uneconomic use of our natural resources; it means waste.

It follows, therefore, that an overall appraisal of the Nation's water resource program is a matter of great concern, whether or not we are directly interested in any specific project. Such an appraisal was the primary objective of the Task Force on Water Resources and Power of the Hoover Commission from the time it was organized, in October 1953, to the date of submission of its report in May 1955.

The report was the result of 18 months of intensive labors by 26 task force members, 6 consultants and an administrative, engineering, and research staff of 40. It consists of 1,800 pages of printed text, supplemented by many charts, tables, and maps.

From our studies, we concluded that all citizens who wish (1) to restrict Government to its proper functions in a capitalistic system of private competitive enterprise; (2) to increase the efficiency of Government operations; (3) to lighten the burden of oppressive taxation which is now eroding initiative and destroying incentive in our business community; and (4) to eliminate the moral decay which always results when a people succumbs to the seduction of Government subsidies, should take a critical look at the history and current operations of our Federal Government in this field. For there are some disturbing implications in the data we uncovered.

First, with respect to the magnitude of Government spending. Since 1824, a total of $14.3 billion has been spent, of which $11.6 billion is for capital outlay. In addition, a very conservative estimate of the backlog of projects already authorized or under consideration is in excess of $70 billion for capital outlay alone. To this should be added annual operating and maintenance charges of indeterminate amount.

Second, as to the rate of expenditure. In the first 96 years, up to 1920, only 8 percent of the $14.3 billion total had been spent. Between 1920 and 1930, 6 percent was spent, and since 1930, 86 percent of the spending has taken place, with the bulk of it, 68 percent crowded mostly into the postwar years. The rate of expenditure seems to be doubling about every 10 years.

Third, as competition increases between Federal agencies for funds and prestige, and between regions for Government subsidies, the economic worth of the individual projects is on a sharply declining scale.

Fourth, many Federal and local officials appear to lack knowledge of and demonstrate an increasing indifference to what constitutes the national interest. Projects which are obviously of little economic value are pushed vigorously without regard to a chronically unbalanced Federal budget and a rapidly growing national debt.

Fifth, there is a sharply accelerating transfer of political, economic, and social power from local communities and States to the Federal Government. This is an inevitable consequence of the abdication by the States, in favor of the Federal Government of their right and responsibility to control their own growth and progress.

Sixth, there is a dangerous ambition on the part of bureaucrats and their Socialist supporters to project Government farther and farther into activities which, until recently, had been looked upon as the domain of private enterprise. You are no doubt familiar with what is happening in this respect in the power industry, and which gives rise to certain important questions. Should Government engage in business? Should it engage in business in competition with its citizens? If so, what businesses and to what extent? If it is proper for Government to enter one business, why not any business, or all business? In your business could you compete with Government, which has the use of controlled low cost money, pays no taxes (Federal, State or local) and provides other hidden subsidies? If we go down this road, where is the stopping point?

The report of our task force covered these four principal areas, in each of which the Federal Government is heavily involved:

1. Power generation and distribution, including atomic power.

2. Reclamation and water supply, including domestic and industrial water supply, irrigation, water pollution abatement, recreational projects, fish and wildlief projects, and drainage.

3. Flood control, including water retardation projects and upstream watershed treatment.

4. Improvements to water navigation, including inland water transportation and beach erosion.

It is evident that these activities are of such wide scope that they could blanket the country with an assortment of projects of all sizes and varieties; they could be used to appeal to the special interest of almost any region. Here is a potential "Christmas tree," with the Federal Government acting the role of Santa Claus, and a present for everyone, provided, of course, that they are all good little children and do what they are told.

Our task force reached 10 principal findings. Among them were these two:

First: "The Federal Government has used water resources and power development projects, which should be undertaken exclusively for economic purposes, to accomplish indirect social and political ends."

Second: "The Federal Government has planned, constructed, and paid for water resource and power development projects which are economically unsound and hence waste the national wealth."

We started with the assumption that economics rather than politics should control the development of our Nation's water resources and power. Which does actually control? The answer to that question is of vital importance to our business community and, in fact, to our whole social structure.

I am a stanch advocate of the sound economic development of our natural resources. I believe we can maintain our national strength only by proper conservation of those resources. But I have found that, in many instances, politics has the controlling decision.

The result is that many of our citizens have been enticed into an indecent competition wherein political pressures are used in order to gain economic advantage. Many of us are not willing to rely on our own worth and efforts but prefer Government subsidies which are taken from our helpless neighbors by means of compulsory taxation.

This is the very antithesis of the golden rule which we appear to have adapted to modern conditions and our own selfish purposes so as to read, "Thou shalt do others * * * if thou canst get away with it."

The fashionable slogan seems to be, "Gimme—something for nothing." But the Government has nothing of its own to give. What it gives, it has taken away from someone else. This means the destruction of a moral as well as an economic value. The moral value is that embodied in the fifth amendment to the Constitution which prohibits depriving a citizen of his lawfully acquired property without due process of law. The economic value is the incentive for continued production which is destroyed when taxes become oppressive.

The statements made at the hearings which our task force conducted throughout the country lead to the conclusion that many of our people have developed a blind faith in omnipotent government and a firm belief in the concept that no one has to pay for Government favors—old-age payments, hospitalization, polio vaccine, public works, school aid, flood control. With this goes the concept that the Government can do everything much cheaper and better—whether it be building houses, making and selling electric power, lending money, controlling the economy or what not. But this faith in Government as an economic wizard is founded on sand. Government is society's agent for keeping the peace. All it can do in the economic sphere is transfer wealth from one set of pockets to another.

I shall try to illustrate these points by citing specific examples in the various fields of water-resource development, in chronological order of Federal entry into them.

IMPROVEMENTS TO WATER NAVIGATION, INCLUDING INLAND WATER TRANSPORTATION AND BEACH EROSION

In 1820, Congress authorized a survey of the Ohio and Mississippi Rivers and, in 1824, appropriated funds for removing obstructions in those streams. From that modest

beginning, the program has spread to include most of the Nation's rivers, the harbors of the three coasts, and the Great Lakes. Up to June 30, 1954, the amounts spent and appropriated for capital improvements total $3.1 billion, with prospective appropriations required to complete these works of $5.2 billion. To these sums should be added $1.7 billion spent for operation and maintenance. Practically all of these funds were supplied by the Federal Government. Participation by local interests amounted to about 2 percent.

Most of the work was performed by the Army engineers under specific authorizations of the Congress. In 1935, Congress made a general assignment of this function to the Army engineers.

In its reports to Congress, the engineers developed a procedure of estimating the benefits from proposed improvements and comparing them with estimated costs, thus establishing a so-called benefit-cost ratio. There is no standard pattern for estimating benefits which would permit the determination of the relative merits of projects. In many instances, the evaluation of benefits has been omitted entirely and recommendations are supported only by some Mother Hubbard statement, such as "Thus it can readily be seen that the project is justified," this insight being achieved, presumably, by a process of divine revelation.

In 1946, the Army engineers recommended the construction of a deep-draft channel in the Sacramento River between San Francisco and Sacramento, Calif., at an estimated cost of $10,742,000. The benefit-cost ratio was estimated as practically unity, i. e., estimated benefits and costs were the same.

The Bureau of the Budget wrote a scathing criticism of the project and questioned the validity of the estimates. Nevertheless, Congress authorized the project. By the time funds to start the construction were appropriated in 1949, the cost estimate had advanced 60 percent, to $16 million. Last July, Congress appropriated an additional $500,000 to continue the work, although the project had not been included in the President's budget. But, by that time, the cost estimate had risen to $35,300,000, more than three times the original estimate, with no change in the scope of the work.

Although the Army engineers still estimate a slightly favorable benefit-cost ratio, in spite of the vastly increased costs, a study by California shipping interests indicates that the total annual benefits are about half those estimated by the engineers. This leads to a benefit-cost ratio of 0.53 to 1.0; i. e., for every dollar of Federal money invested in the project, someone will receive a benefit of only 53 cents.

But there is more to this story. Several years ago, the California Senate studied the port facilities in the San Francisco Bay area and estimated that the capacity of these facilities was 25 percent to 50 percent more than was currently required. It found that 3 of the existing 6 ports had operated at a net deficit over a 20-year period, and that dry cargo in 1949 had decreased more than one-third from the 1925 to 1940 average.

Nevertheless, the Sacramento Port District has voted a bond issue of $3¾ million for new port facilities and now insists that unless the Federal Government proceeds with its part of the work, including river improvement and a seventh port, at a total cost of $35 million, it will be breaking faith with Sacramento.

This could hardly be called sound economics. However, there are many economically sound navigation projects, particularly at our major seacoast harbors and most of the Great Lakes developments. It is evident that politically motivated projects, such as the Sacramento River, jeopardize the prosecution of those which are sound and should be constructed.

Here is another one; improvement of the Arkansas River, an outstanding example of political boondoggling.

In 1946, Congress adopted a generalized proposal to improve the Arkansas River. The project was justified by estimating that three-fourths of the benefits would be derived from savings in transportation costs. The Army Board of Engineers for Rivers and Harbors refused to give the project its blessing on the ground that benefits to be derived from the navigation part of the project were doubtful. But the Chief of Engineers disagreed with the Board and recommended the entire multiple-purpose project, which provided for a 9-foot channel, reservoirs, hydropower, flood control, etc., at an estimated cost of $435 million.

I will not bore you with the statistics on the alleged transportation benefits. They border on the fantastic.

At the present time, the official estimated cost is slightly over $900 million for the whole multiple-purpose project. However, a $7-million survey of the area has recently been completed and the new program is now being studied. The navigation feature alone is now estimated to cost $1 billion.

Last summer, Congress appropriated $1,900,000 to start work on three structures for this project. These structures will cost $279 million but, more important, they will commit us to what is almost sure to be at least a $2 billion project.

Our task force found that navigation projects are frequently promoted by local interests in order to secure lower rail-freight rates and that the revenue deficiency of the railroads, resulting from this subsidized competition, is usually made up by charging excessively high rates to other communities which cannot hitch a ride on the Federal gravy train. This harmful effect on other communities is never considered in estimating the benefits of the improvements. A similar effect is obtained when industries are drawn away from existing locations to locate on navigable streams because their freight costs would be subsidized by Federal taxes derived, in part, from the communities which have thus been hurt. This is tantamount to forcing a man to dig his own grave before you shoot him.

Up to the present, costly navigation projects have been financed almost entirely by the Federal Government without charge to beneficiaries. Some Federal agencies have promoted navigation projects which have little economic justification, in order to obtain subsidies for hydroelectric or reclamation projects, thus reducing the amounts to be repaid by the latter.

FLOOD CONTROL, INCLUDING WATER RETARDATION PROJECTS AND UPSTREAM WATERSHED TREATMENT

Mankind has had to struggle to protect itself from flood damage since prehistoric days. History records that the first civilizations were established in river valleys where rich alluvial soil was deposited on the flood plains and where the inhabitants could readily retreat to higher ground during floods, to return when the waters had receded.

Until 1917, the Federal Government did not undertake any works solely for flood damage abatement. River improvements were done in the name of navigation. In that year, Congress authorized flood-control programs for the Mississippi and Sacramento Rivers. However, it was not until 1936 that flood control was taken over as a Federal responsibility on a broad scale. Since 1917, the Government has spent approximately $3.3 billions for this purpose.

Another $7.6 billion will be required to complete projects now specifically authorized, and, under the Hope-Aiken upstream flood-control program the task force estimated an additional capital expenditure of $17 billions.

To date, the contribution by local interests is approximately 6 percent.

The 1936 act specified that if the estimated benefits to whomsoever they might accrue exceeded the estimated costs, the Federal Government should undertake flood-control development. But Congress never established any precise definition of "benefits" and the Federal agencies have never come into agreement on this subject. The result is that the amount of benefits to be obtained from any specific project is dependent almost entirely upon the ingenuity of the Government estimator. Estimating direct or monetary benefits can usually be done with a fair degree of accuracy but when the skilled evaluator of so-called indirect or secondary benefits hits his stride, the sky is the limit. He finds no difficulty in assigning specific dollar values for mental, moral, physical, intellectual, psychic, social, global and cosmic satisfactions which will be derived by individuals and groups from the projects he is justifying.

Let us take a look at the country's No. 1 flood control project, the lower Mississippi River. The earliest settlers in this valley constructed levees to protect their land and structures. In 1927, a great flood drew national attention to the river and the country rose as one man to contribute to the relief of the sufferers. The Honorable Herbert Hoover, at that time Secretary of Commerce, was placed in charge of the relief program and accomplished it with admirable efficiency, at low cost and without Government funds.

The Army engineers undertook a study to devise a single comprehensive plan of control. In 1928, Congress authorized the Jadwin plan, whose purpose was to protect the lands of the valley from Cairo, Ill., to New Orleans, by levees, supplemented by floodways at a few crucial points; the whole plan estimated to cost $325 million. Eight years later, Congress adopted a modified plan which increased the cost by $272 million, making a total of $597 million. The modification was needed largely because political pressures had made it impracticable to construct floodways where they were originally proposed.

There is a formal processing procedure for river and harbor and flood-control projects prescribed by law and designed to weed out unworthy projects and, when this procedure is followed, it is fairly effective.

But what happened on the Mississippi? Between 1928 and 1954, there were nine separate laws which provided for authorizations, modifications, or extensions of the project and which approved 46 specific items. Of these, 15 were not supported either by public document or other reports of the Army engineers. Two were supported only by reports contained in committee documents of restricted distribution and one by an unpublished report.

The 46 items increased the authorized cost of the project from the original $325 million to more than $1,327 million. The 15 items which lacked the support of an engineering report accounted for $336 million of the increase.

But there were other items which had the support of an engineer's report. One of these authorized the improvement of Memphis Harbor at a cost of $17,120,000. The Bureau of the Budget, in 1946, stated that construction of this project prior to other already authorized projects would not be in accord with the President's program. But the project has become buried in the overall flood-control project and, in 1954, the Chief of Engineers reported that the Memphis Harbor project was 58 percent complete.

The Mississippi River Commission, in recommending the Memphis project, stated that the construction would be detrimental to

the existing flood-control project and would require additional expenditures for corrective works. Yet there was no suggestion that any non-Federal agency bear any part of the cost.

Briefly, this project consists of five parts—a closure of a stretch of the Mississippi River at Memphis, filling an industrial area of 960 acres and dredging a protected harbor, channel dredging, building 11 miles of levee, and extending a sanitary sewer. While the levees, dredging, and river closures have a legitimate place in flood control and river regulation, the 960-acre industrial fill at a cost of $6½ million and the sanitary sewer at a cost of $1⅓ million are improvements solely for the benefit of local interests.

I do not mean to detract one iota from the magnificent job of river engineering performed by the Corps of Engineers in establishing control of the 1,100 miles of the alluvial Mississippi River. But, if these uneconomic "cats and dogs," which are nonessential giveaways, were not tied onto the main project, the economic worth of the latter would be established on a more solid basis and it would merit the support of the entire country.

There are other instances of political influence in our flood-control program.

For example, a project of dubious merit was added at Baton Rouge, La., by the 1946 act. An artificial channel, 5 miles long, is to provide water frontage free from river currents for industrial expansion on upland sites not subject to flooding, at an estimated cost of $2 million. This project will benefit only local property owners and it will be paid for entirely by the Federal taxpayer. Involved in this deal was political maneuvering which successfully blocked the criticism of the Bureau of the Budget from going to Congress, until after the project was authorized.

Another reclamation project which was primarily for the benefit of local land owners and which was labeled "flood control" was authorized at Lake Pontchartrain at an estimated Federal cost of $3,150,000.

But such projects are not confined to the lower Mississippi. The control of Red Run, a tributary of the Clinton River near Detroit, is an example. While the Federal participation was less than $1 million, the project was essentially one of storm water drainage to benefit a private real estate development, as is clearly shown in the report of the Corps of Engineers to Congress.

The average citizen, if not on his guard, can easily be confused with respect to the value of flood-control projects. If a dam is well designed and built, and if the cost is reasonable by sound engineering standards, it is easy to assume that the project, as a whole, is good and the alleged benefits worth their cost. But the value of flood control cannot be measured by the engineering soundness of dams, levees, flood walls, and other works. It should be measured by the increased value of the land and other property protected. Unless this property can be converted to a higher economic use, no real benefit results. The true measure of benefit is the increased value of the land and property as determined by the free market. It is of utmost importance in evaluating flood-control measures not to be distracted by structural grandeur or appeals to emotion.

The recent series of floods in various parts of the country have aroused the sympathy of our citizens, and properly so. All of us have a responsibility to help our neighbors in time of disaster. But this help should be voluntary and from our own resources.

I have no criticism of the man who wants to build on the edge of the river or the lake shore. I have no complaint with the industry that erects its plant in the low-cost land of the flood plain, provided, only, that by building there it does not create a public hazard or a nuisance to others.

However, when one chooses to obtain the economic and social advantages of such locations, he should be willing to accept the risks incident to his choice. If he insists on taking some of the land which belongs to the river, he must realize that if nature is left to itself, the river will occasionally claim its right of occupancy. If he wants to undertake works to control the river and reclaim the land permanently, all credit to him. But I question the soundness and propriety of his approach if he expects to defer necessary protective works until he can obtain a Government subsidy of tax funds exacted from the more prudent man who builds on the hill back from the river and the industry that has located its plant on safer ground—at a higher cost.

Occupany of flood plains by humans can be avoided or controlled in such manner as to eliminate or largely reduce the hazard. The task force has made specific recommendations in this respect. I sincerely trust that the structures recently destroyed by floods will not again be rebuilt in the river beds. But, more important than this, in rebuilding and occupying river lands which the inhabitants know will be taken over from time to time by the river, those who wish to do so should take necessary measures among themselves for action to provide mutual protection. Procrastination until some politician assures them that tax funds will be used to subsidize the protective works will only lead to future disaster.

The task force found that the successive flood control acts have become a catchall for legislative authorizations covering a wide variety of activities, including the generation and marketing of power, the reclamation of land, the provision of domestic and industrial water supplies, the improvement of navigation and the enhancement of recreational and wildlife resources. Benefits other than flood damage reduction constitute a large proportion of the total benefits claimed for the Corps of Engineers flood control program, as a whole. In a few instances, projects authorized by the flood control acts will have little, if any, effect on flood damages. For example, 96 percent of the benefits expected to result from the Dalles project on the Columbia River will be power benefits, although the project was authorized as a flood control project.

RECLAMATION AND WATER SUPPLY, INCLUDING DOMESTIC AND INDUSTRIAL WATER SUPPLY, IRRIGATION, WATER POLLUTION ABATEMENT, RECREATIONAL PROJECTS, FISH AND WILDLIFE PROJECTS, AND DRAINAGE

In 1906, the Federal Government entered upon an irrigation program under the Reclamation Project Act for the purpose of opening arid public lands to settlement and agricultural development. The funds for the work were to come from the sale of public lands and all capital costs were to be repaid (without interest) to the Government within 10 years. Since 1906 up to June 30, 1954, the Federal Government has spent for its reclamation program $3.1 billions. Of this amount, the irrigation features cost $1.1 billions for capital improvement. The repayments have been approximately $100 million and no interest costs were ever repaid. The interest costs alone have been estimated at $300 million.

The cost to complete presently authorized projects is estimated at $4.1 billions. In addition, there are several projects now being considered by the Congress which will cost in the billions.

The original requirement for repayment of capital costs by beneficiaries in 10 years has been liberalized so that some repayment schedules for capital costs alone run to 400 years.

With the passage of time, there have been many changes in governmental procedures, most of which act to facilitate obtaining Federal funds for reclamation works.

In 1939, the Reclamation Project Act stated that if the Secretary of the Interior found that a proposed construction had engineering feasibility and if the reimbursable allocations to irrigation, power, and municipal water supply, together with the nonreimbursable allocations to flood control or navigation, as determined by the Secretary, equaled the total estimated cost of construction, the project could be approved without further authorization by the Congress. This act opened wide the door of subsidy by administrative decision, since the criteria established afforded much leeway for individual judgment. It is a fact that most project proposals since that time do not comply even with the very loose requirements of the act.

Recently, a high-ranking officer of the administration claimed that the reclamation program does not actually cost the general taxpayer anything to the extent that it is financed from the reclamation fund. The fund was established in 1902 and was to be made up of proceeds from the sale of public lands, plus repayments of reclamation project costs. Later, as the fund was found to be inadequate, royalties from oil leases and other sources were added to it.

But the big hocus-pocus came in 1938, when Congress provided that all funds received by the United States in connection with any irrigation project were to go into the reclamation fund and that revenues from the sale of power could not go into the general fund of the Treasury until the construction cost of the entire project has been paid into the reclamation fund. In other words, under this act, the Federal Government puts up the money for the reclamation project and cannot receive anything in return until the reclamation fund is sweetened by an amount equal to the cost of the project, even though that fund never put up a dime of the project cost.

Do you wonder that I refer to this as a "hocus-pocus"? Still a responsible officer of Government has recently insulted our intelligence by stating that since projects today are largely financed from the reclamation fund, they do not cost the taxpayer anything.

I realize that irrigation has been a major factor in developing the economy of the West. The prosperity of El Paso, Fresno, Yakima, Boise, Spokane, Phoenix, Denver, Salt Lake City, and other urban centers is based on irrigation. The importance of irrigation is growing in the East, also. But let us remember that the 26 million acres of irrigated land is only 7½ percent of the country's total of 350 million acres of cultivated cropland. And over three-quarters of the irrigated acres in this country were developed by private enterprise. Still, the Federal Government is now struggling hard to spend good tax dollars on projects that aren't worth the cost no matter where the money comes from.

For example, about a year ago, Congress accepted some weird arithmetic in connection with an irrigation project on Foster Creek, Wash., which the Interior Department said had a benefit-cost ratio of 6 to 1, that is, water users would receive $6 in benefits for each $1 spent on the project. But, at the same time, the Department said that the users could only afford to pay $1 million for the works which would cost $4 million.

This is how they get something for nothing. The Government puts up the $4 million. The water users pay $1 million over a 50-year period. The present worth of the repayment, with interest at 2½ percent, is approximately one-half million. The balance of the capital cost will come from power revenues from the Chief Joseph Dam, which has no connection with the project other than the fact that it is in the same general area. "Is costs the taxpayers nothing," the Department says. But one is not supposed to ask questions about interests costs and Federal, State, and local taxes foregone. Ap-

parently, New Deal financial wizards have not yet caught up with the fact that in a business enterprise, interest on borrowed capital and taxes are costs.

We have heard much in recent months to the effect that the so-called upper Colorado River storage project is an absolute "must." It is claimed that without it, the entire reclamation program is a "dead duck." The project was approved by the Senate in the last session of Congress and has been favorably reported to the House. Members of both political parties are vying with each other in their eagerness to support it.

The upper Colorado River drains parts of the States of Wyoming, Colorado, Utah, and New Mexico. The project consists of a number of storage dams which would impound water for so-called river regulation and for the development of power. It contemplates 10 reservoirs and 33 participating irrigation projects. The bill, which passed the Senate, proposes immediate construction of 3 of the dams and 11 irrigation projects, requiring an initial capital outlay of $1.6 billion. For the complete project, the latest Government estimate is over $3 billion. Based on the past record of underestimation of costs, responsible authorities estimate that the ultimate project will cost between $5 and $6 billion for capital outlay alone, with no allowance for interest cost or other hidden subsidies.

The Interior Department has stated that for the last 25 years the reservoirs will not be needed for river regulation. Others place the figure at 50 years. In any event, the sole function of the dams for many years will be to provide revenues from the sale of power to subsidize the irrigation projects which would be operated independently of the dams.

The projects now under consideration would bring in 143,000 new irrigated acres and would provide supplemental water for 243,000 acres already irrigated. The irrigation costs are estimated at $323,526,000, but the water users are asked to repay only $36,546,000, without interest. Someone else will have to pay the remaining 88 percent of the capital cost and all of the interest charges. It is proposed that these moneys be provided by power revenues. But the power projects cannot pay off their own costs and the irrigation costs simultaneously. One or the other must be deferred. The plan now awaiting consideration by the House proposes a schedule of repayments which provides that the power investment be paid off in a period of 100 years from the time the power is available. This assumes that 6-mill power will be marketable for the next 100 years at load centers which are 200 to 400 miles away.

I will not burden you with an account of the mathematical gymnastics which have been resorted to in order to justify this project, all of which assume that interest costs on Treasury borrowings are negligible. But it is pertinent to note that while the capital cost for direct irrigation on the 11 projects in the initial program would range from $200 to $800 per acre, comparable land, already irrigated, in this project area is selling for $150 per acre. The crops proposed to be grown are hay, small grains, and pasture for dairy cows, sheep, and beef cattle. On a few projects, sugar beets and alfalfa would be added. At present, grains, sugar beets, dairy cows, and sheep are under the price-support program.

Here is a project that would bring 143,000 new acres into agriculture and would increase the stability of current agriculture on 243,000 additional acres which is made possible only by the investment of $1.6 billion. But there are now in the United States at least 20 million acres of undeveloped fertile land in humid areas which can be developed for agriculture by drainage and clearing at a total cost of about $175 per acre. In all, there are in the United States 350 million acres of cultivated cropland. But, in addition to this, there are approximately 134 million acres of cropland, about half of which is used only for pasture and the other half is neither harvested nor pastured. All of this could be brought into cultivation at relatively small cost.

And it is particularly pertinent to note that during 1953, 1954, and 1955, 31 million acres, about 9 percent of all harvested land, was taken out of crop use by the Government in its farm-support programs. Now, the administration's new soil-bank program proposes the retirement of an additional 40 million acres at an annual cost of $1 billion. Yet, for 1956, the Bureau of Reclamation expects to make available for production about 50,000 acres in new land. Nor is there any indication that they propose to slow down the development of new projects.

In addition to the wasteful expenditure of public funds, even greater harm can be done by permanently committing precious water to uneconomic purposes. The area served by the upper Colorado River is rich in oil, oil shales, coal, uranium, titanium, and other raw materials susceptible of industrial development and all requiring large quantities of water. It has been estimated that 1,000 gallons of water will grow 10 cents worth of crops in this area, but would permit the production of $5 worth of industrial products. But once precious water is committed to agricultural uses, it would be political suicide for anyone to propose that it be taken away and used for something else.

If economics, rather than politics, is the determining consideration in such projects, we need a new definition of the word.

POWER GENERATION AND DISTRIBUTION, INCLUDING ATOMIC POWER

There probably has been vastly more heat generated in the debates on public power than by all the electric power produced since Edison's first discoveries.

The Federal Government first entered the power business in 1906, when it undertook the sale of surplus electric energy developed at reclamation projects. The power was sold for what it would bring.

In 1928, the Boulder Canyon Project Act authorized the payment of the entire development of Hoover Dam from power revenues.

In 1933, the Tennessee Valley Authority was created and the act provided that the cost of the structures be allocated to flood control, navigation, and power and that such allocations by the Board of Directors be final. This opened the door for generous allocations to the giveaway functions of navigation and flood control, which are paid for almost entirely by Federal funds.

The Flood Control Act of 1944 authorized the Secretary of the Interior to dispose of excess power at the lowest possible rates consistent with sound business principles. The law said, further, "rate schedules shall be drawn having regard to the recovery of the cost of producing and transmitting such electric energy." But the law did not define what is meant by "sound business principles" nor did it define "costs" and the definitions of these terms have been the subject of bitter controversy ever since. Public power has now become a potent political issue of growing importance. It is, in fact, an ideological controversy because it has come to be recognized that socialized power can easily lead to socialized industry, since the control of the allocation of power could be used as a powerful weapon to control the operations of industry.

There is no logical reason for the popular appeal of public power. But demagogs have been able to hoodwink the public into believing that it is an important factor in their cost of living. Actually, the cost of power to the average householder is about 1 percent of his family budget. A reduction of only 3 percent in his tax bill would pay for his power.

As for manufacturing, except for the electrochemical and electrometallurgical industries, the cost of power averages little more than one-half of 1 percent of the product value, while for the two industries mentioned it averages a little over 10 percent.

In 1933, the installed capacity of Federal power projects was less than 1 percent of all electric utilities in the country. By mid-1953, the Federal Government had invested $2.3 billion in power facilities and had become the largest single producer, accounting for 13.1 percent of the kilowatt-hours generated. Federal projects now under construction and authorized will, by 1960, more than double the 1953 capacity and, when all are completed, will triple it, reaching a total of 35 million kilowatts, at a total cost of $10 billion.

Since the end of World War II, investor-owned electric companies have spent approximately $20 billion for new facilities, as against a total expenditure for power facilities by the Federal Government, from the very beginning of its program in 1906 to mid-1953, of only $2.3 billion. There is not a shadow of a doubt that private industry can take care of the country's needs for electric power in peace or in war.

The primary objective of public power is political and, therefore, it must be made to appear cheaper than investor-owned power. With direct costs the same, the only way an advantage can be shown for public power is by subsidizing it. Subsidy is a political necessity and our studies show that all Federal power is subsidized. The subsidy takes one or more of the following forms, which are evidenced in lower power rates:

(a) Use of interest rates which are lower than the actual cost of long-term money and risk capital.

(b) Omission of interest during construction.

(c) Omission of Federal income taxes or comparable contribution to the cost of the Federal Government.

(d) With two exceptions (Hoover Dam and TVA), omission of all State or local taxes.

(e) Charging large parts of the initial capital costs to wholly subsidized Federal activities such as flood control, navigation, fish and wildlife, etc.

(f) Charging administrative costs, insurance, and pensions to other Government accounts.

To illustrate my point that political considerations take precedence in determination of hydroelectric power developments, I shall mention some examples.

The Corps of Engineers has built 3 dams on the Cumberland River ostensibly for flood control and power. The engineers have estimated the annual charge for power for the 3 projects at $5,112,000. But the sales agency, the Southeastern Power Administration, estimates this cost at $4,134,000. The estimated average annual power benefits, based on power values furnished by the Federal Power Commission, are $11,540,000. But the Southeastern Power Administration has contracted to sell the energy to TVA at a gross annual revenue of $3,500,000, or about 30 percent of its value and between 60 percent and 80 percent of its cost, as estimated by the Federal agencies themselves. This cost assumes that the cost of money is 2½ percent and no allowance is made for Federal, State or local taxes. Interest at 3 percent, the current long-term Government money rate, and taxes would add about $2,500,000.

There are other examples of devious accounting and skillful evasion of costs in the Federal power program.

Our task force concluded that if all Federal power rates were based on power values computed according to Federal Power Com-

mission methods, the rates would be increased by 30 percent and 50 percent.

The construction of Federal power projects as a so-called yardstick to control the rates charged by investor-owned utilities is a gross deception. I was taught that there are 36 inches to the yard. But by virtue of failure to include taxes, and because of low interest financing and other hidden subsidies, the yardstick proposed by public power proponents has somewhere in the neighborhood of 24 to 27 inches. There is much more that I could say about public power as, for example:

(a) That the only areas in the United States which face a current or prospective power shortage are those now served predominantly by public power.

(b) That Federal agencies have frequently described projects as flood control, reclamation or navigation measures (all of which are heavily subsidized) when their real and obvious purpose is to produce electric power.

(c) That private power companies, by their tax payments, are forced to subsidize competing public power.

(d) That 80 percent of our people who obtain their power from private companies subsidize, in large measure, the 20 percent who are served by public power.

(e) That private power cannot compete with subsidized public power for obvious reasons, which means that as long as the general taxpayer is willing to foot the bill for the subsidy, the areas served by public power will expand at the expense of areas served by private power. There is the equivalent of Gresham's Law on money here—bad power chases out the good.

I have cited a few examples to illustrate my point that political considerations are, for the most part, in control of the development of our national water resources and power. As a result we are wasting the substance of our natural resources and this and future generations will pay the penalty of such waste.

The question arises—What steps should be taken to assure a greater measure of control by the economic factors?

Our task force made detailed recommendations in this matter. Briefly, we recommended that Congress establish a specific code of principles and procedures for determining the economic justification and financial feasibility of all water-resource projects and that all agencies of the Federal Government should be governed thereby.

We recommended, also, that planning should be decentralized to local, State, and regional groups of non-Federal entities who should participate in financing the work. We found that one of the best practical tests of economic soundness is the extent to which the immediate beneficiaries are willing to spend their own money for the alleged benefits.

We recommended the establishment in the Executive Office of the President of a Water Resources Board which would resolve conflicts between Federal agencies, establish uniform procedures, and insulate the planning and construction agencies from political pressures.

We recommended, also, an independent Board of Review to be established in the Bureau of the Budget to screen all project proposals made by the Water Resources Board.

Time will not permit me to go into the details of these proposals.

I am convinced that until these steps are taken we will continue in our present policies of developing our water resources in the old-fashioned pork-barrel style, projects being put over by logrolling and pressures and with little regard to merit, economy, or real conservation of those resources. Changes of this kind can only come about when the people understand the issues and insist upon sound procedures. Unless the people really want economy and conservation, and are willing to make their voices heard, they will continue to be fed on so-called free projects, paid for with their own money and an increased public debt.

Since the publication of our report, and as a result of the numerous articles and speeches I have made on this subject, I have been accused of being opposed to the conservation and development of our country's water resources. I have even been called a Fascist, because I once modestly advanced the suggestion that those great political benefactors who run on platforms of doing good for the people should begin, if only on a very modest scale, by doing that good with their own money.

In the field of water resources and power I stand committed to six basic principles, which are:

1. That we develop our water resources only as they are needed and only to meet proven economic requirements;

2. That developments be financed and administered by private enterprise or, if this is not feasible, by local governmental units or by the States;

3. That those who benefit pay the cost of providing their benefits;

4. That whatever work is done by the Federal Government be done efficiently and economically;

5. That we do not use the power of the Federal Government, as represented by the tax collector, to deprive the Federal taxpayer of his lawfully acquired property in order to finance water-resource projects unless those projects will provide a clearly defined and demonstrable direct benefit of national scope; and

6. That in every case the activities undertaken by the Federal Government be clearly within the strictly construed constitutional limits of its authority.

I am aware that this platform is poorly designed to attract the support of those who believe in special privilege for political pressure groups. Nevertheless, I am prepared to stand on it.

The Charge Is Trespassing: Manifesto States Principle of Widespread Concern

EXTENSION OF REMARKS
OF
HON. WILLIAM M. COLMER
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 21, 1956

Mr. COLMER. Mr. Speaker, the whole South, as well as many people in other sections of the country, are becoming more aware and therefore more alarmed over the recent decision of the Supreme Court attempting to outlaw segregation in the public schools of this country.

Since the manifesto a few days ago by 101 Members of Congress on this subject, there have been literally hundreds of editorials approving this action. This demonstrates what we have long contended, namely, that our people were praying for leadership. Now that the manifesto has been subscribed, they are asserting themselves through every forum available.

In this connection, Mr. Speaker, we submit a splendid and timely editorial from the Nashville Banner under date of March 20. The editor of this splendid paper is to be congratulated upon his appraisal of the situation.

The editorial follows:

The Constitution of the United States not having been abolished—or abridged to change any of its basic points—this is what its first paragraph still declares:

"All legislative powers herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and House of Representatives."

There should be no necessity of reminder on that. However, in recent years, by rulings of the Supreme Court, one might almost imagine the specification had been abrogated and that Congress had abdicated the lawmaking function.

The judiciary should take a look, for there it is—neither by attribution nor inference assigning to the bench any prerogatives of the legislature. The trespass of an overstepped authority setting the judicial foot on lawmaking domain is exactly as violative of the metes and bounds of constitutional government as would be congressional intrusion usurping authority of the bench.

That in substance is the point made, and beyond refutation, by the manifesto filed by southern Congressmen in challenge of the Supreme Court ruling of May 17, 1954.

Namely, the indictment rings with the charge that the tribunal overstepped its jurisdiction—quitting the judicial premises to tramp heavily and illegally upon the legislative.

When that is pointed out, it should give deeper meaning for this document and its principle to States and regions unconcerned about segregation as such. For it can readily be seen that once the bars are down which historically have restrained the respective branches of Federal Government from encroaching, or usurpating powers, the danger of trespass is against all.

Actually, the segregation issue is only incidental to the larger case presented in this manifesto. For it is not hard to demonstrate that in this action dictating to the States the rules governing public-school enrollment, the blow inflicted is upon powers and functions reserved by the States when the Constitution was written. And Congress did not do the transgressing. The only Federal agency ever endowed with legislative power has declined consistently to legislate in that particular—on the ground surely that it is a State right, authority, and responsibility.

It is not, note it, just a matter of being either for or against segregation. The issue is more fundamental than that.

If the Supreme Court has the authority to legislate—or to act in a manner tantamount to that by construing the Constitution—where does that power stop? If the authority exists, it is as broad as the whole province of legislative action.

Once before it became necessary for Congress to act in renunciation of a Supreme Court decision—at that time, too, to clarify a point which the lawmaking body had refused to authenticate with law. That was Mr. Truman's wild claim to possession of the tidelands property. As President he had sought to enact legislation to that end; failing that, he got a ruling through the Court validating the Federal claim to that oil-bearing land. It was clear to legal minds, and to students of the Constitution, that the Court had overstepped its authority. So it became necessary for Congress to pass a law restoring the lands to State ownership.

It never is safe to risk a principle on eccentric interpretation.

America must have realized that after, by a narrow margin, the Court in 1952 struck down Mr. Truman's imperial claim to inherent powers by which, regardless of law, he seized the steel industry.

It bears repeating, and other areas should see it, the issue is not segregation as such—though that conforms with custom and tra-

dition of the South. The aim of this manifesto is not some retaliatory action on the part of a Jeffersonian American element that has been maligned for its political fundamentalism. The issue is whether the Supreme Court shall usurp authority belonging to that separate and equal branch of the Government—whether, in other words, it ends by a transgression the segregation of govenmental units into their respective areas of jurisdiction.

Speaking of segregation, the Founding Fathers evidently believed in it. In the instrument of organic law they clearly intended to segregate the three branch of Government—executive, legislative, and judicial—from one aonther.

That is why, in the Banner's view, it is important, too, to proceed with the move of interposition.

That is not a hostile action. It simply proposes that if the Federal Government is to regulate enrollments and attendant rules in our public schools, the Constitution should specifically state that by an amendment.

If Congress feels that way, surely it will initiate the action whereby such a rider for the Constitution will be submitted to the States for ratification or rejection.

If regulatory power is to be in Federal hands, it should be put there by a formal vote of the people and not by a quasi-legislative act by the Supreme Court.

Role of the Antarctic, the World's Last Outpost

EXTENSION OF REMARKS
OF
HON. ALFRED D. SIEMINSKI
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 21, 1956

Mr. SIEMINSKI. Mr. Speaker, it would appear that the Antarctic is not covered by the Monroe Doctrine and that it is wide open for all comers to stake claims on it. Will they?

During World War II, it is said that Hitler's submarines refueled from dumps in the Antarctic.

The question is, in the next foray, Would it avail an unfriendly force to set up missile bases on the Antarctic to knock out any war effectiveness of South America, Africa, and Australia? A power astride the Antarctic would look down the throat of Australia, Africa, and South America. To date, wars have been fought and battlelines moved from east to west and from west to east. Note Islam's sweep from China to France and Hitler's dash from Dakar to the gates of Cairo, not to mention Napoleon's nemesis from Paris to Moscow.

In our time, we moved from Pearl Harbor to Africa, from Dieppe to D-day, thence to Japan. Do the Reds now move, in the way of Islam, from China to Paris via the Mediterranean Basin? And will they move south to Africa via the Middle East, knocking out South America and Australia from the Antarctic as they go?

Had the four horsemen of World War II moved north and south instead of east and west, what would have happened? Had Hitler, Mussolini, Stalin, and Tojo, in 1939, moved directly south, would Africa, Australia, and South America have remained so secure for the free world?

Should some future horsemen in their sweep against freedom, retrieve the errors of World War II, and couple with their drive from China to Paris a knockout blow from the Antarctic against Australia and South America, as they move south on Africa, from Cairo to Cape, how ready would be be to blunt their thrust?

While scientists make soundings of the universe on the Antarctic in the geophysical year, it is hoped that a few sons of freedom there are, whose soundings on survival include the Antarctic in their appraisals.

One remembers how, in the era of good will, the Allies, flushed with victory over the foe, forgot to provide roads of entry and exit from Berlin and Vienna, so clearly revealed by the Berlin airlift.

I thought the attached clipping, Mr. Speaker, might add a point or two of interest to the topic of Antarctic:

[From the Washington Daily News of March 13, 1956]

BOOK REVEALS ANTARCTIC LANDING BY NEW ENGLANDERS

(By E. A. Kendall)

Newspapers have been carrying items about the latest Antarctic expedition. It is of interest to know, therefore, that publication of a book based on a recent discovery of a sealing vessel's log of the early 1820's reveals that New England seamen made a landing on the Antarctic Continent.

If all documentation holds up, this may prove to be the first landing of human beings upon this vast southern continent. First sighting of the continent proper already has been pretty well established as having been made by an American skipper (although which of the three, Palmer, Burdick, or Davis, is not perhaps too certain).

The prowess of the early Americans undoubtedly will strengthen the basis for United States claims to the Antarctic tracts, if and when we decide making formal claims is sensible.

Participation of our scientists in the International Geophysical Year studies during 1957 to 1958 does not solve territorial claims. Today we have no claims to a single pebble on the rich and potentially very important new continent. Tomororw we may not be able to claim any of it; other countries may have stepped in, while we delayed.

Perhaps our hesitancy may be overcome with these new facts about the first landing, as depicted in Dr. Edouard A. Stackpole's book entitled "The Huron and the Huntress."

Representative Thompson of New Jersey Makes Plea for American Art

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 21, 1956

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I include an article by Mrs. Eleanor Roosevelt, which appeared in the Washington Daily News for March 20, 1956. The article commends our colleague, Representative FRANK THOMPSON, JR., for the leadership he has provided in furthering the recognition of American art, as recently embodied in his bill, H. R. 9988. I have today introduced an identical bill in the hope that this proposal to provide temporary exhibition space for the National Collection of Fine Arts in the National Gallery of Art may be favorably acted upon. Mrs. Roosevelt's article follows:

REPRESENTATIVE THOMPSON MAKES PLEA FOR AMERICAN ART

(By Mrs. Roosevelt)

NEW YORK.—Representative FRANK THOMPSON, JR., Democrat, of New Jersey, had an interesting article in the CONGRESSIONAL RECORD, March 12, about the National Gallery of Art, which celebrated its 15th anniversary. During the week of this celebration the gallery had a splendid exhibition of potential and outright gifts by Samuel H. Kress, Rush H. Kress, and the Samuel H. Kress Foundation.

Andrew W. Mellon was the man who started what has become, under David E. Finley's directorship, one of the greatest cultural monuments in the entire world. Congress has made an impressive contribution of more than $1 million a year to the gallery's maintenance, so that the people of the country have a stake in the growth of this great cultural monument.

PLEA

Representative THOMPSON makes a plea in his article for the advance of all our arts. He suggests that the Smithsonian Institution and the board of trustees of the National Gallery should rethink their position in regard to all American art and set aside some exhibit rooms in the gallery exclusively for the National Collection of Fine Arts which, like the National Gallery, is a branch of the Smithsonian Institution. In 1948, by act of Congress, a gallery was authorized to be built exclusively to house the National Collection of Fine Arts. But it has not as yet been accomplished, and so this suggestion of Mr. THOMPSON'S is of a temporary nature.

The Hughes Trial and Domestic Security

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 21, 1956

Mr. GWINN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a speech made by Mr. William F. Buckley, Jr., publisher of National Review, at the For America Rally in Carnegie Hall, New York, on February 22, 1956, as follows:

Ladies and gentlemen, a few weeks ago, New Yorkers had a rare privilege. Down at Foley Square, one after another of the most celebrated liberal publicists in America, having solemnly sworn to tell only the truth, begged a jury of 12 American men and women to believe that they are fools. One would have thought that this much at the very least, in the case of the men in question, would have been easy of demonstration; yet the jury balked. To Joseph L. Rauh, Jr., senior paymaster of anti-McCarthy confidence men, and chairman of the Americans for Democratic Action; and to Clayton Fritchey, propaganda head for the Democratic Party, and deputy chairman of the Democratic National Committee; and to Al-

fred Friendly, assistant chief moralizer and managing editor of the Washington edition of the New York Times—the jury said, in effect, Gentlemen, hard and conscientiously though we look at the evidence, and try to evaluate it, we cannot bring ourselves to pass judgment on it, we cannot come to a decision. We are, frankly, disagreed as to whether you are far-gone fools, or systematic liars.

The truth, perhaps, lies somewhere between the two extremes the jury was, in effect, asked to consider. Things are never all white or all black, liberal philosophers frequently remind us, but usually gray. This may be a case in point: Messrs. Rauh, Fritchey, and Friendly are, perhaps, only half foolish and half untruthful.

The trial of Paul Hughes was one of those freakish events through which, from time to time, a benevolent providence allows us to get major insights into major problems through the doings of minor men caught up in a single drama. The transcript of the proceedings in the case of the *United States* v. *Paul Hughes* is a source of invaluable insights as to why it has been difficult—and at the margin, impossible—to persuade the majority of our ruling elite to concern themselves, let alone cope with, the Communist conspiracy.

Consider the facts, and the light they shed. In January 1954, a 35-year-old veteran of the Air Force approaches Joseph L. Rauh, Jr., a celebrated Liberal publicist, a renowned lawyer specializing in civil-rights cases, a conspicuous critic of congressional investigations, secret informers, and the like, and, in his role as a most worldly and cynical man, a persistent skeptic with respect to tales of Communist intrigue or treachery or power. Posing as a secret and disaffected member of Senator McCarthy's staff, Hughes unfolds a phantasmagoria around the treacherous doings of McCarthy and his associates so grotesque and exaggerated as to have impelled a balanced man to have telephoned immediately for the man in a white suit; but the fantasy had quite the opposite effect on Joseph L. Rauh, Jr. He started shelling out money, for he wanted more and more and more, so hotly did he lust after anti-McCarthyana.

Hughes promptly brought in a 94-page document—a document which is, in a sense, a work of genius. One might easily suppose, on reading it, that it was the work of a psychiatrist who sought simultaneously to assuage and to aggravate a patient of somewhat unbalanced political outlook. The salve was there—for here was confirmation in abundance of the worst one could imagine about McCarthy—and also the galvanizer—here was a call to glory, a call for superhuman exertions to destroy the monster McCarthy. There is something in the remarkable document that fed on, and then quickly nourished, just about every liberal political neurosis of early 1954. Here were notes on secret correspondence between Eisenhower and McCarthy; on rivalries between the staffs of the Jenner and the McCarthy committees; plans to contact Gouzenko, behind the back of the State Department; reports on a clandestine White House conference at which a smear campaign against the Democratic Party was organized; a transcript of miscellaneous McCarthy animadversions on such disparate persons and things as Herbert Brownell, Air Force bases, Drew Pearson, ethics, and Leonard Hall; of McCarthy informers splattered around, in the White House, in the CIA; excruciating teasers about informants whose identity had not been disclosed; and all this wrapped up in a disorderly package, sometimes illiterate, sometimes eloquent, but reeking with drama, and emitting a sex appeal irresistible to professional anti-McCarthyites.

In the course of the months to come, things got better and better. Getting reports from Paul Hughes was, for Mr. Rauh—for his friends Fritchey and Friendly—like taking dope. They needed a little bit more every time; and, always obliging, Paul Hughes gave it to them. By the time the summer was well along, and their addiction complete, Hughes was driven to rather desperate measures to keep up the flow of information as to the rascality of McCarthy. He had already tried—successfully—a melodramatic tale about how he had had to move his wife and child to another State for fear that, when he discovered he had been double-crossed, McCarthy would send around some of his mercenaries to wipe out Hughes' family; and then, a few weeks later, he had tried to get money from Al Friendly, substitute paymaster while Rauh was in Europe, to turn over, said Hughes, to an investagator on McCarthy's staff to be used by that investigator to buy off a girl he had gotten into trouble. And what did all this have to do with the Washington Post? Why, obvious, said Hughes; by getting the investigator out of a jam, he could ingratiate himself with him and get still more intimate secrets about the doings of McCarthy and the committee.

By midsummer, dizzied perhaps by an equatorial sun, Paul Hughes took a step which, in spite of a 6-month run of steady successes, he must have deemed at little chancy. It must have been with a quiver of trepidation that he told his little group that Senator McCarthy and his staff kept an arsenal of pistols, Lugers, and submachine guns hidden in the basement of the Senate Office Building. Why? Well, presumably, to protect themselves when they went out after evidence. But perhaps for other reasons, Hughes must have hinted enticingly, knowing from experience that his job was confined to the mere planting of seeds, which a whole army of neuroses could be counted on to fertilize.

Things became almost unbearably hot. A little later, Hughes told Friendly that McCarthy was about to send someone to New York to pay cash for secret information snitched from the State Department, by an employee. Friendly got hold of his boss and the two of them tore over to Attorney General Brownell and breathlessly told him that they had got hold of something hot, they couldn't tell him just what it was, but that any day now it would happen, and would he hold himself ready, day and night, to put an FBI man at their disposal so that they could catch the lawbreakers in flagrante? They insisted on, and got, Brownell's unlisted home telephone number, so that they could reach him at whatever hour Hughes might happen to call in.

Brownell promised to help. So the publisher and the editor of the Washington Post went back to the barricades to wait anxiously final word from Hughes that the great illegal act for which they had all been praying and paying was about to take place. Nothing happened, of course. After he had squeezed all the juice out of that one, advancing one reason after another why the meeting, week after week, did not come off, inventive little Paul Hughes simply went on to something else.

Well, ladies and gentlemen, it went on and on and on. In October the Washington Post, bracing itself for the climax, prepared 12 articles on Senator McCarthy, based on the information Paul Hughes had given them. And then, as an afterthought almost, a reporter was assigned to check on some of the information on the basis of which the Post was about to break into print. He went off to see 3 or 4 of the workers in the Bell Telecommunications Laboratories (which manufactures secret equipment for the Signal Corps), whose affidavits testifying to the way in which McCarthy had browbeat them Hughes had furnished: and lo and behold, the workers didn't exist. The affidavits the Washington Post was about to publish were totally fictitious. Almost in a state of panic, I suppose, the researcher tore off to Cornell University, next stop on the verification tour, to interview a professor who, Paul Hughes had reported, had been blackmailed by McCarthy. If the professor refused to come through with a juicy Communist or two, McCarthy had allegedly said to him, the committee would publicly reveal that, in his misspent youth, he had had an illegitimate son. Unlike the workers at the Bell Telecommunications Laboratories, the professor did exist; but he was terribly startled by the story of his victimization. For the poor old man had never been in touch with McCarthy or any member of McCarthy's committee at any time; and on top of that, far from having misspent his youth, the professor had led a life of conspicuous rectitude.

The disappointment of the Washington Post must have been terrible. The series was canceled. The bill was toted up: Hughes had collected over $8,000 from Joseph Rauh, and over $2,500 from Clayton Fritchey. The general indignation was great. Quite great, that is. The Post did not vent its indignation by publishing an exclusive story on the strange life and activities of an anti-McCarthy careerist. Joseph L. Rauh, his perfervid concern over lawbreaking notwithstanding, did not complain to the Justice Department that a man was wandering around getting money under false pretense from credulous liberals, and flashing forged credentials as an alleged member of the McCarthy committee; Clayton Fritchey did not complain to the police that Hughes had subsequently tried to blackmail him; Gen. Cornelius Mara, assistant to Harry Vaughan and Harry Truman, and another victim of the hoax, did not complain that Hughes had given him a bum check—no, these forgiving men were prepared to just let Hughes go, to let the whole episode remain an unpricked bubble in the sea of history, forever immune from human scrutiny.

But the indomitable Paul Hughes wouldn't cooperate. He looked around for fresh bait, and settled on the FBI. From that point, his career moved to a rapid end. He was subpenaed by a grand jury, and in due course the Government decided he should be prosecuted, for lying before the jury. The Government was completely confident it would win a conviction. The Government saw no reason to doubt that a person who admitted to being a professional liar could be proved to have lied, in a few specific instances, to a grand jury. Alas, the Government prosecutors forgot to reckon with the fact that in order to prove that Hughes was a liar, it became necessary to prove that Rauh, Friendly, and Fritchey were not liars. That proved an insurmountable obstacle. With the result that, today, Hughes is a free man.

I don't pretend that the recounting of the essential facts of the Hughes episode does not give me a certain sensual satisfaction. But I do assure you that I recount those facts here tonight for other reasons. The fifth plank of the For America platform which I was assigned to speak about, asks that we destroy the Communist conspiracy. If we lived in a society of reasonable men we could take for granted the desire to destory the Communist conspiracy, and the resolution with which to do it. That desire and that resolution would flow automatically, we would reason, from the fact that our society, being free, desires and resolves to remain free, which involves destroying the forces of slavery. But in our society, reason is not king, and it is a matter of fact that in some of our most prominent leaders, neither an understanding of the comspiracy, nor an effective will to destroy it is present. The Hughes case illustrates the point.

Let me set forth a series of assumptions centering around the activities of Joseph Rauh, in the Hughes episode, and generalize from them. I treat Rauh, unhesitatingly, as an archetype of the modern liberal—not only because, as head of the ADA, he is

idealogue in chief of the most concentrated nest of contemporary liberalism, but because—and this is more deeply significant—not a single liberal publicist has dissociated himself from Rauh by condemning, in any particular, his behavior with respect to Paul Hughes. Thus we can safely assume that they see nothing in his behavior to criticize.

Assumption 1: I assume that in his entire life, Joseph L. Rauh, Jr., has not spent as much of his spare time in attempting to uncover the wrongdoings of Communists as, in 1954 alone, he spent in attempting to catch up an anti-Communist American Senator in an illegal act.

I generalize that, like Rauh, the liberal community is more concerned about potential perfidy on the part of anti-Communist members of the American right than about the perfidy of the Communists. Anticommunism, then, must wait in line beyond anti-anti-communism.

2. I assume that in his entire life, Joseph L. Rauh, Jr., has not contributed $8,000, or anything like $8,000, to persons or organizations engaged in attempting to study the activities, or fix the location of, Communists, or Communist sympathizers, whether in government, education, the arts, or religion.

I generalize that, like Rauh, the liberal community is not prepared to make sacrifices in order to arrest the conspiracy; sacrifices are in order only to arrest those who are engaged in attempting to arrest the conspiracy.

3. I assume that if anyone had gone to Joseph L. Rauh, Jr., and told him there was reason to believe that the Communists were maintaining an arsenal in the cellar of the United States Senate Office Building, Mr. Rauh would have dismissed the story as inherently unbelievable.

I generalize that, like Rauh, the liberal community remains, the evidence notwithstanding, so skeptical about the extent of the Communist menace, and so concerned about the danger of anticommunism as to make the liberals, in objective fact, more effectively pro-Communist than anti-Communist.

4. I assume that Joseph L. Rauh's enthusiastic use, in pursuit of anticommunism, of methods whose use in pursuit of communism he persistently denounces, is a measure of his evaluation of the comparative threat posed by the two forces.

I generalize that, like Rauh, the liberal community is not motivated in its repudiation of a set of methods by mere disapproval of the methods in the abstract, but rather by fixed ideas as to the enemy against which the methods are legitimately used. One may legitimately employ, against McCarthyism, methods deemed inexcusable in the fight against communism.

In sum: I assume that the behavior of Joseph L. Rauh, Jr., et al. during the Hughes case bares dramatically the state of mind whose grip on American opinion makers accounts for many of the difficulties we have experienced in the past in protecting ourselves against communism, here and abroad, and also is a terrible augury of the difficulties that will continue to confront us in the future.

Destroy the Communist conspiracy—how is that possible while so many strategically situated men and women, in our Government, in our schools, in our press, remain massively indifferent to the enemy? These men and women are stirred to heroic action only when the tocsin sounds to give warning against the aggressions of Senators or Congressman or writers or teachers who dare to rise to the challenge of our times by beating back the forces of darkness.

What is it that will serve to kindle a spirit of resistance in the liberal bosom? Not, it seems, the naked horror of a philosophical system that denies human value; nor the historical record of a political movement that kills and enslaves by the tens of millions. That is not enough. What, then?

A few years ago, a reflective observer indulged in a little wishful thinking. If only, he wrote, Mao Tse-tung had, back in 1946 or 1947, criticized Margaret Truman's singing. China might have been saved. We cannot, it seems count on the evil in communism to instill in us the will to defend ourselves. Something else will have to furnish the impulse. Perhaps, someday, in his cups, Nikita Khrushchev, moved to repay a long-outstanding diplomatic courtesy, will sputter out, "You know, I like old JOE"—MCCARTHY, that is. Then will the liberals mount their chargers, and join the fray, prepared to die to the last man, if need be, to beat down the newly discovered enemy.

President Tubman, of Liberia, Chooses the United States

EXTENSION OF REMARKS
OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 21, 1956

Mrs. FRANCES P. BOLTON. Mr. Speaker, having recently completed an extensive survey mission to Africa for the Committee on Foreign Affairs, I have watched with interest the political and economic overtures that the Soviet Union is making toward the Republic of Liberia. President William V. S. Tubman, a man of great integrity and ability, has been under considerable pressure to establish diplomatic relations with the Soviet Union and to accept their offers of economic assistance. During the two discussions I had with President Tubman in September, I was deeply impressed with the sincerity of his conviction that both Liberia and the United States have much to gain through close mutual cooperation. It was hard to conceive that these Russian overtures could dissuade him from that conviction. I have just received a copy of a speech President Tubman made at a dinner in his honor by the Liberian Cabinet on March 8. The Congress will be pleased to note that he has made his choice with the words:

The Government and people of Liberia irrevocably and wholeheartedly identify themselves in spirit and action with the free nations of the world.

Under leave to extend my remarks, I am submitting the full copy of President Tubman's speech:

You will recall that 12 years ago, when, as a result of the free exercise of their franchise, the people of Liberia first called us to this high office, we embarked upon the sacred duties of administrating the affairs of this our common country amidst a world which was actively engaged in a global armed conflict the scope and magnitude of which had never before been experienced by mankind.

Whereas many felt at that time that we had already given adequate expression of our devotion and such concrete assistance as was within our means to the allied cause, I did not think that there should have been any room whatsoever for possible doubt or question as to how and where Liberia stood on the critical issues of that day. Our honor and integrity demanded that we speak and act in unequivocal terms. And we did so by a declaration of war, despite the grave and hazardous risks involved. All of that has now passed into history.

We are now entering upon a new administration of the affairs of state in a world which, whilst not actively engaged in a major war, is, 10 years after the end of the last Great War, still unable, it appears, to return to the placid ways of peace and tranquillity. Besides the seething unrest of the north and east of us on this our own continent, there are sensitive zones of crisis among the teeming masses of Asia. In the Middle or Near East we observe how the bitter fruit of entrenched hatred has so dangerously inflamed passions that someday, by accident or design, this powder keg may be set on fire. The fearful blast from such an explosion will not only consume those who ignited the fuse, but the effects would be felt around the earth.

Beyond these discords referred to which tend to rend and tear the world apart, there appears today the underlying basic difficulty in reaching any permanent solution to the vexing problems of the world because of the great ideological gulf which divides the great powers and separates the smaller nations into various camps. The sanctity of treaty obligations, the inviolateness of the human person, as well as the art of decent and just compromise which has characterized classical diplomacy, now, more often, give way to flagrant, unilateral violations of the pledged word, willful interference in the affairs of other nations, duplicity, subversion, and brute coercion. Neutralism, to a certain extent, has also lost some of its ancient virtues and has become a third force whose mission is not always crystal clear.

It is in such a world that we stand upon the threshold of the future in this new administration.

I, therefore, consider it necessary that the Liberian position be clearly defined and our attitude fully described.

The Government and people of Liberia irrevocably and wholeheartedly identify themselves in spirit and action with the free nations of the world. Our friendship and historic connections with the United States, the leader of the free world, is older than the Republic of Liberia itself; for the idea and plans for the organization and founding of this State existed intangibly in that great country long before the founding of this Government actually occurred. No hypnotic maneuvering can traduce us away or deter us from our firm resolve to continue to maintain this position and strengthen the bold ties of our long and lasting friendship.

We are convinced that the correctness of our position proceeds not from any temporary considerations nor is it based upon speculation. This nation has never been for sale; neither will the Liberian people ever barter their integrity. We shall not go around with hat in hand begging. On the contrary, we shall pursue the path of honest industry in our endeavor to develop ourselves.

We also believe that all free nations, be they large or small, should firmly adhere to the principles of freedom and democracy for the simple reason that they love and want to be free. It should be their natural desire and determination to remain free to exercise their sovereignty without outside interference or intimidation.

We feel that at no time and on no issue should the conduct of any free nation be such as to create the remotest impression that selfish political or economic advantages are the principal motives for supporting the cause of freedom. Each nation alined on the side of the free world must, if it is truly realistic, understand that any infantile flirtations with the powerful and implacable foes of democracy and freedom for temporary gains may involve a price fatal to their own independence and very existence;

and that, embracing the foes of democracy to their bosom may mean crushing forever their own religious freedom and the individual liberty of their people.

Because of these considerations we have decided and intend, like the people of the great United States, to build and develop our country by our own labor and toil. Our prosperity and wealth must be based in the first instance upon the ingenuity, thrift, and industry with which we exploit our God-given resources and attributes. We shall continue, as in the past, to seek and effectively use such technical skills and services as are available to assist us in exploring and developing these human and natural resources as well as in training our labor to be more skilled and productive.

It is our policy to continue by precept and example to make Liberia attractive to capital from the United States and other friendly countries within the free world economy. In the exploration and exploitation of our natural resources, including the processing and semifinishing of some of these commodities, we shall welcome foreign private investment on a partnership and joint participation basis in the interest of developing a sounder economy and securing a wider enjoyment of the benefits possible to our people through their participation.

In a manner similar to that used by many of the great nations of the free world which have sought and received access to reasonable capital markets during the early stages of their economic development, we shall also continue to seek reasonable larger long-term financing for our development program and for internal security and defense through the effecting of fair loans at equitable and moderate rates and conditions.

It is my conviction that if we apply a fresh resolve and strive for these honest and honorable aims, we can merit the right to hope for and expect some measure of success in the achievement of the goals we have set.

With the fervent hope that the spirit of unity and concord in the future promotion of our common patrimony will long be our guiding light; the national interest our greatest concern; and the determination to render more satisfactory service to our God, our country, and our fellow men, will remain our principal objective, I ask you, ladies and gentlemen, to join Mrs. Tubman and me in drinking a toast to the health, prosperity, and well-being of the Cabinet.

Social-Security Benefits

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 21, 1956

Mr. FLOOD. Mr. Speaker, I rise today on behalf of my bill, H. R. 10064, which would lower the qualifying age for social-security benefits from age 65 to age 60 for men and age 55 for women, as well as to provide that any fully insured individual who becomes permanently and totally disabled shall be considered to have reached retirement age.

At the outset, Mr. Speaker, I would like to say that if there is any group in this great land of ours that deserves special consideration it is the totally and permanently disabled who would otherwise be eligible for benefits under the social-security system except for the fact that in many, many cases they have not as yet reached retirement age.

In all justice, I feel that these people should not be further penalized by being required to wait for their rightful benefits until they reach age 65. They need economic assistance right now and, after all, they are not employable, and to force them to wait, perhaps for many years, for their benefits, is working a terrible hardship upon them.

I would like to remind the Congress that we have modernized our social-security system in other respects. In the 1950 amendments we substantially increased the coverage of the system and more than doubled the amount of the benefits.

Again in 1952 and in 1954 the benefit structure was brought up to date. Today, 9 out of 10 workers in this country are covered by social security—as compared with only 3 out of 5 in 1949.

But, we have made no change whatever in the qualifying age of 65 which was set 20 years ago in the middle of a depression.

Mr. Speaker, it is time for a change. And permit me to outline very briefly some of the reasons why it is imperative that the 84th Congress act on this matter.

The first and most urgent reason for lowering the age requirement grows out of recognition of the human values involved. No longer will it be necessary to explain to the older men and women who, through forces beyond their control, are unable to find work—or are unable to work—that they will have to wait for a number of years for their retirement benefits. No longer will it be our unhappy duty to explain to the aged widow of a worker who has died that she cannot receive any widow's benefit until she has reached her 65th birthday.

We know, too, how significantly increases in our living costs have threatened the security of many older men and women who are the victims of the kind of involuntary retirement I have just described. It used to be that a family which had managed to save a few thousand dollars to purchase a home could survive many years of retirement without additional income. Fifty years ago a backlog of $5,000 would care for a retired couple for 15 or 20 years. Now, if they manage carefully, they may be able to stretch it to cover 2 or 3 years. This is just one of the economic realities of today which calls for a lowering of the qualifying age in social security.

Let us consider, for a moment, other realities which call for the enactment of this bill. First of all, it provides a logical adjustment to the fact that the length of work-life, for most of us, has been substantially shortened. In 1900, 39 percent of all persons aged 45 or over were in the labor force. To day this proportion has dropped to around 27 percent. In the language of the technician, the shift from a rural to a highly industrial economy is reflected in the long-term decline of farm employment and in the expansion of such occupations as semiskilled operatives and clerical and sales workers—occupational fields which have a very low proportion of older workers. Translated, this means that the parent or grandparent who, some years ago, could continue to work around the farmyard or by hiring out to the neighbors, must now try to find a job in a labor market which has relatively few openings for older men and women.

It is true, of course, that the older worker who has remained in the same job for a number of years can continue on with it as long as he is able to work, or as long as the job lasts. But let us not fall into the error of believing that this is the typical experience of older citizens. As of October 1953 workers above 45 were about 50 percent of all unemployment-benefit claimants. We know that unemployment benefits are paid for only a limited period, depending upon limitations set by the States. In spite of our efforts to retrain and reeducate both workers and employers so that more work opportunities may be made for older people, we know in our hearts that this is a solution which will work only in a relatively small proportion of cases.

We know, too, that the remarkable improvements in factory technology are rapidly changing our methods of mass production so that we are producing more and more goods with less and less hours of work. Recently the Federal Reserve Board reported that American factories produced the same amount of goods in November 1954 as during the same month of 1953. But at the same time, the Bureau of Labor Statistics noted that there were 6 percent fewer production workers employed last November than in the same month a year ago. In other words, output per man-hour of work had risen enough in a single year to permit industry ot cut down on the number of its employees by 6 percent without decreasing production at all.

Nor is this a temporary development. The whole trend of our industrial expansion has been in the direction of shortening the number of hours of work required to produce a given product. And now we are hearing new predictions that we are on the verge of even more revolutionary developments in this direction. A new word, "automation," has come into our language as the field of electronics is developing the "mechanical brain" and similar devices. We are not yet quite clear as to just what effect the development of nuclear power for peacetime uses will have on this total picture. But we do know that, whatever happens, we are certainly going to be faced with the familiar problem of how to adjust to the machine's contribution to more leisure time. It is true, of course, that new jobs will be created in the manufacture of the machines and in providing for their maintenance. But the overall problem of adjusting the length of work hours—and the length of work life—to this new industrial revolution remains. One important aspect in these considerations will be a recognition of the fact that job opportunities for younger workers with growing families must be maintained.

But someone will say we cannot afford to lower the retirement age so that our older people will quit work and live off the rest of the country for the remainder of their lives. Now, first of all, let us be clear about the fact that lowering the

qualifying age in social security does not amount to enforced retirement at that age. Most of the men and women who are able to work, and who are allowed to continue on their jobs, will do so because retirement means a very greatly reduced income. In effect, therefore, my bill would simply shorten—or eliminate entirely—the tragic waiting period now imposed by the provision that benefits cannot be paid until age 65 has been reached.

Let me say, too, that new developments of the kind I have outlined have always brought out the prophets of gloom, who predict that more leisure time is a serious matter. In the early days of the 18th century they opposed the idea of bringing children out of factories and into schools on the ground that the children would thus be encouraged to develop habits of indolence. When the 8-hour day was first proposed, early in this century, there was widespread protest that people would have too much time to get into mischief. We are, indeed, just beginning to learn that more leisure time for more of our people can enrich our national life and create new opportunities for life, liberty, and the pursuit of happiness. This is another reason why I believe that the sooner we adjust to the inevitability of a shorter work life for most of us, the sooner we will understand all the implications of our destiny of abundance.

One further change in our work pattern should be noted, especially as it applies to the appropriate qualifying age for women. The fact that older women often survive their husbands had added to the problems of dependency, particularly as living costs have increased. The widow who has married and raised a family is at a special disadvantage in seeking employment not only because job opportunities for older women are limited but also because of her own lack of experience in a job. Moreover, she has other serious disadvantages. Her opportunity to accumulate retirement benefits is cut down; she lacks seniority protections and is often first to be released when reductions in force are put into effect; she must often accept jobs at low wages or salary levels; and she usually lacks training or recent job experience. Can we, therefore, conscientiously continue to extend the burden for the women of America? I think not, and I trust that this legislation which I have introduced today will relieve the grave economic plight that many thousands of our fine citizens are presently experiencing and most certainly will continue to experience unless direct action is taken by the Congress to alleviate this serious situation.

Pure Arrogance

EXTENSION OF REMARKS
OF
HON. J. T. RUTHERFORD
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. RUTHERFORD. Mr. Speaker, when President Eisenhower recently vetoed the bill to remove Federal controls on natural gas, there was an obvious lack of comment by persons favoring the principles of free enterprise relating to his actions.

For some reason, many individuals and the majority of the press in the United States attempted to place the blame upon his political advisers, and the persons who surround him.

I believe every man should be held personally accountable for his individual actions, and for that reason it is my firm contention the veto of this gas bill and the attendant responsibility should be placed squarely upon the President's doorstep.

The Odessa (Tex.) American, the daily newspaper in my hometown, recently printed an editorial entitled "Pure Arrogance," having to do with the veto of this measure by the President.

I would like to point out, Mr. Speaker, that this paper opposed me in the 1954 congressional campaign and that my thoughts do not always concur with those expressed editorially by the Odessa American and its sister papers in the Freedom Newspapers, Inc., chain.

But often we do find a common meeting ground, and we have in this instance. The American's editorial places the blame for this veto exactly where it should be placed—on the shoulders of the President of the United States. It would appear this stand by the American is one of rare courage among newspapers in this day and age, and that theirs is a vanishing breed of journalism—that of squarely calling the shots and letting the chips fall where they may.

I think all Americans should be fully aware of the principles involved in connection with the President's veto action. The editorial follows:

PURE ARROGANCE

In 1950, President Truman, a persistent foe of private enterprise, vetoed a measure which would have granted relief from price control to the gas industry. President Eisenhower was elected in 1952 on a platform which called for the elimination of price controls.

But in 1956, Mr. Eisenhower followed the Truman line and has vetoed a similar bill. We can say this in favor of Mr. Truman. He was at least consistent. We always knew where we stood with him. He talked socialism; and he practiced socialism.

A little more consistency from Mr. Eisenhower might not be out of place. Mr. Eisenhower talks for freedom of the individual and says he favors free enterprise. But by his actions, he gives the lie to his statements. In practice Mr. Eisenhower is frequently the Socialist.

The President's statement as reported by United Press is curious. After indicating that he had a body of evidence showing that some men will go to great efforts to secure their freedom from Government control he stated: "These include efforts that I deem to be so arrogant and so much in defiance of acceptable standards of propriety as to risk creating doubt among the American people concerning the integrity of governmental processes."

What is it that makes a man arrogant when all he is trying to do is to secure protection against an invasion of his property rights by coercive Government? This is the kind of language King George III used against the American colonists: He claimed that colonists were arrogant, stiffnecked, and rebellious, because they wanted to control their own lives and properties.

But history has found that George III was himself one of the most arrogant of rulers. Arrogance is scarcely to be found in the man who is fighting desperately against the tyranny of oppression. But arrogance is the constant companion of the ruler who places himself in the position of enjoying the divine right of kings and presumes that he will teach his subjects good manners.

Mr. Eisenhower might have given the matter a little more thought. He ought to have recognized that it was his job to judge the controversial gas measure on the basis of the principles involved in the measure, not upon the attitudes or the personalities of the men and women who backed the bill.

Of course some of the backers of the bill backed it with their money. This is scarcely unusual in American politics. Mr. Eisenhower might have recalled the number of men and women who put up money to back him when he was running for election in 1952.

It seems to us that his veto creates more doubt of the integrity of governmental processes than any alleged arrogance the President discerned in the manner of some of its backers. For here we have a man who lays great claim to integrity. He was elected on the basis of a promise to the American people to bring them relief from Government price controls.

Isn't his own integrity in question, and consequently the integrity of the administration he heads, when he presumes to teach the American people manners and betrays his own commitments for that purpose?

If we understand the meaning of arrogance, Mr. Eisenhower, rather than the proponents of the Fulbright bill, qualifies for the term.

The Facts Versus Governor Freeman

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 22, 1956

Mr. HIESTAND. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following statement:

Gov. Orville Freeman, of Minnesota, was guilty of the worst sort of demagoguery March 18 when he maintained on a national television show that there was "no (farm) surplus whatever" up to the time the Eisenhower administration went into office, that there was in fact a shortage of farm goods. He later commented to reporters that what the Republicans called farm surpluses at the end of the Truman administration were strategic reserves.

Governor Freeman, as the head of a great agricultural State should, and in all probability does, know better. He had only to go to the reports of the 1952 Agriculture Department to find the facts.

At the end of the 1952 marketing year the carryover of agricultural surplus goods included wheat, 562 million bushels; cotton, 5.6 million bales; corn, 769 million bushels.

The Truman administration, in spite of this, however, announced that there would be no acreage allotments in effect for 1953. This was an obvious trick to woo votes in the agricultural areas, but it also seriously hurt the farmers by continuing production of surpluses which now cost the Nation $2 billion a year.

This failure to improve controls for 1953 resulted in sharp increases in carryover stocks at the end of the 1953 marketing year which included: wheat, 902 million bushels; cotton, 9.7 million bales; corn, 920 million bushels.

With these facts, it is foolish and dishonest for anyone to say there was no carryover surplus when the Truman administration left office.

Governor Freeman's attempt to call these carryover commodities a strategic reserve is a feeble attempt to explain away the surpluses which have depressed farm prices. Every farmer knows that a 2 years' domestic food requirement of wheat is a surplus not a reserve. We do not, by changing the name of these surplus stocks, which are costing $1 million per day for storage alone, lessen their price impact on the market, or raise the price the farmer gets for his wheat.

It is obvious that Governor Freeman was trying to farm the farmer for political gain, but the farmers will not be fooled.

Financial Aid Given by Georgia to Negro Graduate Students

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 21, 1956

Mr. DAVIS of Georgia. Mr. Speaker, many people who are quick to find fault with Georgia's educational system are completely unacquainted with the generous financial assistance which that State has for many years given to Negro students desiring to attend institutions of higher learning.

As a matter of information, I insert herewith an article appearing in the March 14, 1956, issue of the Metropolitan Herald, Atlanta, Ga., on this subject.

NEW YORK UNIVERSITY, COLUMBIA TOP LIST—FINANCIAL AID GIVEN BY GEORGIA TO 1,791 NEGRO GRADUATE STUDENTS ATTENDING 66 UNIVERSITIES

Approximately 1,791 Negro students received financial aid from the State of Georgia for graduate work at 66 universities and colleges throughout the United States during the fiscal year ending June 30, 1955, according to the State auditor's annual report. Most popular out-of-State institution was New York University, where 269 Georgia Negro graduates studied with State aid; Columbia University was second with 202, and Tuskegee Institute third with 180 graduate students. Atlanta University led the list with 758 students receiving State assistance.

The list of universities and colleges with the total number of Georgia Negro students, who received State aid, are as follows:

Alabama State, 3; American University, 1; Atlanta University, 758; Art Institute of Chicago, 2; Boston University, 10; Butler, 2; University of Buffalo, 1.

Columbia 202, University of Chicago 9, University of Cincinnati 2, Cornell University 8, University of California 1, Colorado University 1, University of Connecticut 1, Catholic University 2, Central Institute of Deaf, 1.

Drexel Institute of Technology 1, Dillard 1, Duquesne 3, Detroit Institute of Technology 1, Fisk 5, Florida A and M 64, Howard University 32, Hampton Institute 7.

Harvard University 2, University of Indiana 22, University of Illinois 5, Iowa State College 6, Juilliard School of Music 1, Johns Hopkins University 1, University of Minnesota 5.

University of Michigan 15, Michigan State 3, Meharry Medical College 20, Middlebury 1, Mt. Sinai Hospital 1, New York University 269, North Carolina A. and T. College 7, North Carolina College 18.

Northwestern University 8, New England Conservatory 2, New Jersey State Teachers 1, Ohio State University 11, University of Pennsylvania 9, Pennsylvania State College 3, Purdue 3.

University of Pittsburgh 12, George Peabody College 1, Radcliffe 1, St. Elizabeths Hospital 1, Syracuse 3, South Carolina State College 6, South Carolina A. & M. 5.

Simmons 1, Southern Illinois College 1, Tuskegee 180, Temple 16, Tennessee A. & I. 8, Virginia State College 1, Wisconsin State College 1, University of Wisconsin 4, Winston-Salem Teachers College 1, and Xavier 4.

These students attend the university or college of their choice and receive State aid through the university system of Georgia's Board of Regents. Of course every graduate student must be accepted by the institution before State aid is granted. Most of these students are studying for their master of arts degrees, but a number of others are seeking their doctorate. Twenty are studying medicine at Meharry Medical College.

This policy of aiding Negro graduate students was established by the board of regents a number of years ago, before the United States Supreme Court's edict against segregated public schools.

Greece: The Cradle of Democracy

EXTENSION OF REMARKS
OF
HON. THADDEUS M. MACHROWICZ
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 21, 1956

Mr. MACHROWICZ. Mr. Speaker, under leave to extend my remarks, I wish to include the remarks of the Honorable G. Mennen Williams, Governor of Michigan, which were made at the National Biennial Banquet of the Order of Ahepa on March 19, 1956, in Washington, D. C.

The remarks follow:

We meet—6 days early, but that is no matter—to celebrate the independence of Greece. Greece, the mother of our civilization. Greece, it may be especially pertinent to point out at this pre-Easter time, the cradle of Christianity.

It is the debt which the whole world owes to Greece that I would like to discuss today.

Our debt to Greece is rooted, not only in the common earth of the interdependence of all men. It is rooted, in addition, in the far richer soil of Greece's unmatched contributions to mankind.

There is no need for me to list any of these contributions here, but permit me the privilege even so.

Greece, the cradle of democracy, the lover of freedom.

Greece, the cradle of philosophy.

Greece, the cradle of the drama.

Greece, the cradle of medicine, of literature, of mathematics, of astronomy, of oratory.

Greece, the cradle of our whole culture, its repository through the Dark Age.

It is on all of this, it seems to me, that we should dwell.

My own dues-paying membership in this great organization, AHEPA, can be of no earth-shaking consequence to anyone. It is, however, a matter of great pride to me. To me, the American Hellenic Education and Progressive Association is not merely another group in which men and women meet periodically to exchange pleasantries. It is a group which is interested in the more abundant life for all people and the preservation of freedom for all men.

As we come together to celebrate Greek independence, I am mindful that the blood of heroes surges in the heartbeat of my friends, heroes not only of classical Greece that maintained independence against the threats of multitudinous hordes from the East, but of Ypsilanti, who again fought the Eastern despot, of the heroes who defied the black Fascist with a resounding "No," and of the heroes who wrested their country back to independence from the godless Red.

These are my friends of whom I am so justly proud, with whom, incidentally, last night at a wedding I danced the Sirtos, Hasapiko, and the Tsamiko. Friends with whom I visited Athens and renewed acquaintance with their gracious Majesties King Paul and Queen Fredricka.

In R. W. Livingstone's The Legacy of Greece, it is written:

"Without Greece, we should have neither our religion nor our philosophy nor our science nor our literature nor our education nor our politics. We should be mere barbarians. We need not speculate how much we might ultimately have discovered for ourselves. Our civilization is a river which has received affluents from every side, but its headwaters are in Greece."

To this I subscribe.

Greece as the headwater of Christianity is a new concept to some. But the very name of Christ our Saviour is Greek, Christós, the anointed. Not only the New Testament, which, of course, was written in Greek, but for many centuries even the Old Testament was preserved only in Greek, the Septuagint.

Moreover, as you here so well know, for the first three centuries after Christ all Christian writings were in Greek. St. Paul, though born a Jew, belonged, of course, to the history of Greek culture. It was he, who, in his journeys to Greece, sowed the good seed which, at first, so quickly withered elsewhere. And, of course, much of the New Testament tells how the churches all over Greece flourished.

It was to the Athenians that Paul preached his great sermon, standing in the midst on Areopagos, after he had come upon an Athenian altar reared to the unknown god—a sermon which not only nurtured the seed he had planted, but which, today, if the world will but listen, could save the civilization which flows from the Greek headwater, but which is threatened now by those who profane the God who created them.

"Him declare I unto you," said Paul, "Him who hath made of one blood all nations of men for to dwell on all the face of the earth."

It was the brotherhood of man, which Paul preached. And this is the doctrine which has flowed to us from the Greek headwater. It is the doctrine without which men cannot be saved from themselves.

Your beloved Greece, over the centuries, has known many dreadful times. The present moment is not a happy one, and we cannot permit ourselves to become so lost in the glories that were that we ignore the travail that is.

Of Cyprus, for example, it must be said that the right of the people there to self-determination is a right which Americans, having asserted it for themselves, traditionally and quite properly, would extend to all people everywhere.

We must be mindful, of course, of Great Britain's and the whole free world's responsibilities in the eastern Mediterranean. We must not permit ourselves—and the Cypriote and Greek people have indicated they will not permit themselves—to be placed in a position where we or they would impede any of the other defenders of western democracy in the defense which all of us must be ready to mount at any moment against those who would sweep in and obliterate democracy.

Surely this problem could be and must be fairly met within the framework of freedom.

For this reason, I cannot view, and I am certain that you do not view, the deportation of Archbishop Makarios as in the best interests of the free world. I believe that America should stand firm in its support of the principle of national self-determination so eloquently voiced to the world under somewhat similar circumstances by Woodrow Wilson almost 40 years ago.

We cannot now, I agree, ignore this grave difficulty.

We cannot ignore either the continuing plight of 28,000 Greek children and 3,000 Greek soldiers abducted by the Communists and held prisoners behind the Iron Curtain. This is another of the concerns which is not that of Greece alone, but is a concern of all who treasure freedom and human dignity.

Other indignities have been heaped upon Greece which I shall not ignore either, even on this occasion. Not the least of these has been heaped on it, not by an oppressor at all, but by a friend—by some of our own countrymen over the veto of President Truman. I refer, of course, to the gross indignity so glaringly and so inexcusably written into our immigration laws, laws for whose revision I, for one, shall not cease to press until they have been rewritten.

I cannot believe that a law is a good law which would exclude from our shores a Sophocles, a Pericles, an Aristotle, a Demosthenes, or a Hippocrates on the basis of their national origin.

Nor is this all. I join you in your concern not only for continuing American aid to Greece on an adequate scale, but for making that aid more meaningful to all and not merely to some of the Greek people.

All of us are concerned, as we should be, with fair trade agreements, under which Greek commerce may flower. We are concerned with Greece's brave fight against communism. We shall be concerned until Greece once again stands in her fair place among nations.

We are concerned, as I said in the beginning, not merely for the reason that all men are interdependent, but for the reason that Greece is indeed the headwater of so much which we cherish.

From that headwater has flowed the doctrine that God hath made of one blood all nations of men who dwell on all the face of the earth.

How fitting it is, then, that the civilization which Greece cradled will be saved, if the Creator means it to be saved, only by the faith in God, which the Greek ancients cradled also.

The whole of civilization owes a great debt to your beloved Greece. Surely the moment cannot be indefinitely delayed, on which we will discharge our great obligations.

Zito Hellas. Zito America.

Shameful Korean Peace Conference

EXTENSION OF REMARKS
OF
HON. J. T. RUTHERFORD
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 21, 1956

Mr. RUTHERFORD. Mr. Speaker, one of the great black marks against the history of the United States of America is the manner in which the Korean Peace Conference was held.

Our Nation was too ready to agree to the terms of the Communist nations, and as a result made concessions which today do not bring us honor.

Many times the American press, in support of President Eisenhower both personally and politically, attempts to make a great patriot, Korean President Syngman Rhee, appear ungrateful to the United States Government and to our cause.

But many persons are not aware of the conditions in which we abandoned Korea; are not aware that our pledge to Syngman Rhee concerning a just peace affording future safety to South Korea has not been kept.

An editorial appearing in the Tuesday, February 28, 1956, edition of the Odessa (Tex.) American, entitled "Lest We Forget" contains a message which we should all read and remember.

The editorial follows:

Every now and then, if we search the back pages of our newspapers, we can find a brief report from the U. N. Commission in Korea to its "boss" in New York, solemnly detailing the continued violations of the Korean Truce terms by the Chinese Communists in North Korea. Presumably these official reports are received at U. N. headquarters, but since nothing ever is heard from them again, one can only assume that they either get filed away out of sight and mind, or dropped into the nearest wastebasket.

The American Government, and therefore its people too, also seem anxious to ignore and forget Korea. Any reference to Communist violations, or to our own unfulfilled promises, only arouses embarrassed silence or angry resentment. Korea is obviously something that both the United States and the U. N. would prefer to sweep under a rug somewhere—and forget. It merely irritates the conscience, and gets in the way of newer problems. So—the U. N. Commission over there goes on holding its futile meetings, and filing its futile reports, and accomplishing absolutely nothing at all. Nobody pays the slightest attention to them. Nobody suggests that these officials be relieved of this useless job, which the Communists have arrogantly refused to let them do—so one can only assume that these frustrated and ignored U. N. officials are expected to live out the remainder of their lives doing nothing in Korea—and maybe die and be buried there, for all anybody back home cares.

Going through some old clippings the other day, we came across some correspondence between Korean President Syngman Rhee and United States President Eisenhower, just before we crammed the Armistice down Rhee's throat. Most Americans have long since forgotten that our ally, South Korea, was not even allowed to participate in the Panmunjom negotiations, although the North Korea and Chinese aggressors were given a major voice in them. Rhee protested vainly against this unjust and immoral exclusion from any voice in deciding the fate of his innocent country, but nobody paid the slightest attention to his protest. He therefore wrote a pathetic letter to President Eisenhower, pleading with him not to sign any truce which would leave the Chinese invaders in possession of North Korea, and camped menacingly just above his 38th parallel—but this plea was also ignored, and the truce terms allowed the foreign invaders—900,000 strong—to keep this fruit of their illegal aggression.

We have reread President Eisenhower's reply to Rhee's plea, with an acute sense of guilt. Our President wrote: "The Republic of Korea has engaged all of its resources, human and material, in a struggle which will go down in history as one of the epic struggles of all time. You have dedicated your all without reservation to the principle that human liberty and national liberty must survive against Communist aggression which tramples upon human dignity and which replaces national sovereignty with a humiliating satellite status. The principles for which so many of your youth have died are principles which defend freemen and free nations everywhere." As to the "independence and unity" of Korea, Rhee was told "to have faith" in the United States. Our President assured him: "The unification of Korea is an end to which the United States is committed, not once but many times, through its World War II declarations and through its acceptance of the principles enunciated in reference to Korea by the United Nations * * * The United States will not renounce its efforts by all peaceful means to effect the unification of Korea. In the political conference which will follow the armistice that will be our central objective * * * A peaceful settlement will afford the best opportunity to bring you people the blessings of liberty."

So Rhee had no choice but to submit and "trust us." But the promised "political conference which will follow," during which our "central objective" was to be the unification of Korea, and which was to offer Rhee's "best opportunity" to gain liberty for his people—has been as nonexistent as Rhee predicted it would be. And now, of course, the rest of us just don't want to be reminded of this unfulfilled promise. If the question is even raised, somebody always answers angrily: "Well—what do you expect us to do? Go to war again?" Which again—is precisely what Rhee knew we would say.

But somehow, a few of us cannot simply forget the unjust and unfinished business in Korea, and the immoral armistice which was forced upon our innocent and prostrate friends there, without their consultation or consent, and over their anguished protest. Nor do we consider it out of order for Rhee and others to keep reminding us of our promises.

A Bill To Amend Title II of the Social Security Act

EXTENSION OF REMARKS
OF
HON. HERBERT ZELENKO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 21, 1956

Mr. ZELENKO. Mr. Speaker, I am introducing today a bill to amend title II of the Social Security Act to provide that where a husband and wife are both entitled to benefits under the act and one of them dies, the benefit of the survivor shall be equal to the total of the combined benefits to which they were entitled while both were living.

Many of our elderly married citizens who, in the twilight of their lives are subsisting on the bare minimums of social-security benefits, are entitled to this additional protection from an appreciative Government.

The death of a beloved one, after many years of living together, is sufficiently distressing in itself. Removing from the survivor a few dollars which has kept the home together, and leaves the survivor not only with an ache in the heart but with insufficient funds, in most cases, to continue to maintain the modest home is, to say the least, inequitable.

The additional cost to the Government will be negligible compared to the irreparable damage done to these citizens in this situation.

I shall most earnestly press for the early passage of this bill, statistics and actuarial compilations which may show monetary detriment to the Government notwithstanding.

Resolution of the Assembly of California Regarding Civil Rights Decision of the Supreme Court

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 21, 1956

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution from the Assembly of the State of California and submit it for the consideration of my colleagues:

"House Resolution 16

"Resolution urging Federal action to support the civil-rights decision of the Supreme Court of the United States

"(By Messrs. Hawkins, Rumford, Elliott, Kilpatrick, Maloney, Bee, Wilson, O'Connell, Porter, Munnell, Unruh, Henderson, Thomas, Miller, Beaver, Weinberger, McMillan, Masterson, Donald D. Doyle, McFall, Gaffney, Mrs. Sankary, Messrs. McCollister, Pattee, Rees, Ernest R. Geddes, Grant, Miss Donahoe, Messrs. Meyers, Nisbet, and Mrs. Davis)

"Whereas our great American democracy was founded upon the basic concepts of equality and liberty for all which principles are embodied in our Constitution and cherished as the supreme law of our land; and

"Whereas these doctrines of equality and freedom have been fountainheads of strength to our Nation which have borne us through our times of trial, nurtured us as a free people who have matured a mighty and thriving civilization, and brought us to an ascendancy among the nations of the earth; and

"Whereas there have been reliable reports of serious violations of these American democratic principles in certain of our sister States of the South which threaten the national security, the orderly processes of commerce among the several States, and the welfare of the Nation; and

"Whereas according to these reports of this critical situation, the constitutional rights of citizens to vote and engage in the pursuit of happiness, to travel, work, and attend school, are violated frequently and often with means of physical violence and terror; and

"Whereas these attacks based solely upon bigotry and race prejudice, have in some Southern States achieved the sanction of State governments in the form of nefarious attempts to defy the Supreme Court of the United States and to threaten nullification of the Constitution; and

"Where such unlawful acts and overt defiance of the Constitution and the power of the United States Supreme Court are of national concern, regardless of the States in which they occur, and demand the cognizance of all States, as well as the active attention of the Federal Government, because they are repugnant to every moral, religious, and political principle of our great American democracy and seriously weaken the United States in the international conflict between democracy and totalitarianism: Now, therefore, be it

"Resolved by the Assembly of the State of California, That it memorializes the executive branch and Congress of the United States to take the necessary action to support the recent decisions of the Supreme Court on civil rights, by the utilization of available agencies and facilities to maintain peace and order, protect the rights of citizens, and enforce the laws of our land; and be it further

"Resolved, That copies of this resolution be sent to the President and Vice President of the United States, Speaker of the House of Representatives, United States Department of Justice, and to each Senator and Representative of the State of California in the Congress of the United States."

Resolution read, as amended.

At 10:58 a. m., Hon. Thomas A. Maloney, speaker pro tempore of the assembly, presiding.

Messrs. Hansen, Bee, Pattee, Wilson, and Miss Donahoe demanded the previous question.

Demand for previous question sustained.

The question being on the adoption of the resolution, as amended.

Resolution adopted.

Farm Bill Deterioration

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. HIESTAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of March 20, 1956:

FARM BILL DETERIORATION

Even with the best will in the world and under the most favorable conditions possible, writing a sound bill dealing with the agricultural problem is an almost super-humanly difficult one. Two reasons in particular account for this. In the first place, what we usually refer to as the farm problem is actually a number of problems, each of which presents its own set of complexities, but all of which must be approached in the realization that no action can be taken on behalf of one commodity or one farm group without considering its possible repercussions on some other group or upon agriculture as a whole. In the second place, the farm issue, by its nature and by tradition, is one of the most highly surcharged politically of all legislative issues.

For the past week and a half we have been witnessing attempts to write a farm bill, not "under the most favorable conditions possible," but under the worst conceivable conditions. We have been witnessing an attempt to rewrite on the floor of the Senate what was a catch-all bill even when it emerged from the Committee on Agriculture. More than 50 votes had been taken before the Senate met yesterday, and about the same number remained to be taken. Even before last week came to an end this legislation had degenerated into an orgy of logrolling that was reminiscent of the days before the Hull trade agreements, when one protectionist group voted special tariff favors for another in return for reciprocal aid on the items in which it was interested.

Two provisions that compromise the heart of the administration's farm program—flexible price supports and the soil bank—still remain in this hodgepodge piece of legislation up to this point, though there is no real assurance that the first of these will survive when the measure goes to the House. But along with these a score of special dispensations have been written into it that add up to something approaching anarchy. So far has this legislation drifted from its moorings that the two principal questions being asked now are these: Will the President be able conscientiously to sign the measure when the Senate, the House and the Senate-House conferees have finished with it? And, on the assumption that sufficient sense should be restored to it to justify such aproval, will it be too late for the legislation to be of any substantial help to the farmer this year?

Retirement Act for Self-Employed

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Great Falls Tribune of Wednesday, March 14, 1956:

RETIREMENT ACT FOR SELF-EMPLOYED

For a number of years Congress has been debating whether self-employed persons should be provided a retirement act which would assist and encourage them to set up for themselves an old-age retirement fund. In steadily increasing number business and industrial firms have set up retirement pension plans which supplement or tie in with the social security retirement program. Quite generally, the employer's contribution to such funds is not subject to income tax, though the takeout from the employee's paycheck for the Government's social security retirement is not deductible on the income tax return.

There are no tax concession plans available, however, for about 10 million farmers, doctors, lawyers, dentists, engineers, accountants and other self-employed professional workers.

The Jenkins-Keogh bill, pending in Congress, offers a plan whereby self-employed persons can set aside a modest amount for their retirement, tax-free until time for retirement. When the money in the retirement fund is used it would be taxed, according to regulations applying to such income.

In his State of the Union message of January 1953 President Eisenhower urged Congress to enact such legislation. Last summer, however, Secretary of the Treasury Humphrey urged the House Ways and Means Committee to hold up action on the legislation for the time being. His chief objection seemed to be that it would represent an unequal tax cut.

In general, the Jenkins-Keogh bill provides that any individual who is not eligible to participate in a pension or profit-sharing plain may set aside each year an amount not to exceed 10 percent of his earned income, and in no case more than $7,500, to be paid into a retirement trust or insurance annuity. The amount thus set aside could be deducted from his taxable income. The proposed law places restrictions on the means by which these savings can be accumulated and provides that the taxpayer may not tap the fund until he is 65, except in case of total disability.

Such encouragement for the establishment of voluntary pension plans would help to stabilize our economy as well as benefit those participating.

The Manifesto

EXTENSION OF REMARKS
OF
HON. WILLIAM M. COLMER
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 21, 1956

Mr. COLMER. Mr. Speaker, under leave to extend my remarks, I submit the splendid analysis of our distinguished colleague, Congressman O. C. FISHER, of Texas, on the manifesto which was subscribed to by more than 100 Members of both branches of the Congress last week.

Coming as this does from a Member of Congress in whose congressional district the race issue as such is relatively unimportant because of the scarcity of Negroes in that part of the great Commonwealth of Texas I think it can be regarded as purely an objective statement. Mr. FISHER not only subscribed to the document himself, but was a member of the House Strategy Group which was responsible for its circulation among the Members of the House.

While I think that our colleague might have gone further in his analysis by pointing out the potent implications of the instrument, his analysis so far as it goes is a logical and sound analysis.

The statement follows:

Resistance to Federal encroachment upon powers and functions reserved by the States when the Constitution was written, was voiced last week by more than 100 Members of Congress. I joined with a half dozen of my Texas colleagues in this declaration of constitutional principles.

It's not just a matter of being for or against segregation. The issue is much more important and fundamental than that. It strikes at a trend which threatens by judicial fiat to gobble up many of the basic rights and powers clearly retained by the States when the Constitution was drafted in 1787.

The integration decision was made 22 months ago. The big question now is: Where will the Supreme Court strike next?

In scores of decisions covering a 100 years of judicial history the Supreme Court has repeatedly scoffed at the very idea that local school trustees—and individual States—did not have the right to separate students, in equally desirable facilities. That included the discretion to separate boys and girls, Negroes and whites, if local trustees thought best.

But a new Supreme Court comes along and wham!—away go the precedents of a 100 years, and for the first time in American history Uncle Sam rides herd on local school boards.

No, the matter of integration now becomes secondary in importance. The big question is: What does the future hold in store for America and for our Constitution? Where will the Supreme Court strike next?

The simple fact is that the original Constitution does not even mention education. Nor does the 14th amendment. The framers enumerated the powers the Federal Government would be allowed to exercise—spelled them out, 18 of them. Control over education was not one of them. And to clinch the meaning, article 10 of the Bill of Rights came along to provide: "The powers not granted to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States."

How could language be more definite, more positive, more understandable?

But now we find the Supreme Court in a completely new role of legislating; of not only going contrary to the wording of the Constitution but also going contrary to more than 50 prior court decisions.

Clearly, the Court now acts not on the written word or precedent but according to the Court's whims, philosophy or shade of political thinking.

What can we do about it? Well, the least we can do is to assert ourselves and hope that an aroused public opinion will make itself felt in opposing future encroachments. Playing ostrich will not suffice. The great Edmund Burke once said: "For evil to succeed it is only necessary for good men to do nothing."

Talk Instead of Farm Aid

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 21, 1956

Mr. ARENDS. Mr. Speaker, under leave to exend my remarks in the RECORD, I include the following editorial from the Washington Post and Times Herald of March 19, 1956:

TALK INSTEAD OF FARM AID

The Senate has multiplied words on a grand scale in an effort to demonstrate its concern for the welfare of the farmer, but the chief effect of its longwindedness will be to deprive many farmers of benefits this year. Today the Senate is expected to begin its fourth week of debate on the farm bill. While the talkathon continues, farmers in some States are planting their crops and many others have already laid their plans and prepared their ground so that that participation in the so-called soil bank will be difficult. The President on several occasions has pleaded for action, but the Senate continues its slow motion to the detriment of the farmer and the disadvantage of other major items on its legislative program.

If the Senate were improving the program of agricultural aid, there would be less ground for complaint. Instead, it is cluttering up the bill with extraneous provisions and unwise gimmicks. Take, for example, the reversion to the old parity formula. One of the real achievements of the Eisenhower administration was its modernization of the parity yardstick applied to farm prices. The old parity was based on the relationship between farm costs and the prices going back as far as 1909. The new parity reflects the pattern of price-cost relationships for the various commodities in the last 10 years. Drastic changes have taken place in agriculture since 1909. The logic of modernizing the parity concept is overwhelming, but the Senate voted to use both the old parity and the new, whichever is higher, thus abandoning all pretense to consistency for the sake of attracting farm votes.

Fortunately, the Senate has rejected the Agriculture Committee's effort to return to rigid price supports at 90 percent of parity, but it is still uncertain whether this deterrent to the production of surpluses will survive the conference with the House. The situation called for enactment of a relatively simple bill carrying out the soil-bank program. The Senate could have passed such a measure within a few days. Instead it has added hundreds of millions of dollars to the authorization, millions of words to the debate, and encouraged a Presidential veto. The least the Senate can now do is to trim the amendments yet to be considered to a minimum, further limit debate, and then work for a bill in conference that the President will be able to accept.

Israel and American Policy

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, March 21, 1956

Mr. LEHMAN. Mr. President, the Boston Daily Globe, an independent and influential newspaper with a wide circulation in and around Boston, Mass., published, on March 13, 1956, an editorial entitled "Israel and American Policy."

I consider this editorial so pertinent and so closely parallel to my own views on the subject, that I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ISRAEL AND AMERICAN POLICY

Dispatch of the aircraft carrier *Forrestal* to the Mediterranean follows, within a week, announcement that a battalion of United States Marines has been ordered to that dangerous sea "for training purposes."

Meantime, active preparations for war are speeding up at Cairo among Arab leaders; ground forces are being built up along the Egyptian approaches to the Republic of Israel; the inhabitants of that unhappy country are digging in desperately, resolved to sell their lives, if need be, as dearly as possible; Jordan, released from restraints which have kept her border inactive for 2 years, has renewed raids deep into Israeli territory; and the Egyptian Ambassador in Washington proclaims in a radio-TV broadcast that "Israel does not exist."

From every capital abroad come reports of increasing danger of an Arab-Israeli war, the stakes being the survival of the Republic of Israel. Simultaneously, the frenzy of Arab nationalism is being stoked by a stream of arms shipments, while an airtight ban is enforced against Israel's pleas for defensive weapons.

The United States is shipping tanks, planes, artillery, and other weapons to the Arabs, meantime postponing Israel's arms requests till the Greek Kalends. Canada last week banned a shipment of ammunition to Israel, while sending forth a shipment of warplanes to Egypt. Sweden announces heavy arms shipments to Egypt, but none to Israel.

What is our Nation's policy in this explosive dispute?

Both Secretary of State Dulles and President Eisenhower explain that one of our aims is "to prevent an arms race." Their statements certainly find verification in what our own and other governments are doing. This is, indeed, no arms race. It is a heavily loaded, one-sided, studied program of denying the means of self-defense to one country while building up armaments at the disposal of its self-proclaimed foes, whose announced determination is to obliterate it.

The President, last week at his press conference, further explained—again echoing ideas previously expressed by Mr. Dulles—

that Israel is small and has but 1,700,000 population, whereas her hostile Arab neighbors have 40 million. This fact, said Mr. Eisenhower, makes it futile to ship arms to Israel, because neither her size nor her small population would enable her to "absorb" sufficient arms to defend herself.

If relativity of size and population to the rights of survival of a free, independent democratic state is really the criterion underlying sound policy, some interesting revisions of history would seem in order. The Greeks at Marathon should have been directed by their rulers to disperse, because Persia was a huge country and Xerxes' armies numbered 2 million. The Continental Congress should never have assembled, because of the size and power of the British Empire.

Perhaps Mr. Dulles should even halt shipping arms to Pakistan, a small nation in comparison with the size, population and power of its Russian neighbor.

Week by week, parallels from the thirties rise wraithlike over this situation: Ethiopia, dismissed to tyranny because its succor against Mussolini might inconvenience the oil interests; Czechoslovakia, whose freedom was bartered to Hitler by "practical men." To what end?

If the United States and its British and French allies of the Tripartite agreement of 1951 are to rescue the moral foundations of any policy at all, they would do well to emerge at once from their artificial fog and reaffirm explicitly, their guaranties under that pact to place their full might behind the protection of the Arab-Israel frontiers against aggression by either side.

The hour grows late.

UNCLE DUDLEY.

Veterans' Benefits

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 21, 1956

Mr. CRAMER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include my statement before the Committee on Veterans' Affairs:

Mr. Chairman, in the introduction of my bill H. R. 5298 I have been prompted by certain discriminations that have been brought to my attention in benefits that inure to those who have served in the Armed Forces of our Nation.

My bill would extend the veterans' benefits that now exist for the wives and widows of male veterans to those dependent husbands and widowers of female veterans of our wars.

From the best estimates available, there is a present total of some 405,000 women who have served our Nation well. This figure includes 320,000 women who served in World War II; 60,000 who were called to service in the Korean crisis, and presently serving in the service; and some 25,000 women who served in World War I and in the Nursing Corps during the Spanish-American War.

I have said that these inequities that exist have been brought to my attention, and particular cases have arisen in my district that have brought out the importance of such legislation to me. There have been those whose husbands through accident or war incurred injury have been disabled to the point where they have become entirely dependent upon their spouse for support and core. In one instance, such care demanded the untiring and faithful attention of the woman at all times. In another case, a female veteran of the First World War had reached the age where she could no longer find gainful employment through which she had cared for an invalid husband over a period of many years. These are but examples.

In all, I am sure that the number of such cases throughout the Nation is not great. Their lack of great numbers, however, does not lessen our debt of fair and equal treatment to these veterans who often served in positions of responsibility equal to and beyond many male veterans. The humanity of this Nation and the heart of this Congress should not be found wanting when such inequities are found.

The provisions of this bill limit the benefits to those women whose husbands are in such condition, as determined by medical authority, that they may be wholly dependent upon the female veteran, or, if she be deceased, would be dependent upon her for support. The bill discontinues benefits should this widower remarry.

It is my hope that this committee will promptly see the justification that does now exist and by its action move to bring this bill to the floor of the House where final decision may be made to correct this existing inequity.

State of Small Business

EXTENSION OF REMARKS
OF
HON. STUART SYMINGTON
OF MISSOURI
IN THE SENATE OF THE UNITED STATES

Wednesday, March 21, 1956

Mr. SYMINGTON. Mr. President, many words have been spoken from this floor regarding the difficult situation in which some of our small and independent businessmen find themselves despite the current big boom.

In a recent letter to the editor in the Washington Post, Dr. Dewey Anderson, Director of the Public Affairs Institute of Washington, D. C., presented some interesting facts in regard to the plight of the small businessman.

Dr. Anderson has a long background as a student of small-business problems. He served originally as the executive secretary of the TNEC monopoly investigation before World War II, and later in the 79th Congress was staff director of the Senate Small Business Committee.

Mr. President, I ask unanimous consent that Dr. Anderson's letter on the state of small business as published in the Washington Post and Times Herald be inserted in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

STATE OF SMALL BUSINESS

In the President's state of the Union message reference is made to the fact that only farmers as a group have failed to share in the general prosperity. In discussing small business the message unequivocally asserts that small businessmen are prospering greatly.

I have before me figures just released by the Credit Clearing House of Dun & Bradstreet, Inc. They show that in 1955, 7 percent more apparel and accessory retailers failed than the year before, with a rise in total liabilities of 17 percent.

Apparel wholesalers failures in 1955 rose 35 percent and liabilities involved increased 36 percent over 1954.

It is difficult for me to understand on what the state of the Union message's conclusions regarding the state of small business are based. For example, the opportunities for entry of new firms has probably never been so difficult as in the past 3 years. In fact, since the end of 1952 the number of business firms has remained stable at 4.2 million. Growth was comparatively steady during the years 1949 to 1952 when we had a net gain of about 50,000 firms annually or 200,000 during the 4-year period.

Examination of the data on manufacturing corporations earnings compiled by the FTC and SEC also yields results for small companies which contradict the conclusions of the state of the Union message. For example, firms with less than $250,000 in assets had net profits after taxes of $175 million during the first 6 months of 1952.

In the first half of 1955 the same asset size class had net profits after taxes of only $60 million. The smallest size class of manufacturing corporations earned 66 percent less net profits after taxes than a similar group of small manufacturers did 3 years earlier.

Internal funds available for reinvestment and expansion tell a similar story. For manufacturing firms in the under $250,000 asset class such funds totaled $267 million in the first half of 1952 and only $162 million in the first half of 1955, a drop of 40 percent.

In 1953 and again in 1955 many a small-business man has gone to the financing well and found it dry. For most of the past 3 years the small-business man has found credit extremely costly or else unavailable at any price. He has been led to believe that if he is turned away by his local bank he stands a better chance of getting a loan from the Small Business Administration. As against an average of 11,000 inquiries received per month from small-business men concerning credit assistance the SBA approved 395 direct loans to small business after 2 years of operations.

The unhappy fact is that contrary to the rosy picture portrayed in the state of the Union message, the growth of small business has been retarded by a combination of heavy taxation and a scarcity of credit. This has happened during a period of widespread economic expansion in which small business has not shared.

DEWEY ANDERSON,
Executive Director, Public Affairs Institute.
WASHINGTON.

The President's Mutual Security Message

EXTENSION OF REMARKS
OF
HON. H. ALEXANDER SMITH
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES

Wednesday, March 21, 1956

Mr. SMITH of New Jersey. Mr. President, yesterday, an excellent editorial appeared in the Washington Evening Star on the subject of the President's mutual security message.

The editorial discusses the size of the foreign aid request and concludes that the program should be supported.

I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BIG BILL FOR FOREIGN AID

President Eisenhower's appeal for $4.86 billion for foreign economic and military aid in fiscal 1957 will be closely scrutinized by Congress—and this is as it should be. For this is a lot of money, and a variety of doubts are entertained by some officials concerning the long-range usefulness of some aspects of the program. We venture the guess, however, that Congress, after it has heard the whole story, will conclude that it is desirable to give the President substantially what he has asked for.

By far the greater part of this money—$4.13 billion—is for military assistance and defense support. Presumably there is not going to be serious opposition in Congress to these items, for Communist military power remains at a very high level, and, as the President correctly said, it "still casts an ominous shadow over the world." It is probable that the same conclusion applies to the special funds sought by the President, including the requested item of $100 million to be used as and where need arises in the Middle East and Africa. Recent events in that part of the world leave little room for debate over the desirability of setting up such a fund.

The congressional fireworks, to the extent that they materialize, will be directed toward the items for economic aid, and, in particular, the President's request for authority to make commitments up to 10 years in length to assist backward countries, with the proviso that not more than $100 million could be used for this purpose in any 1 year.

Those who will oppose some or all of the items in these categories are sincere, and their views should be fully explored. But at the same time we should not let relatively unimportant considerations divert us from the main stream of the reasons which support the President's position. Our foreign aid programs, over the past 9 years, have been successful. One measure of this is in the progress which the free nations have made with our assistance. Another, though not susceptible of precise measurement, is to be found in a rational estimate of what might have happened to our friends and allies if we had been unwilling to act.

The growing strength of the free world has put a stop, for the time being at least, to the advance of communism by the use of force and threats of force. They are now exploring the possibilities of economic and political penetration. No one would contend that our foreign aid programs have been solely responsible for this change of direction and emphasis by the Russians and their satellities. But neither would any rational person deny that these programs have played an important part in this turn of events. In our judgment, the time has not yet come when we can afford to relax and rest on our laurels.

The Importance of the Middle East Oil Resource

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, March 21, 1956

Mr. WILEY. Mr. President, I think that people who observe the world situation today realize, as I have pointed out heretofore, the critical importance of petroleum resources in the Middle East.

Oil is one of the most significant factors affecting the security of the United States and other NATO powers in that crucial geographic area. It is by no means the only such security factor, but it is a very important one which we can never lose sight of or discount.

We know that the Kremlin, if it does not change its spots, would like to get that oil. We know they would like to get oil from the Near East and from Africa, where there are tremendous supplies of basic materials. If the Kremlin could get the oil and the other basic materials, it would serve to make Russia the strongest nation on earth.

Sometimes, some critics may foolishly assert or imply that the only people involved with this petroleum resource are the large American oil companies sharing holdings in the area. That, of course, is nonsense. The world has become shrunken by man's ingenuity. Unless we become cognizant of how small the earth has become, we shall find ourselves in a seriously jeopardized position.

An Englishman, a few days ago, traveled 1,128 miles in 1 hour. So we are not very far away from Europe or Asia. In fact, every nation, because of man's ingenuity, is now next to every other nation's backyard.

Critics may assert that the only reason for our United States interest in the Middle East is the interest in the oil companies themselves.

That definitely is not the case. Obviously, American companies do have important financial interests there. That is their perfect right, for they have heavily invested, in accordance with the sound private enterprise system of profit and loss and risk-taking. No other system could have so miraculously developed oil resources there, in Venezuela, or anywhere else. No other system would have returned so much to the lands owning this precious resource.

Obviously, too, oil company stockholders and bondholders are directly affected. But both the companies, their investors, and all thinking Americans' concern is basically with the petroleum resource of the free world, as such, and keeping it out of Red hands.

The companies' and investors' interests must be protected, and will be protected, as should any other private interest.

Simultaneously, the parallel legitimate interests of the Government of the United States and the people of the United States in protecting this crucial resource, and in keeping it from falling into the hands of the Soviet enemy, that overall interest must and will be protected.

I was pleased to see in Monday's issue of the New York Journal-American an important article by the financial editor, Mr. Leslie Gould, stressing this vital point. I believe Mr. Gould's significant comments, based on a new, scholarly petroleum study, will be of interest to my colleagues, and I ask unanimous consent that the text of his remarks be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MIDDLE EAST OIL CRITICAL FACTOR IN UNITED STATES FUTURE

(By Leslie Gould)

What is happening in the Middle East is of vital concern to the United States. Without this area, the United States and the rest of the free world will be short of adequate petroleum production.

Currently, the Middle East accounts for 22.6 percent of the free world's petroleum production, and 10 years from now is counted on to supply a third of this to meet a demand that will have more than doubled.

If this area should be lost to the free world—its production shifted to the other side of the Iron Curtain—the United States would be hampered—maybe disastrously so—in its economic development. It would be even more crippling for other countries outside the Iron Curtain.

In 10 years, the United States will have to import about a fourth of its petroleum needs. The Middle East is the one place that can meet a major share of this need.

The only offset to this can be a more rapid development of nuclear power.

These figures on current demand and the needs 10 short years ahead for petroleum are based on an excellent study of the world petroleum situation by Joseph E. Pogue, petroleum consultant to, and Kenneth E. Hill, a vice president of the Chase Manhattan Bank. Pogue is recognized as one of the world's leading authorities on petroleum.

MIDDLE EAST IS BALANCING FACTOR

Pogue and Hill point out that the Middle East is the palancing factor in equating world supply and demand. Their estimates point to a larger increase there than elsewhere to meet the growing demand for petroleum in the years just ahead.

Current United States demand is placed at 8,745,000 barrels a day, against a production of 7,795,000 barrels. By 1960 the United States demand is expected to reach 10,575,000 barrels against a domestic production of 8,870,000 barrels, and by 1965—only 10 years away—demand is figured at 13 million barrels a day against production of 9,870,000 barrels. So, the United States will have to import a lot more petroleum products.

In the Western Hemisphere, outside of the United States, production is currently about 380,000 barrels, with 4,200,000 barrels estimated for 1960 and 5,250,000 barrels by 1965. This includes Canada, Mexico, and Venezuela.

MUST BE KEPT IN FREE WORLD

In the Middle East current production is 3,240,000 barrels and this is expected to reach 4,830,000 barrels daily by 1960 and 8,280,000 barrels by 1965. This is more than enough to meet American needs, as well as help balance the demand in other free nations.

It is just a simple matter of arithmetic. The Middle East must be kept in the free world. It must not fall into Russian hands or under Russian domination. Hence, the importance of peace in that area. This also explains why the Russians are making sweet talk to the United States and with the other side of the mouth fomenting war in the Middle East.

Jefferson-Jackson Day Address by Adlai E. Stevenson

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, March 21, 1956

Mr. LEHMAN. Mr. President, several weeks ago, Gov. Adlai Stevenson spoke at the Jefferson-Jackson Day dinner held in Hartford, Conn.

He spoke of many matters of urgent national interest, including civil rights,

immigration policy, and measures which are necessary to meet the threat of floods and other natural disasters.

I ask unanimous consent that Governor Stevenson's remarks on that occasion, which was February 25, be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TEXT OF ADDRESS BY ADLAI E. STEVENSON AT THE JEFFERSON-JACKSON DAY DINNER IN HARTFORD, CONN., FEBRUARY 25, 1956

We meet tonight to do honor and to pay expensive homage to two great Democrats.

I have sometimes wondered whether Thomas Jefferson and Andrew Jackcon would wholly approve of hundred-dollar dinners being held in their names by the party of the common man. They were more concerned with whether the common man could afford any dinner at all.

We can say tonight—across a century and a half—that the one thing that is worth today what it was in 1800 and in 1828 is the Democratic doctrine of Thomas Jefferson and Andrew Jackson.

This has been for the Democratic Party 150 years of continued growth and there are few States in the Nation where we have come so far—or indeed had so far to come—as here in Connecticut. Thomas Jefferson and Andrew Jackson had to make their way without the help of a Connecticut majority and I remember that when I came here as a schoolboy 40 years ago Connecticut was still in that strange interlude which has gone down in history as the dark age of Roraback. Woodrow Wilson was reelected President that fall but here in Connecticut a schoolboy, already a passionate Democrat, found himself a long lonely way from home when the talk turned to politics.

I understand things got even worse after I left—until by 1927 there was only one lone Democrat left in the Connecticut senate.

What a change there has been in these past 25 or 30 years. I suppose it was due to the spread of education. But a succession of brilliant Democratic governors certainly helped to revive the Connecticut democracy. Yale loaned us one of its distinguished faculty to start the revival: I mean, of course, Wilbur Cross.

In our own day we have seen two great Democratic governors here in Connecticut, one served his country brilliantly—in Hartford, in Washington, and abroad: the man who gave the people of India a sense of the true nature and spirit of America—Chester Bowles. The other has added to outstanding service in Congress 2 years of vigorous and enlightened leadership in this State and by his record has won the Nation's admiration—Gov. Abe Ribicoff.

I salute, too, in personal friendship and in the great respect we all share for him, a man who served in the Senate with great distinction—a leader of real political courage—Bill Benton.

Nor could I come to Connecticut without saying a sober word in memory of a man whose untimely death deprived the Nation of rare vision and wisdom—your late Senator and my valued friend, Brien McMahon.

Only yesterday I read again in his prophetic warning to the Senate 6 years ago this very month these words: "Let me warn with all the solemnity at my command that building hydrogen bombs does not promise positive security for the United States. Do not for a moment overlook that Soviet Russia broke our atomic-bomb monopoly sooner than we had expected and she would break any hydrogen-bomb monopoly we enjoyed with equal or greater speed."

And so she has. What's more, although we have appropriated probably $130 billion since the advent of this administration to counter the Communist challenge, the Soviet Union is forging ahead of us in weapons of many kinds and worst of all she has now challenged us to an economic duel for the great uncommitted peoples of the earth. Yet at a time when our rigid, inflexible position is the most precarious it has been in many years, what do we hear from our faltering Government? Warnings like Brien McMahon's?

No. We hear the Secretary of State boasting of his "brinksmanship"—the art of bringing us to the edge of the nuclear abyss.

We hear the President declare that he hasn't read what his Secretary of State says.

We hear the director of the economic-assistance program tell us the Reds are on the run and there is no need to reexamine our foreign-aid policies.

We hear from the Vice President that a Republican peace has settled on the earth and all is well.

And from Washington, Gettysburg, and southern plantations we hear the President expressing renewed confidence in his team.

To put it politely I must say that the head coach seems to have missed some plays and not be too sure of the score.

And that is but one reason why next November Connecticut will again be where it belongs—in the Democratic column. And I have every confidence the Nation will be there, too, and that TOM DODD, of Connecticut, won't be all alone in the Congress next year, either.

There are other reasons for this confidence. One is that we all know what the Democratic Party stands for. The other is that nobody knows today what the Republican Party stands for. We are, to be sure, promised that any minute now the Republicans will get the signal—in one syllable—that will tell them whether this year's Republican model is to be opportunist or reactionary, liberal or conservative, isolationist or internationalist. The Republican Party no longer represents ideals and principles of public policy but individuals. Not long ago Taft was the Republican prototype. Now it's Eisenhower or Adams or somebody. Tomorrow—well, who knows? As the Chicago Tribune said, the Republican Party needs the services of a psychiatrist to discover its own identity.

A lot of men have had to make up their minds if they were going to run for President. But this is the first time that one of the great parties had to wait until it has a candidate to find out where it stands.

It may be true that a leopard can't change its spots, but any such statement about the old GOP elephant would be all wrong. Yet it is no laughing matter that one of our great parties no longer has any continuity of philosophy.

As for the Democratic Party, it stands today exactly where it was through a century and a half—on the rock of principle that Jefferson put in the imperishable phrase: "Equal rights for all; special privilege for none."

We sometimes forget, when phrases become familiar, all that they mean. And their real meaning must be in terms of the problems each generation faces.

They mean, in terms of the most crucial issue within this beloved land of ours today, equal rights for all—regardless of race and color.

America is nothing unless it stands for equal treatment for all citizens under the law and freedom is unfinished business until all citizens may vote and live and go to school and work without encountering in their daily lives barriers which we reject in our law, our conscience, and our religion.

The Supreme Court has reaffirmed this essential doctrine of democracy in the school desegregation cases. These decisions speak clearly the law and the conscience of this land. But they recognize that a time for transition and compliance is necessary—time for the adjustments that have to be made. But they do not recognize or permit repudiation or rejection of these decisions of the Court and of the people.

And I would say a word directly tonight about the reemergence in a few States of the doctrine called interposition—the doctrine that a State has a right to interpose its power against the decision of the properly constituted authority as to the law of the land.

I recall here in all gravity what one of the men we honor—Andrew Jackson—said in his Proclamation of December 10, 1832: "I consider then," Jackson wrote, "The power to annul a law of the United States assumed by one State incompatible with the existence of the Union, contradicted expressly by the letter of the Constitution, unauthorized by its spirit, inconsistent with every principle on which it was founded, and destructive of the great object for which it was formed." That was essential Democratic doctrine—and American doctrine—120 years ago. It is essential Democratic—and American—doctrine today.

We are as a people at the very dawn of one of our brightest days—the day of full democracy in our public schools. This may well be one of the greatest accomplishments of our generation. Not as Democrat but as American, not as candidate but as citizen, I pray to God that this day may not be marred nor this achievement poisoned by the bitterness of any who would assert views, no matter how deeply felt, against the laws of the land and of humanity.

"Equal rights for all" must mean just that—the right of everybody to live according to the laws and freedoms which are the meaning of America and of modern Christian civilization.

The other half of Jefferson's phrase was "special privilege for none." This too has meaning in today's terms.

"Special privilege" means in plain language what the present administration tried so hard to do last year for Mr. Dixon and Mr. Yates.

"Special privilege" means tax reductions which gave 10 times as much benefit to corporations and the well-to-do as to those who earn less than $5,000.

When thousands of conscientious loyal Government employees are kicked around and called "security risks" while a Cabinet officer who quit because he used public office to promote his private business is awarded the medal of freedom—that's "special privilege."

When small-business firms get less and less of the Government's buying and more and more goes to the great corporations whose managers now manage the Government—that's special privilege.

And when boards and commissions are stacked with representatives of the very interests they are supposed to regulate; when the people's last great dam site goes to a private power company for only partial development; when the food processors get big windfalls but not the farmers; when a raid on public timber is disguised as a mining claim—that's special privilege, too.

Yes, and when 295 businessmen dine at the White House and only 9 farmers, 8 labor leaders, and 6 churchmen—that's special preference.

One of the issues to be decided this year is whether we want a Government which represents primarily a single interest—big business—or one which represents all the interests and all the people. And the Democratic position is very plain. It is today as it was in the time of Jefferson and of Jackson: That there shall be special privilege for none, that the purpose of Government is to serve not the welfare of the few but only what the Founding Fathers called the general welfare.

I know it may sound trite to talk after 150 years about the general welfare and about equal rights and about special privilege. But I am constrained to say that I would

rather be trite with Jefferson and Jackson than up to date with the slick slogans like "Dynamic conservatism," "Walking on the brink but staying out of the drink," and "Marching bravely down the middle of the road."

Part of the trouble with these phrases is that though they were designed to fool the customers they now confuse the salesmen. So one day the administration is for tax reduction but the next day it isn't; one day it denounces as socialism what the next day it proclaims as Republican policy; one day it is against book burning but the next day it doesn't mind; one day it is against a new farm program but the next day it is for it and then it blames all the farmers' troubles on the workers; one day it is for intervention in Indochina, the next day it isn't, and then finally we are told it was for it all the time. Yes, and one day it is for shipping tanks to the Arabs, the next day it isn't, but the next day it is.

But let us not make the mistake of underestimating those who are presently engaged in substituting salesmanship for Government in this country and who look upon us not as owners of the Government but as customers. The blunt fact is that there is in Washington today an administration which is willing to take advantage of the fact that support and opinion can be fabricated for any person and any cause. They are willing and they are trying to do just that—to manipulate public opinion—to sell us as customers rather than inform us as owners.

They understand fully that everybody is tired of the old political models, that people want freedom and progress and Government in the interests of all.

That is why the Republican Party has recently put on its liberal face—the one that always seems so bright and sunny because it is used only once every 4 years.

That is why the Republican Party after 3 years of do-nothing Government has suddenly come up with what it bills as a liberal program in this election year.

That is why we are seeing once more today the quadrennial quick-change act—that grand old practice known in the trade as "keeping up with the New Deal."

Well it isn't going to work. It is the custom of the Secretary of State to remind the Russians that the American people are interested not in words but in deeds. And we are. But we are interested, I may add, not in the words but in the deeds of our own Government too—of Republicans no less than of Russians.

I have finally figured out what the Republican orators mean by what they call "moderate progressivism." All they mean is: "Don't just do something. Stand there."

Tonight I want to talk about two questions which I think illustrate this gap between Republican words and Republican deeds and the price we are paying for a Government that talks so much and does so little.

One of these issues of particular importance here in Connecticut, but of national concern too, was brought home with tragic force last summer and fall.

The total flood damage in the Nation last year amounted to over a billion dollars—a cold figure which takes no account of the accompanying and incalculable loss of life. In Connecticut alone I know almost a 100 people died in the floods. More than a thousand families were made homeless, and 20 times that number suffered flood damage amounting to hundreds of millions of dollars. And I am reminded to mention it here because I have just come from the West and I've seen at firsthand something of the vast devastation in the Sacramento River Valley of California.

I do not suggest that a different attitude in Washington would abolish hurricanes and floods. But I do suggest that a different attitude in Washington could materially reduce the grievous losses from floods. And I suggest that if we had in Washington the kind of leadership in protection against future floods that the Governor of this State showed in fighting those of 1955 then we would start getting some place—this time before it is again too late.

Of words—about floods and their awfulness—there have been plenty from Washington and elsewhere; and conferences and airplane inspections by high officials over the flooded areas and promises of multimillion dollar relief funds and loan programs.

But of deeds—of steps actually taken to meet this problem—there have been mighty few.

The Eisenhower administration has actually weakened our defenses against floods.

It cut appropriations for the Weather Bureau—so that flood areas had less warning.

The Republican 83d Congress cut flood-control construction funds to less than half those recommended by President Truman in his last budget.

In 1954 the Republican Congress made available a paltry $80,000 for flood-control projects in New England.

In 1955 the Republican administration cut its expenditures for flood control and multipurpose projects 25 percent below what they had been under the Truman administration.

General Fleming, head of the Army Engineering Corps in New England, testifying recently before the Senate, specified one locality after another in New England where if authorized flood-control projects had been built three-fourths of the damage to life and property would have been avoided.

And on the subject of disaster insurance the Civil Defense Administrator recently told a congressional committee that private insurance companies must accept the challenge to provide inexpensive disaster insurance. But this is just what the insurance companies have again and again told us is impossible.

We have had enough of Republican words. Here again, it is time for Democratic deeds.

I know of the recommendations the New England Governors have made. I know that the States must pull the laboring oar, with the Federal program being very carefully worked out behind what the States do.

But I believe the people of this country are ready and willing to back up, through the Federal Government, flood control and river development projects to meet this problem. And I saw drastically unfold beneath me in California the story of what happens when the great waterways are dammed and harnessed for power, storage, and irrigation and what can happen when they are not.

The flood-control program proposed by the New England Governors last September seemed wholly reasonable. It doesn't seem fair that New England has received so small a percentage of what Federal expenditures there have been for flood control—approximately one-fifteenth of your share by reasonable measure. And I note that over the past 25 years the Federal Government has returned to Connecticut a smaller share of what this State has contributed in Federal taxes than to any other State except one.

It is plain, too, that the Federal Government will have to assume a large measure of responsibility if we are to have any effective flood insurance. And I should think the program on this front should be expanded to the extent, at least, indicated in the bill submitted by New England Senators KENNEDY, GREEN, and PASTORE, and several other Democrats, including Senator LEHMAN, of New York.

I think, too, that there should be considered a program of tax allowances to plants in the textile and other New England industries for what they spend to avert flood damage.

I repeat that I think we are ready and willing as a Nation to do—not to talk, but to do—what is so plainly called for in meeting the problems brought into tragic focus by last year's devastating floods.

Another front where for 3 years now we have heard the words but seen no deeds is immigration.

Few problems of our age have more poignancy than the plight of hundreds of thousands of Europeans driven from their homes by totalitarian oppression. And no nation in the world owes more to immigrants than our own, or has a nobler tradition of welcome for men and women in search of freedom. In the 1952 campaign General Eisenhower spoke feelingly of the need for change in our immigration laws. The administration has also expressed verbal concern for the refugees and escapees of Europe, many of whom have relatives and friends in the United States. But so far as action goes, the record is complete failure to deal with either the refugee crisis or the more permanent issues of immigration policy.

Even when Congress recognized the refugee emergency by passing the Refugee Relief Act of 1953, it was sabotaged so effectively that for nearly a year not a single refugee or escapee entered this country under this act. Finally, the assistant to the Secretary of State, a lifelong Republican, Edward Corsi, resigned in protest.

Despite all the words and messages, the basic immigration law remains exactly as it was—a law, incidentally, which the Republican Vice President supported with his vote in Congress.

The system of national origins quotas is still in effect. In a city like Hartford, in a State like Connecticut, where Americans of many diverse origins live harmoniously together, the idea that immigrants who arrive in the later years are somehow inferior or make worse Americans than the earlier immigrants is preposterous on the face of it.

Yet, after 3 years, the President has taken no action, made no recommendation, regarding this central difficulty.

And in his recent message, though it represented the usual election-year improvement, the only proposal about the national origins quota system was that it be restudied.

Has the President forgotten the exhaustive and conscientious report of the Commission on Immigration and Naturalization submitted on January 1, 1953? Or is his recommendation for further study only an excuse for not doing anything at all?

There are other things that need to be done, and without delay, to make this country's immigration and refugee policies an expression not of the worst but of the best in American life.

The immigration quota should, as the President now agrees, be based on a recent census figure, and should not be reduced, in my judgment, as the President's formula proposes.

And I should think that the people who have come to us under the humane Displaced Persons Act should not be charged to national quotas and thus exhaust them, as in the case of Greece and Poland, for 50 years to come.

There should be a single agency of Government wtih full authority over immigration and naturalization.

The decision of a customs official with respect to the admission of a sack of beans can be appealed, but not his decision concerning the admission of an American citizen's mother or wife. That needs attention.

There is no basic disagreement about the wisdom of these changes, but only about whether these things are really worth doing. We say that they are.

This will be, not only with respect to such things as flood control and immigration policy, but across a broad front of problems,

a central issue in the election campaign we now enter: the issue of whether things are worth doing for the Nation, or just worth talking about for the votes.

I speak tonight then for principles as old as the Democratic Party, and that's about as old as the Republic—for equal rights for all, for special privileges for none, for the old-fashioned proposition that the proper business of Government is to serve the general welfare.

And I speak for Government that says what it means, that means what it says, that doesn't try to fool the people, that doesn't believe that words are a substitute for deeds.

This is the kind of Government the Democratic Party has sought to provide since the days of Jefferson and Jackson. The object of Government is to unite us all—Democrats and Republicans and Independents—behind the aims and aspirations we cherish together as Americans. This is an age of rapid growth in our land. It must also be an age of expanding opportunity, not just for the insiders, but for all Americans.

This challenge cannot be met by slick salesmanship. It can be met only by honesty and devotion on the part of our leaders, and hard work and responsibility on the part of our people. In a spirit of unity and dedication, we can move forward together, joined by our memory of the past and our faith in the future, determined to make our country the land of hope and the land of opportunity for our children and for all who love freedom throughout the world.

Address of Stanley J. Tracy, Former Assistant Director, Federal Bureau of Investigation, at the American Federation of Government Employees, AFL–CIO, National Civil Service Week Banquet, Philadelphia, Pa., January 20, 1956

EXTENSION OF REMARKS

OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 21, 1956

Mr. WOLVERTON. Mr. Speaker, on the evening of January 20, 1956, the American Federation of Government Employees, AFL–CIO, held a banquet in the city of Philadelphia to commemorate the 73d anniversary of the signing of the Civil Service Act.

The banquest was largely attended and had the benefit of several brilliant addresses emphasizing the rights and privileges of Government employees by reason of membership in the American Federation of Government Employees, AFL–CIO, and the provisions of the Civil Service Act.

Among the several worthwhile addresses that were delivered during the evening was one by Stanley J. Tracy, former Assistant Director, Federal Bureau of Investigation. It was outstanding in the fundamental principles that were emphasized, the logical conclusions expressed and the valuable contribution by reason thereof it made to the cause of labor. In accordance with the consent granted to me, I consider it a privilege to insert this memorable speech as a part of my remarks. It reads as follows:

President Gibley, National Vice President Smith, distinguished guests, friends, and members of the American Federation of Government Employees, as we gather here this evening in Philadelphia to commemorate the 73d anniversary of the signing of the Civil Service Act we might pause to recall two impressive facts of American history. Philosophers through the ages had formulated lofty ideals of government—but it was here in Philadelphia, at the writing of our Constitution, that these ideals, for the first time in history, were gathered together and comprehensively embodied in the basic law of a nation—wtih the aim of protecting it by every known device against despotism. Also the first recorded meeting in the United States of worker and employer representatives for discussion of labor needs was also here in 1799, between the Philadelphia shoemakers and their employers.

Even before the writing of the Declaration of Independence, employees had joined together in benevolent societies, primarily to provide members and their families with financial assistance in the event of serious illness, debt, or death of the wage earner. In all walks of life mankind has encountered problems of mutual concern and has sought to devise ways and means for their solution.

The American Federation of Labor since its founding in 1886, has constantly championed the philosophy that gradual improvement of the economic condition of the worker was the only useful course of action to follow and that collective bargaining was the chief tool to use.

The A. F. of L. has had bitter opposition to this philosophy from the beginning. The Socialist Labor Party, founded in 1874, a product of the American section of Marx and Engels' International Workingman's Association or first international, attempted in 1895 to form a rival body to the A. F. of L. In 1905 the Industrial Workers of the World was formed and was pledged to the abolition of the wage system. Both failed as contenders to the A. F. of L. But the opposition to free labor continues as the Communist conspiracy, champions of slave labor, grinds out its vicious propaganda the length and breadth of what remains of a free world.

The morning of December 5, 1955, saw the opening of the First Constitutional Convention of the American Federation of Labor and Congress of Industrial Organizations. Another milestone had been passed in the march of American free labor. It was not without reason that morning, that Cardinal Spellman prayed:

"Take away from our deliberations the temper of selfishness and shield us from the lust for power which forges chains on free men's arms and drenches the earth with blood and tears. * * * And may the foe of liberty and free labor who plots to pull down the sceptre of God and dominate our country, degrade the dignity of man, and ensnare and enslave the toilers of the world by luring, lying slogans, know that we pierce the veil of his hypocrisy and scorn his insidious deceitful promises."

The American labor movement has contributed, under our brotherhood-of-man concept of government, to a standard of living which had never been attained before at any stage of human history and we must assume it to be a definitive achievement of our civilization that we hope some day it will be shared by all nations. The acquisition of material values should not and does not retard the acquisition of spiritual and ethical values. American workers are not like any other workers anywhere. They rather are workers on which all the other workers of the world have set their eyes.

Universal peace must rest on a healthy understanding among individuals of all races, of all creeds, and of all nations. This is more enduring than political considerations. Persons must be judged by their individual acts and not through prejudice of the group to which they may belong. If an individual is not worthy of respect, that individual alone should suffer the consequences of misconduct. It was so in the war-crimes trials in Germany and Japan and will be so when those responsible for the Korean atrocities are finally brought to the bar of justice.

We in the labor movement can be thankful for such leaders as President George Meany, David Beck, and David Dubinsky who recognize that human values measure the intrinsic value of man. Recently President Meany stated that he was disturbed that many United States liberals are stone silent about the loss of human rights in Soviet-dominated countries. He added that too many people here and abroad still believe communism is a "progressive system—extreme liberalism temporarily making bad mistakes," while actually "communism represents darkest reaction. It is an antisocial system in which there are imbedded some of the worst features of savagery, slavery, feudalism, and life-sapping exploitation."

Every generation are executors of the inheritance left to them. In addition they have the responsibility of their own original authentic achievement. The A. F. of L., the AFGE, and our Nation are great precisely to the extent to which its leaders are great. No nation has ever been able to set a lasting imprint on history by the sole weight of its material values. There is something no organization can give, and this is what man has within himself, either because nature has favored him or because the society in which he has been raised has conferred on him those values that the organization cannot give.

The American Bill of Rights is a greater historical document than the Magna Carta for, by the 10th amendment to our Constitution, "the powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

It is a sad commentary that we need a security program in America. Yet the sorry parade of fifth-amendment pleaders continues, which is quite a change from an earlier America, where a man's word was better than his bond and a man's convictions were worth openly fighting for with truth, pride, and courage, regardless of the consequences and however unpopular his cause might be.

Members of the AFGE have a great and vitally important individual and collective responsibility. Government employees comprise the greatest single safeguard in America for the preservation of our form of government. It is the Federal employee who operates the machinery of government and helps determine the course of the ship of state. Let us remember that they are all members or potential members of the AFGE. It is our responsibility to look after their welfare and well-being.

Collectively we must merit the confidence and respect of our fellow worker if we are to bring him into our membership and individually that is our specific job—to bring him into membership.

MR. SMITH GOES TO WASHINGTON

Government is complicated big business and no longer can results be attained by attacking policy decisions after they are established. AFGE must take part in formulating personnel policies, as was done recently when National Vice Presidents John Smith and Tim Kelly attended a luncheon meeting of the naval shipyard's Metal Trades Council in New York at which plans were made for top-level conferences at the Pentagon in Washington. Seven Congressmen were present at this meeting and additional Congressmen joined with John J. Smith in a number of conferences with the Secretary of the Navy, the Secretary of the Army, and others at the Pentagon. Your J. J. Smith has so many contacts in high places in Washington that many new AFGE

members in Washington believed for a time that he was a Member of Congress.

There are many goals yet to be attained and lodge officers and national vice presidents must participate in a joint effort. It is the responsibility of the national president to keep all national vice presidents constantly and fully informed on all matters in order that there can be a joining of effort—nationwide in scope. This is a "We" organization and the national vice presidents' responsibilities are to fully inform and confer with officers of lodges and district departments. It is the individual member's responsibility to "get another member." We all have a job to do in a "We" organization.

The national president's further responsibility is to carry out the mandates of the convention and of the national executive council and to report at stated intervals the results of his stewardship. Only by combined, coordinated, and cooperative effort can we muster the strength and gain the wisdom that spells success. Here are some of the goals that need the work of many hands:

1. An adequate Federal salary schedule and travel allowance.
2. A retirement act that meets basic living expenses.
3. Revision of working hours. Thirty years ago the hours were 39 a week.
4. Commanding officers of our Armed Forces should not be required to replace civilians with Armed Forces personnel.
5. Hospital and medical insurance plans with employee representation.
6. Nonpolicy employees must have assurance of continuity of employment.
7. Politics must be removed from the career civil service. As a step in this direction I recommend a single administrator for the Civil Service Commission to be appointed for a term of 15 years. The General Accounting Office in the legislative branch has proven it will work.
8. The Civil Service Commission should have broader authority to insure uniformity of personnel policies in all agencies.
9. The Civil Service Commission should be authorized to establish an independent appeals court available to veterans and nonveterans alike.
10. A more practical performance rating procedure should be adopted.

In our membership we have experts in every area of Federal personnel activity. We should utilize their talents and lead the way intelligently and aggressively to constantly better personnel management. Members of Congress like to receive objective, well thought out and practical suggestions. This is the positive approach of cooperation with the legislative branch and its results in sound legislation.

The AFGE should organize a public relations program on a national scale in order that officials and employees alike in all branches of Government will understand the AFGE, its patriotism, its aims and ideals of public service.

The editor of the Government Standard might well visit each district once each year to confer with lodge officers and national vice presidents in order that he might know first hand the type of published information needed in the field.

A plan should be drawn up for the uniform participation of all national vice presidents and district officers in the legislative field. This would afford the national office proper entree and introductions, particularly to newly elected officials in the legislative and executive branches of Government.

The Secretary of Labor might well be consulted with reference to having a unit of that Department specialize in Federal employee statistics as is now done for labor in private industry. Reliable statistics would be of assistance to the Congress in considering Federal employee legislation.

The proceedings of the national convention and all meetings of the national executive council should be furnished promptly to all officers and copies made available to any member on request. An informed membership is an alert and interested membership.

A plan should be devised whereby younger members of the AFGE are encouraged and assisted in competing for scholarships in various educational programs for advanced study and training at selected universities. Other scholarship sources should also be developed.

These are just a few of the things the AFGE might do to advance its leadership in the field of Federal employment. We must interest ourselves in the multiple activities of our employer if we are to prove worthy of our hire. The Government's business is our business and we want our employer to be permanently successful.

Let us not forget to express our individual and colliective appreciation to those Members of Congress and other Federal officials who have and are devoting of their time and energy in our behalf.

In conclusion may I observe that the founders of our country gave us the greatest philosophy and the greatest form of government ever brought forth on this earth by the heart and mind of man.

Great unions, as great nations, are born out of principle, become strong through the application of integrity and die at the hands of moral decay. A great organization is one which never compromises principles, tolerates corruption or fails to recognize that a government is something to live under, never to live on.

With granite in our character, iron in our backbone and the courage of our convictions we can prove by our future work in the AFGE that it merits the right to represent Government employees.

Golden Anniversary of the Food, Drug, and Cosmetic Laws

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 21, 1956

Mr. MILLER of Nebraska. Mr. Speaker, as a Member of Congress and as a medical doctor, I have been long interested in the Federal food, drug, and cosmetic laws. It was my privilege to serve during the 81st Congress as a member of the special committee on these problems under an outstanding chairman, Hon. JAMES J. DELANEY, of New York.

Following the exhaustive studies made by this committee, I introduced a bill dealing with the use of pesticide chemicals on raw agricultural commodities. This bill subsequently became Public Law 518 of the 83d Congress.

This year marked the 50th anniversary of the passage of the first Food and Drug Act by a Congress of the United States. The Honorable George P. Larrick, Commissioner of Food and Drugs, Department of Health, Education, and Welfare, gave the following address at the spring meeting of National Agricultural Chemicals Association, commemorating this occasion.

His remarks are as follows:

FIFTY YEARS OF FEDERAL FOOD, DRUG, AND COSMETIC LAWS

(By George P. Larrick, Commissioner of Food and Drugs, Department of Health, Education, and Welfare)

President Allen and members and guests of the National Agricultural Chemicals Association, it is a real pleasure to be with you at this meeting to discuss the Federal food, drug, and cosmetic laws. We always welcome the opportunity of meeting with your association.

As you know, 1956 is the 50th anniversary of the passage of the original Food and Drugs Act. It is appropriate to look back at the events leading to passage of that law, and compare them with the situation today.

The Food and Drugs Act of 1906 had a long gestation period. In 1878 the first record of the study of food adulteration by the Chemical Division appeared in an annual report of the United States Commissioner of Agriculture. When Dr. Harvey W. Wiley became Chief of this Chemical Division in 1883, the first problem with which he was confronted was an extensive study of food adulteration. His Division began to issue from time to time a series of bulletins giving the results of its scientific and research work. Of this series the best known was bulletin 13 on foods and food adulterants. It covered 1,417 pages and was issued in 10 parts from 1887 to 1902. It dealt with the chemical composition, technology, and adulteration of dairy products, spices, beer and wines, lard, baking powder, sugar, molasses, confections, honey, tea, coffee, cocoa, canned vegetables, cereals, and preserved meats.

In 1889 the small organization that had worked under the direction of the Commissioner of Agriculture became the United States Department of Agriculture. The first appropriation for the new Department included a provision "to enable the Secretary of Agriculture to extend and continue the investigation of the adulteration of foods, drugs, and liquors."

These investigations exposed a variety of abuses in the production of foods and drugs. The sensational revelations were incorporated in reports to Congress and were dealt with at length in testimony before congressional committees. A number of prominent writers for newspapers and for magazines of national circulation gave wide publicity to the charges. Dr. Wiley readily acquired the support of the General Federation of Women's Clubs and of many individual women's organizations.

The history of this period records somewhat inconspicuously the fact that "most of the well-established concerns manufacturing foods, drugs, and drinks favored such regulatory legislation."

Dr. Wiley and his supporters were successful in their efforts and the first national food and drug law became a reality on June 30, 1906.

When we look back to 1906 we see retail grocery stores whose stocks were largely restricted to simple staple products such as flour, sugar, and shortening. The foods sold in those days were principally ingredients with which the housewife could prepare the finished foods for her family. Branded merchandise was in its infancy, and food packaging as we know it today was unheard of.

The state of progress in the drug field was on a similar plane. Castor oil, Epsom salts, herb laxatives, and tonics—simple medications—were the rule of the day. Neither the food nor the drug supply moved extensively in interstate commerce. The housewife prepared most of her own foods in the kitchen and most of the medicines were compounded by the corner apothecary.

Those who pioneered in the factory production of foods and drugs were confronted with ruinous competition. The public was suspicious of factory-made products. If these honest men who sought to develop an interstate business in foods and drugs of high

quality were to succeed they would need protection against unscrupulous competitors. At the commemorative meeting celebrating the 40th anniversary of the Federal Food and Drugs Act, Mr. Clarence Francis, then president of General Foods Corp., said:

"Fortunately for the food processing industry and for the country, the act gave honest manufacturers the protection they needed from unfair competition at the very time when a great new opportunity—and a great obligation—opened before them. The national economy gaining momentum with every year since the industrial revolution, was rounding the corner into the machine age and into a new period of plenty and a standard of living such as the world had never seen. In this process, food manufacturing had a vital part to play. It has done so and, in analyzing the reasons therefore, we find that possibly the most impressive single factor was this: The conditions created by the passage of the act invited responsible businessmen to put real money into the food business. Life suddenly became more precarious than ever for the fly-by-night payroll dodger whose practice it had been to make a quick cleanup in a single pack and vanish into thin air.

"Freed from the competition of such as these, substantial businessmen staked their capital on the proposition that the consumer wanted, and would reward, known quality. They put their resources behind their guaranties and, as we have already remarked, they submitted readily to a law that was meant for the Medes as well as the Persians. And the food industry began to grow."

The same general comment could be made with respect to the drug industry.

It is interesting to trace the progress of the most recent Federal legislation in the food field—the Miller pesticide chemicals amendment. When numerous new agricultural chemicals came on the American market after World War II, consumers became disturbed. They wondered whether the food supply was being harmed by use of the new products. The spray residue hearings in 1950 and the hearings of the Select Committee to Investigate the Use of Chemicals in Food Products (the Delaney committee) which began the same year, revealed genuine alarm by some people about the safety of food.

For this and other reasons new legislation was sponsored by Congressman A. L. MILLER and others to simplify the procedure for setting safe tolerances for pesticides in or on crops.

Your Association showed outstanding foresight and regard for the public in supporting the legislation which became law. The statesmanship of Lea Hitchner and the help of his staff deserve recognition. Your action and the complete cooperation we have had from you since 1954 have earned for the agricultural chemicals industry a place of respect and confidence. And like the food industry five decades ago, you should find the provisions of the new law an aid to material growth of the more progressive companies.

After the pesticide chemicals amendment became law, cooperation continued. Agriculture, industry, and Government have worked together to the benefit of all consumers in the United States. Several foreign countries keep informed of the United States tolerances for pesticide residues, and progress under the United States law has been studied by a special committee of the World Health Organization at a conference to consider methods of dealing with chemical additives to foods.

Our joint support of the new legislation, progress of the past few years, and the cooperation now existing between all who are affected by tolerances for agricultural poisons, give promise of continued progress.

It gives me real satisfaction, as we celebrate this golden anniversary of Federal food laws in the United States, to be able to cite the passage of the Miller pesticide chemicals amendment and its administration to date as a classic example of the type of harmonious Government-industry relationship that all of us seek. I thank you for the assistance you have given, and request your continued help.

The progress in this field is monumental. In July 1954 there were no formal tolerances for spray residues in food; no one knew what arrangements would be made for administering the Miller amendment in a practical manner; some members of your industry were concerned about the effect of the new law on their operations, and a few months later, in the spring of 1955, there was alarm in agricultural circles because of a fear that the law would become fully effective in the middle of a growing season and cause serious disruption of established farming practices.

Today almost 100 pesticide chemicals have found their place under the Miller amendment for one or more uses through the establishment of tolerances or exemptions. The administrative procedures established under the amendment have proved workable. Most of the pesticide manufacturers have adapted to the law. The farmers have had one growing season since the amendment became law. And here in Florida the second growing season is drawing to a close. The transition to full application of the new law is coming about smoothly.

Of course there are problems ahead—major ones. But they are no more difficult of solution than some which already have been handled. And the same cooperative approach that has served so well in the past will permit them to be solved to the best interest of all who are affected.

The philosophy of the Food and Drug Administration is to try to bring about cooperatively with industry the maximum voluntary compliance with the law. To this end the doors of the Food and Drug Administration are open to any representatives of industry who wish to discuss with us what the law's requirements are.

We welcome opportunities to work with committees from industry to try to solve problems of any sort having a bearing on the requirements of the law. In other words we wish to exhaust all proper means of trying to prevent law violations. The statute provides in no uncertain terms for the steps which are to be taken when voluntary compliance does not occur and instead substantial violations result. Under these latter circumstances it is our obligation to proceed vigorously to utilize the sanctions provided for in the statute.

At this time I would like particularly to thank your association for its cooperation in advising growers about the new law and in pointing out to them the importance of using pesticides carefully according to the label directions.

We have already had a few instances where growers have used the wrong pesticides or have applied pesticides too close to the time of harvest. Inevitably there will be other such incidents. We can hope that none of them will result in harm to the public, but we must also do everything we can to impress upon growers the fact that pesticides should never be used carelessly.

Your association, and the individual members of the industry, are aware of our mutual problem in grower education. To teach growers to use pesticides safely, as well as effectively, is in many respects our biggest job. It is by all odds the best way to protect the public in this field. We have a good law, but we also share this problem which no law can solve, and which can only be solved by education. It is my hope that NACA can expand its activities in this area, and that the Food and Drug Administration and other agencies in Government can cooperate to the full extent that is needed to do this educational job. Like other types of safety education, this needs to be set up as a permanent and continuous activity.

The Food and Drug Administration is an organization of about 1,000 people. Somewhat more than half are assigned to our 16 field laboratories scattered throughout the United States. The field staff consists of inspectors, chemists, and other laboratory scientists, together with a normal complement of clerks and laboratory helpers. The Washington staff is made up of a wide variety of scientists including medical officers, bacteriologists, chemists, microscopists, pharmacologists, veterinarians, and of course our administrative staff.

During the past year a distinguished representative citizens' committee was appointed by the Secretary, with funds specifically provided by Congress, to make a study of the responsibilities of the Food and Drug Administration as contrasted with their facilities. This committee pointed out the very substantial increase that has occurred in our population. They referred to the repeated amendments to the statute which place more responsibility on the FDA. They were impressed with the increased complexity of the processes and procedures used in the production of foods, drugs, and cosmetics. Because of these and other additions to the job expected of the FDA, the committee recommended that the facilities of the Food and Drug Administration be expanded some threefold to fourfold over the next 5 to 10 years, and that a new laboratory building should house the entire Washington staff of the FDA. The Secretary of the Department has spoken favorably of the report of the Citizens Advisory Committee.

The first step in following these recommendations was when a proposed increase in appropriations of some $1 million for the FDA was included in the President's budget for next year.

It seems to us that the problems in the production of foods, drugs, and cosmetics in the next decade will be more challenging than those of the past. We forecast that continued improvement in our food and drug supply will be achieved by the progressive utilization of scientific discoveries. The possibilities are limitless. Nucleonics will be used in producing foods and drugs. The discovery of many new substances can be expected to improve our food supply. The use of new, superior insecticides, herbicides, and a variety of other products will be helpful in growing foods. The utilization of hormones, antibiotics, and other new substances to improve the production of meat and poultry and to retain natural flavors at the peak of freshness are all promising.

The problems which the use of these substances will create, however, are many and serious. Before these advantages can properly be taken to the public we must know what, if any, changes are produced. We must be sure that the new product is safe for consumption by the young and the old, the weak and the strong, the sick and the well. Because of your pioneering in the pesticide chemicals field, you are well aware of the kinds of facts needed in judging the safety of new products.

The law does not now require, except in the case of pesticides, that new substances be tested for safety before they are added to food. Some 10 bills are now pending in the Congress to deal with the pretesting of so-called chemical additives to food. It is our view that this field is one which richly deserves the study of Congress and the enactment of legislation to solve the problems.

Similar problems will be raised by the accelerated discovery of powerful but useful new drugs. Fortunately the new drug section of the present Federal Food, Drug, and

Cosmetic Act provides an adequate instrument to deal with the safety of new therapeutic agents.

In conclusion, we in the Food and Drug Administration seek the help and cooperation of industry. We believe that if problems of mutual interest are fully disclosed and the facts are laid on the table for joint consideration, for the most part men of good intentions can arrive at common conclusions without difficulty.

Labor Unions and the Antitrust Laws

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 15, 1956

Mr. CELLER. Mr. Speaker, the antitrust laws of the United States prevent big corporations, big trusts, or big combinations of industrial management from restraining or controlling trade in their respective fields. In short, monopolies are against the law so far as big business is concerned. Labor is not a commodity like ships or shoes or sealing wax, and the antitrust laws were never intended to be applicable to organized labor. If the antitrust laws wert made applicable to labor unions, they would be destroyed and the American economy would suffer. Unions have brought to the Nation immense benefits in the form of higher wages and increased purchasing power, without which there could not be the huge demand for automobiles, refrigerators, radio and television sets, and the innumerable modern conveniences which have added so much richness to our lives.

The right of men to join together in a union to enable them to bargain collectively for wages and working conditions was finally established despite the bitterness of opposition from those who sought to gain added profits from a constant supply of cheap labor to keep wages depressed, to hire and fire at whim, to eliminate the expense of good working conditions, to extend the working day as served their purpose.

There were those who maintained that the labor union actually was a combination in restraint of trade. With the passage of the historic Sherman antitrust law in 1890 which declared, among other things:

> Every contract, combination in the form of trust or otherwise, or conspiracy, in restraint of trade or commerce among the several States, or with foreign nations, is hereby declared to be illegal.

The cry arose that this provision applied with equal force to the labor union. A series of cases in the courts disclosed the danger that unless Congress acted specifically, this interpretation would prevail and destroy forever the principle of free collective bargaining.

In 1914 the Congress did act specifically, and in the provisions of the Clayton Act Congress declared:

> The labor of a human being is not a commodity or article of commerce * * * nothing contained in the antitrust laws shall be construed to forbid the existence and operation of labor organizations * * * or to forbid or restrain individual members of such organizations from lawfully carrying out the legitimate objects thereof; nor shall such organizations * * * be held or construed to be illegal combinations or conspiracies in restraint of trade, under the antitrust laws.

I direct your attention to the words in the act "the legitimate objects."

When the acts of a labor union in conspiracy with management result in price fixing or when labor unions enter into combines to restrict production, allocate areas or fix prices, then the labor union is no more immune than any other combination acting to restrain competition. If labor unions conspire with employer groups toward monopolistic ends, they are not immune to the antitrust laws.

To bring labor unions within the purview of the antitrust laws as such would be to strike a blow against the collective strength of the workingman. There might appear to be a greater advantage to management in lower wages, fewer holidays, no fringe benefits, and so forth, but in the long run the economy of the country would suffer bitterly, which, in turn, would reflect management's problem.

The high standard of living brought about through the process of collective bargaining has resulted in increased consumer purchase, increased demands for goods, increased production, and in the sum total of economic gain both for management and for labor.

I repeat the language of the act:

> The labor of a human being is not a commodity or article of commerce.

More than that, I say that the human being himself is not a commodity or an article of commerce.

The Fantastic Farm Mess

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 21, 1956

Mrs. ST. GEORGE. Mr. Speaker, now that the other body has passed a farm bill that is apparently incomprehensible to the very people that it is supposed to benefit, and to the people who wrote it, an article appearing in the April Reader's Digest seems much to the point.

It proves once again that there is no all-embracing answer to the farm problem; that the solution for the Midwest will work hardships in the Northeast; that what helps the Northwest may well harm the South. Indeed, as the heading on the article says: "A grim example of what Government can do to you when it tries to do something for you. Will Congress help dig the farmer out?"

Of course, Mr. John Strohm is the former associate editor of Country Gentleman and president of the American Agricultural Editor's Association. He is now editor-in-chief of Robin Press and editor of the Ford Almanac.

The article follows:

THE FANTASTIC FARM MESS
(By John Strohm)

In a period of general prosperity the United States farmer is being squeezed between falling prices and rising costs. What is going to be done about it?

The story behind the story goes like this:

In a costly but futile attempt to support farm prices near the levels guaranteed to farmers during World War II, the United States Government has succeeded only in amassing an $8 billion hoard of food and fiber which can't be eaten, used, sold, or given away. And as surpluses have skyrocketed, farm prices have tobogganed. It's a grim example of what Government can do to you while trying to do something for you.

The rent bill alone for storing this vast hoard of wheat, corn, beans, tobacco, peanuts, butter, and some two dozen other products comes to $1 million (of taxpayers' money) per day. And each new day new room must be found to store the inflowing avalanche. This past year growers produced more cotton, more peanuts, more rice—more of a dozen commodities—than we'll use. The Government will shell out an estimated $1 billion for 6½ million bales of cotton grown last year—1 crop, 1 year. The Commodity Credit Corporation, with more than $11 billion already in use, has authority to tap the United States Treasury for up to $12 billion. That exceeds the total national farm income last year.

This is the picture as Congress again wrestles with the "farm problem." But it is more than a farm problem. Agriculture means food, shelter, and clothing for you and your family. A liberal supply of these in the future at reasonable prices depends upon a stable, independent, and efficient agriculture. However, the longer farmers are bogged down in the present surplus mess, the more dependent and inefficient they become.

You can't blame the farmers—they were led into this morass by the high, rigid price supports of the war years, and it's only fair they should have help getting out. Capital investment per farm worker is twice as high as it was 10 years ago; cash expenses have doubled. Yet during this period the farmer's share of the consumer's dollar has dropped from 52 cents to only 39 cents.

There are many false ideas about the farm program—slogans repeated so often that they're accepted as economic truths, as well as political gospel. Here are some which have helped spawn much of our unwise farm legislation:

Farm price laws rescued farmers from the depression. False. Farm prices did not start moving up until 1940, when war and inflation caused all prices to go up. Farm prices averaged only 78 percent of parity [1] in 1939—6 years after lawmakers had thrown every law and panacea in the book at the farm problem.

The farm problem can be cured by a simple farm law. False. What does a New York dairyman have in common with a Florida citrus grower? A Montana wheat raiser with a Virginia orchardist? A 15,000-acre Wyoming rancher with a 15-acre Long Island gardner? Their markets, operations, tools, and price problems are all different. Trying to write a "farm law" to solve the "farm problem" is as silly as treating all of the sick with one health serum.

Farm legislation is written as though our 4,800,000 farm families were as alike as peas in a pod. The startling fact is that 60 percent of them are not really commercial farmers at all, for they produce only 10 percent

[1] Parity, a formula conceived in Congress, is defined by law as a fair price, based on what a farmer has to sell and the cost of what he has to buy.

of the Nation's food and fiber. There are 2,682,000 farms which sell less than $2,500 worth of stuff per year.

About half of these small-scale farmers have jobs in town. The other half would be better off if they, too, had off-the-farm jobs, because they're underemployed. Their farms are too small or too poor to make a decent living. It would be fairer to call these families a social problem instead of a farm problem. But you'll never hear that in an election year.

Fix a farmer's price high, and you've fixed his income high. Not necessarily. It's not the margin per item alone that determines a farmer's profit; it's also how much he sells. You don't put more money in a farmer's pocket by boosting his price per bushel if you also cut his acreage. And any price-support program to be effective must include acreage controls.

Government can restrict production by restricting acreage. It hasn't worked that way. Last year cotton-acreage allotments were based on a national quota of 10 million bales, yet farmers produced more than 14 million bales. Although burley tobacco acreage has been cut by 35 percent, we still have enough barley for 3 years' smoking—so another 15 percent acreage cut is slated this year. Farmers are not dummies. They take their poorest land out of production, fertilize heavily on the remainder, aim to grow more on less.

The above fallacies, glibly argued as facts, have encouraged errors in farm legislation.

Here are some of the things wrong with our farm laws—wrong for farmers, wrong for taxpayers, wrong for the country. Let's hope they're not repeated in new legislation.

Farmers have been encouraged to produce for storage instead of for stomachs. The revered Iowa farm publication, Wallaces' Farmer, bluntly advised readers last November: "In most sections, free corn (sold on the open market) is going to be 35 or 40 cents under the loan price. It's a good year to seal your corn (i. e., turn it over to the Government at the support price) if you can. Buy what you need outside."

An Iowa farmer told a New York Times reporter that he raised corn, oats, and soybeans, turned the crops over to the Government at harvest and then left for Florida for the winter. "I have no idea how to get rid of surpluses. All I do is raise the crops and count on those fellows to get rid of them."

Don't blame the farmers. Price is a powerful incentive.

Unrealistic price supports are losing the American farmer markets at home and abroad. When butter was priced by law at 80 cents a pound, the housewife bought more oleomargarine. Today we use 9.2 pounds of butter per capita, compared with 16.7 pounds in 1940. So in 15 years the dairyman has lost nearly half his butter market.

Cottongrowers have been heavy losers. They have lost ground at home to synthetics; and when we held a price umbrella over the world market, the price zoomed and countries like Mexico and Brazil found it profitable to step up cotton-growing. In the last 2 years United States farmers have reduced cotton acreage by 7.8 million acres, while foreign acreage has jumped 6.8 million acres. Informed Government observers say that in 2 more years we shall have lost all of our foreign market for cotton.

The farm program has played favorites. The six farm commodities called basic by the Government—corn, wheat, cotton, tobacco, rice, peanuts—account for only 24 percent of the national farm income. Hog and cattle raisers alone produce 29 percent of the total farm income, but these men get no price supports, and for the most part don't want them. Poultrymen produce 9 percent of the farm income; fruit and vegetable farmers, 9 percent. Neither group gets or wants price supports.

Iowa gets only 12 percent of its farm income from the so-called basic commodities. New York State gets only 2 percent. North Carolina gets 67 percent.

The fact is that the prices of 55 percent of all farm products are not artificially supported. It's a crazy, hit-or-miss program. If you raise beef cattle, you get no subsidy. If you raise peanuts or rice, you do. Are peanuts and rice "basic" farm commodities? Well, the politicians think they help round up southern vote support.

The farm program has disrupted regular farming patterns and brought inefficiency. High price supports, plus restricted acreage in the Corn Belt, encouraged New York State farmers to grow corn. This lost the Illinois producers some of his market, and didn't particularly help the New Yorker because New York just isn't "corn country."

Senator ANDREW F. SCHOEPPEL of Kansas estimates that high price supports on wheat, and accompanying controls, have lost Kansas farmers "the right to produce 5 million acres of wheat; their opportunity and ability to produce wheat have been cut one-third."

Today total corn production has gone down in the Corn Belt, wheat production has gone down in the Wheat Belt, cotton production in the old Cotton Belt. Dispersing production around the country has forced farmers to raise a dab of this and a dab of that—when it is far more efficient to specialize.

So the farm program designed to whip the farm problem has hurt some farmers while trying to help others.

Farm legislation has been geared to the past. Our eating habits have changed. We eat far less starchy foods, far more meat, eggs, dairy products, fruits and vegetables than we used to. For example, wheat consumption per capita has dropped from 310 pounds (per year) to 173 pounds in the last 45 years. Yet our farm program encourages raising wheat—to sell to the Government.

Control threatens loss of traditional freedoms. Here's an actual timetable of how controls breed controls: In 1953 the Government said, "We'll pay you $2.21 per bushel for wheat." The farmer responded by planting more wheat.

In 1954 the Government had so much wheat it was forced to say, "We'll continue to pay you 90 percent of parity [which by now came to $2.24], but we must cut your acreage." So the farmer fertilized heavily and grew as much wheat on, say, 60 acres as he had on 80.

The Government wheat pile grew and grew. So the Government was forced to level its sights on all farmers who had been exceeding their acreage allotments: "We'll have to fine you $1.12 a bushel on all wheat produced on acres above your quota."

In 1955 the Government cut the price from $2.24 to $2.08, and this year it proposes to go even further: to cut the price to $1.81, and to pay the farmer so much per acre for not growing wheat.

In the meantime, the Government has been forced to arrest or sue more than 1,500 farmers who grew wheat on their own farms in excess of their quotas, even though they fed it to their livestock.

"Big Government" has gotten bigger. Six years ago I went into rich De Kalb County, Ill., and counted 180 full- or part-time Government employees getting Federal tax money to do some job for the farmers. That was just 1 of 3,000 counties in the United States.

Today, far more bureaucratic manpower is needed. There is more land to measure, there are more loans to process, more bins to inspect, more records to keep, more violators to prosecute.

There's inevitable graft, waste, corruption and inefficiency. Five men rented 100 surplus Army buildings from the Government at Camp Crowder, Mo., for $1,000 a month. They then rented the space to the Government for $19,000 a month—to store Government-owned grain.

There's inevitable spoilage: weevils in the grain, cheese that's going stale, rats in the granaries.

The Government's attempts to support potato prices resulted in 470 million dollars of taxpayers' money going down the drain, and deliberate destruction of millions of bushels of potatoes.
